4 to 8 inches. Special tubes used in the manufacture of bicycles, furniture, refrigerator equipments, and transformers are generally made from cold rolled strip.

The Fourth Plan holds forth a number of lines for the expansion of demand for the steel pipes and tubes industry. Some allocations which are of interest from the industry's point of view are: Rs 237 crores for housing and urban development, Rs 406 crores for water supply and sanitary schemes, Rs 3,237 crores for transport and communication and Rs 1,087 crores for irrigation. The allocations of over Rs 2,700 crores for agriculture will also boost the demand for the industry's products.

In the context of the facts, of the country reversing its role, from being an importer of steel pipes and tubes to an exporter of these products earning foreign exchange of Rs 12 crores per year, there is need to ensure that the industry gets the necessary raw materials. The industry has faced, for a long time past, shortage of hot rolled coils and skelp. The supply position has not yet improved satisfactorily. This is because the perspective planning for steel has been bad. No effort has been made to match supply and demand at different points of time. There is also little relationship between the product-wise demand and the rolling programme of main producers. The strikes at Hindustan Steel have affected the supply position. As if this was not enough, the public sector steel plant has diverted hot-rolled strips for producing more of cold-rolled and galvanised sheets. It is no wonder that this has thinned the supplies to the steel pipes and tubes manufacturers. The industry would like the supply position of steel to improve. The Government's decision to import of Rs 100 crores worth of iron and steel has given the hope that the industry's demand for steel would be met adequately. The steel tube industry's production facilities have cost Rs 25 crores and it is in the interest of the national economy that these facilities are not wasted.

Apart from inadequate supply of iron and steel, the industry also faces shortage of zinc, spare parts and tools. At times shortage of railway wagons for the despatch of finished items from the works has been a frustrating experience.

The raw materials shortage has had an adverse impact on the industry. The capacity of the industry has been about six lakh tonnes but the estimated utilisation has been less than 48 per cent. A significant point about utilisation is that it has been showing a deteriorating performance for the last few years. Thus in 1965, the production as percentage of capacity was 80 per cent which came down to 70 per cent in the subsequent year. In 1967, the utilisation came down to 45 per cent while the bottom of 35 per cent was reached in the subsequent year.

The organised sector has another grievance. They consider that the disproportionately high allocations to the small sector tube industry are not justifiable particularly since the organised sector is denied essential raw materials. Its contention is that the tube made by the small producer is a sub-standard product. In the case of gas and water conveyance tubes, the small producers do not have the requisite equipment. They also do not have galvanising facilities.

BUILD WITH PIPES

Build the vast modern buildings of today and tomorrow, that will raise the skyline of the nation - with pipes. Pipes for structuring. Pipes for conduits. Pipes for plumbing. Pipes for fencing. BST pipes and tubes in sizes ranging from 15 mm to 150 mm. Black and galvanised. Specialised pipes and tubes by Bharat Steel Tubes.

BST FOR THE BEST IN TUBES

more 70 per cent of the demand is for galvanised quality the products of the small producers may not come up to the requisite standard. These circles feel that the sub-standard steel pipe and tube products of the small sector, if supplied to agriculturists and housebuilders, would amount to a waste of resources. It is in this context that the industry has made representations to the Government that the allocations to industries should be revised on the basis of their capabilities and importance to the national economy.

A look at the capacity, production and demand for the products of the tube industry indicates that there is imbalance between these. The installed capacity is 4.3 lakh tonnes of welded tubes, 45,000 tonnes of seamless tubes, 1.5 lakh tonnes of higher sized tubes of ERW quality by Hindustan Steel and 25,000 tonnes in the small-scale sector. Currently there is a two-shift working but with a three-shift working the capacity can be raised by 30 per cent. This can be done without additional expenditure on plant and machinery. The demand is hardly 30 per cent of this potential production capacity. It is estimated to grow at the rate of six per cent, which means the rise would be hardly 15,000 tonnes per year. Over the Plan period the rise would be of the order of about 85,000 tonnes.

The steel pipes and tubes industry is worried that the future demand pattern may be seriously affected by the competitive role of PVC and polythene tubes. The petrochemicals complexes may throw into the market a large quantity of tubes at cheaper prices. It is in this context that the industry seeks a stop to further licensing till such time as consolidation is achieved.

Apart from the difficulties faced by the manufacturers in raw materials and balancing of capacity and production, official red tape has caused financial difficulties. In the case of one company alone payments and refunds from the Government on export account as well as import entitlements, to the extent of well over Rs 1 crore, were held up for a period of more than 15 months. The effect of this, in financial terms, has been to reduce the export earnings substantially, in fact by the amount of interest paid on the additional overdraft. The import entitlements which are issued by value are, in effect, reduced by at least 10 per cent as world prices of zinc and spares go up at regular intervals. The industry feels frustrated that the authorities do not realise the consequences of inordinate procedural delays. Speedy disposal of cases and claims is essential so that the country's economy does not suffer avoidable losses.

The industry is looking forward with hope that the inhibitions on the building trade, created by the proposed ceiling on urban property, will be offset by the construction work to be undertaken by the proposed urban development corporation and larger outlays on schemes for water supply and minor irrigation.

The Annual Survey of Industries 1965 gives certain basic data about the iron and steel pipes industry. Though in certain respects it has become outdated, some of the features disclosed in the survey are useful to take note in understanding the industry. According to this

survey the average number of working days was 302 for the industry. At the time the survey was conducted the industrial situation in West Bengal was rather peaceful hence the working days for the factories in that State were as high as 307. The plant and machinery investment at that time was about Rs 13.58 crores of which nearly one-fourth was in West Bengal. Maharashtra and Orissa accounted for nearly one-half of the investment. Fuel and lubricants consumed included coal, coke, coal gas, firewood, charcoal, petroleum, other fuel oils, lubricating oils, etc. Electricity charges accounted for nearly one-third of the energy charges.

Materials consumed included pig iron, plates, sheets and strips, skelp, blooms, scrap, non-ferrous metals and alloys, zinc,

acid, oxygen, gas, electrodes, paints and varnishes and zinc chloride. The materials consumed formed nearly three-fourths of the gross value of output. The value added by manufacture was nearly one-sixth of the value of the output. Percentage of wages, salaries, etc. to value added was 52.6 per cent. However this varied between 81.5 per cent in West Bengal which was the highest and 36.9 per cent in Gujarat which was the lowest. The industrial units sold products and by-products which included steel pipes and tubes, iron pipes and tubes, spun pipes, conduit pipes, other pipes and tubes including pipe fittings, steel strips, castings of all kinds, fittings, cisterns, etc., ingot moulds, and zinc dross and dust.

CROP AND COMMODITY SURVEY: APRIL 1971

Shortfalls in procurement

By Commerce Research Bureau

OFFICIAL circles have placed the procurement of *kharif* cereals between November 1970 and April 1971 at 3.29 million tonnes or about 60 per cent of the target of 5.5 million tonnes fixed by the Agricultural Prices Commission and agreed to by the State governments. The actual procurement of *kharif* cereals exceeded the targets only in two States. In Punjab which topped the list, the procurement was of the order of 6.94 lakh tonnes, against the target of 5 lakh tonnes. Madhya Pradesh came second by procuring 5.11 lakh tonnes, against the target of 4.85 lakh tonnes. In Uttar Pradesh, the procurement figure touched 3.12 lakh tonnes, against the target of 3.45 lakh tonnes. While there are moderate shortfalls in the procurement of *kharif* cereals in Andhra Pradesh, Maharashtra and Haryana the shortfalls in procurement are larger in Tamil Nadu, Mysore and Union Territories. The aggregate procurement of *kharif* cereals is estimated at 3.5 million tonnes during the full year from November 1970 to October 1971.

In the meantime, the procurement of wheat for the current marketing season (April 1971 to March 1972) has already started in the important producing States. In the opening month of the current season Punjab has procured 72,000 tonnes of wheat while in Haryana and Uttar Pradesh about 7,000 tonnes have been

procured. During April, the total procurement of wheat in all the States aggregated 94,000 tonnes. For the 1971-72 season the overall target for procurement of wheat has been fixed at four million tonnes.

With an improvement in the overall availability of foodgrains and a shrinkage in the gap between the market prices and the issue or controlled prices, the offtake of foodgrains from the public distribution centres has undergone a contraction. According to the Agricultural Prices Commission, during 1971, the offtake from the public distribution system is expected to fall to 8.5 million tonnes from 9 million tonnes in 1970. However on account of the extra demand for foodgrains arising from the influx of refugees from Bangladesh the offtake of foodgrains from the public distribution system is expected to rise rather sharply during 1971. To meet this situation, the Government has decided to import about three million tonnes from the US under the PL 480 by the end of 1971.

The supply and demand position of various agricultural commodities, their prices and other related developments during April are reviewed in the following paragraphs. Our State-by-State reviews appear after the commodity reviews.

Rice

The supply position of rice continued to be satisfactory during April. Nevertheless, in keeping with the seasonal pattern the price index of rice rose by 2 per cent between April 3 and April 24. Turning to the markets divergent trends were seen. Whereas the prices of rice at the Tadepalligudem market (Andhra Pradesh) showed a sharp fall of 14 per cent during April on account of good arrivals in the face of poor demand, in the Calcutta market the prices showed a substantial rise of about 13 per cent owing to the heavy demand. The influx of refugees from the neighbouring Bangladesh also aided this upturn. The current prices are 24 per cent lower than the level a year ago.

Wheat

During 1970-71, the output of wheat is estimated at 21.5 million tonnes, against 20 million tonnes in 1969-70. Already arrivals of the new crop have commenced. Reflecting this, the price index of wheat declined by 2 per cent between April 3 and April 24. In the Hapur market daily arrivals were about 1,000 maunds. As a result, the prices in this market at Rs 80-82.50 per quintal, showed a sharp fall of about 10 per cent. On the other hand, the prices in the Bhatinda (Punjab) market rose by 3 per cent owing to the good buying support. The current prices are one per cent lower than the level a year ago.

Barley

The daily arrivals of new barley crop were satisfactory. As a result, the prices of barley in the Hapur (Uttar Pradesh) market declined sharply by 7.2 per cent. The present price at Rs 45 per quintal is about 15 per cent lower than the level a year ago.

Jowar

Owing to the shortfall in the outturn of Maharashtra's jowar crop, there is a

marked fall in the availability of this commodity this year. As a result, the price of jowar in the Hapur market at Rs 70 per quintal showed a sharp rise of 40 per cent. Nevertheless, the current price is 35 per cent lower than the level a year ago.

Bajra

The supply position continued to be satisfactory during the month. With the beginning of the summer season the demand for the commodity declined. Reflecting this, prices of bajra in the Bombay market at Rs 60.65 per quintal showed a fall of about 7 per cent. On the other hand, in the Hapur market the prices remained steady at Rs 40 per quintal. The current prices in these two markets are lower than the level at this time last year by Rs 24 and Rs 15 per quintal respectively.

Maize

Owing to the slackness in demand the prices of maize in the Hapur market further slid down by about 27 per cent. The current price in the Hapur market is about 25 per cent lower than the level a year ago.

Tur

The daily arrivals of tur were normal in the principal markets of the country. In the Bombay market, the prices of tur ruled steady at Rs 110-112 per quintal. However, the prices in the Hapur market at Rs 122.50 per quintal showed a fall of 9 per cent because of slackness in demand. The current prices are lower than those that prevailed a year ago.

Gram

The flow of new gram crop was satisfactory at the terminal markets. Because of this, the prices in all the selected markets continued to decline further. In the Bombay and Rohtak markets, the prices of gram receded by about 4 and 9 per cent respectively. The current prices in

these two markets are lower by about 8 per cent than the level a year ago.

Cotton

For 1970-71 (September-August), the output of cotton continued to be placed at 54 lakh bales, against 58 lakh bales during 1969-70. With the increase in the pace of arrivals of imported cotton the supply position continued to be satisfactory during April.

The import of cotton from September 1970 to April 3, 1971 was placed at 201 lakh bales, against 420 lakh bales in the corresponding period in 1969-70. The export of Bengal Deshi registered for sale during the period September 1, 1970 to April 10, 1971 amounted to 130 lakh bales, against 181 lakh bales in the corresponding period.

In the Bombay market, the prices of the popular varieties declined between 4 and 8 per cent. The price of Cambodia 'B' variety at Rs 779 per quintal showed a sharp fall of Rs 65. The current prices are 18 per cent higher than the level a year ago.

Among other developments, the Union Government has cleared the Maharashtra Government's cotton monopoly purchase scheme under certain conditions. According to the Minister of State for Co-operation about Rs 7 crores to Rs 8 crores worth of cotton remained unsold with peasants in the Vidarbha region of Maharashtra. Neither the State Marketing Federation nor the State Government was in a position to purchase the unsold stock for want of funds.

Sugarcane

The output of sugarcane (gur) during 1970-71 is expected to be 1.75 million tonnes, against 1.34 million tonnes in 1969-70. Of this four-fifths have been cleared from the fields for the manufacture of sugar, gur and khandari. Sowing was in full swing in Uttar Pradesh, Maharashtra, Bihar, Tamil Nadu and Andhra

Pradesh. The acreage is expected to remain unchanged.

Sugar

During the period October 1, 1970 to April 15, 1971 of the current sugar season (October 1970 to September 1971), sugar production aggregated 33.54 lakh tonnes against 34.05 lakh tonnes in the corresponding period of the last season.

If this trend continues, according to the latest official estimates, the production during the current season is expected to be a little over 41 lakh tonnes as compared with 42.60 lakh tonnes in the preceding season.

The prices of sugar, which remained more or less steady during the first fortnight of April, declined in the following week owing to the release of a higher

quota of 4.25 lakh tonnes, consisting of 2.65 lakh tonnes of levy sugar and 1.60 lakh tonnes of free sale sugar by the Union Government on April 20. However, because of the marriage season, the offtake was higher and, therefore, prices again moved up. At the close of the month, the prices of sugar (C-30) in Bombay and Muzaffarnagar markets were 2 and 5 per cent higher than in the preceding month. The current prices in these two markets are higher by Rs 14 and Rs 22 per quintal, respectively, than the levels a year ago.

Gur

As the production of sugarcane during 1970-71 is a little lower than the preceding year, the production of gur is also expected to come down by half a million tonnes to about 6 million tonnes. On account of short supplies, the prices in the Hapur market as well as in the Kolhapur (Maharashtra) markets rose by about 5 and 2 per cent respectively. The current prices in the Hapur market are higher by Rs 35 per quintal, about 40 per cent, compared with the level a year ago.

Khandsari

During 1970-71, the aggregate production of khandsari is expected to be slightly lower at two million tonnes. The prices of khandsari in the Muzaffarnagar (Uttar Pradesh) and Delhi markets showed a rise of 4 and 11 per cent respectively owing to good demand. The stock in the Muzaffarnagar market is estimated at around 1,00,000 quintals. The current prices in the Muzaffarnagar market are higher by Rs 25 per quintal than the level a year ago.

Oilseeds

The aggregate production of groundnut (nuts-in-shell) for 1970-71 continued to be estimated at 62 lakh tonnes against the earlier estimate of 64.55 lakh tonnes. In spite of this downward revision it is higher than the output of 54.55 lakh tonnes in 1969-70. The summer crop arrivals in the south continued to be good, though the arrivals during the last week were slightly lower than in the first week of April. This was reflected in the prices in all the principal markets which receded sizably. In the Bombay and Rajkot (Gujarat) markets, the prices at Rs 177 and Rs 148 per quintal, were lower by about 10 per cent and 8 per cent respectively. The current prices in these two markets are significantly lower than the levels a year ago by 23 per cent and 25 per cent respectively.

The outturn of the other four major oilseeds—rapeseed, and mustard, sesamum, linseed and castorseed—is expected to be larger than last year. The prices of castorseed showed a sharp fall in the selected markets owing to the lack of buying support from exporters as well as industrial users. The daily arrivals of castorseed in the Gujarat and Hyderabad markets were sizable at 10,000 bags and 700 bags respectively. This indicates that the castorseed crop is expected to be significantly larger than last year.

Tea

During March 1971, the production of tea in South India was 9.9 million kg against 8.4 million kg in March 1970. However, the output during the first three months, January-March 1971, was lower.

It was at 22 million kg as compared to 22.6 million kg during the corresponding period of 1970. Till March end, production in north-east India had not begun.

In the Calcutta market, the average price of tea at Rs 621 per quintal showed an increase of 3 per cent in April. The current prices are lower by Rs 11 per quintal. The proposed Tea Corporation is expected to start its work soon. The Corporation will establish blending and packaging units in foreign countries. The Corporation will have an authorised capital of Rs 5 crores and an initial paid-up capital of Rs 25 lakhs.

Coffee

As against the original estimate of 82,000 tonnes of coffee crop for 1970-71, more than 86,000 tonnes have already been delivered to the Coffee Board's pool so far and another 10,000 to 15,000 tonnes are expected to be obtained for the pool before the end of the current season. Thus, for the first time, the production of coffee is expected to cross the one-lakh-tonne mark. Reflecting this record output, the prices (Robusta Flat) in the Coimbatore market have declined by about 2 per cent. The current prices are lower by about 31 per cent than the level a year ago.

Thus, there will not be any shortage of coffee for internal consumption. Currently, internal consumption is placed at between 42,000 and 45,000 tonnes. As regards the export of coffee, about 24,395 tonnes will be exported under the International Coffee Agreement. Besides, a sizable quantity will be exported to countries not covered by this agreement. It is estimated that foreign exchange earnings from coffee exports will be Rs 25 crores during 1971 against Rs 20 crores in 1970.

ANDHRA PRADESH

The foodgrains situation in the State continued to be satisfactory. So far, the Food Corporation of India has procured 3.75 lakh tonnes of rice during the current season and it is expected to go up to 4 lakh tonnes by the end of mid-May. Till April 15, the State had exported 17,430 tonnes of broken rice to Maharashtra, West Bengal, Kerala and Bihar.

ASSAM

In view of the satisfactory foodgrains position, the prices of foodgrains continued to rule steady. Owing to good rainfall during the first two weeks of April, the sowing of jute commenced in the State. Acreage under jute is expected to be more than normal. The tea crop is in excellent shape.

BIHAR

Despite drought, during 1970-71 the production of foodgrains in the State is expected to be satisfactory. On April 15, the State Government set up a Land Commission headed by the Revenue Minister, Mr Krishna Kant Singh, to suggest a limit for ceiling on land. The State Government has launched some new schemes for landless agricultural labourers, which provides for the settlement of small farmers on cultivable land with minimum wages and full employment, besides

Jute

THE prices of both raw jute and jute products, after spurting up in the first two weeks of April, following the civil war in Bangla Desh, moved down during the major part of the remaining period. The prices of Assam bottoms which were quoted at Rs 158 per quintal at the end of March rose sharply to Rs 168.79 in mid-April. Thereafter, the prices came down, as steeply as they rose, to Rs 158.09 in the last week of April. In fact, as the month closed, the prices not only settled down to March-end level but showed definite signs of a decline. Thus, the earlier expectation that the jute prices would shoot up have been belied for some time at least. There were three major factors contributing to this development. Firstly, the domestic demand is yet to gather momentum as the Government and the semi-Government agencies continue to buy in small lots preferring to draw more upon their existing stocks. The major industrial buyers reduced their requirements and preferred to wait until the prices settled down at reasonable levels. Thirdly, the anticipation following the civil war in Bangla Desh that sizable foreign orders would be diverted to India could not materialise in the wake of stiff resistance of overseas buyers to higher prices. They were rather inclined to watch the Bangla Desh situation for some time before entering into large-scale commitments. In fact, they were repeatedly assured by the Pakistani exporters that conditions in Bangla Desh would settle down soon and shipments start immediately thereafter.

However, the present indications do not lend support to any optimism about jute production in Bangla Desh on account of reported large-scale dislocation of industries and communications there. Secondly, good rains in the jute-growing areas and the fixation of a target of 84 lakh bales for 1971-1972 as compared with the production of 62 lakh bales in 1969-70 had a sobering effect on the market sentiments. Thus, though the crop arrivals have been small, the prospects of bigger crop made the holders keen to dispose off their stocks in order to avoid loss in prices.

giving them subsidiary occupation as a precaution against the failure of crops.

GUJARAT

The production of foodgrains in the State is expected to rise to the record level of about 34 lakh tonnes during 1970-71 against 32 lakh tonnes in 1969-70. For the first time, the Food Corporation of India has entered the Gujarat markets. It has a purchase target of 30-40 thousand tonnes of wheat. Meanwhile, it has already started purchasing wheat and so far about 22,211 tonnes have been purchased. For the expansion of the agricultural research programme during 1971-72, a provision of Rs 45.78 lakhs has been made.

HARYANA

The State harvested a bumper wheat crop during 1970-71. For the investigation of irrigation, flood control and power projects, the Union Ministry of Irrigation and Power has sanctioned Rs 90 lakhs to the State. The Resources and Economic Committee of Haryana in its report to the State Government has recommended the imposition of agricultural income tax on all land holdings above 30 standard acres. A dairy scheme, which will give a profit of Rs one lakh per year from a holding of 12 hectares, has been worked out by the National Dairy Research Institute of Karnal.

HIMACHAL PRADESH

The production of foodgrains in the State is expected to be 11.50 lakh tonnes during 1970-71 against about 10 lakh tonnes in 1969-70. The State has harvested about 35 lakhs tonnes of wheat during 1970-71, against three lakh tonnes in the previous year. The sowing of sugarcane was over by April. The Union Ministry of Irrigation and Power has sanctioned a special loan of Rs 17 lakhs for the investigation of irrigation, flood control and power projects in the State.

JAMMU AND KASHMIR

The overall food situation in the State continued to be satisfactory. The Kashmir valley, however, is faced with a serious drought on account of scanty rains during March and April. The Union Ministry of Irrigation and Power has sanctioned a special loan of Rs 2.2 lakhs to the State for the investigation of irrigation, flood control and power projects.

KERALA

The aggregate production of rice in the State is expected to be 13 lakh tonnes during 1970-71 against 12.1 lakh tonnes in 1969-70. Between September 1970 and March 1971, the Cashew Corporation of India (CCI) imported and distributed to processors about 65,000 tonnes of raw cashewnuts. About 16,000 tonnes of processed cashewnuts were expected to be exported by the middle of April. On April 13, the State Assembly urged the Centre to nationalise the export trade in processed cashewnuts and to distribute imported cashewnuts to only existing registered and licensed cashew factories on the basis of the number of workers engaged in them. The Union Minister of State for Foreign Trade, Mr L. N. Mishra, has promised help in the shape of institutional finance of Rs 4 crores from the Reserve Bank of India for reopening at least 50 out of the 220 closed cashew factories in the State. A survey on tapioca has been launched by

PRICES IN APRIL

Stability continues

GOING by the average for the first three weeks, the official Index Number of Wholesale Prices at 182.1 remained almost stable during April (+0.3 per cent). A study of the commodity quotations from the various markets compiled by us indicates that this steady trend continued during the last week of April as well. The prices of foodgrains were generally lower than the level a year ago. This reflects a comfortable supply position of foodgrains. But other food items rose slightly. As a result, during April, the price index for food articles rose nominally. Even as compared to the level a year ago, the price index for this group was marginally higher.

Owing to the improved availability of supplies, the price indices of both raw cotton and groundnuts showed marked declines of about 7 per cent and 4 per cent, respectively, during April. On the other hand, the price index of raw jute forged ahead rather sharply by 10 per cent on account of good buying support. As a re-

sult, the price index for industrial raw materials recorded a moderate fall of 2 per cent. What is more, for the first time in recent months, the price index for this group was lower by about one per cent than the level a year ago.

The price index for manufactures, however, should cause concern. During the month under review, the price index rose by about one per cent. During the last 12-month period, the index for manufactures rose by 8 per cent. During the week ended April 24, the official Index Number of Wholesale Prices at 181.5 was only 2.9 per cent higher than the level a year ago.

The most notable feature of the current busy season is that the prices remained almost stable during the last eight months beginning from September 1970 to April 1971. During the current busy season so far (September 1970 to April 1971), prices have declined by only 0.5 per cent against the declines of 3.2 per cent and 6.9 per cent during the busy seasons of 1969-70 and 1968-69, respectively.

INDEX NUMBERS OF WHOLESALE PRICES

(Base: 1961-62 = 100)

Group/Commodity	Weight	April 24, 1971	March 27, 1971	April 26, 1970	Percentage variation in April 24, 1971 over

the Tapioca Market Development Board in selected panchayats in each of the 55 talukas in the State to ascertain the extent of the use of tapioca as an article of food.

MADHYA PRADESH

During 1970-71, the State harvested a record rice crop of 3650 lakh tonnes against 3225 lakh tonnes in 1969-70. The procurement of rice has already exceeded the target of 425 lakh tonnes in the State. The wheat procurement target in the State during 1971-72 has been fixed at 10,000 tonnes. So far, the Food Corporation of India has procured 594 tonnes of wheat in the State. In pursuance of the recommendation of the Forest Advisory Committee, the State Government has decided to exempt *mahua* flowers from State trading in forest produce. The State Government would, however, purchase *mahua* flowers, if necessary, at the support price of Rs 20 per quintal.

MAHARASHTRA

Owing to severe drought conditions, the overall foodgrains production in the State has been adversely affected during 1970-71. Standing sugarcane crop in nearly 1,000 acres has wilted and farmers have suffered losses at an estimated rate of Rs 3,000 per acre. It is reported that in the Kopargaon, Shrirampur, Rahuri and Sangamner areas, 90 per cent of the 25 lakh wells have dried up. The State Government has submitted a Rs 63-crore comprehensive project for the development of ground water resources, land and farm mechanisation to the World Bank. The Maharashtra Apex Co-operative Marketing Federation has opened 11 new cotton purchasing centres for stabilising prices of cotton at Akola, Ycotmal, Ghatgi, Vani, Arvi, Sillod, Hingoli, Khelu and Jalna. The Government of Maharashtra has lifted the Statutory rationing of wheat from the Greater Bombay rationing area with effect from May 1.

MYSORE

The overall foodgrains production (*kharif* plus *rabi*) during 1970-71 is expected to be 62 lakh tonnes, against 59 lakh

tonnes in 1969-70. The available preliminary estimates of production of rice and jowar seems to be higher than in the previous year. The Indian Coconut Development Council proposes to set up a big coconut seed farm of about 120 acres in the State. The farm will serve as the main plantation centre of high-yielding seed nuts and will produce 7,000 tall and dwarf hybrid seedlings per year. At the Institute of Horticultural Research, Hessarghatta, some new varieties with double yield, early maturity and disease resistant vegetables have been evolved.

ORISSA

The food position in the State continued to be satisfactory. On account of the excellent pre-monsoon rainfall in the State during April, the sowing of jute has been started. It seems that this year more acreage will be brought under jute. Among other developments, the Planning Commission has not approved the Orissa Government's provision in its annual plan for the current year for the construction of the Rs 120-crore Indravati dam project and the Rs 2457-crore Anandapur barrage project.

PUNJAB

During 1970-71, the production of wheat in the State is expected to be 48 lakh tonnes, i.e., the same as last year. The wheat procurement target for the State is fixed at 26 lakh tonnes for 1971-72. Of this, 12 lakh tonnes will be procured by the State Government and 7 lakh tonnes each by the State Co-operative Marketing Federation and by the Food Corporation of India. The wheat procured by the State Government and the State Co-operative Marketing Federation will also be taken over by the Food Corporation of India for the central pool.

On April 7, the State Government had decided to go in for complete nationalisation of trading in wheat in the State. The Cabinet decided that the Food Department should make wheat purchases through other agencies than *pucca arhatis*. A survey conducted by the State Fisheries Department revealed that the annual fish

production in the State from all sources is about 1,800 tonnes valued at Rs 54 lakhs. In view of this, the State Government plans to intensify fish production in the State.

RAJASTHAN

During 1970-71, the aggregate production of foodgrains (*kharif* plus *rabi*) is expected to touch the record level of 76 lakh tonnes. The Food Corporation of India has started its procurement operations and so far procured 420 tonnes of wheat from the State. The Rajasthan State Agro-Industries Corporation has opened workshops for the repair of tractors at Jaipur, Kotah, Hanumangarh, Pali, Nagaur, Chittorgarh, Alwar and Bharatpur. The Corporation is also engaged in a land levelling programme in the State. Last year, the Corporation levelled 1,000 acres in the ravine areas of Chambal in Kotah district. Further, the Corporation has also signed an agreement with a West German firm for the establishment of a tractor plant at Jodhpur. Two varieties of Molya disease resistant barley have been evolved by the Agricultural Research Farm at Durgapur near Jaipur.

TAMIL NADU

The overall foodgrains production in the State during 1970-71 is expected to be higher at 65 lakh tonnes, against 62.5 lakh tonnes in 1969-70. Of this, production of rice is 49 lakh tonnes. It is expected that rice production in the State will be raised to a new high of 60 lakh tonnes and foodgrains production to 77 lakh tonnes during 1971-72.

UTTAR PRADESH

Uttar Pradesh accounts for more than one-third of the country's *rabi* foodgrains production. During 1970-71, the State is expected to produce 10.5 million tonnes *rabi* foodgrains, against 10 million tonnes in 1969-70. The State has decided to build up a buffer stock of 6.5 lakh tonnes of wheat. A composite variety of maize, Protina, with 10.62 per cent protein and 5.86 per cent lysine, has been developed by the U. P. Agricultural University, Pantnagar. Its yield is about 45 quintals per hectare, against the average yield of 8 quintals per hectare for the State.

WEST BENGAL

The overall foodgrains production in the State during 1970-71 is expected to be higher than the last year's level of 736 lakh tonnes. The production of wheat alone this year is estimated at 8.5 lakh tonnes. In 1970-71, so far, only two lakh tonnes of foodgrains have been procured by the Food Corporation of India from the State. Currently, the annual requirement of rice in the State is placed at 62 lakh tonnes and that of wheat at 18 lakh tonnes, thus making a total of 80 lakh tonnes. Of this about 4 lakh tonnes are required for a buffer stock and the rest for consumption. The sowing of Boro paddy for 1971-72 season has commenced in the State. Against 8 lakh tonnes of Boro paddy produced in 1970-71, the target for 1971-72 is fixed at 10 to 11 lakh tonnes. The State Government has decided to distribute 750 lakh acres of vested land among the landless cultivators or those having less than two acres of land.

ANNOUNCEMENT REGARDING THE ISSUE OF EQUITY AND PREFERENCE SHARES

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

PERSONS INTERESTED IN FULL DETAILS MAY OBTAIN COPIES OF THE PROSPECTUS AND APPLICATION FORMS FROM THE BROKERS AND BANKERS MENTIONED BELOW

THE SUBSCRIPTION LIST WILL OPEN AT COMMENCEMENT OF BANKING HOURS ON TUESDAY, 25th MAY 1971 AND CLOSE AT THE CLOSE OF BANKING HOURS ON MONDAY, 31st MAY 1971 OR EARLIER, AT THE DISCRETION OF THE DIRECTORS, BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON THURSDAY, 27th MAY 1971.

SWADESHI POLYTEX LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

Registered Office : KH-257, KAVINAGAR, CHAZIABAD, U.P.

HISTORY AND BUSINESS

The Company which has been promoted by The Swadeshi Cotton Mills Company Limited, Kanpur, one of the leading textile manufacturers in India, was incorporated on 21st March 1970 and received a certificate of commencement of business on 9th July 1970. The objects of the Company are to carry on the business of manufacturing, processing and selling of synthetic fibres, organic and inorganic heavy chemicals, fine chemicals, dyestuffs and resins.

The Company has obtained an industrial licence for the manufacture of 6,100 tonnes per annum of polyester fibre at Chaziabad, near Delhi. Polyester fibre, a leading man-made fibre, was commercially developed by Imperial Chemical Industries Limited, U.K. under the name of "Terylene" and by Du Pont of U.S.A. as "Dacron." Polyester fibre is now recognised as amongst the most versatile and useful of textile fibres. The demand for polyester fibre in India is very much in excess of supply.

The Company has entered into an agreement with Vickers-Zimmer AG, Frankfurt, West Germany for the purchase of machinery, equipment and technical know-how. Vickers-Zimmer is a specialist in the design and supply of plant and machinery for the manufacture of synthetic fibre and has designed, fabricated and erected plants for leading manufacturers in more than thirty countries in the world. Tata Consulting Engineers have been retained to supply detailed design and engineering services based on the technical information provided by Vickers-Zimmer. They will provide assistance and supervision in procurement, construction, start-up and acceptance testing of the plant. Siemens India Limited will be responsible for the supply of electrical instrumentation and control facilities for the plant. A project manager with several years' experience in the chemical industry and who was until recently employed in the polyester fibre plant of Du Pont, U.S.A., has joined the Company. Some senior technical personnel have already been recruited and other executives will be recruited in due course and trained by the Company's technical collaborators.

The Swadeshi Cotton Mills Company Limited has been allotted Rs. 1,00,00,000 face value of equity shares and the directors, nominees and associates have been allotted Rs. 65,00,000 face value of equity shares.

COST OF THE PROJECT

The total cost of the project is estimated by the Directors at Rs. 1,272 lacs as follows :

	Rs. lacs
Land and site development	26
Buildings	93
Plant, machinery and equipment	746
Other assets	20
Preliminary, pre-operative and issue expenses	48
Interest on loans and on deferred payments during construction period, mortgage expenses, etc.	70
Contingencies	47
Working Capital	222
Total	1,272

The total foreign exchange cost (including insurance and freight) is estimated as Rs. 229 lacs.

SOURCES OF FINANCE

The project is being financed as follows :

	Rs. lacs
Equity share capital	330
Preference share capital	110
UPSID deferred credit on land	18
Term loans/debentures	649
Cash credit facilities from banks	105
Total	1,272

SHARE CAPITAL

AUTHORISED

	Rs.	Rs.
75,00,000 equity shares of Rs. 10 each	75,00,000	
2,50,000 redeemable cumulative preference shares of Rs. 100 each	2,50,00,000	
		10,00,00,000

ISSUED, SUBSCRIBED AND PAID-UP

	Paid up	Face value
	Rs.	Rs.
4,00,000 equity shares of Rs. 10 each allotted to subscribers to the Memorandum, directors, nominees and associates, which have been fully paid up	40,00,000	40,00,000
2,50,000 equity shares of Rs. 10 each allotted to directors, nominees and associates on which Rs. 5 per share has been paid up	12,50,000	25,00,000
10,00,000 equity shares of Rs. 10 each allotted to The Swadeshi Cotton Mills Company Limited on which Rs. 5 per share has been paid up	50,00,000	1,00,00,000
	1,02,50,000	1,65,00,000

The balance of Rs. 5 per share on the partly paid shares will be called up along with the calls on the present issue to the public.

PRESENT ISSUE TO PUBLIC

	Rs.
16,50,000 equity shares of Rs. 10 each for cash at par	1,65,00,000
1,10,000 9.5% redeemable cumulative preference shares of Rs. 100 each for cash at par	1,10,00,000
	2,75,00,000

TERMS OF PAYMENT

	Equity shares	Redeemable cumulative preference shares
	Rs.	Rs.
On application	2.50	25.00
On allotment	2.50	25.00
By two equal calls to be made simultaneously on both equity and preference shares by the Board of Directors on or after 1st October 1971 with an interval of not less than two months between the calls	5.00	50.00
	10.00	100.00

Note : The balance amount, if any, paid on application will be adjusted towards the amount payable on allotment of shares actually allotted to the applicant concerned.

Failure to pay the amount due on allotment or call will render the shares, including the amount already paid up on them, liable to forfeiture.

Hindustan Lever Limited

Chairman, Mr. V. G. Rajadhyaksha's Speech

PAST AND FUTURE

SPEECH delivered by V. G. Rajadhyaksha, Chairman, at the Annual General Meeting of Hindustan Lever Limited, held at Bombay on Thursday, 20th May 1971.

This year I am departing from the past practice when your Chairman restricted his address to a single facet of your Company's activities. The end of one decade and the beginning of another marks a milestone that would itself justify taking stock of the enterprise as a whole.

In assessing the Company's past performance and its plans for the seventies, I will confine my remarks to two questions which I feel sure are of interest to you. First of all in the face of growing concern and indeed in some quarters, trenchant criticism, about the role of large companies such as yours, what account have we given of ourselves? Secondly, in the light of the new industrial policy that has just emerged, how do we see our future?

A REVIEW OF THE PAST

Our Traditional Business

Our traditional business has been largely in good quality household consumer goods aimed at the mass market. For instance, 'Dalda' is not just an economical substitute for ghee, but a nutritious product, in its own right. Similarly, 'Sunlight', 'Lifebuoy', 'Surf' and 'Vim' have come to represent the highest standards in their product class. In a developing economy, where the accent is on production rather than on distribution and marketing, the customer's interests have often been ill-served. By contrast, a trained marketing organisation dedicated to offering the consumer precisely what she wants at reasonable prices has been an integral part of your Company's philosophy since its inception and remains one of its greatest strengths. Indeed, the emergence of marketing as a discipline and a socially worthwhile profession is something which your Company has done much to foster.

In the field of distribution we have created a network which is not only efficient and economical, but which was one of the first to penetrate deep into the countryside using methods and equipment which were new to the country. In the absence of taxation on agricultural incomes the sale of excise-bearing consumer goods in the rural areas is one of the few practicable means the exchequer has of tapping the wealth in the more prosperous farming communities.

Indianisation

During these last two decades one of the important objectives of Government policy was to persuade multi-national companies to Indianise their managements. Our response may be gauged from the fact that as early as 1957 we had only a sprinkling of expatriates and there has been an Indian national at the helm of our affairs since 1961.

Again we were amongst the first to respond to Government's desire to associate Indian capital with the business. Our progress in this direction has been limited not by any reluctance in principle, but because such modest growth and diversification as we were permitted from time to time could be financed from within and did not call for any widening of the capital base.

Research and Development and Import Substitution

That industries should develop an indigenous research and development base and that one of the objectives of such R & D effort should be to reduce the country's dependence on imports of goods and know-how has been and is one of the goals of Government policy. Here also I believe your Company has an exemplary record.

We concentrated our efforts on vegetable oils—the principal raw material for the products which make up the bulk of the Company's business. The stagnant productivity of oilseeds in the face of rising demand, the theme of your Chairman's Annual General Meeting speech eleven years ago, resulted in a net deficit ten years ago and the deficit has been growing. In spite of imports amounting to over 200,000 tonnes by Government in 1970, and a good oilseed harvest in 1970-71, prices of vegetable oils are higher in India than almost anywhere else in the world.

With these and other problems in mind, a decade ago, your Company began investing in its own Research and Development facilities and today it has the largest and finest organisations in its field in the country. One of its major tasks was to discover new techniques for upgrading non-traditional and inedible oils into materials suitable for making good quality soaps. Our Buying Department has played a pioneering role in promoting the collection of forest seeds such as sal. The joint effort of these departments had led to an eight-fold increase in the consumption of non-traditional oils by your Company during the last five years. Today only the physical difficulties of gathering seeds in the short time that is available before the monsoon makes collection impossible and the low value of the by-product oil-cake are the main obstacles in the way of exploiting the full potential of these oils.

Perhaps our most notable success in reducing the need for imports of oils is in stimulating the mass consumption of synthetic detergent powders and bars which replace soap. In 1970 alone, the synthetic detergents produced by your Company saved the import of over Rs 3 crores of oils which would have otherwise been required to produce an equivalent quantity of soap. In less than three years' time, if no impediments are put in the way of our growth, this figure can be readily increased to Rs 6 crores, or Rs 10 crores per annum if by then the alkylate, which is one of the main

raw materials, is manufactured in the country.

Another area in which your Company has taken the lead in saving foreign exchange is in the chemicals which it requires for its traditional business. Thus, by manufacturing nickel catalyst for its own use as well as for third parties, and by producing aromatic chemicals based on entirely original know-how developed at our Research Centre, imports worth nearly one crore of rupees are being saved every year.

Our research activity is not confined to our own facilities or to our own products. We have for instance sponsored research projects in National Laboratories and helped our suppliers to cut costs and improved the quality of their products with the object of reducing our dependence on imports.

Exports

The long-standing adverse balance of payments has been a major problem for the last 15 years and, besides import substitution, increasing exports is an important feature of the country's economic policy. In response to this your Company had built up, prior to devaluation, a substantial export business based largely on the export of high quality refined edible oils and vanaspati tailored to meet the needs of the importing countries. After devaluation such exports were banned, leading overnight to an almost total collapse of our exports. We had to begin building up a new export business from scratch and in 1970, we again reached the respectable figure of Rs 4.8 crores. In doing so we have widened the range of exports to include non-traditional items and entered new markets. Using our familiar marketing techniques we have begun the sale of Hima food mixes to people of Indian origin overseas. We recently sent a substantial consignment of synthetic detergent powder to the USSR and hope to do so again this year.

Agro-Industries and Agricultural Extension

If the recent success with high yielding varieties of wheat could be extended to other cereals, especially rice, the day of self-sufficiency in foodgrains will not be far away. This has brought into even sharper focus the growing scarcity of indigenous fats and proteins, the other two major components of a balanced diet. In addition to finding substitutes for the traditional oils as mentioned earlier, we have succeeded by our own extension efforts and through the Vanaspati Manufacturers' Association, in stimulating the introduction of better seeds and improved agronomic practices for growing groundnuts, the nation's most important oil seed, in many parts of the country. By developing techniques which have enabled us to become one of the largest users of cottonseed oil in vanaspati, we have encouraged the diversion of cottonseed from its uneconomic use as a cattle feed, to oil crushing and extraction.

Through our international associates we have access to unrivalled knowledge and experience of modern palm oil plantations which if applied in suitable soil and temperature conditions can produce very high yields of oil per acre.

Such conditions are believed to exist in the Andaman islands and we have offered to place at Government's disposal the expertise to set up and run a plantation there. Immediate and urgent action both by the Centre and the States is however required if the output of indigenous vegetable oils is to increase at a pace which will allow supply to catch up with demand. The recent suggestion that Government should appoint a National Commission for Oils and Fats to suggest the means by which this can be done deserves serious consideration.

Turning to the problem of proteins, amongst the best and most widely acceptable sources of proteins in India are milk, eggs and poultry. We have helped to stimulate milk production in the Etah district of UP by setting up a dairy to provide a steady outlet for the surplus milk in the area and by bringing in good quality buffaloes to improve the quality of the herds.

We have also played a major role in the rapid growth of the organised animal feed industry in India by formulating and supplying dairy herds and poultry farms with high quality feeds backed by expert guidance in the setting up and operation of egg and broiler producing units.

Our agro-industrial activities have gone further. At Ghaziabad we put up the first unit in India using a unique process for dehydrating peas and at the same time helped farmers to improve the yield and quality of their pea crops. In Assam we have taken the initiative in collaborating with the tea estates to cultivate Citronella grass on unused land on a scale which, last year, provided Citronella oil, a hitherto imported essential oil, in commercial quantities.

Management Development

To achieve progress in all these directions your Company had to develop a cadre of managers who were not only professionally competent by international standards, but were also sensitive and responsive to the nation's goals and ideals. It is now becoming widely accepted that the principal obstacle to rapid and healthy economic growth is not so much finance or foreign exchange or even natural resources, but the scarcity of such managers.

We have been privileged to play a small part in the development of such institutions as the Administrative Staff College of India, Institutes of Management and Institutes of Technology. Our contribution takes many forms—ranging from providing funds, to encouraging our senior executives to spend a significant part of their time in a teaching role or serving on the governing bodies of these institutions. A number of students and sometimes faculty members from the Institutes and colleges come to us for short-term training attachments at our offices and factories.

The training of our own managers is supplemented by the free access we have to the facilities available through our international associates. These facilities comprise specialised courses as well as short- and medium-term attachments with associated companies in various parts of the world. As a result we are able to expose our managers to the latest trends in management development. Neither have we neglected training at non-management

levels—over 40 per cent of our managers have risen from the ranks.

Our contribution to professional management outside the Company sometimes takes a more direct form and it is with a sense of pride that we see some of our alumni, if I may call them that, occupying high places in both public and private sector organisations.

The Efficient use of Resources

In order to provide the consumer with the highest value for her money we have, over the last two decades, devoted much attention to the efficient use of resources. To mention a few examples of what we have achieved between 1960 and 1970—distribution costs have been cut from 9.1 per cent to 8.2 per cent of turnover, the number of times in a year our working capital is turned over has increased significantly and the man-hours required to produce a tonne of soap have fallen from 40 to 27. Reductions in the wastage of materials and services and improved by-product recovery have all contributed to cost reduction. We have used the full range of our managerial skills to avoid or delay an increase in selling prices and to conform to Government's policy of keeping a check on inflation.

In spite of all this, price controls which now cover 75 per cent of your Company's products have bitten deeply into our profitability and their effect on margins can be judged by the fact that purchased materials accounted for 72.2 per cent of our income in 1970 as compared to 65.4 per cent in 1961. The pricing formulae that Government have evolved take into account the cost of the major raw material but pay little or no attention to the rises that have taken place in the costs of other inputs, such as chemicals, packing materials, engineering spares, fuel, transport charges, rents and wages. As a result, margins in many of our Company's traditional products are down to wafer-thin levels and their viability is threatened.

Our representations to the Tariff Commission which has recently submitted its report on vanaspathi prices and to the Bureau of Costs & Prices which is examining the cost of soaps will, it is hoped, lead to the adoption of more equitable and sensitive pricing mechanisms. We are not pleading for a "cost plus" type of formula and we do not suggest for a moment that a manufacturer's inefficiencies should be passed on to the consumer. Competition in a free market has been shown time and again to provide the best protection to the consumer. However, if this is not practicable then prices should be such as to leave the manufacturer, who makes efficient use of his resources and makes good quality products, a surplus which is sufficient to pay the shareholder a reasonable dividend, the employees a fair wage and enables the manufacturer to improve his products and techniques, modernise his plant, widen his distribution and invest in Research and Development.

To summarise, I believe it is fair to say that over the last two decades, your Company, while safeguarding the interests of the shareholder, has responded as best as it could to every call that the country's industrial and economic policy has made on it. Even with harsh price controls it has continued to provide its main customer

—the common man—whether he lives in the larger towns or in the smaller villages good quality products which provide value for money.

PROSPECTS FOR THE SEVENTIES

Consumer Products

Our contribution to the Indian economy has been in those areas where we have been able to combine the wealth of knowledge, experience and research that has been made available to us, entirely free of charge, by our associates. Unilever—with our own skills in research and development, production, marketing and distribution. We are fortunate that our associates are a widely diversified business, and in addition to being leaders in the range of products, which we already manufacture, are amongst the foremost companies in the world in such consumer products as frozen food, and processed meats. Whilst today the time may not be opportune to enter these fields because the market for such products may be too small or because current licensing policies may preclude it, we hope that one day we shall be able to play our part in bringing yet another range of quality products to the Indian consumer. We do not share the view held in some quarters that India cannot derive worthwhile benefits from international skill in the creation, production and marketing of good quality and efficient consumer goods which have provided, in many countries, the strongest incentive for better standards of living.

The new Industrial Policy

The industrial policy announced last year seeks to create a wider role for multinational companies, such as yours—a role which may be different to that which such companies have hitherto played in other countries, including the country in which they are based.

This new policy aims at directing the energies of your Company into the core/heavy investment sector of industry which, while it is of vital importance to the economy, is a field where neither we nor our associates have any direct experience. It could be argued that such a policy may tend to create a conglomerate type of corporate structure and by making it difficult for the economy to reap the benefits that flow from specialisation, may not turn out to be in the nation's long-term interest. Be that as it may, we have, as in the past, responded promptly to the new challenge.

Fertiliser Project

Your Company was asked by the Government to consider investing in a fertiliser project and, in particular, to participate in a joint sector venture in the Punjab in partnership with the Punjab State Industrial Development Corporation (PSIDC) to whom a Letter of Intent, it is understood, will be issued shortly. Accordingly, we commissioned a feasibility study by the Mitsui Toatsu Chemical Company of Japan and a market survey by the FACT Engineering and Development Organisation. These studies revealed that, *prima facie* and subject to certain key requirements being met, such a project would be viable and we are at present engaged in discus-

sions with the PSIDC and the Central Government in this regard.

In order to have access to up-to-date technology, both in the construction of the plant and on a continuing basis, it is our intention to associate with the project firms of international repute in the field of fertilisers. We have, we believe, the general skills to manage such a project and, after the gestation period associated with an undertaking of this magnitude, we expect it to provide a satisfactory return on our investment.

Our Existing Businesses

In the meantime the importance of maintaining the viability of your Company by allowing it freedom to grow in its existing businesses cannot be over-emphasised. We are, therefore, also discussing with Government a number of other projects which not only seek such growth, but at the same time fully conform to Government's social and economic objectives in regard to the development of backward areas, co-operation with the small-scale sector, import substitution, etc.

The project which involves co-operation with the small-scale sector is a novel concept and you might find it interesting to hear a few details about it. The proposal we have submitted to Government is to build a factory in a backward area, which, despite its other drawbacks, is well placed in regard to supplies of non-traditional oils such as rice-bran, sal, neem, etc. The factory will convert these and other oils into a semi-processed soap using com-

plex and relatively capital-intensive processes for upgrading these non-traditional oils, and extracting a strategically important by-product—glycerine—of which there is a growing national shortage. This semi-processed material will then be despatched to a number of widely dispersed and independent small-scale units who will process it further, package it to our specifications and return it to us for marketing and distribution.

We propose, subject to obtaining the Government's approval for this project, to provide these small entrepreneurs, free of charge, the know-how required to instal and operate their equipment and to guarantee the offtake of the finished goods. Such a scheme, we believe, will provide an example of how the small- and large-scale sector can perform complementary roles—the large-scale unit undertaking the complex technological and marketing functions which are generally beyond the capacity of the small-scale sector, leaving the latter with the more labour-intensive, but technologically less complex activities in a way which gives the maximum benefit to the economy and conforms to the social objectives of the country.

This is not to suggest that we have not been conscious of these social objectives in the past. Our dairy project, for instance, was located in one of the most backward areas of Uttar Pradesh and is making a significant contribution to raising living standards in its neighbourhood, although the cost to us has been heavy. Likewise,

as a part of our purchasing policy, we are encouraging and giving technical guidance to a large number of small- and medium-scale firms.

Whilst we are thus responding, as promptly and wholeheartedly as in the past, to the social and economic objectives of the new industrial policy, the cost and delays, for instance, of starting up a factory in a backward area cannot be ignored. It would, I believe, be wrong if, in pursuance of the new policy, all growth on the existing factory sites is completely stopped when it is clear that such growth is the quickest and most economical way of increasing production, particularly at a time when there is a growing shortage of your Company's products.

Conclusion

In the final analysis, national growth aims at things that transcend the parameters of output and income. Two decades ago Pandit Jawaharlal Nehru observed that we should seek to improve the quality of life in our society, that our aim should be the making of better men rather than men who are merely better fed and clothed. The quality of life depends upon standards, specifically standards of excellence. May I, again in a spirit of humility, assert that the function of an enterprise like your Company in a developing society is to aim at setting such standards, albeit in the limited spheres of commerce and industry. The standards we have set span a whole host of activities ranging from the quality of the raw materials we are prepared to use to the quality of the product we are hoping to sell, from management practices within the Company to our corporate behaviour *vis-a-vis* the society at large. Such standards have, we believe, significant, if immeasurable, effects on the values of those we meet at the boundaries of our enterprise: our customers, our stockists, and our suppliers, to cite a few.

In one sense, therefore, our activity in the seventies will be no different from what it has been in the past. We believe that this particular function of your Company draws strength from its association with a multi-national corporation. It is this international association that continuously exposes us to new and more challenging standards of excellence. In the relatively narrow view of the statute books, we may be a foreign company. But, from a larger point of view, the label is misleading as most labels are. Your Company is just as much concerned with the welfare of the nation in which it has grown as are enterprises based wholly on indigenous capital. It is this concern which, I believe, emerges out of a social audit of your Company in the sixties; and it is the same concern which will continue to permeate its plans for the future.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

REVISED PROCEDURE FOR INCOME TAX ASSESSMENTS

In accordance with the substituted provisions of Section 143(1) of the Income-tax Act, 1961 Income-tax Officers will be free to accept, in a large majority of cases, returns of income, subject only to statutory adjustments to the income declared, without calling tax-payers or their account books and other evidence. If a tax-payer objects to such an assessment, the Income-tax Officer is duty bound to make a fresh assessment after calling upon the tax-payer to appear personally or to produce account books and other evidence.

These procedures, with their accent on trust in tax-payers, lean heavily on the completeness and correctness of returns of income. Tax-payers are requested to respond by furnishing correct particulars in the returns of income and ensuring that these are, wherever available, invariably accompanied by a copy of the Manufacturing or Trading Account, the Profit and Loss Account and Balance Sheet.

New assessment procedures aim at expeditious completion of income-tax assessment. To achieve this objective, it is essential that tax-payers furnish their returns of income promptly and voluntarily as required under Section 139(1) of the Income-tax Act, without waiting for a reminder from the Department. Under that Section, returns of income for assessment year 1971-72 are ordinarily due by June 30, 1971, but a tax-payer closing his accounts of business or profession after 31st December, 1970 may file his return within six months from the date of closing the accounts. Tax-payers would be well-advised to comply with the provisions of Section 139(1) to avoid the penal consequences.

"Nothing can be done without the full support of the people...and I think, only democracy can make them feel involved..." —Indira Gandhi

In an interview with Dr. Gisela Bonn, noted German TV writer, India's Prime Minister Indira Gandhi answered crucial questions on a varied range of subjects—the eventful years of her childhood, her major policies and the broader international issues of peace and co-existence. This interview was shown on German TV and the full transcript was published by GERMAN NEWS. Here are some excerpts:

What do you think are India's most urgent requirements?

The most urgent requirement...is to get rid of this very deep poverty and economic backwardness. It's something that will take a long time, and therefore our method is to try and reduce the disparities between people. So far when we made our programmes we found that although the programmes are meant for everybody, those who had property could take more advantage of them. Therefore they became richer, and this increased the disparity.

Do you think you could achieve these programmes by democracy...?

I am deeply committed to democracy, because nothing can be done without the full support of the people and I think, only democracy can make them feel involved.

When did you become interested in politics and think of a political career?

Well, the two things are quite separate. I think there was no time when I was not interested in politics, but never as a career. There are times in the life of a nation when something has to be done. And when we were not free, you just had to be in the freedom struggle because you couldn't be an artist or a writer or anything properly in that situation. Today the situation is the same. Unless there is peace in the country and a change in society which gives India a place in the modern world which helps her people to make use of new knowledge we can't build the sort of life that any individual would like.

The full text of this interview appeared in GERMAN NEWS, a fortnightly magazine published by the German Embassy in New Delhi. If you are interested to receive the GERMAN NEWS regularly, please fill in and mail the coupon to: Embassy of the Federal Republic of Germany, P.O. Box 813, New Delhi.

I would like to receive the GERMAN NEWS regularly. I understand that I will receive the first four issues free of cost. Annual subscription (Postal Order) is Rs 2.

Chemical and Alkali Distributors Limited

HIMALAYA HOUSE, PALTON ROAD,
BOMBAY-1.

SPEECH delivered by Chairman Shri N. R. Swamy at the Fifteenth Annual General Meeting of the Company held on Friday the 7th May 1971

GENTLEMEN

I take pleasure in welcoming you all to this Fifteenth Annual General Meeting of your Company. The Directors' Report and audited Statement of Accounts have been in your hands for quite some time now and with your permission I shall take them as read.

STC

You would have noticed from the Directors' Report that during the year un-

der review sales of goods distributed by your Company on behalf of the STC on commission basis was higher by about Rs 28 lacs than the previous year. In spite of increased turnover, commission earned during the year was lower by about Rs 1,33,000 as compared with the previous year. This is due to the fact that under the new agreement the basis of calculating the commission is different.

In line with the present Government policy of canalising more and more items of chemicals and allied products through STC I hope your Company will receive larger allocations of Chemicals and allied

products for distribution. The working of your Company so far during 1971 has been quite satisfactory.

You would have observed from the Directors' Report that during the year 1970 your Company have been appointed as one of the agents of the STC-IRMAC (Industrial Raw Materials Assistance Centre) scheme. Though the remuneration has been fixed low, we will have the satisfaction of serving the actual users/licence holders by making available goods at a much lower c.i.f. value as a result of bulk purchases and for small consumers, the additional advantage of offering goods ex godown.

Other Agency Business

During the year 1970 your Company had been able to sell 100 tonnes more of J. K. Hydrosulphite of Soda and 50 tonnes more of Jekolite as compared with the previous year. As you are well aware the current market conditions are not encouraging for increased offtake, but we are doing our best to increase our sales.

As stated in my last year's speech, sales of fine chemicals manufactured by Dr. Paul Lohmann (India) Ltd, Calcutta were not satisfactory. Therefore, we have stopped handling their products.

Finance

Our financial position during the year under review was quite satisfactory. Your Company have made satisfactory arrangement with your bankers for additional funds as and when required.

As proposed and decided at the last Annual General Meeting, during the year under review your Directors have allotted 992 equity shares of Rs 500 each as bonus shares by capitalising an amount of Rs 4,96,000 from the General Reserve thus increasing the paid-up capital from Rs 9,92,000 to Rs 14,88,000. Your Directors have also recommended dividend at 15 per cent i.e. Rs 75 per share on the increased paid-up capital of Rs 14,88,000.

On behalf of the Board and myself I wish to convey thanks to the President and members of the Managing Committee of the Chemical and Alkali Merchants' Association for the valuable advice and help given by them.

Gentlemen, on behalf of all of you and my own behalf, I convey my grateful thanks to my colleagues on the Board and to the members of the Staff for their honest and efficient service to the Company. Your Directors have been pleased to pay to the members of the staff bonus equivalent to four months' salary.

With these observations I move—

"That the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ending 31-12-1970 are read and adopted."

A dream today, a reality tomorrow

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

Pfizer pays more

PPFIZER Ltd (Chairman and Managing Director: Mr S. V. Pillai, Bombay) has achieved better working results for the year ended November 30, 1970. Sales have gone up to Rs 17.3 crores from Rs 16.4 crores in the previous year. The gross profit was Rs 4.6 crores (Rs 4.4 crores). The net profit, after providing for depreciation and taxation, amounted to Rs 1.5 crores (Rs 1.7 crores). The dividend has been stepped up by one per cent to 25 per cent.

The company's gross profit margin works out to 26.4 per cent against 27.1 per cent. The ratio of net profit to net worth comes to 15.3 per cent (18.7 per cent).

During the year under review, the productivity of the Thana unit increased and the plant today is fully equipped to meet the growing demand for the wide range of products marketed by the company. The company's manufacturing plant at Chandigarh operated to capacity. The production yields of broad spectrum antibiotics from this plant has increased as a result of process efficiencies and other technological improvements achieved by scientists. An intensive programme of process improvement and import substitution work continues.

The costs of identical products manufactured in other countries are significantly lower than those manufactured by the company in India. Pfizer organisations abroad not having manufacturing facilities can therefore obtain their requirements at

much cheaper prices from those locations than from India. However, the foreign associates have accommodated the company by accepting its high cost products much to their commercial disadvantage

at export prices which left the company with good profit margins. Due to the active assistance of its associates abroad, the company's exports have reached a new high of Rs 64 lakhs in 1970 as against Rs 24 lakhs in 1969. These exports have not only contributed to the country's foreign exchange earnings but also to the growth in profits of the company.

Tata Mills

rose to Rs 82 lakhs from Rs 71 lakhs. The net profit, after depreciation, amounted to Rs 14 lakhs (Rs one lakh). The ordinary dividend for the year was 6 per cent (nil).

The company's gross profit margin works out to 6.7 per cent against 6.4 per cent. The ratio of net profit to net worth comes to 6.1 per cent (0.5 per cent).

Exports during the year under review amounted to Rs 39 lakhs (Rs 33 lakhs). Second-hand combers, draw frames, cards, a roto coner winding machine and a stenter were installed during the year. A new sectional warping machine a 3-chamber float dryer and a garnett machine for the non-woven plant were also installed. Plant and equipment of the total value of Rs 18 lakhs was installed during the year.

The value of works under construction and machinery received at the mills but awaiting installation towards the end of the year was Rs 11 lakhs. Further orders have been placed for machinery of the value of about Rs 1.50 lakhs after the close of the

year. There was a considerable increase in the production of non-wovens, mainly due to commissioning of the garnett machine. Quilting and other interlinings were introduced in the market. During the year sales of non-woven lappings increased substantially.

Svadeshi Mills

THE Svadeshi Mills Co Ltd (Chairman and Managing Director: Mr Naval H. Tata Bombay) has improved its sales for the year ended December 31, 1970 to Rs 12.1 crores from Rs 10.3 crores in the previous year. The gross profit was Rs 85 lakhs (Rs 71 lakhs). The net profit, after depreciation and taxation, amounted to Rs 24 lakhs (Rs 13 lakhs). The ordinary dividend has been stepped up to 12 per cent from 9 per cent.

The company's gross profit margin works out to 7 per cent against 6.8 per cent. The ratio of net profit to net worth comes to 8.6 per cent (4.8 per cent).

Exports for the year were remarkably higher at Rs 70 lakhs (Rs 41 lakhs). Plant and equipment worth Rs 8 lakhs installed

In the market

Swadeshi Polytex

SWADESHI Polytex Ltd (Registered Office: KH-257, Kavinagar, Ghaziabad, UP) is offering for public subscription at par 16.5 lakh ordinary shares of Rs 10 each of the total value of Rs 1.65 crores and 1.1 lakh 9½ per cent redeemable cumulative preference shares of Rs 100 each of the total value of Rs 1.10 crores. Application for the shares must be the minimum of 50 for the equity and five for the preference shares. The entire issue has been underwritten. ended December 31, 1970 against Rs 3.79 lakhs in the previous year. The dividend is stepped up by one per cent to 10 per cent payable on the increased capital. The paid-up capital of the company rose to Rs 15.74 lakhs from Rs 13.80 lakhs. Bonus to staff claimed Rs 1.30 lakhs (Rs 0.15 lakhs). An amount of Rs 4.50 lakhs (Rs 2.55 lakhs) has been set aside for reserve and other funds.

Deposits of the bank expanded to Rs 9.1 crores from Rs 8.3 crores. Advances rose to Rs 6.3 crores from Rs 4.9 crores. Investments were higher at Rs 2.6 crores (Rs 2.1 crores).

The ratio of advances to deposits was higher at 68.6 per cent (59.6 per cent) and that of investments to deposits was also higher at 28.4 per cent (25.4 per cent). Ratio of cash to deposits was lower at 13.7 per cent (24.5 per cent). During the year under review, the bank has shown all-round progress in its business. Three branches were opened in the year raising the total to 39.

Pandyan Insurance

TOTAL net premium of Pandyan Insurance Co Ltd (Chairman: Mr M. B. S. Henry, Madurai) for the year ended December 31, 1970, has increased to Rs 48.77 lakhs from Rs 40.03 lakhs in the previous year. The claims ratio in the fire department increased to 42.6 per cent from 39.4 per cent. In the marine department it was halved to 25.8 per cent from 51.1 per cent. In the miscellaneous department the ratio was lower at 54 per cent (59.2 per cent).

The company has earned a net profit of Rs 15.12 lakhs (Rs 8.25 lakhs). The dividend was maintained at 30 per cent. As on December 31, 1970, the insurance funds

stood at Rs 30.18 lakhs (Rs 24.88 lakhs). The reserves were Rs 27 lakhs (Rs 34.40 lakhs),

recommend a dividend of 7 per cent as against 6 per cent for the preceding year. The deposits increased from Rs 52.31 crores to Rs 65.05 crores—an increase of 24.3 per cent as against an average of 16.38 per cent for the banking system of the country as a whole. The number of depositors increased from 3.32 lakhs to 4.18 lakhs during the year. Bank's advances increased from Rs 35.45 crores to Rs 46.27 crores, representing an increase of 30.52 per cent. Advances to priority sector amounted to Rs 18.64 crores, of this agriculture accounting for Rs 9.85 crores. The number of farmers financed by the bank was 65,000. Advances to small industries increased from Rs 3.69 crores to Rs 7.01 crores. The number of small units assisted was 950. The investments have increased from Rs 15.56 crores to Rs 20.09 crores. The Chairman in his statement to the shareholders has said that as an all-India institution with a strong regional bias, it was the aim and endeavour of the Bank to play an active role in the economic development of Andhra Pradesh despite certain constraints under which it functioned as a non-nationalised Bank. The Bank's survey team had conducted surveys to identify growth centres in six districts of the state where it had been assigned lead bank role jointly with the Indian Bank.

Mim Tea

Proceeds of tea sold by the Mim Tea Co Ltd, Calcutta, for the year ended December 31, 1970 have slightly increased

to Rs 13.22 lakhs from Rs 11.29 lakhs in the previous year. The net profit, after providing Rs 52,315 (Rs 54,817) for depreciation and Rs 31,000 (Rs 16,000) for taxation, amounted to Rs 36,541 (Rs 78,090). The dividend has been maintained at 7½ per cent. The crop of 877 quintals, as compared to 871 quintals in the previous year when there was a 3-week strike during the peak flushing period, was a disappointment and was entirely due to unfavourable weather conditions. The average price secured of Rs 15.24 per kg was Rs 2.01 per kg more than in 1969. But this was offset by the increase in excise duty of Re 1 per kilo and by wage increases. Capital expenditure amounted to Rs 65,281, of which Rs 62,169 was for the construction of 23 labour houses.

Preliminaries

Ahmedabad Kaiser-I-Hind

Total sales of the Ahmedabad Kaiser-I-Hind Mills Co Ltd, Ahmedabad, for the year ended December 31, 1970 rose to Rs 2.89 crores from Rs 2.63 crores in the previous year. The gross profit was Rs 19.26 lakhs (Rs 24.08 lakhs). Depreciation absorbed Rs 12.40 lakhs (Rs 9.57 lakhs) and taxation Rs 40,000 (Rs 1.40 lakhs). The amount set aside for the development rebate was Rs 2.70 lakhs (Rs 1.91 lakhs). The ordinary dividend has been maintained at

15 per cent. The capital expenditure incurred on machinery and building was Rs 14.66 lakhs (Rs 10.35 lakhs).

Permanent Magnets

Sales of Permanent Magnets Ltd, Baroda, for the year ended December 31, 1970 rose to Rs 131.07 lakhs from Rs 90.78 lakhs in the previous year. The sales during the three months ended March 31, 1971 have amounted to Rs 32.99 lakhs as against Rs 22.74 lakhs during the corresponding period in 1970. This includes sales of "Primus" burners and its parts amounting to Rs 1.40 lakhs (Rs 0.90 lakhs).

In the market

Aluminium Industries

THE Aluminium Industries Ltd (Registered Office: No 1 Ceramic Factory Road, Kundara, Kerala) is offering 65,000—8 per cent first mortgage registered debentures of Rs 100 each of the total value of Rs 65 lakhs at par for cash payable in full on application. The holders of the existing debentures of a total value of Rs 13 lakhs have the option to exchange their holdings for an equivalent face value of the debentures of the present issue. The entire issue has been underwritten. The subscription list for the issue will open on May 24 and close on June 4 or earlier at the discretion of the directors but not before June 2. Application must be for a minimum of five debentures or multiples thereof.

This debenture issue is being made for the purpose of meeting repayment obligations partly of medium-term loans and fixed deposits and for the repayment of the residue (Rs 13 lakhs) of an earlier debenture issue of Rs 45 lakhs, that falls due for amortisation in the year and also for augmenting the company's working funds.

Bihar Alloy Steels

BIHAR Alloy Steels Ltd (Registered Office: Hadley House, Old Hazaribagh Road, Ranchi, Bihar) is offering for public subscription at par 36.5 lakh ordinary shares of Rs 10 each of the total value of Rs 3.65 crores and one lakh 9.5 per cent redeemable cumulative preference shares of Rs 100 each of the total value of Rs 1 crore. The entire issue has been underwritten.

The subscription list will open on May 25 and close on May 28 or earlier at the discretion of the directors but not before May 27. Application for shares must be for a minimum of 50 shares or multiples thereof in the case of ordinary shares and five shares or multiples thereof in the case of preference shares.

The company was incorporated on September 27, 1965. The immediate object is to set up, in technical collaboration with Societe des Forges et Ateliers du Creusot of Paris, an alloy and special steels plant at Patratu near Ranchi, Bihar. The licensed capacity of the plant is 36,000 tonnes of constructional steels and 4,000 tonnes of alloy tool steels and high speed tool steels per annum.

when will we catch up with advanced countries?

This is precisely what the Laghu Udyog Annual 1970 tries to find out.

The 2nd Annual brought out by the MSSIDC. Its 440 pages packed with colour plates and articles by international experts, draw a comprehensive and comparative picture of Small-Scale Industry in Developed and Developing countries.

They present the tremendous progress made by the former; analyse the impediments in the way of the latter; and suggest practical lines of action to bridge the gap-fast!

A 'must' for
Small Industry
Corporations
Research Institutes,
Universities,
Government
Departments, Banks,
and also large
commercial and
industrial
organisations.

ANNUAL 1970**

EQUITIES

Easy tendency

BOMBAY, May 19

TAKE-over of the management of general insurance and the Company Affairs Minister, Mr Raghunath Reddy's statement denouncing stock exchange operations induced a feeling of nervousness in a market already held down by Budget uncertainties. Selling was fairly widespread and little support was forthcoming. Corporate reports continued to be excellent but these were lost on the market. The tendency was to sell off while the going was good and await developments.

Market men were sceptical of reasonable compensation in respect of insurance shares. The tendency here too was to sell off but transactions were virtually nil in view of the directive of the stock exchange that dealings had to be on a final payment basis. New India declined sharply from Rs 49.50 to Rs 36 at the time of writing. The decline was sharp even after allowing for a six-rupee dividend. The dividend, 40 per cent, was on enlarged capital following a bonus issue but market men wondered whether in view of nationalisation it would reach the hands of shareholders.

Earlier hopes that the Budget would be good from the stock market angle have yielded to a feeling of doubt and scepticism. Union Ministers have been airing socialist views on income and property while the situation created by the large-scale influx of refugees from West Bengal has added to the financial burden of the Government. In these circumstances, market men fear an addition in the tax on individuals as well as the corporate sector let alone any relief.

Corporate reports have been consistently good. National Rayon, in line with general expectations, proposes to raise its equity dividend for 1970 by four points to Rs 32 a share. The gross profit is up by 8 per cent and sales by 13 per cent. The news was greeted with a smart rise in the quotation on Thursday evening to Rs 531. At the time of writing the scrip was mentioned at Rs 520. Century was subdued almost throughout the week. Kohinoor also turned easy following precautionary liquidation in view of the proximity of dividend.

However, Bombay Oxygen has come out with satisfactory results and the directors have proposed a 2 per cent rise in the dividend at 10 per cent for 1970. New Shorrock, with a 31 per cent rise in its gross profit, proposes to raise the dividend from Rs 20 to Rs 22. Another member of the Mafatlal group, Nocil, has been making satisfactory progress and there has been an impressive rise in sales and gross profit during 1970. Ceat, in the first four months of the current year, has bettered its sales by 15 per cent compared to the corresponding period of last year. But the impressive reports from the corporate front failed to influence the market. Firstly, for quite some time now, the market has been used to this. Secondly, bear factors have been rather too powerful for the market to be sustained by past performance of companies.

Thin trading in spot cotton

BOMBAY, May 19

Generally steady to firm trading conditions prevailed in the spot cotton market during the past week. But the volume of business transacted remained thin. The limitation of deals was mainly due to the stringent monetary conditions during the week, as in previous weeks. Most of the mills tended to confine their buying to stray lots of one or two varieties, the prices of which, in consequence, showed modest gains while other varieties, neglected by the spinners, ruled steady.

During the week the sad plight of the farmers, following the sharp fall in prices all round during the last few weeks, was highlighted by the Cotton Development Council. It is the Council's contention that even now "the prevailing prices are not favourable to them and if we allow them to dip further, the farmers will be seriously hit." In this connection, the Chair-

man of the Council said that auctions of good lots of *kapas* had to be postponed recently in Hubli and Gadag as proper prices were not offered. Reports from Vidharbha and Khandesh indicate accumulation of *kapas* and the consequent plight of the farmers. The unsold stocks are estimated around 50,000 bales.

The following has been the price trend of some of the leading varieties:

(Rs per candy)

	For the week ended May 19	For the week ended May 12
Khandesh	2,100	2,100
Berar AK	1,800-2,100	2,100
Digvijay Dabhoi	2,900	2,881
Berar L. 147	2,400	2,400
Manavdar Co 2	2,600	2,550

In the import section also, as in indigenous cotton, little business materialised for want of adequate funds with the importers and the mills. Some of the mills who, in desperation, approached the Cotton Corporation of India with the suggestion that it should carry cotton on behalf of the mills were told that the CCI itself was not having enough funds.

On the export front, very little business of note was reported. Japanese inquiries tended to be indifferent as the buyers there seem to be biding their time in expectation of a possible devaluation of the Pakistani rupee when perhaps they could get equivalent cotton from Karachi at more attractive prices. Cotton registered for export as on May 8 amounted to 150,328 bales against 191,144 bales in the corresponding date last year.

YARNS IMPROVE

BOMBAY, May 19

An improvement in the prices of yarns characterised trading in the yarns market during the past week. Art silk yarns gained further ground during the week following slack arrivals from mills and improved demand from upcountry centres. Staple fibre yarns were quietly steady. Cotton yarns were neglected.

In the art silk yarns section, 150D National Rayon improved by 42 paise to Rs 17 37 120D spured by 86 paise to Rs 19 60. 150D Bright Century gathered 42 paise to Rs 17 37 120D strengthened by 68 paise to Rs 19 42. 100D Bright South India picked up 56 paise to Rs 22 18. Staple fibre yarns (2 x 34 nF) spot Kiran was fully maintained at last week's level of Rs 11 24.

JUTE GOODS PICK UP

CALCUTTA, May 18

After a bearish start, prices of both jute goods and raw jute picked up and excepting sacking all others closed higher on balance during the past week. Thus, B twills opened at Rs 265, and receded to Rs 260 75, but after recovering to Rs 262 50 closed at Rs 260 50. Hessian 40' 10" gave way from Rs 95 to Rs 94 but gained to Rs 97 50 to finish the week at Rs 96. As the week was coming to a close, sentiment was aided by the announcement of a bullish statistical position. For, although the April output of mills was higher at 94,800 tonnes as against 83,700 tonnes in the previous month—this position revealed that mills made a substantial headway towards realising the monthly target of one lakh tonnes—stock of goods with mills at the end of the last month was lower at 95,700 tonnes against 95,900 tonnes. The decline was only 200 tonnes, but satisfaction was derived inasmuch as the higher output did not inflate the mills' godowns.

The continued difficulty in getting export contracts registered in the Jute Commissioner's office caused concern, and if these were not settled immediately, a West African loader would be denied the booked cargo of 2,800 bales of gunnies. The news that burlap consumption in the US was higher at 49 million yards against 43 million yards in the earlier month and that March-end inventories disclosed a substantial erosion of 11 million yards to 135 million yards aided sentiment for a while, but the absence of any worthwhile interest shown on behalf of US buyers strengthened fears of the unlikelihood of exports in this year making up for the poor performance of 1970, when jute goods exports touched an all-time low of 539,000 tonnes. Carpet-backing cloth fully shared in this declining trend for the first time, and the export of this construction was only 138,000 tonnes as against 219,000 tonnes in 1969.

The announcement of higher production in April coupled with the programme of mills to raise production to one lakh tonnes a month reversed the declining trend in raw jute to help prices to close higher on balance. Thus, Assam bottoms rose from Rs 57 to Rs 59 50 per maund, northern bottoms from Rs 55 to Rs 57 50, and Daisee bottoms from Rs 58 50 to Rs 60 50. Sellers were reserved while mills showed interest. The rising trend encouraged the strong among the stockists who were keen buyers. Fibre arrivals were only 25,000 maunds per day as against 35,000 maunds a week ago.

GROUNDNUTS BEARISH

BOMBAY, May 19

Informed circles in the market consider the long-term outlook for groundnuts and groundnut oil as bearish. At around Rs 4,200 per ton

Do your car tyres measure up to

THE STRONG ONE

Firestone

This is the tyre that was built taking into account the most demanding driving requirements. A tyre that can ride smoothly on even rough road surfaces. Can withstand the heat of summer, and provides the safety you need on wet monsoon roads. Can take the wear and tear of frequent stopping and starting.

You get all this toughness in a Firestone tyre, because of exclusive Triple-Strength Construction—that's a special method of bonding the tread to the tyre, reinforcing the sidewalls and insulating the cords.

When you want more kilometres and greater safety for your money—you need 'The Strong One' from

Firestone

Sold throughout India—
See your Firestone dealer today.

oil finds little support. The main reason is that supplies of soyabean oil would be quite adequate in the months to come. It was said that two steamers together discharged only the other day about 20,000 tonnes of soya oil and that 35,000 tonnes would be shipped in May and 27,000 tonnes in June.

The Government of India is understood to have applied for 150,000 tonnes during the US fiscal year (July 1971-June 1972) and it is also believed that with the reported stoppage of supplies to Pakistan, a further quantity of 50,000 tonnes may become available to India any time between July and October.

Groundnut extractions were dull. UK was quoting £42.50 for May/June, £43.25 for July/August/September and £45.50 for October/December shipments. Japan was quoting 90 dollars on 1 p.p.m. aflatoxin basis. East European countries did not seem interested.

Linseeds and castor were steady having rallied from their low levels. But with overseas inquiries being few and far between the market is not likely to register noticeable gains. On the contrary the chances are more for a setback than a rise in prices. The supply position of mutton tallow has also been good and during the last few weeks India is reported to have received about 40,000 tonnes thereby inducing a bear trend in Mahuwa, rice bran oils and copra oils.

Comparative prices in rupees were:

Item	12-5-1971	19-5-1971

Linseed oil ..	34.25	35.00

NEW TEA IN DEMAND

CALCUTTA, May 18

For the second week in succession, there was much less general demand during the export sale held on May 10. An occurrence of excessive rain in the tea districts may hold up the commencement of shipment of consignment teas to London, but there are enough stocks in the UK. Although the resumption of shipment of tea from Bangladesh was believed to be taking place most of the gardens are in disarray, and Ceylon's prospects for meeting a good portion of West Pakistan's requirements of low-medium teas estimated at 30 million kg, are rated high.

At last week's sale, leaf offerings totalled 10,790 chests, of which only 1,344 chests were old season's teas. The internal sale had on offer 3,430 chests, including 1,310 chests of old teas. Demand, especially for the new teas, was good. Orthodox varieties were in keen demand. Plain CTCs were firm, and other varieties recorded a dearer tendency, but the soft liquorings were difficult of sale. In both the above sales, no quotations were given in view of inadequate quantity.

FOODGRAINS RISE

BOMBAY, May 18

In the local foodgrains market, the prices of foodgrains generally moved up. In cereals, the prices of wheat (Pissi) firmed up by Rs 2 to Rs 83-87 per quintal on account of heavy demand of about 5,000 bags per day. The daily arrivals of wheat were slightly below the requirement. The arrivals were mainly from Gujarat and Khandesh regions. The prices of bajra at Rs 68-75 per quintal showed a rather sharp rise of Rs 6 owing to the inadequate supplies. The upcountry advices of bajra were also ruling at a higher level. Maize at Rs 64 per quintal continued to rule more or less steady. The demand was moderate. In pulses, the prices of gram (Punjab) moved up nominally by a rupee to Rs 85-87 per quintal. The arrivals from producing centres were generally satisfactory.

SUGAR DROPS

BOMBAY, May 18

In the local sugar market, the prices of sugar (C-30), at 202-204 per quintal recorded a fall of about Rs 5 during the past week. This was mainly due to the increased pace of arrivals and a fall in demand at a higher level. Further,

the traders expect a larger sugar quota for the month, which will be announced in a couple of days. The State Government has already announced the allotment of more sugar for marriage purposes. The current prices of sugar are higher by about Rs 23 per quintal than the level a year ago. Closing stocks of sugar were estimated at 1,500 bags.

FOODGRAINS MIXED

HAPUR, May 17

Mixed trend prevailed in foodgrains during the past week. While prices of average wheat were subdued and were being lifted mainly by government agents around procurement prices at Rs 74 to Rs 76 per quintal, superior farm quality prices hardened due to good outside buying support gram, barley and bejhar prices improved due to poor arrivals in the face of good demand but prices of maize and bajra drifted lower as demand was almost dormant. Heavy duststorm accompanied by rains and hailstorm in some areas have very much adversely affected wheat crop still in threshing yards.

While wheat average is quoted around procurement prices at Rs 74 to Rs 76 per quintal, superior farm wheat is now being lifted at Rs 80 to Rs 81.50 a quintal mostly for upcountries including Bihar and Delhi. Red Mexican quality continued to be quoted at Rs 70 a quintal.

SUGAR MOVES BOTH WAYS

HAPUR, May 17

Sugar prices moved in a narrow range during the past week. Although the demand for summer season and marriage requirements was fairly brisk but the supply position was easy. Mills were reported hesitant sellers on reports that duty is likely to be enhanced in the new budget. Sugar production is coming to a close. The production by the end of March at 31.10 lakh tonnes was slightly higher from the corresponding last year's production at 30.83 lakh tonnes and closing stocks with factories on March 31 was about 31.86 lakh tonnes against 28.13 lakh tonnes on the same date of the last season. Sugar in wholesale was now quoted at Rs 179 to Rs 194 a quintal according to quality.

METALS HARDEN

CALCUTTA, May 18

A hardening trend in prices of non-ferrous scrap was again a feature of the base metal market in the past week. Although the import policy is growth-oriented, zinc and lead prices maintained the gains, since the addition of these two items to the list of items to be exclusively handled by the Minerals and Metals Trading Corporation, was depleting the readily available supplies in the market. Industrial demand for

scrap was good. Fears that the Union Finance Minister would not be kind to the non-ferrous metals processing industry continued to cause concern. However, having regard to the fact that crude copper is already attracting excise duty/customs duty at the high rate of Rs 1,500 per tonne, industry circles had renewed their representation to free semis from the levy of a second excise.

It was announced that the MMTC proposed to import Rs 300 lakhs worth of copper wire bars and brass ingots and Rs 30 lakhs worth of pig lead for shipment in May/June. Although in respect of copper scrap this report had an effect in as much as utensil copper scrap eased from Rs 1,360 per 100 kg to Rs 1,350, virgin lead hardened from Rs 455 to Rs 458.

BULLION STRONG

BOMBAY, May 19

A strong sentiment in the prices of bullion was the feature of trading in the local market during the week under review. Silver which ruled strong last week gained further ground during the week due to slack arrivals in the wake of increased offlike. Strong upcountry demand also pushed up prices. The recent seizure of silver meant for smuggling also aided the strong sentiment. Standard gold was in limelight during the week and touched high peaks. The paucity of

floating stocks was the main factor behind this rise in prices.

Silver (996 fineness) began 50 paise higher at Rs 586 and improved in the subsequent sessions. It moved still higher and closed the week at Rs 595.25 today, with a net gain of Rs 9.75 over the week. Silver weekly delivery was mentioned at between Rs 585 and Rs 590. The weekly average arrivals and offtake of silver aggregated 45 bars and 10 bars respectively.

Primary gold in unofficial trading commenced at last week's close to Rs 190 but improved in the latter sessions. It moved still higher in the subsequent sessions and wound up the week at Rs 196 today, the net gain over the week being Rs 6. Standard gold also commenced at last week's closing rate of Rs 203 and improved higher subsequently. It touched the highest level of Rs 209.50 today, before closing at that level of Rs 209.50. The net gain over the week was Rs 13.50. Sovereign was fully maintained at Rs 174.

MONEY COMFORTABLE

BOMBAY, May 19

Comfortable conditions prevailed in Bombay's short-term money market in the past week. The call rate ruled at 5-1/2 per cent. In Calcutta, renewals and fresh were both effected at 5 per

cent. In Madras, the call rate ruled at 5 1/2 per cent.

During the week ended May 7, foreign exchange reserves of the Reserve Bank of India rose by Rs 4 crores to Rs 373.19 crores. While foreign securities increased by Rs 10 crores to Rs 303.42 crores, balances held abroad came down by Rs 6 crores to Rs 69.77 crores. Notes in circulation expanded by Rs 70.21 crores to Rs 4,401.16 crores. Deposits of scheduled commercial banks with the Reserve Bank of India declined to Rs 192.71 crores from Rs 215.32 crores.

Week ended May 7 marked a rise of Rs 27.41 crores at Rs 4,686.44 crores in the total credit made available by scheduled commercial banks. Aggregate deposits rose to Rs 5,992.28 crores from Rs 5,971.84 crores. Borrowings from Reserve Bank were higher at Rs 205.45 crores (Rs 190.68 crores).

N.B. (1) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member.

8 p.m. and all is well!

CONTENTED father sits reading the magazine beside his favourite reading lamp, house-proud mother gets ready the dinner, cooked just right, over the electric range, the children listen happily to music over the radio. This is the everyday wonder of electricity. More than half a century has passed since Jamsetji Tata's great vision was realised... the vision of Bombay a smokeless city, powered by electricity.

Today, Tata's hydro and thermal power stations together generate more than six per cent of the country's entire electric power bringing it to the people of Bombay and its surrounding area.

V.I.P.'S stop here so very often !

Because we care for their moods, and hunches, and whims.
And we know they like red carpet - which is exactly
what they get.

And, of course, they go for that elusive something called
atmosphere - which is everywhere in Rajdoot.

And, before they are gone, we like them to taste the
wonderful Indian and Western cuisines, the variety
programmes in the ELDORADO and STARLIT Restaurants
or an open air session at RAMBLE Connaught Place.

We have a telephone in each room, and its own
thermostat control.

What's more, we don't treat them as come-and-go
guys; but like real house guests!

our identity gap

The Price of—Diversification

A multi-product organisation is rarely known for all it does. To those manufacturing electrical equipment, we are known as pioneers in the mass production of electrical stampings. The automotive and machine tool industries have come to regard us as leading producers of alloy and special steels and forgings. In metal fabrication and assembly, we are instantly associated with fasteners. Actually, we are all these and more. Making of alloy and special steels forms the first link of a chain of diverse activities. At GKW steel is melted, rolled, drawn and turned into rods, bright bars and sections; forged into automotive components and fasteners. Silicon steel is pressed to form the core of electric motors and transformers. In other words we are leaders in the supply of precision components to many vital industries. We would like people to know us for what we are—diversified.

AIR-INDIA
the airline that loves you

*Subject to Government approval

7 years old and already expanding

Soon we will expand our range to include upto 150 mm diameter tubes. Increase our capacity substantially. And diversify into the manufacture of other products. All this in just seven years!

Gujarat Steel Tubes are in demand in 35 international markets. Earn over a crore of rupees in foreign exchange. Account for 10 per cent of the country's total export of steel tubes and pipes. We have increased our exports by 220 per cent since 1966—twice winning Engineering Export Promotion Council awards.

We started with advantages—the enthusiasm and enterprise of youth. Sound technical know-how. An uncompromising dedication to quality. All of which enabled us to declare a dividend in our first year of production.

Since 1966 we have doubled our sales. And added the most modern welding technique—TUFFWELD—high frequency induction welding. Today we are one of 73 export houses recognised by the Government of India.

We look forward to the future with confidence. A confidence born of achievement. The trust of our dealers. The satisfaction of customers. Above all, the unsurpassable quality of our products.

GUJARAT STEEL TUBES LIMITED,
Bank of India Bldg., Bhadra, Ahmedabad 1

OUR PILOTS GET YOU AIRBORNE, OUR PURSERS TAKE YOU TO SUBLIME HEIGHTS.

When the takeoff roar settles to a murmuring hum, you'll hear different sounds. The tinkle of silver against china. Wine pouring into crystal. The soft whir of the dessert cart as it moves slowly down the aisle.

And the gentle accent of our purser suggesting yet another comfort that makes you feel so luxurious in the air.

This man that takes you to sublime heights was trained in the tradition of a great European hotel.

Specifically, he's in charge of all passenger services aboard the aircraft. From lighting and heating arrangements to the more complicated pleasures of food and wine.

You might think that a big American airline would be satisfied with its achievement of technological excellence.

But TWA went a step further. We combined European graciousness.

And created a maitre de plane.

An ideological budget

IT must be conceded that Mr Y. B. Chavan's first Budget has taken several decisive steps towards redeeming the pledges that the Congress (R) gave to the people during the mid-term poll. Mrs Gandhi's party which received a massive mandate to implement socialist policies to eradicate unemployment and poverty is quite justified in expecting from its Finance Minister a budget in tune with its public pronouncements. Mr Chavan has fully responded to his party's expectations. In doing so he has presented an ideological budget which almost exclusively relies on the public sector. Having said that he was within his rights to implement his party's manifesto, it would be necessary to inquire whether so overwhelming a reliance on so undependable an instrument such as the public sector would serve the cause of growth with social justice.

Mr Chavan himself in his budget speech has confessed that "administrative and procedural delays which hold back progress of these [public] enterprises are... matters of considerable concern." He has also referred to the inability of the public sector to generate reasonable surpluses and to evolve normal industrial relations. So, according to Mr Chavan's budget speech, our public sector is bureaucratic, inefficient in its performance and bedevilled with labour problems. If the Finance Minister's diagnosis about the health of the public sector is accepted, the question arises as

to whether the 1971-72 budget should have burdened this sector with the responsibility of an engine of rapid growth.

No one would say that the private sector is a paragon of efficiency. It so happens that, despite a sizable enlargement of the public sector, the private sector still covers nearly 85 per cent of our economic activity. And yet Mr Chavan has proposed a number of measures which would indicate that New Delhi couldn't care less about the private sector. Purely from the economic point of view such a policy decision is likely to slacken the pace of growth of the economy as a whole. Unconcern for the private sector is particularly pronounced in the sphere of the corporate sector. The increase in the rate of surtax on company profits, withdrawal of development rebate on ships acquired or machinery or plant installed after May 31, 1974, curtailment in tax exemption, shortening of the list of priority industries these are measures that would hamper the growth of the corporate private sector.

There cannot be any quarrel with the broad principles initiated by the Finance Minister that should govern taxation proposals. Simplification and rationalisation of the tax structure, minimising the opportunities for evasion, fair distribution of the burdens of taxation and maintenance of the general level of prices of essential goods are laudable objectives in themselves. If, however, taxation has to serve the larger interests of the economy and the well-

being of the people, some thought has to be given to the cost the community has to pay in order to secure the benefits. If ideological preoccupations result in too heavy a price to be paid for securing normal justice the essence of socialism might be lost. Even a preliminary analysis of the taxation proposals and their impact on the growth of the economy would indicate that in conforming to certain abstract principles practical considerations have not been given due weight.

The budget places the overall tax revenues at Rs 3,403 crores at the existing level of taxation. Fresh proposals for Rs 220 crores would leave the Central tax revenues with Rs 2,730 crores after the States' share of tax revenue is deducted. Non-tax revenues account for another Rs 1,009 crores. Thus the total revenue would be of the order of Rs 3,739 crores. The revenue expenditure would be Rs 3,587 crores, thus leaving a surplus of Rs 152 crores in the revenue budget. On the capital side receipts are put at Rs 2,024 crores and capital disbursements at Rs 2,396 crores, leaving a deficit of Rs 372 crores. Thus, the overall deficit would be Rs 220 crores if the Finance Minister's proposals for additional taxation of Rs 220 crores go through. Mr Chavan has decided to leave this deficit uncovered.

Notable proposals for direct taxation include the increase in the rate of surcharge from 10 per cent to 15 per cent on individuals and Hindu undivided families provided the total income exceeds Rs 15,000 per annum. The incidence of tax on long-term capital gains is increased both on individuals as well as companies. Taxation on slabs of net wealth above Rs 15 lakhs has been raised uniformly to 8 per cent. The first Rs 1 lakh of wealth in the case of all individual assesseees and the first Rs 2 lakhs for Hindu undivided families will be included in net wealth for purposes of taxation. If, however, the net wealth does not exceed Rs 1 lakh in the case of individuals and Rs 2 lakhs in the case of Hindu undivided families, no wealth tax will be levied. The exemption from wealth tax currently available for household or personal jewellery and for shares forming part of initial capital issues is withdrawn and the existing provision in the wealth tax excluding from aggregation the assets transferred by an individual to the spouse or minor children is being done away with. This together with the structural changes affecting the incidence of company taxation already mentioned are expected to yield Rs 27 crores for 1971-72 and Rs 57 crores in a full year after taking into account some concessions proposed. As regards indirect taxation, import duty will now be levied on all items of machinery at the rate of 30 per cent. Certain basic raw materials and non-ferrous metals will be liable to duty at the rate of 40 per cent. Automobile components and dry fruits will now attract an import duty of 100 per cent. The result of all the proposals relating to import duties would be an accrual of Rs 54 crores to the public exchequer during the remaining part of the current financial year. As regards excise duties, medium A and medium B varieties of cotton textiles and superfine and fine cloth will now have to pay additional excise duties. Motor spirit, solvents and some other minor lubricants have been taxed more heavily with a view to conserving scarce foreign exchange. Glassware, tableware and china will attract a uniform duty of 20 per cent. Another item of consumption taxed is toilet soap. Luxury items such as coolers, vacuum flasks, foam sponge, shampoos, lipsticks, pressure cookers and even playing cards have been brought into the net of excise duties. Most notable in the list, however, is agricultural tractor which will be charged a duty of 10 per cent *ad valorem*. The addition to excise duties would be roughly of the order of Rs 89 crores for the Centre and Rs 43 crores for the States for the rest of the current financial year.

As for the expenditure side, special mention must be made of a step-up in the Plan outlay. While presenting his interim budget, the Finance Minister had tentatively placed the current fiscal year's Plan outlay for the Central sector at Rs 1,195 crores, and had hastened to reassure the nation that while presenting the final Budget

he would make every possible effort to increase the allocation. This promise he has now fulfilled by raising the allocation for this purpose by Rs 155 crores to Rs 1,350 crores. In fact, the step-up is larger than what appears at first sight. For the figure of Rs 1,350 crores represents an increase of Rs 300 crores over the actual Plan expenditure under this head in the previous year. This step-up is certainly most welcome. Nevertheless, in this context one cannot but recall the revelation contained in the *Economic Survey 1970-71* a shortfall in the aggregate Plan outlay of the Centre and the States together of the order of Rs 100 crores in 1969-70 and of the same order in 1970-71. Such shortfalls have become so common in this country that one cannot be quite sure as to how far the increase in the Plan outlay budgeted by the Finance Minister would be realised.

Mr Chavan's basic strategy of managing the financial affairs of the country is the same which has been followed during the last 15 years or so. The central feature of Indian financial policy so far has been the heavy reliance on deficit financing. The most disturbing aspect of Mr Chavan's Budget is that even at the very outset it assumes deficit financing of the order of Rs 220 crores. From our past experience we know that such a heavy dose of deficit financing ultimately leads to inflationary price increase.

Another familiar feature of inflation is that it upsets all budgetary calculations. Once budgetary deficits push up prices, the increase in prices leads to unanticipated increases in Government expenditure which, ultimately, tend to enlarge Government deficits. In 1970-71 the Central Government was compelled to grant interim relief to its employees. The single decision added Rs 107 crores to the Government wage bill. It is not sufficiently realised how inflation tends to increase non-developmental expenditure. But it should be easy to see that once deficit financing raises prices it inevitably increases the cost of all the goods and services purchased by the Government.

Once this trend starts, the Government is compelled to cut down its expenditure in some direction or other. As expenditure on non-developmental heads increases there has to be a corresponding cut under developmental heads. Looking up the official data for 1970-71 we find that, due to increases in prices and some related factors, the non-developmental expenditure turned out to be Rs 145 crores more than originally budgeted. No wonder, the developmental expenditure had also to be cut down by Rs 137 crores during that year. It turns out that while Finance Minister after Finance Minister has resorted to excessive deficit financing in the hope that it would enable him to raise the Plan outlay in real terms, most of this effort has been frustrated by the inevitable price increase, with the result that even a bold fiscal effort does not yield the desired results. Thus, in 1970-71 the tax revenues and non-tax revenues of the Central Government were significantly higher than anticipated in the Budget, and yet developmental expenditure turned out to be lower than budgeted. We are afraid that the lessons of the past have not still been learned by the Central Government and the traditional fiscal policy has been continued.

The task of a Finance Minister in a developing democratic society is never enviable. Mr Chavan's responsibility has become more challenging in the context of some unforeseen developments such as the influx of about three million refugees from East Bengal. He has provided Rs 60 crores for the relief of these unfortunate neighbours of ours. This amount may prove to be insufficient if the international community fails to recognise its basic responsibilities. The behaviour of the monsoon is another uncertain factor. In view of all this the Finance Ministry should keep its powder dry for a supplementary budget if the vagaries of nature or the plight of Bangla Desh so warrants. The country will have to accept that burden if need be. But this is all the more reason why the Finance Minister ought not to have opted for such a heavy reliance on ideological dictates. This is the time when all the possible productive strength of the nation is to be alerted and put to maximum use. This is certainly not the time to change the horses.

THE current year is the centenary year of the emergence of modern Japan. Following the restoration of the Meiji Dynasty, the feudal system (Hoken Seido) was abolished in 1871 which saw the beginning of modernisation of Japan. Broadly speaking, the current year is also the centenary year of Indo-Japanese trade ties. India's trade relations with modern Japan commenced in the early seventies of the 19th century.

The basic commodity composition of the trade between the two countries was soon established and it remained unaltered for nearly 70 years until the entry of Japan into the Second World War in 1941. Throughout this period, Indo-Japanese trade centred on Indian raw cotton in exchange for Japanese textiles and cheap consumer goods. With the exception of a few years, throughout this period of 70 years or so, India continued to enjoy favourable trade balance with Japan. After the interregnum of the war and its aftermath began the second phase of Indo-Japanese economic ties. This second phase, which could be broadly described as between 1951 and 1970, saw structural changes in Indo-Japanese trade. In contrast to the first phase, barring a few early years, the second phase saw a chronic deficit in India's trade with Japan. Since 1966-67, however, India has been enjoying increasing surpluses. Planning in India and the far-reaching technological changes in Japan's economy brought about a significant transformation in the commodity composition of trade between the two countries during the post-war period. Instead of Japanese textiles and cheap consumer goods, India now imports mainly machinery, iron and steel, chemicals and fertilisers. These items account for about four-fifths of our total imports from Japan. Similarly, iron ore, iron and steel scrap have emerged as the principal items of Indian exports to Japan. Iron ore accounts for nearly half of our total exports to Japan.

Exports of mineral ores have generated a momentum in our trade with Japan, the like of which was not witnessed any time during our relations of 100 years or so. In 1966-67 our exports to Japan rose by 20 per cent to Rs 108 crores (US \$144 million). In the following year, the growth of exports was as high as 26 per cent and in 1968-69 it again rose by 16 per cent. In 1969-70 this momentum was maintained and our exports to Japan rose by a little over 13 per cent and touched an all-time peak of Rs 180 crores (US \$240 million). As a result of these successive leaps, Japan became our second important export market after the US.

While our exports to Japan registered a phenomenal growth during these four years or so, our imports from Japan nearly halved to Rs 66 crores (US \$88 million) in 1969-70 from Rs 125 crores (US \$167 million) in 1965-66. Between the period 1951-52 and 1969-70 our imports from Japan rose by about 66 per cent while our exports registered an amazing seven-fold rise. During my recent visit to Japan, officials of Japan's powerful Ministry of International Trade and Industry (MITI) repeatedly drew my attention to the large deficit that Japan was having with India. My reply was: "This is a temporary phenomenon created by the sudden and massive

imports of iron ore from India by you. This deficit would be wiped out if we can buy just a few ships from you. The commodity composition of our trade must undergo another change so that Indo-Japanese trade could find a new equilibrium at a much higher plateau."

Because of certain crucial developments in Japan and India it has become inevitable that a new phase in Indo-Japanese relations commences in the beginning of the seventies itself. This phase would not cover aid despite the fact that India has so far received assistance totalling \$575 million from Japan. India topped the list of the nations which received yen aid. But the trend is likely to shift from aid to joint ventures and more trade. In fact, the third phase might be a phase of increased trade through numerous joint ventures. There are objective conditions for such a development.

Japanese planners and businessmen have started thinking about the impact of the growing labour shortage and rising industrial wages in Japan. Industrial wages are rising at the annual rate of about 14 per cent and it is presumed that they would almost double in five years. Japanese wages are said to be three or four times higher than in neighbouring Asian countries. So Government and business have come to the conclusion that their labour-intensive industries would no longer have the advantage they used to have when Japanese labour was both abundant and cheap. It is interesting to note that in 1966 Japan became a net importer of silk and in the following year a net importer of cotton yarn. Her textile exports are declining by 10 per cent every year and other developing countries have now acquired a competitive edge over her in the matter of toys, artificial flowers, low-cost transistor radios, dry cells and rubber products. It is this transformation of international markets which has prompted Japanese leaders to plot the course of their economy for the coming three decades. (Japanese private sector is quite fond of perspective planning. It always thinks ahead for the coming two or three decades.)

In which direction will Japan's economic might be directed? Japan seems to have decided to specialise in highly sophisticated and complex industries during the coming decades. One of Japan's foremost economists, Mr Saburo Okita, has indicated in his new book, *Essays in Japan and Asia*, the coming change in the pattern of Japanese industrial output. While discussing the future of manufacturing industries, Mr Okita has observed: "Labour-intensive light industries will rapidly lose their international competitiveness due to rising wages and will shift from Japan to developing nations. Examples are textile and sundry goods industries. The probability is considerable that camera, transistor radio and even shipbuilding industries may follow suit. Steel and automobiles, which are the principal support for the

INDIA AND JAPAN

The beginning of a third phase

By Vadilal Dagli

present high economic growth rate, may lose a momentum of growth and decrease their shares in the net national product due to a slowdown of demand and increasing difficulties in locating industrial sites for the necessity of preventing public nuisance. Industries in which a big progress is envisaged for the next thirty years might include electronics industries such as computers and communication apparatus and petrochemical industries" (Page 67.)

Japanese industrial giants have already started making structural adjustments in their industrial activities with a view to moving in this direction. The visit of the high-power Mitsubishi mission to India last month should be viewed in the context of this imperceptible transformation of the Japanese economic scene. It is noteworthy that the Mitsubishi mission finalised on the spot negotiations for setting up a joint venture to manufacture ossein which is used for producing films. Three points may be made about this joint venture. First, the entire output of the factory will be exported to Japan. Second, the Indian party will hold about 60 per cent of the shares and Mitsubishi about 40 per cent. And third, the Indian partner of the giant Mitsubishi is a medium-size company. I believe that Mitsubishi's decision to set up a joint venture of this nature marks the third and perhaps the most exciting phase in Indo-Japanese economic relations.

The terms and conditions of this joint venture are likely to be repeated in numerous cases in the coming decade. Political stability in India, relatively cheap skilled labour, the rapid growth of engineering industry and the facility of a modern infrastructure and administration have prompted Japanese industry to explore the possibilities of making India a base for manufacturing not only spares and components for their complex industry but also for producing consumer and engineering goods for exporting to third countries. If the Japanese wind blows over our economic landscape it would be a rejuvenating influence for us in every sense of the term. An Asian country without any natural resource, which could convert herself into an economic giant by sheer strength of discipline, ingenuity and incredible hard work, could always be a good influence to a tradition-bound and slow-moving country such as ours. If Japanese business has grasped the vast potentialities of Indo-Japanese joint ventures, why should the Indian business community adopt a policy of drift? The embassies no doubt have a role to play. But how is it that our industrial houses have offices in London, Zurich and New York, and not in Tokyo? Can they afford to leave the second biggest market for our goods to the mercy of officials? The future of Indo-Japanese co-operation may lie in the awareness of the private sector in India and Japan, and not in the doings of embassies in Delhi and Tokyo. □

MARKET GOSSIP

Budget: Stick, no carrots

MARKET circles are surprised that the Union Finance Minister has shown complete unconcern for the private sector which has been assigned an important role in our Plan programmes. "Almost all carrots are withdrawn and what is now left is the stick", was the typical market comment.

At a time when industrial growth has been stagnant for the past several months, to announce measures which would create an air of despondency among entrepreneurs, would hardly further the cause of industrial growth. The proposal to include in net wealth, for purposes of taxation, the first one lakh of rupees of wealth in case of all individual assesseees, will create considerable hardship for small-scale entrepreneurs whose cause Mrs Gandhi's Government claims to champion. The shortening of the priority list for industry also indicates that the Finance Minister is interested more in the socialist pose than in real growth. The stock markets in Bombay, Calcutta, Madras and Delhi, which initially reacted rather favourably to the Budget, developed nervousness, when the ideological implications of the Budget became clear. The prices, later, slipped back over a wide front.

★

Bombay: Industry and trade circles have termed the taxation proposals as "harsh". It is felt that from the long-term point of view the Budget cannot be deemed to be growth-oriented. Measures such as the stepping up of the rates of capital gains, higher surtax on profits of companies, narrowing down of the list of priority industries and the decision to discontinue the development rebate after 1974 would, it is argued, seriously affect the investment climate.

Marketmen had expected certain positive measures to stimulate growth, and the emphasis in the *Economic Survey* on the mobilisation of resources through domestic savings had inspired the hope that the actual saver would be rewarded. Marketmen feel that the Budget has let them down. In fact, the grouse appears to be that even the kind of incentives which were provided in the earlier budgets were absent this time. Thus the exemption from wealth tax currently available for household jewellery and shares forming initial capital issues has been withdrawn. Government spokesmen in the past had sought to discourage investment in jewellery on the plea that the savings should in fact be diverted to industries. But by putting jewellery and shares on the same footing for the purposes of wealth tax the Government, it is complained, was being unfair to the industry.

The reduction from 8 per cent to 5 per cent of the special tax exemption enjoyed by priority industries has given cause for worry to several industries. It was also felt rather unfortunate that the industries such as aluminium, motor trucks and buses,

cement and refractories, soda ash, petrochemicals and automobile ancillaries had been excluded from the priority list. In the context of the statement in the *Economic Survey* that the aluminium and soda ash industries were working to full capacity and that their expansion was urgently called for, the denial of fiscal concessions to them now, it is argued, will hamper the chances of their growth.

★

COMMODITY-WISE the Budget proposals were an odd mixture, some hitting the common man and others the rich. Textiles attracted additional excise as was expected. Industry circles can have no quarrel with the Finance Minister on this score. But the rise in the levy on coarse varieties as well as medium "A" and "B" cloth would naturally hit a large majority of the cloth consumers.

Apparently in order not to rub the Government on the wrong side, the representative organisation has refrained from coming out with its reaction, at any rate immediately after the Budget. Textile industry circles are obviously taking a cautious stand in view of the prevailing political situation.

Marketwise, too, there was very little of the customary excitement associated with a Union Budget. Deals were few and far between in most commodities thanks to the continuance of the tight money conditions. The growing tension across the border also acted as a deterrent. The changes in the excise levy in cotton textiles were not reflected in the price situation obtaining at the wholesale level in the Moolji Jetha market. The general pre-Budget rush for some commodities was also conspicuous by its absence.

Before the Budget was out there was considerable speculative activity in the art silk yarn market. But most of the traders were rudely shaken at the absence of any harsh levy on art silk yarn and prices, which had gone up earlier, declined. The 100 per cent rise in the duty on staple fibre was an exception. Inasmuch as staple fibre, among all the synthetic fibres, is the one consumed mostly by small-scale weavers for the manufacture of the poor man's synthetic apparel, the levy has shocked the staple fibre industry. It is felt that the ordinary consumer will be called upon to pay double the price, a factor which will definitely convert staple fibre also into a luxury item, which at present it is not. Whereas staple fibre prices tended to move up after the Budget, viscose and nylon yarn, the prices of which had risen before the Budget, suffered a decline in the post-Budget session.

Garment manufacturers have also been taken by surprise by the Finance Minister's decision to bring them under the excise purview. The significant role that garments have been playing of late in boosting India's textile exports called for

appropriate recognition in the form of incentives. As against this, the better organised units, which have established a reputation for their brands, have been singled out for harsh treatment. How this will help augment the production of garments for the masses—which is the objective of the Government—is not understood. On the other hand, one could visualise a general deterioration in the standards of production following this uncalled-for excise.

In non-ferrous metals, the fear of a rise in import duties occasioned a price rise in copper wire, zinc, lead and tin. The Budget actually provided for a duty at the uniform rate of 40 per cent. The bullion market ruled subdued after an initial mark-up in the price of standard gold on fears of an excise duty.

★

Calcutta: The stock exchange typified the reaction of Calcutta's industrial and commercial circles by its initial favourable reaction and then a feeling of bewilderment and uncertainty as the whole gamut of Mr Chavan's taxation proposals gradually unfolded itself. The tax net has been thrown very far and wide. Industrial circles are emphatic that the Budget will be inflationary because of the enhanced excise and import duties. From eastern India's point of view there is little consolation in the fact that the tea and jute industries have not been taxed, but in the case of these industries, particularly tea, some tax relief had been expected. But Mr Chavan has turned a deaf ear to their appeal. Nor is there any hint that investments in West Bengal will be encouraged. On the other hand, it is pointed out that two measures could affect investment prospects adversely. First of all, the advance notice to stop development rebate for industrial plant and machinery newly installed after May 31, 1974, is felt to be discouraging, for the hope that this is being done to accelerate investment in the Fourth Plan is misplaced. Secondly, removing industries like cement refractories and the automobile ancillaries from priority list are seen to affect many units here.

★

Madras: Reactions to the Central Budget are mixed. Stock exchange circles here feel that share prices are bound to settle down after the initial reaction caused by the absence of incentives for enterprise or relief for investors. This, it is said, is not likely to help in capital formation. The inflationary impact of the Budget is considered plain enough because of the rise in indirect taxes over a wide field.

★

New Delhi: Business circles here feel that the new taxation proposals would have an adverse impact on savings in the household sector and the corporate sector both immediately and in the long run. Nevertheless, on the whole the market has received the Budget favourably. It had expected a much harsher Budget. Market circles now feel they have been let off somewhat leniently. Following the excise duties, proportionate price increases are expected.

BUDGET SUMMARY

A step-up in Plan outlay

New Delhi, May 28

PRESENTING the General Budget for 1971-72 to Parliament today, the Finance Minister, Mr Y. B. Chavan, disclosed that the overall budgetary gap, taking revenue and capital accounts together, would now be Rs 397 crores.

Referring to his commitment to step up the Plan outlay which he had made when he presented the interim budget last March, Mr Chavan stated that it was proposed to increase the outlay under the Central Plan by Rs 155 crores—from Rs 1,195 crores envisaged in the interim budget to Rs 1,350 crores. In terms of actual expenditure, this would represent an increase of more than Rs 300 crores over the previous year.

Speaking of the tragedy in East Bengal as one of the darkest episodes in human history, he said he had tentatively made a provision of Rs 60 crores for relief to evacuees. Rs 20 crores were expected to accrue to the Budget on revenue account by way of external assistance. Mr Chavan said it was the Government's hope and endeavour that all these unfortunate people would be able soon to return to their homes and hearths in dignity and honour. 'Meanwhile we regard it as the responsibility of the international community to share with us the burden involved.' Mr Chavan expressed the hope that substantial supplies from abroad would be available for providing relief.

Reaffirming the Government's resolve to create more employment opportunities, Mr Chavan disclosed that a further sum of Rs 25 crores was being set aside for schemes, specially designed to suit the educated unemployed, including engineers and technicians. This would be in addition to the provision of Rs 50 crores made in the interim budget for the crash programme for rural employment.

Giving the revised estimates for 1970-71 Mr Chavan said that according to the latest indications, the overall deficit would be Rs 270 crores—Rs 40 crores more than the interim budget estimates. The Finance Minister recalled the concern he had then expressed about the State Governments' overdrafts with the Reserve Bank of India. This tendency, he said, had shown no signs of abatement, and at the end of last March as many as 14 States had overdrafts aggregating to Rs 260 crores. This was despite the increased special assistance of Rs 195 crores to the States during 1970-71. Mr Chavan appealed to the States to maximise their efforts to raise additional resources and to enforce the strictest discipline on the growth of non-Plan expenditure.

The major sectors in which the Central Plan outlay is to be significantly raised are Agriculture Rs 32 crores; food procurement Rs 18 crores; shipping Rs 16 crores; ports Rs 13 crores; roads Rs 10 crores; mines and metals Rs 9 crores; health and family planning Rs 12 crores; and post and telegraphs Rs 11 crores.

The interim budget had already provided Rs 785 crores towards Central assist-

ance for the Plans of the States and the Union Territories an increase of Rs 74 crores over the Budget for 1970-71. The provision for a nutrition programme for children is being raised from Rs 4 crores to Rs 10 crores and is being included in the Plan. Mr Chavan also disclosed that 25 per cent of fresh admissions to public schools would be reserved for meritorious candidates who would be given Government scholarships.

Summing up the overall budgetary picture for 1971-72, Mr Chavan said that on revenue account receipts are likely to be Rs 3,562 crores and expenditure Rs 3,587 crores. This would leave a deficit of Rs 25 crores as against the interim budget estimate of a revenue surplus of Rs 114 crores.

On capital account total receipts are now placed at Rs 2,024 crores as against an expenditure of Rs 2,396 crores—a deficit of Rs 372 crores, Rs 18 crores more than the one shown in the interim budget.

The overall budgetary gap would be Rs 397 crores after taking into account the revenue expected from the changes recently announced in railway fares and freight and the changes proposed in the post and telegraph tariff.

Mr Chavan referred to the recent general election and said that the Government had received from the people a massive mandate for socialism and for rapid economic growth matched by increased social justice. A good deal had already been done to initiate measures for creating gainful work for the urban unemployed as well as the rural under-employed and the Government intended to do much more in future. Faster growth and greater social justice could be achieved only in an en-

vironment of relative price stability. This would require continuous vigilance.

It was also necessary to make a fresh appraisal of the Plan as a whole and the emphasis had to be on measures which would speed up the process of implementation of projects, foster the expansion of employment opportunities, and reduce disparities. Efficient performance on the part of public sector enterprises was crucial for the Government's overall development effort. Increasing attention was being devoted to raising their general efficiency and jacking administrative and procedural delays.

Referring to the development of backward areas, Mr Chavan said that schemes for their growth should get their due share.

Budget at a glance

(Rs crores)

	1960-70 (Actuals)	1970-71		1971-72 (B.E.)
		(B.E.)	(R.E.)	
Revenue Account				
Receipts	3,067.08	3,060.00	3,301.43	3,562.81
Expenditure	2,941.86	3,162.18	3,193.29	3,587.86
Surplus (+) or deficit (-)	+125.17	+137.81	+108.14	-24.55
Capital Account				
Receipts	1,935.97	1,823.71	2,104.97	2,023.54
Expenditure	2,100.07	2,188.46	2,632.50	2,395.80
Surplus (+) or deficit (-)	-170.70	-364.75	-427.71	-372.85
Overall surplus (+) or deficit (-)				-306.90
Effect of budget proposals				177.87
Total uncovered deficit	-46.53	-226.94	-229.67	-210.53

in the general allotment of internal and external resources under the Plan. The special provisions made last year for improvement of slums were being maintained. If the State Governments or municipal bodies initiated viable schemes to improve the living conditions for slum dwellers, the Central Government would consider the question of financial accommodation.

Taxation proposals

New Delhi, May 28

THE Finance Minister, Mr Y. B. Chavan, today introduced taxation proposals to yield Rs 177 crores in 1971-72. This will result in the overall budgetary gap of Rs 397 crores being scaled down to Rs 220 crores.

Direct taxes

In the field of personal income tax, the rate of surcharge in the case of individuals as well as Hindu undivided families is being increased from 10 per cent to 15 per cent provided the total income exceeds Rs 15,000 per annum. In a full year, the impact of the proposal will be to provide an additional Rs 20 crores to the exchequer. For 1971-72 the revenue yield is expected to be around Rs 12 crores.

The deduction from long-term capital gains allowed in computing the taxable income of non-corporate assesseees is being reduced from 45 per cent to 35 per cent where such gains relate to lands and buildings, and from 65 per cent to 50 per cent in respect of other capital gains.

The incidence of tax on long-term capital gains will be increased in the case of companies as well. This increase is being brought about by raising the rates of tax from 40 per cent to 45 per cent in respect of gains relating to lands and buildings and from 30 per cent to 35 per cent in respect of other gains.

Taxation on slabs of net wealth above Rs 15 lakhs will now attract a uniform rate of tax of 8 per cent. Also for purposes of taxation, the first Rs 1 lakh of wealth in the case of all individual assesseees and the first Rs 2 lakhs for Hindu undivided families will be included in net wealth. Exemption in respect of approved financial investments, owner-occupied house and agricultural assets will continue.

The exemption from wealth tax currently available for household jewellery and for shares forming part of initial capital issues is being withdrawn. In the case of conveyance, the exemption will now be limited to Rs 25,000 in the aggregate. The

(Continued on page 1026)

SURVEY

THE AILING RAILWAYS

THE financial position of the Railways continues to be a source of unease. Since 1964-65 the Railways have not been able to meet fully the liability for development fund works, and from 1966-67 it has been defaulting on the full annual dividend liability to the general exchequer. At the end of 1971-72 the revenue reserve fund is expected to owe to the general revenues in all Rs 38.83 crores. These realities are to be viewed in the context of the emphasis by the Administrative Reforms Commission (ARC) on the need for the Railways, being the largest public sector undertaking, functioning on sound business and commercial principles. In this connection the ARC had made 49 recommendations in its report on Railways. Mr K. Hanumanthaiya, Union Railway Minister (who, incidentally, had headed the ARC), however, stated in his Railway Budget speech that so far only six recommendations had been accepted fully or with minor modifications. The other recommendations are still under various stages of examination. This leisurely approach to such a vital issue needs to be revised. The Railways have remained far too long in the red. The nation cannot afford to allow this situation to persist. Something needs to be done, and done as early as possible.

According to the Railway Minister, the financial performance of the Railways is unimpressive particularly because of the increased incidents of thefts and labour unrest in the Eastern and South-Eastern Railways, social burdens such as unremunerative branch lines, deficit on passenger traffic and especially on the suburban lines in the three cities of Bombay, Calcutta and Madras. The other drag is the loss on low-rated commodities such as coal, ores, stone, cement, fertilisers, foodgrains and salt. The third factor listed by the Minister is that the annual increases in the costs of operation are creating a big lag between the income and the working expenses. It has been estimated that operational costs have gone up by 72 per cent since 1963-64, while increases in passenger fares and in freight rates have been of the order of 19.6 per cent and 22.7 per cent respectively. These figures would indicate that the Railways recover only 36 per cent of the increase in their cost of operation. This, in short, is the Railway Minister's explanation for the poor performance of the Railways.

There is, however, another side to the picture also. According to the report of the Comptroller and Auditor General of India for the year 1969-70 the utilisation of locomotives shows a downward trend since 1960-61. This is especially true in the case of steam locomotives. As the report has pointed out, there has been deterioration not only in the case of steam locomotives but also in those of diesel and electric locomotives after 1964-65 on all the Railways except the South-Eastern Railway. The Railway Board's explanation is that steam locomotives have been relegated to

an inferior service with the progressive dieselisation and electrification; other reasons put forward are non-materialisation of traffic and conditions of mixed traffic. Some of these factors are certainly within the control of the Railway Board.

In order to reduce the gap between revenues and working expenses, the Railway Minister has proposed measures designed to net in an additional Rs 35 crores in a full year. In this the share of freight would be Rs 21.80 crores in a full year and of passenger fare Rs 13.20 crores. During the current financial year their joint contribution will be of the order of Rs 26.25 crores. The physical targets for the Railways have been reduced from 265 million tonnes to 240.5 million tonnes of originating goods traffic for the Fourth Five-Year Plan. The Plan outlay has consequently been reduced from Rs 1,525 crores to Rs 1,275 crores. And the outlay for 1971-72, accordingly, comes down from Rs 308 crores to Rs 280 crores as far as works, machinery, and rolling stocks are concerned. At the same time the Minister has admitted that, as a result of the revival of the economy, there might be an upsurge in the traffic demand, and the Railway Plan would have to remain flexible. When traffic demand calls for new works, the necessary resources will have to be found. All this is rather intriguing and has given rise to the rumour that perhaps there might be a scaling down of the overall targets for the Fourth Plan.

The steps proposed by the Railway Minister can be of help only over a short period. A more comprehensive approach to railway finances is necessary if they are to be put on a sound basis. The questions such as freights for moving bulk traffic, rationalisation of the classification of passengers and some arrangement for passing the burden of Railways' social responsibility to the general revenue will have to be considered from a long-range point of view. There was much force in the proposal that the railway trains should have only two classes, upper and lower, and that the fares charged for each class should be commensurate with the amenities provided. This proposal needs active consideration. Similarly, the problem of bulk cargo has to be examined in terms of the cost of carrying the cargo. Admittedly, railway finances have to be planned in terms of very intricate technical considerations. But this is no reason why the exercise should not be attempted with a view to pulling the Railways from below the red line. □

SENSIBLE SUGAR POLICY

WITH the decontrol of sugar the Government has finally disowned its obligation to finance the huge stocks, estimated to be over three million tonnes, with the sugar mills. The policy of partial decontrol which has been in force since August 16, 1967, has over the years deteriorated into a virtual subsidisation of inefficient units at the expense of the consumer. The record sugar production of

4.26 million tonnes in 1969-70 and 4.1 million tonnes in 1970-71 created a near-glut in the market. The prices of free sale sugar came down to such an extent that in some areas they were ruling even lower than those of levy sugar. Factories in high-cost zones found it difficult to sell their quota of levy sugar since the deficit States were reluctant to lift high-priced levy sugar when the commodity was freely available at comparable rates in the open market. All this resulted in huge accumulation of stocks in several zones leading to acute financing problems. In some areas the mills failed not only to pay the cane growers and Government dues but even the wages of the workers. At the same time, there was persistent demand from the sugar industry for revision of levy prices on the ground that the cost of production had increased. Some sugar mills took recourse to litigation and obtained interim court orders involving substantial increase in prices with the result that the system of controls was about to break down in many parts of the country.

Hence it was quite logical on the part of the Government to have decontrolled sugar. According to the new policy, as announced in the Lok Sabha on May 25 by the Union Minister for Agriculture, Mr Fakhruddin Ali Ahmed, the distinction between free sale sugar and levy sugar will disappear. Until now 60 per cent of the production was being released as levy sugar and 40 per cent reserved for the free market—the former carrying an excise duty of 25 per cent and the latter 37.5 per cent *ad valorem*. The entire production will now carry a uniform excise duty of 30 per cent *ad valorem* calculated on the basis of a tariff value of Rs 125 per quintal. All controls on distribution have been lifted except the monthly release of sugar from factories to wholesalers, which the Government will continue to regulate in order to maintain reasonable and stable prices and ensure adequate supplies throughout the year. Hence the free market prices in future will depend on the amount of sugar released every month by the Government. However welcome the decision of the Government to decontrol sugar, it must be pointed out that the power to regulate supplies is fraught with the potential danger of co-operatives and other interests using their political influence to reduce the monthly releases in order to maintain retail prices at higher levels. This has happened in the past, and the Government should primarily keep the interests of the consumer in mind while fixing the monthly releases.

The prices of sugar in low-cost zones such as Maharashtra, for instance, are bound to decline as a result of the new policy. Already there was a fall of Rs 8 to Rs 10 per quintal in the Bombay market within 24 hours of the announcement of the new policy. There have been marginal price declines in deficit States also. The Government should allow retail prices to come down to a reasonable level which alone would answer the most fundamental

problem that faces the Indian sugar industry, namely, the stepping up of domestic consumption. □

LABOUR : DIALOGUE BEGINS

The Union Labour Minister, Mr R. K. Khadilkar, assured the trade union representatives whom he met in conference recently in New Delhi that the Government would consult labour representatives in all matters such as preparation of plans and major economic policies affecting them. From the point of view of labour this was a significant gain out of this conference. As for the rest he could not make much headway in inducing the trade union leaders to agree among themselves on the question of determining the bargain agent for each industry and industrial unit and also on the machinery for the settlement of disputes. As Mr Khadilkar stated at a press conference later the trade union representatives had agreed that the bargain agent should be the majority union, but the question was how this agent is to be selected. The INTUC has all along held that it should be through verification of membership of the unions while others have insisted that the question of who should represent labour should be decided through recourse to secret ballot. This is a very long-standing dispute and the very fact that the present conference failed to end the deadlock indicates that unless the Government took initiative in this matter nothing worthwhile will emerge.

As regards the question of settlement of disputes the trade unions demanded that the matter should be left to bipartite discussions without governmental interference in the form of adjudication. Mr S A Dange is reported to have said that the present industrial tribunals should be abolished. There is also general opposition to the setting up of an Industrial Relations Commission as recommended by the National Labour Commission. The main objection to adjudication and arbitration seems to be that these would lead to litigation, and that the employers having larger resources at their disposal would be in a better position to take advantage of the time-consuming and costly processes.

The Union Labour Minister also met representatives of employers. The main point made by the employers at this meeting was that wages should be linked with productivity. This again has been the view expressed many times before. The main difficulty, however, is to secure an agreement on how productivity should be measured. So far no fool-proof formula has been evolved and perhaps serious attempts have not been made to sit down with the representatives of workers and employers to secure an agreement on a workable formula.

Two points made by Mr Naval H. Tata at the meeting deserve some consideration. One is that the Government of India and the State Governments should evolve a co-ordinated labour policy so that both workers and employers knew their rights and duties. The other is that there should be an apex body of all trade unions which could evolve a unified approach from workers to problems relating to industrial relations. This would, of course, mean that employers, too, will have a concerted approach to these problems. □

INDIAN ECONOMY: BASIC INDICATORS

WEEKLY INDICATORS

Wholesale Price Index (1961-62=100)

THE WEEK

THE Union Budget for 1971-72 was presented to Parliament on May 28. (See also Editorial and Market Gossip.)

The Economic Survey 1970-71 presented to Parliament by the Union Finance Minister, Mr Y. B. Chavan, on May 25 estimates that in 1970-71 the growth of national income will by and large attain the Fourth Plan target level of 5.5 per cent a year. This was mainly due to the rate of growth of over 5 per cent in the agricultural sector. According to the Survey, "overall industrial output is likely to have grown by a little more than 5 per cent". Corporate performance has been satisfactory and the stock market displayed great confidence. For the year as a whole the average level of wholesale prices during 1970-71 was 5.6 per cent higher than what obtained in 1969-70. The volume of external assistance available declined in 1970-71 inasmuch as fresh aid commitments including debt relief and unutilised aid commitments of earlier years together amounted to Rs 2,484 crores. Rs 257 crores less than in 1969-70. The Survey says that on present indications the growth rate of our exports during the entire year 1970-71 is expected to be 8 to 8.5 per cent which would exceed the Fourth Plan annual export target of 7 per cent. The declining trend in food imports continues. India's short-term indebtedness to the IMF has been wiped out.

The Railway Budget for 1971-72 presented to Lok Sabha on May 24 proposed to raise Rs 26.25 crores by way of increase in fares and freights. After taking into consideration the proposed increases, the gross traffic receipts are estimated at Rs 1,070.25 crores and working expenses and miscellaneous transactions at Rs 903.35 crores. This resulted in a surplus of Rs 166.90 crores. But after meeting the dividend obligations to general revenue amounting to Rs 173.77 crores, the Railways had a net deficit of Rs 6.87 crores which has been left uncovered. The Minister for Railways announced a sizable reduction of Rs 250 crores in the Railway's Fourth Plan outlay from Rs 1,525 crores to Rs 1,275 crores.

The Union Government announced on May 25 the decontrol of price, distribution and movement of sugar. However, the releases of sugar from factories for sale to wholesalers will continue to be regulated in order to maintain prices and ensure availability throughout the year. The Union Government has also announced a uniform rate of excise duty on sugar at 30 per cent *ad valorem* instead of the present 25 per cent on levy sugar and 37.5 per cent on free sale sugar. Following the announcement of decontrol, sugar prices registered a significant fall in the Bombay market. The price of 30 D variety dropped from Rs 201 to Rs 191 per quintal. (See also Survey.)

The Union Government is reported to have cleared Tatas' Rs 56-crore Mithapur fertiliser project. The project (a modified version of the earlier proposal to set up a Rs 200-crore giant complex) envisages the production of about 6 lakh tonnes of complex fertilisers. The project, however,

awaits permission to import phosphoric acid required by the plant in the first five years.

The Reserve Bank on May 24 announced relaxation of credit control on bank advances against mustard seed, rapeseed and soyabean. The minimum margin banks are required to keep in respect of advances against these three commodities has been reduced from 75 per cent to 60 per cent.

The Uttar Pradesh Ministry, headed by Mr Kamalapati Tripathi, was expanded on May 21 by the addition of 31 new members, bringing the total to 38.

Mr N. Sanjiva Reddy announced on May 25 his resignation from the Working Committee of the Congress (O). He wants to be free from "narrow party considerations."

Air-India launched its first trans-Atlantic Jumbo jet flight from London to New York with 58 passengers on board of the mammoth airliner which can carry 350. Air-India has also announced plans for the setting up of a charter company for the management of chartered flights. The Corporation is also planning to set up two hotels in Bombay through its subsidiary, the Hotel Corporation of India, in technical collaboration with the West German firm, Steigenberger.

The Kerala Government decided on May 26 to give concession in the duty charged on electricity consumed by industrial undertakings in the State—5 per cent to ordinary industries and 10 per cent to intensive industrial undertakings in areas other than Greater Cochin.

Pakistan agreed in a letter to the UN Secretary-General to accept a UN co-ordinator for humanitarian relief assistance to East Bengal.

In Parliament

The Budget session of the Lok Sabha and the Rajya Sabha began on Tuesday, May 24.

The Union Finance Minister, Mr Y. B. Chavan, stated in the Rajya Sabha on May

25 that there was no proposal under consideration to demonetise 100-rupee and 1,000-rupee notes.

The Minister of State for Agriculture, Mr A. P. Shinde, stated in the Lok Sabha on May 25 that the Government had instructed the Food Corporation of India to procure rain-damaged wheat "as far as possible" with a view to helping farmers. About 20 to 25 per cent of the wheat harvested in Bihar and Uttar Pradesh and 10 to 15 per cent in Punjab and Haryana are estimated to be damaged by rains.

The Rajya Sabha referred on May 26 to a joint committee a Bill to amend the Advocates Act 1961 which would ensure, among other things, that a lawyer had 15 years practice before he becomes a member of the Bar Council of India.

The Rajya Sabha adopted on May 26 the Indian Telegraph Second Amendment Bill 1970 seeking to remove a section in the Telegraph Act which provides for punishment of a person who transmits or causes to be transmitted by telegraph an information which he knows to be forced or fabricated.

Money easy

Conditions were unchanged in the Bombay short-term money market as of Tuesday. Demand for funds was maintained and there were borrowers over at the close. In the inter-bank call section, both renewals and fresh money were reported at 4½ per cent. In Calcutta and Madras markets also the rate ruled at 4½ per cent.

Price index steady

During the week ended May 8, 1971, the Index Number of Wholesale Prices recorded a nominal rise of 0.3 per cent to 182.0. At this level, the index was only 2.2 per cent above its level a year ago.

PEOPLE

MR Harish C. Jain has been appointed Regional President of the International Advertising Association.

★

Mr S. T. Raja has been appointed Managing Director of Premier Automobiles Ltd.

50 years ago

Motorists and those who use petrol in industrial pursuits will be gratified at the news that measures are being taken in Great Britain to produce alcohol on a large scale so as to seriously rival petrol, which is not only scarce but necessarily dear. Recent experiments, we read, of a mixture of fifty per cent of alcohol, twenty-five per cent of benzol and twenty-five per cent of paraffin have yielded satisfactory results and the mixture, we are assured, can be produced at the price of 2s 8d per gallon. Legislation will shortly be undertaken in Great Britain to relax the embargo on the use of alcohol for commercial purposes. In fact, as Mr George Howell, a member of the Institute of Petroleum and Technologists, puts it, we are entering the oil age which no doubt the coal strike in

England has hastened. The railway companies are converting locomotives from coal to oil fuel at the rate of one in six, while there is every prospect that twenty-five per cent of the British furnaces will soon be burning oil. We are, therefore, particularly pleased to learn that in the near future petrol will be produced in quantities appreciably large enough to send down the price considerably in this country. So far petrol was obtained by refining petroleum; but now a simple process has been discovered and patented in the United States of America by which petrol, or gasoline, may be obtained from some of the by-products of bituminous coal, of which we have plenty of suitable quality in India. The process, we hear, will shortly be working in this country.

Godrej Forklift Trucks: Case No. 1

**AN ILLUMINATING
MATERIALS HANDLING
DISCUSSION WITH
MR. A. A. HINDLEKAR,
WORKS ENGINEER AT
GUEST KEEN WILLIAMS.**

Mr. Hindlekar how do Forklift Trucks help in your materials handling?

That's easily answered. Our materials handling involves the stacking of material in our stores and transporting scrap and material bins, press tools and finished products to the various sections of our Works. A Forklift Truck is a great help because it saves us a lot of time all round. We find our Godrej Electric Forklift Truck really very convenient.

Was there any special reason for choosing an Electric Forklift Truck?

Well, we had a choice between the Electric and Diesel models. But we opted for an Electric Forklift—the Godrej EC-40—because apart from its low maintenance cost, it is fume-free, hence neat, clean and silent. It's also easy to manoeuvre and operate.

What made you opt for the Godrej EC-40?

Its many advantages. Like the exclusive Carbon Pile System. This hydraulically actuated System provides Infinite Inching and an extremely smooth drive with faster acceleration. Also Reverse Torque Braking which eliminates the need to stop the Truck before reversing. Besides, the battery and contactor tips last for a much longer time.

Godrej®

FORKLIFT TRUCKS

Electric Models: ECE 'D' 2024 (1 tonne)
EC 40 (2 tonne)

Diesel Models: DCY 40 (2 tonne)
DCY 50 (2½ tonne)
DCY 80 (4 tonne)

REPORT

THE NATION

From Our Own Correspondents

Railways vs crime & politics

NEW DELHI.

IT was not the Rs 22-crore increase in freight rates or the marginal increases in passenger fares, or even the 16 per cent cut in the Fourth Plan outlay for the Railways which was the central theme of Mr Hanumanthaiya's 1971-72 Railway Budget speech. The chaotic conditions in the crucial Eastern and South-Eastern Railways appropriately dominated Mr Hanumanthaiya's account of the performance of our Railways.

The Eastern and South-Eastern Railways constitute the backbone of Indian Railways. The Minister of Railways reported to the nation, that the conditions in these regions "continue to cause anxiety" Mr Hanumanthaiya said that the very functioning of the Railways in these regions was being hampered by "daily dislocation of train services".

In Mr Hanumanthaiya's words this is the state of affairs in the Eastern and South-Eastern Railways: "Thefts of overhead traction wire, theft of telecommunication cables and equipment, attacks on trains and staff, organised looting of wagons and luggage vans, large-scale thefts of wagon fittings and track fittings, have become the order of the day. On Eastern Railway alone, during the first three months of the current year, there were as many as 155 cases of theft of overhead electric wire, 369 cases of theft of telecommunication cables and equipment, 305 cases of attack on trains, 39 cases of attack on stations and 33 cases of assault on railway staff. Hundreds of wagons remain immobilised due to theft of brake beams, bearings and other fittings. Goods trains have had to be stopped for several hours a day in the busy sections in the Eastern region due to the theft of overhead wires. The two Railways should normally have loaded a minimum of 6,500 coal wagons daily in the Bengal and Bihar coalfields. In the last few months they have hardly been able to load 5,500 coal wagons. It is, therefore, that coal supplies to industry, power generation, brick kilns have been so unsatisfactory. The movement of food-grains has also been affected".

Mr Hanumanthaiya should have also added that in encounters with criminals 23

men of the Railway Protection Force lost their lives during the year. The entire route from Calcutta to Mughalsarai is now electrified and the theft of overhead traction copper wire puts the entire train operations out of gear on the electrified section for several hours each day.

"A Review of the Performance of the Indian Government Railways" prepared by the Directorate of Statistics and Economics of the Ministry of Railways pinpointed the disastrous impact of a "bandh" in one region on the entire railway system of the country when it observed:

"Movement of other general goods had been less than the target mainly owing to poor mobility in the Eastern sector and slow release at terminals in Calcutta and Howrah area. There were as many as eight major 'bandhs' during the first nine months of the year, completely dislocating traffic. The crippling effect of one such 'bandh' can be appreciated from the fact that during the Bengal bandh on 8th December 1970, nearly 550 trains were stalled and 60,000 wagons immobilised on different Railways. The frequent dislocations and

slow releases of wagons at terminals not only affected loading on the Eastern, South-Eastern and North-East Frontier Railways, but also from all other Railways for destinations on these Railways. The hold-up of abnormally large number of wagons in loaded or damaged condition on these Railways reduced the overall availability of wagons on all Indian Railways as a result. Though there is no overall shortage of wagons on Indian Railways, sufficient number of wagons were not available day-to-day for clearing the demand on hand. This naturally has had an impact on the various indices of utilisation of assets in 1970-71..."

The lightning strike of the employees in Dhanbad division of the Eastern Railway in February and in the Tatanagar yard and shed of Southern Railway in March on trivial and flimsy grounds almost paralysed the goods traffic. The Eastern and South-Eastern Railways together account for three-fifths of the total tonnage carried by the Railways as a whole and hold two-fifths of the total number of broad gauge wagons. This is why lawlessness in the eastern region makes the task of the Railways most unenviable and it still has to be realised that there are powerful political forces in league with the law-breakers as they are with the smugglers. Railways alone cannot break this alliance of crime and politics. □

From bad to worse

By A Special Correspondent

IF the railway finances are in a bad shape, not all of it was of Mr Hanumanthaiya's making. The contribution of his predecessor, Mr Nanda, was substantial. In fact, the downward trend in the railway finances began in 1964-65 when the railways could not meet their full liability for the development fund work. The years of drought and recession made things worse. From 1966-67 the railways have not been able to meet fully even their yearly liability to the general exchequer of paying the dividends. In consequence, the revenue reserve fund has had to be drawn upon. Accumulations in it stood at Rs 63 crores in 1966-67, but now the barrel has been scrapped to the bottom. In order to meet the dividend liability, the railways had in fact to borrow Rs 9 crores in 1969-70 and Rs 25 crores in 1970-71. The task before the railways, therefore, is to generate resources which would not merely facilitate the repayment of the loans but also to add to the development and revenue reserve funds.

It cannot be said that the railways have made no effort to raise additional revenues. The estimated amounts raised through increases in fares and increases as well as adjustments in freight rates and the rela-

tive contribution of the increase in fares as against freight rates is as follows:

	(Rs crores)		
	1969-70	1970-71	1971-72
Fares ..	—	4	4
Freight rates ..	3	27	32
Total ..	3	31	36

Out of some Rs 70 crores raised in the past two years, some Rs 60 crores have been paid by those who, in spite of delay, losses and pilfering, continue to use the railways for transport of goods. Although road haulage is on the increase, the choice is not open in every kind of freight and railways will retain this custom, especially in bulk carriage. Nevertheless, the decline in 1970-71 of some five million tonnes of freight from the 1969-70 traffic ought to open the eyes of the railway authorities about the poor service which is driving away the customers. Against 204 million tonnes carried in 1968-69, the provision for rolling stock is for 265 million tonnes of originating traffic in 1973-74. Compared to an average yearly increase in traffic between 1961-62 and 1970-71 of less than six million tonnes, this presupposes an average increase over the next three years of 18 million tonnes a year. This is an impossibly rosy assumption. The lack of progress on the coal and steel programmes and the difficulties with the Madras and Visakha-

Incidence of thefts and pilferages of railway equipment

(No. of cases)

Item	April to October			
	1969		1970	
	Eastern	South-Eastern	Eastern	South-Eastern
Electric traction wire thefts ..	198	10	255	45
Control suspension ..	2,285	420	3,312	693
Wagon brases ..	9,195	822	11,755	1,748

patnam outer harbours imply that even the demand for hauling iron ore for export to Japan will fall short by at least five million tonnes in 1973-74.

A tempting and easy way out of budgetary problems, which should appeal to the Finance Ministry as well, would be to cut down, in anticipation of this reduced traffic, the investment programme of the railways. It stands to reason that the railways should seek to cut their losses and the Finance Ministry to reduce its commitments to raise taxation and increase Plan expenditure. Mr Hanumanthaiya did exactly this when he announced on Monday that the Railway Ministry has decided to reduce the Fourth Plan outlay for railways from Rs 1,525 crores to Rs 1,275 crores—a cut of Rs 250 crores. This is a shortsighted, anti-growth step. Unless there are parallel economies in their working expenses, however, there is no likelihood of the railways making good their promised contribution from internal resources of about Rs 130 crores. The expenses have gone up by more than Rs 50 crores a year, mainly owing to the higher interim relief to the staff. Unless the prices and living costs are held in check, this outlay on materials and men must go on mounting.

No less important from the long-term point of view is the operating efficiency of the railways. If there is a fall in this—as there indeed has been in recent years—the result is higher operating expenses and an increase in the capital investment required for the development of capacity. On one hand there are stories of surplus wagons—the Administrative Reforms Commission was told that their number was in the region of 20,000 wagons. To the extent that they remain idle, there is waste of capacity. On the other hand, it is difficult to get wagons when required. The trip made by each wagon per day on the average is getting shorter over the years—from 77 wagon kilometres in 1956 and again in 1960 to 72 in 1969.

There are tremendous variations which are concealed in this average figure, with the best wagon-kilometre-per-wagon-day on the broad gauge being achieved by the Western Railways at 126 in 1962 and the worst by the North-East Frontier Railway at 51 in 1966-67. The interval between the time when a wagon is loaded and when it becomes available for re-loading is also going up—from 11 days in 1960 to 13 days in 1969. On the broad gauge, the net tonne kilometres per wagon day have also been going down—from 1,007 kilometres in 1962-63 to 905 km in 1968-69. In the use of locomotives, too, there is a similar deterioration:

Kilometres done by broad-gauge engines each day	Average speed in km		
	1960-61	1965-66	1967-68
Steam engine	134	125	120
Diesel engine	263	319	324
Electric engine	116	270	259

In 1941-42, the railways were operating at 160 engine kilometres per engine day for the steam locomotive and if this performance can be re-achieved, the railways will have regained something of their old efficiency.

For the diesel and electric locomotives, the minimum expected in fairly efficient organisations is 650 kms a day. It is not possible to economise on investments in rolling stock also because the average speed of the trains hauled by different types of engines is not going up. The study

team of the ARC has put down 40 to 48 km per hour as the desirable average speed for diesel and electric trains on the broad gauge. While the existing speeds are nowhere near this, the most disturbing development is the continuing decline in the speeds of trains hauled by steam locomotives:

	Average speed in km		
	1960-61	1967-68	
Steam train	18.9	15.4	
Diesel train	22.5	23.5	
Electric train	20.1	24.8	

It should gladden the hearts of all the lovers of democracy in our country that the opposition is very much alive in Parliament. The fears expressed on this score after the results of the elections to the fifth Lok Sabha had been announced have proved to be false. One can confidently hope that even the attenuated opposition would articulate different political opinions in the highest political forum in our country. The Government will have to remain constantly on its toes. If the opposition plays its cards well it will succeed in compelling the Government to listen to criticisms of its policies and to adjust them in the light of the debates in Parliament.

The crux of the matter is the opportunity to be given to the opposition to debate the important issues before the country and the Government. The rules of business in the two Houses need re-examination in the light of the experience gathered during almost two decades of the working of Parliament in our country. The opposition has a legitimate grievance that full opportunities are not available to raise debates on policy issues on the floor of the Houses. The Lok Sabha has a special privilege in the rights to move a vote of no confidence and to table adjournment motions. In the fourth Lok Sabha the moving of no-confidence motion at the beginning of each session had become a routine after the split in the Congress. It seems to have been realised now that this is not a very convenient weapon in the armoury of the opposition as its defeat amounts to an expression of confidence in the Government by the legislature. Mrs Gandhi took full advantage of this when her Cabinet advised the President to dissolve the fourth Lok Sabha.

The opposition can draw public attention to the important political issues through questions, half-an-hour discussions and private members' resolutions. At the time of discussion on the Budget or on motion of thanks to President important policy questions could be debated. But these weapons are not sufficient for the opposition to discharge its functions effectively. Questions are theoretically meant to elicit information and not to offer comments. Half-an-hour discussion should be raised similarly to discuss some action of the Government and not its policy. The fate of the private members' resolution depends on the vagaries of the lots drawn. The opposition parties are therefore justified in raising the issues through adjournment motions. If definite rules can be evolved to ensure that this method

This picture of dismal and deteriorating performance can be completed by a word about the social purpose which ought to animate the largest public sector undertaking which is capable of becoming the best or the worst—public relations agency for the Government. The condition of the third class passenger has become worse with overcrowding and with the reluctance of the railways to add to the number of passenger trains. □

POLITICS TODAY

of raising debates give sufficient scope to the opposition without it being misused for obstructing the work in Parliament, much of the dissatisfaction with the present procedures would disappear.

The rule of procedure as it stands today permits admission of an adjournment motion in the Lok Sabha under very stringent conditions. The matter must be urgent, it must be of recent origin and it must imply the Government's failure to perform its duty. The principle underlying these conditions is very sound. The opposition can take recourse to an adjournment motion only if it is alleged in the motion that the Government had failed in its duties. The attempt to censure the Government thus must be only on the ground of failure of duty. But it does restrict the scope of adjournment motion to a narrow field. The assumption is that under parliamentary democracy the executive must be free to formulate and implement policies in the light of the information and advice available to it and in consonance with its own mandate from the people. It is on the ground of the need for conforming to the mandate that there could be a legitimate discussion on the policies pursued. There is not enough scope under the present rules to raise policy issues on the floor of the House unless the Government chose to do so.

Ministers do often make statements on the policies of the Government. These statements could form a matter for debate later. But for this purpose the concurrence of the Government is needed. In its absence all that the opposition could do is to put a few questions to seek elucidation on some points relevant to the statement made. It needs to be considered if some method could be found to enlarge the opportunities available to the opposition to discuss policy matters on the floor of Parliament. The Government need not fight shy of such discussions. An astute parliamentarian could use the occasion to elucidate the Government's point of view. If the opposition is crying for the moon the Minister concerned can successfully expose the demagoguery and demolish the points made, if he has done sufficient home work.

REPORT

THE WORLD

From Our Own Correspondents

COMMON MARKET

After the Brussels breakthrough

BRUSSELS.

COMMON Market circles here have welcomed the success of the Pompidou-Heath summit. But their satisfaction is tinged with uneasiness. The issues on which the President and the Prime Minister were able to record a complete identity of views are precisely those on which the French position is very different from that of other EEC countries and particularly of the European Commission in Brussels.

The French and British favour a confederation of European States, the others and notably the Dutch and Belgians a federal structure. But if the question of political integration is unlikely to be taken up for some time the conflict over supranationality will make itself felt even before the entry negotiations are over. The French clearly want to take advantage of these negotiations to settle a number of institutional problems once for all. They want to revise the Rome treaty in order to make unanimity among the member States the rule rather than the exception in decision-making, even though the treaty provisions allowing decisions to be taken on the basis of a weighted majority have been suspended indefinitely under a gentlemen's agreement.

The French also want to downgrade the Commission both by reducing its powers and increasing those of the Council of Ministers which they would like to transform into an essentially political institution. At the same time they have strenuously opposed all attempts to increase the powers of the Six-nation European Parliament. French efforts in all these directions have been resisted so far by the other member States but Common Market circles fear that they may have their way with British support.

The identity of views recorded in the joint *communiqué* seems to extend to the EEC's relations with developing countries also. The French not surprisingly have always insisted that the Community give priority to its relations with Africa and Heath apparently has accepted this point of view. Although the joint *communiqué* renews the assurances given to the Commonwealth sugar producers on May 12, its emphasis is on safeguarding the interests of the 18 African associated States. It is as if Mr Heath has preferred to forget the existence of the Commonwealth countries in Asia.

Earlier the two-day meeting between Mr Geoffrey Rippon and the six EEC foreign ministers had set the stage for the summit meeting between Mr Pompidou and Mr Heath—set it so well, in fact, that people here are confidently predicting a speedy settlement of the two remaining problems, such as New Zealand dairy pro-

ducts and the UK's contribution to the Community budget. If they are right, the British negotiations, begun last June, may be brought to a successful conclusion this June.

But at whose expense? The anti-Marketees in Britain believe it will be at the expense of the British housewife and of the country's standard of living. But with the provisional agreement on Commonwealth sugar it is clear that it will also be at the expense of the people of Fiji and Mauritius and the various Caribbean islands whose livelihood depends on their exports to the UK market under the terms of the Commonwealth Sugar Agreement (CSA). Despite the flow of fine words from Brussels it is abundantly clear that these countries face an uncertain future after 1974, when the CSA is to be terminated (provided, of course, that Britain joins the EEC). If Britain and her chief negotiator, Mr Rippon, are partly to blame—for having accepted an obviously unsatisfactory offer by the Six—it is on the French that the largest share of the blame must fall.

A year ago the British explained to the Six the operation of the CSA and the benefits the developing Commonwealth countries draw from it. Under this Agreement some 14 million tons of sugar are imported into the UK each year from developing countries (this figure includes 25,000 tons from India but not the Australian quota of 340,000 tons, which is to be phased out by 1974). Imports take place at a negotiated price which, under the CSA, must be "reasonably remunerative to efficient producers". The price is the same for all exporting countries but in the case of the developing countries it includes a supplementary payment. Some idea of the importance of the CSA for these countries can be had from the fact that four-fifths of Fiji's sugar exports and three-fifths of those of Mauritius take place at this price. The British hoped to be allowed to maintain imports from the CSA countries at more or less their current level. The French, however, took the line that these imports should be cut by over half to 500,000 tons by the end of the transitional period (say 1978). The proposal was totally unacceptable not only to the British but also to several of France's EEC partners.

Then at the meeting of foreign ministers, in a move widely hailed as a substantial concession though it was nothing of the sort, the French submitted a fresh proposal to their Common Market partners. It contained an offer of association or a trade agreement for the Caribbean countries, Fiji, Mauritius and Tonga. At the same time it provided for the CSA to run until the end of 1974. Finally, it included an undertaking by the enlarged Community to re-negotiate their common

sugar policy, which expires in 1975, taking into account the interests of all the developing countries.

The last part of the proposal found little favour with the other Six, who felt it was far too vague. After protracted discussions they decided to drop the references to the re-negotiated common sugar policy, which were replaced by other equally vague references to the sugar problem being solved in the framework of the offer of association. At the same time the UK was expected to hold down its own production of beet sugar to 900,000 tons.

The Six's proposal was hardly generous. The fact is that during the 1962 negotiations with Mr Heath the Six had virtually agreed to offer associated status to the Commonwealth countries in the Caribbean and in the Indian and Pacific oceans. Their refusal to renew this offer until now for tactical reasons was simply evidence of their bad faith towards the developing countries. As for their readiness to let the CSA run until the end of 1974, it was the least they could do anyway: assuming that Britain joins the EEC in 1973 developing Commonwealth sugar producers will have a guaranteed access to the UK market for only another two years.

The crucial part of the Six's offer, which dealt with the situation after 1974, was so vague as to be meaningless. Even Mr Rippon was forced to reject it, although some thought he overdid the part of the indignant British minister defending the rights of the hapless blacks. He insisted on what he termed "bankable assurances"—in other words, assurances on the basis of which sugar producers could raise bank loans. But in the face of the French refusal to give him any firm, quantitative guarantees he agreed to settle for a "suitable form of words". But the Six were unable to comply even with this modest request. The best they could manage was an additional sentence affirming the great importance the enlarged Community attached to safeguarding the interests of the countries in question, whose economies depend in large measure on the export of primary products, especially sugar.

There was precious little to choose between the two versions of the joint declaration. But the choice in fact was between rejecting the Six's proposal (and thereby achieving little of substance during the two-day session) or of accepting it (and creating a favourable climate for the Pompidou-Heath summit). Mr Rippon took the expected course: he warmly thanked the Six for their generosity and accepted their proposal (subject to its approval by the Commonwealth countries concerned).

The latter must now decide whether they can take the French and British at their word and leave it to them to safeguard their interests after 1974. The offer of association is tempting at first sight, even though acceptance is bound to invite the displeasure of the United States. But

it must not be forgotten that the Six are very reluctant to give even their associated states preferential entry for agricultural products which they either produce themselves (sugar) or which can be used in place of their domestic production (vegetable oils). Only last year the Six, at French instigation, rejected for the second time a request from the existing associated states to be allowed to export to the EEC a mere 8,000 tons of sugar a year at guaranteed prices.

The plain truth is that the French and Belgian sugar producers look upon the UK market, as their own in the event of Britain's entry; and with the EEC's sugar surplus running at well over one million tons a year they can be expected to fight for it tooth and nail. The French Government, despite its protestations of friendship for developing countries, is backing them to the hilt.

It is naive of the British to imagine that they will be in a better position to defend Commonwealth sugar interests once inside the EEC. The blunt truth is that when the enlarged Community negotiates a new common sugar policy in 1974 the British will have so many of their own interests to defend that they can be expected to sacrifice those of the developing Commonwealth countries—just as they did last week.

Our London correspondent adds:

The Heath-Pompidou summit meeting in Paris on May 20 and 21 was preceded by a dramatically sudden agreement in the Brussels entry talks; on Commonwealth sugar imports, it happened, but the subject might have been anything. The French in fact yielded remarkably little on this disputed point (as British spokesmen did their best not to point out) but they yielded. They were signalling, it seemed, that they had at last recognised—in the words of one of their officials—that the talks were “condemned to succeed”. Whether they were condemned to succeed on the far trickier point of New Zealand dairy imports was another matter; but the political will—apparently—exists.

Whose political will, though? This is where the pro-marketeers' euphoria turns a little cold. The British Government has always proclaimed that the British public would swing towards EEC membership once the talks started going well. But at the last opinion poll, the public were about 20 per cent for and 60 per cent against. The public so far has not shown much sign of being impressed. Worried by soaring prices—up about 9 per cent in 12 months—it sees Europe as another means of pushing them up further. It gave Mr Heath an extremely thick ear in the municipal elections this month, which were a Labour triumph. He is no national leader in a position to swing a major con-

stitutional change on an unwilling but otherwise admiring country. Admire it does not.

The Labour Party meanwhile may be heading for another great intra-party row, on this issue. Roughly half the Shadow Cabinet is for the EEC, roughly half against. Probably more than half the Parliamentary Party is against. The trade unions are vigorously against, like the average Labour (or Tory) voter. All these points of view will come into the open when the party holds its special congress on the EEC shortly.

And how will Mr Wilson jump? He was the Prime Minister who set Britain back on the EEC road in 1967. But he has always maintained that he was for entry “if the terms were right”—which, of course, can mean anything. And Mr Wilson has one (some people say only one) preoccupation: the political career of H

Wilson. For a start, this means maintaining party unity. A possible solution might be to allow Labour MPs a free parliamentary vote on the basic issue, whether to ratify an agreement reached in Brussels or not—but then to put on the Whips in voting on subsequent legislation that will be needed to make Britain conform with EEC law and practice. And Mr Wilson is not a man to offer gratuitous support to his political enemies—still less so if opposition could win him and his party votes.

It would not, therefore, be surprising if Mr Wilson lets the basic agreement go through, but then seeks to bring down the Heath Government, with aid from fiercely anti-EEC Tories, on some matter of detail. This would give him an excellent chance of becoming Prime Minister—without imposing on him any obligation to get Britain into the EEC again, which would be all but impossible and (as, privately, he must know) economically idiotic. □

BUSINESS REPORT

From Our Own Correspondents

STEEL

Short-term answer to shortages

NEW DELHI.

A NUMBER of interesting suggestions to increase the output and availability of steel in the short run were made at the recent meeting of the Steel Advisory Council in New Delhi. The main function of the Council is to facilitate a consensus regarding distribution of steel and allocation of quotas and priorities among rival categories of steel users. Its preoccupation with techniques of production is a result of the realisation that distribution arrangements will remain a fertile source of dissatisfaction for all categories of steel users, unless something could be done to increase the overall availability of steel.

Instead of improving, the position regarding the availability of steel is getting worse. Production of steel during 1970-71 has been even less than in the previous year. In terms of ingots, production in 1970-71 was only 6.1 million tonnes as against 6.4 million tonnes in 1969-70. And production of finished steel by all categories of producers, including wire drawing units and scrap re-rollers, was only 4.72 million tonnes against 5.05 million tonnes in 1969-70 and 4.90 million tonnes in 1968-69. There is decline in the output of all categories of producers except scrap re-rollers, as compared with the previous year, the decrease being most pronounced in the case of billet re-rollers, reflecting the sharp reduction in the production of billets for sale by the main producers.

The monthly average despatches of billets to re-rollers, including off-grade high carbon billets, have been of the order of 34,216 metric tonnes as compared to 53,187 tonnes in the previous year and 64,661 in 1968-69. It is a matter of melancholy interest that the Third Plan had made provision for production of 1.15 million tonnes of semis per annum, including 900,000 tonnes of billets for supply to the re-rollers. The supplies at the present level provide for only about 27 per cent utilisation of the capacity of re-rollers reckoned on the basis of single shift working.

By all indications the shortage is likely to continue for some years, except to the extent it is possible to relieve it by imports, though the Minister of Steel and Mines Mr Mohan Kumaramangalam has expressed the hope that the current year will see the return of normalcy and the end of the shortage in most of the categories. Hence the suggestions for increasing the output of steel are of more than academic interest as they may help to mitigate the shortage in the coming years. These involve adoption of new techniques in the existing steel plants or establishment of small steel plants in suitable locations. Some of these are already on trial. For instance, the technique of oxygen lancing to increase the output of the

open hearth furnaces, has been tried in some of the furnaces at Bhilai and if the trials are satisfactory, it is proposed to extend it to all the open hearth units of the Bhilai steel plant. It is also intended to introduce it in Durgapur. But there is one serious snag in the adoption of this new technique which is still in the experimental stage. It increases the consumption of refractories and large inventories have to be kept for proper maintenance as otherwise there is a risk of serious accidents and consequent set-back to production.

Suggestions are frequently made for the establishment of small steel plants using electric furnaces/concast plants, etc. But in all these cases, shortage of raw material has been the main barrier to rapid progress. Most of these plants are based on scrap iron. This material, which was used to be exported in the past, is now in short supply and it has become necessary to look for alternate raw materials. The establishment of sponge iron plants and of small pig iron plants, which could use non-coking coal, has been suggested. The Government recently approved the establishment of five or six sponge iron plants. But there are not many plants in the world where this process of production has been tried out.

Another major deterrent, from the point of view of the entrepreneurs, arises out of the fact that sponge iron has no use except as raw material for steel manufacture. Its production, therefore, would not be economical, unless it is combined with steel manufacture in electric furnace/concast plants. This will make the sponge iron plant an integrated project. But under the Industrial Policy Resolution, manufacture of steel in integrated projects is reserved for the public sector. So the mere issue of licences for establishing sponge iron plants will not mean much, unless the Government is prepared to make an exception in the case of small steel plants based on sponge iron.

The same consideration also applies to small pig iron plants. Though a number of licences has been issued, not much progress has been made except in one case. Here also the basic difficulty is that the production of pig iron in small plants will not be economic unless it is possible to convert the material into a high-value product like tool or alloy steel. There is a strong case for linking up the production of pig iron with subsequent conversion into special steels.

Another difficulty is in regard to the availability of equipment. It is said that the Heavy Engineering Corporation (HEC) proposes to manufacture the equipment for the small plants. Originally the intention was that the small pig iron or sponge iron plants should be based on this equipment. But this may involve a long wait

and deter prospective investors. If the projects are to get going in a reasonable time, there is no alternative to importing the equipment until HEC is actually able to deliver the goods.

The shortage of steel has also stimulated thinking on the possibilities of economy in the use of steel. It cannot be claimed that control, which restricts the availability of steel for priority uses, had made for economic use of steel. It has been suggested that restrictions should be placed on the use of steel for non-essential purposes. For instance, it has been suggested that steel sleepers in railway tracks could be replaced by concrete sleepers. Again there is need for examining the possibilities of using plastics and of progressive replacement of rivetting by welding. □

FERTILISER

Hindustan Lever's joint-sector venture

BOMBAY

HINDUSTAN Lever is currently engaged in discussions with the Union Government and the Punjab State Industrial Development Corporation (PSIDC) for the setting up of a fertiliser project in Punjab. The company was asked by the Government to consider investing in a fertiliser project and in particular to participate in a joint venture in Punjab. A letter of intent is to be issued shortly to the PSIDC. Hindustan Lever had commissioned a feasibility study by the Mitsui Toatsu Chemical Company of Japan and a market survey by the FACT Engineering and Development Organisation. These studies had revealed that, *prima facie* and subject to certain key requirements being met, such a project would be viable. Mr V. G. Raja dhyaksha, Chairman of the company has said that to have access to up-to-date technology, both in the construction of the plant and on a continuing basis, it was their intention to associate with the project firms of international repute in the field of fertilisers. He believed that the company had the general skills to manage such a project. After the gestation period associated with an undertaking of this magnitude, the company could expect it to provide a satisfactory return on its investment.

The company is discussing with the Government a number of projects for the development of backward areas. It has also submitted a proposal to the Government regarding the setting up of a factory in a backward area in the south which is well placed in regard to supplies of non-traditional oils such as from rice-bran, sal, neem, etc. The factory would convert these and other oils into semi-processed soap. The semi-processed material will then be distributed to a number of widely dispersed small units which will process it further and send it back to the company for marketing. □

AUTOMOBILE ANCILLARIES

New openings for Indian exporters

MADRAS.

NOT much importance is attached to a report that export of automobile ancillaries in a big way is being arranged. It is true that the STC has made some inquiries into export potential but neither Renault nor any other European buyer can be envisaged as a true and permanent customer. It is indeed suggested that a small proportion of ancillary output is now being exported under arrangements devised by the collaborators of local manufacturers and the volume might go up, if conditions improve. The failure of Rolls-Royce has placed many British suppliers of components in great difficulty. Since many forecast a rough ride for European motor manufacturers and British producers of spares, it is evident that the STC's study of the European market may be of limited use. A Madras manufacturer exporting at present 28 per cent of production has pointed out that the increasing output for export is difficult as anti-monopoly regulations stand in the way of expanding the capacity.

If it is plain that auto ancillary producers like the Mico and the Hindustan Ferodo enjoy certain advantages the prejudice against development of big, established firms is not overlooked. A trade mission which met in Kyoto (Japan) in September 1970 assessed the nature and needs of the Japanese auto industry. The FICCI sent a mission which found that the Japanese motor industry was well developed and powerful and could provide both original equipment and replacements for itself. The FICCI mission sensed also that the scope in Japan for Indian exports is small and any encouragement to export must come really from future buyers of Indian goods whose name has been spoiled by fakes. It is recognised that the Japanese customers are reluctant and wary while their advanced technology in the organised sector now implies a degree of resistance to offerings by Indian manufacturers. The automobile ancillary industry in Japan is tied up with the big manufacturers as the FICCI mission reported. Something may come if and when the Japanese buyers start joint ventures for sales to third countries.

But Indian production may go up in volume, if shortage of essential materials can be ended and the Japanese offer a share in what is a truly competitive trade. But as US firms are entering the Japanese auto industry as partners what may be available for Indian firms in future may not be considerable. □

JUTE

Dwindling fibre supplies

CALCUTTA.

THE jute industry circles in Calcutta are worried about the fibre supply position as the current stocks get depleted, and the possibility of carry-over stock by the end of the current jute year ending in June is

The Railway Budget

MR S. S. Kanoria, President, Federation of Indian Chambers of Commerce and Industry, says that the Railway Budget presented to the Lok Sabha on May 24 will have inflationary impact as a result of the increase in the freight rates for coal and various other basic raw materials including iron and steel. The increase in passenger fares would adversely affect the common man. In Mr Kanoria's view, there is considerable scope for improving the operational efficiency of the Railways and for closing the gap through better management. The Railways must gear themselves to move additional tonnage commensurate with the growing pace of development and higher food production. In this context it is regrettable that expenditure on works, machinery and rolling stock programme has been continuously on the decline with adverse consequences to the growth of the engineering industry. There is an immediate need to step up investment in railway transport so that the capacity is maintained ahead of demand.

Mr K. N. Modi, President, the All-India Manufacturers' Organisation, says that the freight hike in respect of coal, coke and minerals will badly affect the industrial production which will not only put up the cost of engineering goods but also hit their exports. Instead of taxing the industry every time the Railways must improve their operational efficiency, especially in the eastern zone where there is a fairly large number of unutilised wagons.

Mr Harish Mahindra, President of the Indian Merchants' Chamber, says that it is a moot point whether the hike in freights of coal and coke will mitigate the present movement difficulties experienced by industries. The Railway Minister, in spreading his net wide, has not spared even important essential commodities like organic manure and items of export significance such as oilcake and cement.

Mr Prabhu V. Mehta, Chairman, Engineering Export Promotion Council (Western Region) says that the Railway Minister has once again pursued the policy of meeting the cost of inefficiency by raising the freights and passenger fares. One should consider the cost of tonne-kilometre or passenger-kilometre in India and compare the same with those of other countries.

Mr S. C. Chokhani, President, Engineering Association of India, (Western Region) says that the proposed freight increases on items such as coke and coal and round and flat products of steel are bound to push up the prices of engineering goods. The increase particularly in the freight on hard coke which is to be transported for long distances will push up the cost and reflect in the prices of finished products. For obvious reasons the price increase cannot be passed on to the consumer and will, therefore, burden the industry which is already hard hit.

Mr Chandrakant S. Desai, President, National Alliance of Young Entre-

BUSINESS OPINION

preneurs, says that some of the export commodities will be adversely affected as a result of the rise in freights. While the Plan outlay on the Railways has been reduced in order to meet the situation, it is more useful to have a closer look at the expenditure in the past five years. The Railways should make an all out effort to attract freight from high rate commodities by a consumer-oriented service.

Mr N. C. Dalal, President, the Scientific and Surgical Instrument Manufacturers' and Traders' Association, says that it is paradoxical that the Railway authorities complain of insufficient demand for wagons while the business community complains of an acute shortage. This position is due to lack of co-ordination and only a planned programme of services at reasonable rates is the way out.

Credit for oilseeds

Mr Ramdas Kilachand, President, Bombay Oilseeds and Oils Exchange Limited, says that one of the major problems that impedes the orderly marketing of oilseeds and oils is the "not-so-imaginative" credit policy pursued by the Reserve Bank of India. It has been the experience of traders that whenever there is a price rise the RBI automatically tightens up its credit terms without caring to analyse the factors responsible for it. In January 1971, the Reserve Bank raised the minimum margin from 60 per cent to 75 per cent on the plea that despite better crop prospects, the ruling prices then were higher than those during the previous year. The higher prices were, it was stated, due to reports that the Centre and Gujarat and Maharashtra Governments were contemplating the building up of buffer stocks of groundnut and groundnut oil. This untimely publicity created a bullish psychology and led to the hardening of the prices. But RBI's stiff credit curbs virtually amounted to a credit squeeze and the prices of oilseeds and oils registered a marked decline to levels significantly below those prevailing in the corresponding period last year.

Foreign trade take-over

Mr G. G. Siraj, President, All-India Exporters' Chamber, Bombay, says that the recent statement of the Union Planning Minister, Mr C. Subramaniam, in Coimbatore that import-export trade in the country is soon to be nationalised under a phased programme cannot but have an unsettling effect on the future of the country's export trade. If future prospects are uncertain, exporters cannot be blamed for not putting in their best efforts. Export is a long-term business and can be developed only if there is stability of policies and a reasonably fair idea about the future.

being placed at five or six lakh bales. If there is no early crop this year, the industry fears dislocation of production. The alternative suggested by the industry was the import of at least half a million bales of Thai jute as a standby reserve. Although the industry had made this suggestion early last year the Government took long to make up its mind. Eventually a decision was taken in last December for the import of three lakh bales. But even after this, till today, no Thai jute has been imported owing to the extraordinary procrastination on the part of the official agencies concerned.

Meanwhile, the Bangla Desh uprising and the consequent disruption of jute trade have pushed up the Thai jute prices by about 100 per cent over the levels prevailing four months ago. Consequently, the import of three lakh bales of Thai jute would now cost much more than the price of five lakh bales originally planned, had

imports been authorised earlier. Last year, the Indian jute crop was only 66 lakh bales which itself was short of normal requirement by about half a million bales. The previous season's carry-over, although still substantial, was not large and the industry had anticipated early last year a difficult position by the end of the current jute year.

The fibre prices have been ruling high well over Rs 60 for Assam bottoms per maund against the statutory minimum of Rs 40. They have shot up further due to the recent speculative demand despite the fact that foreign buyers have not been rushing in as expected. There appears a wait and see attitude on the buyers' part. Yet the gunny fibre markets remain strong and almost confident that Bangla Desh will not be able to supply raw jute and gunnies as long as the war lasts and sooner or later the foreign buyers would come to India to meet their requirements. □

ADMINISTRATIVE STAFF COLLEGE OF INDIA

announces

the Eighth Session of

COURSE FOR THE YOUNG BUSINESSMAN

(September 2-16, 1971)

-
- Eligibility** This two-week Course is specially designed for young men and women who are owner-managers, entrepreneurs or senior executives in Private and Public Limited Companies, or Proprietorship and Partnership firms which are family-owned and are engaged in manufacturing, selling or providing services.
- Participants must be between mid-twenties and mid-thirties and should possess about five years' managerial experience.
- A University degree is not essential, but a fair proficiency in reading, writing and speaking English is required.
- Course Content** .. This is a General Management course and will cover all the functional areas of management, such as Marketing, Finance, Production, Personnel, Quantitative Techniques, Human Behaviour and Organisation and the National Policies affecting business in India.
- Fees** Rs. 1,000/- per participant, inclusive of board and lodging, priced and non-priced course material, tuition and the use of College facilities.
- Course Director** .. Dr. MADHAV P. KACKER
- Last Date** Completed nomination forms, along with fees, should reach the College latest by Monday, 19th July, 1971.

For brochure and nomination form, please write to or contact :

THE PROGRAMMES OFFICER
ADMINISTRATIVE STAFF COLLEGE OF INDIA
Bella Vista, HYDERABAD - 4

MAN-MADE FIBRES

The unprotected consumer

BOMBAY

THE man-made fibre fabrics have become a mass-consumption fabric in the West. In our country, however, this has not happened, despite substantial increases in the production of raw materials and fabrics. It was in this context that the Additional Textile Commissioner, Mr S. K. Bagchi, has complained that the industry has failed to make moderately priced fabrics available to the masses. The spinners and weavers have evolved voluntary arrangements regarding the availability of raw materials and prices but the benefit had not been passed on to the consumers. Mr Bagchi said that there was hardly any justification for such an arrangement if the ultimate consumer did not benefit. He warned the industry that this sort of a situation would not be allowed to drift. There was hardly any consumer resistance with the result that exorbitant prices could be asked for and paid for. Mr Bagchi also thought that with a higher level of production the tax structure could be recast to help the consumer.

The performance of the industry was discussed at the symposium on "Some Recent Trends in Man-made Fabrics" held under the auspices of the National Committee for India for the Third World Congress of Man-made Fibres to be held in Munich in June this year. Mr Govind Han Singhania, President, Association of Man-made Fibre Industry said that the industry had made good progress in the past 20 years. There is an investment of Rs 280 crores and direct employment is being provided to more than half a million workers as also raw materials to one lakh powerlooms and three lakh handlooms. □

ROURKELA STEEL PLANT

Out of the woods?

BHUBANESWAR

ALTHOUGH the production and profits of the Rourkela steel plant have slid down considerably, the management claims some improvements in its working during the last financial year, especially in the latter half. The production in 1970-71 was 10,38,000 tonnes of ingot steel compared to 11,04,000 tonnes of the previous year. However, there had been a marked improvement in production from the expansion units, according to the General Manager, Mr R. P. Sinha. In his circular letter to the plant employees, Mr Sinha said that Pickline Number One was put back into operation, which enabled the plant to have a better product mix in the cold rolling mills. There had also been an improvement in yields and quality of finished products.

It is stated that the accounts are still being finalised but the profit is expected to be around Rs 5 crores, against Rs 7.8 crores of the previous year. An "encouraging

factor is the significant increase" in production in the second half of the year compared to the first half, viz, 5,80,000 tonnes of ingot steel between October 1970 and March 1971 against 4,58,000 tonnes in the previous six months. □

COMMODITIES

Onion glut

BOMBAY.

THE Ceylonese Government's decision last week to stop the import of Bombay (big) onions has come as a big shock to producers. Apart from Ceylon being the largest buyer of onions from India, the domestic market has been experiencing a glut due to over-production. The price of onions in the Saurashtra region of Gujarat touched last week the lowest level of 50 paise a maund. On May 18, Mr Jashvant Mehta, the State's former Finance Minister met the Governor, Mr Shriman Narayan at Ahmedabad and pleaded for safeguarding the interests of cultivators in the region, through fixing fair prices as the farmers and traders who had stocked the commodity were the worst-hit. A similar situation had developed two months ago in Nasik district of Maharashtra also and the cultivators were not able to recover even their costs by selling the entire onion output. The present glut has resulted out of bringing larger areas under onion by farmers following high prices and a bumper crop last year. □

TRADE

British Export Board

LONDON.

THE real thinking behind the UK Government's decision to form a British Export Board is that if a big and complex ministry such as the Department of Trade and Industry is to make real sense in the field of export promotion it must get the industry closely involved in it. The Board is designed to give businessmen more control over the country's export drive. It is indeed a new concept inasmuch as the Board will consist mainly of businessmen, with a business man as its Chairman, and will be able to take broad policy decisions within the budget agreed to by the Treasury. An advantage of the new set up is that the Chairman will have direct access to the Treasury on matters relating to the financing of the export effort.

Though the Board is not expected to start functioning before January 1, 1972, the Chairman and possibly most of the 12 members the Board will have are likely to be named within the next few months so that it gets off to a good start when it is formally inaugurated. Though Britain has reason to be satisfied with the current export promotion drive there is still a certain amount of overlapping of effort which a new unifying body like the Board into which the best of people engaged in the export field will be drawn will help overcome this as well as other deficiencies to a large extent. □

From laminating flush doors...

to manufacturing sports goods

® Mowicoll HAS SO MANY USES!

Use Mowicoll to join wood to wood; to fix laminates, veneers and wood panels; to stick cardboard boxes, labels and book binds; to make fibre drums, paper tubes for battery cells, emery cloth and fabric paints; to bond textile cones, paper cups, pencil slats and laminated cork wads; for parquet and glazed tile flooring. And for several other applications too.

- READY-TO-USE
- GOOD BONDING STRENGTH
- QUICK-DRYING
- EASY-TO-APPLY
- NO OFFENSIVE SMELL
- LARGER COVERING CAPACITY

Packing:

ECONOMIC SURVEY: 1970-71

Economy poised for a new thrust

The following are the key excerpts from the Economic Survey 1970-71 presented to Parliament on May 25, 1971, by the Union Finance Minister, Mr Y B Chavan:

THE performance of the Indian economy in the year 1970-71 has been generally satisfactory. The growth of national income will, by and large, attain the level targeted for in the Fourth Plan, mainly due to a rate of growth of over 5 per cent in the agricultural sector. Food production continued to rise for the fourth year in a row and stocks of foodgrains with the public agencies amounted to 58 million tonnes at the end of the year. Overall industrial output is likely to have grown by a little more than 5 per cent. Barring a few industries, the rate of utilisation of capacity is considerably higher than last year. Corporate performance has been good, and the stock market has displayed great confidence. The capital market has shown a vitality which it had lacked for some time. The balance of payments continues to display strength. Exports staged a remarkable recovery during the year after initial setbacks. The declining trend in food imports continues. India's short-term indebtedness to the IMF has been wiped out.

Unalloyed satisfaction is not, however, permissible because of certain disturbing elements in the total picture. While cereal production has been impressive, the production of pulses has not shown the same response. The production of commercial crops, such as cotton, jute and oilseeds, continued to be short of requirements.

The growth in industrial production is not as high as during the previous year because of the uneven performance of some of the major industries. Traditional industries, like cotton textiles and jute, are not showing any great improvement. In steel, there has been a slight fall in production. Coal output too was lower during the year. The growth in industrial production was

brought about by other industries, such as chemicals, engineering, certain types of machinery, etc., whose rate of growth in general has not been higher than in the previous year. Excess capacity continues to exist in some machinery and transport equipment industries.

Investment trends

While during the past year, and more, the climate for private investment has been good and the share market buoyant, the actual behaviour of the new issue market presents a mixed picture. A considerable volume of investment seems to be taking place in the small-scale industrial sector.

There are a number of pointers to indicate that, in the large-scale sector too, entrepreneurial interest has been steadily on the increase during 1970. Although the figure of consents for capital issues given to non-Government companies is lower than in the previous year, the difference is accounted for by loans and debentures;

equity and preference issues taken together are at the same level as in 1969. Capital actually raised by the private sector during January-September 1970 was about Rs 23 crores more than during the same period in 1969. The response to public issues has also been enthusiastic. The term lending institutions such as the IDBI, the IFC, etc., have been expanding their operations fast. Sanctions during 1970 were Rs 51 crores higher than in the previous year, while disbursements rose by as much as Rs 28 crores.

Other indicators of investment intentions are industrial licences and letters of intent issued which, during 1970-71, were nearly twice the figures for the previous year. A total of 475 industrial licences were issued during 1970-71 as compared to 219 in 1969-70, while letters of intent issued showed an increase from 219 to 321 over the year. The number of applications for industrial licences received during 1970 was also more than twice that for the year 1969. Approvals by the Capital Goods Committee during 1970-71 were for a value about 35 per cent higher than in 1969-70. Import licensing of raw materials and components too during the year has been as much as 35 per cent higher than in the preceding year.

Apart from lack of industrial raw materials and organisational bottlenecks, another element which has affected the rate of industrial growth during the year has been, as seen above, a weakness in demand for the investment-goods industries. The generally depressed state of these industries in turn has affected the output of several auxiliary and ancillary units, and has also affected the rate of employment. An improvement in the magnitude of public investment could provide an impulse and quicken the pace of activity in each of these industries. During 1970-71, despite the markedly large Plan outlay provided for in the Budget, public investment

does not seem to have increased to the extent hoped for

Employment and industrial relations

During 1969-70 employment in the organised sector continued to show an improvement, overall employment increased by about 400,000 or 24 per cent. The largest percentage increase was in electricity, gas and sanitary services due no doubt, to the increased emphasis on rural electrification. Employment in trade and commerce also showed an appreciable rise, part of which would be on account of the rapid expansion of bank branches following nationalisation. Employment in the manufacturing and services sectors too recorded significant improvement. Employment in manufacturing having risen by as much as 150,000. On the other hand employment in construction has seemingly tended to stabilise after the spurt noticed in the previous year.

The rise in employment in the public sector was 31 per cent over the year but this subsumed the change brought about through the nationalisation of 14 major commercial banks. If adjustment is made for this factor, employment in the public sector would show an increase of 23 per cent, the corresponding rise in employment in the private sector was 26 per cent. The private manufacturing sector provided additional employment to 125,000 persons in 1969-70 as against 63,000 in 1968-69.

Tax effort

The tax revenues of the Central and State Governments taken together were estimated to rise from Rs 4,075 crores in 1969-70 (revised estimates) to Rs 4,604 crores in 1970-71 (budget estimates) representing a rise of 13 per cent as against an average annual rise of 8.6 per cent recorded in the preceding two years. According to the revised estimates for 1970-71, tax re-

Expenditure and current revenues of Central and State governments and Union Territories

	Percentage increase in		
	1968-69 over 1967-68	1969-70 (R E) over 1968-69	1970-71 (B E) over 1969-70 (R E)
I Total expenditure	5.9	12.4	3.5
Developmental	7.1	12.0	6.6
Non developmental	4.3	14.0	0.5
II Current revenues	9.5	9.3	11.4
Tax revenues	8.8	8.4	13.0
Non tax revenues	11.6	12.3	6.7

ceipts at the Centre have turned out to be better than what was visualised at the time of the framing of the budget. As a consequence, the proportion of tax revenues of the Central and State Governments to national income, which stagnated at around 13.2 per cent in 1968-69 and 1969-70, can be expected to rise to about 14 per cent in 1970-71.

The year thus witnessed a major effort on the part of the Union Government to raise additional resources. Additional taxation provided for in the Central Budget for 1970-71 amounted to Rs 178 crores (excluding concessions in export duty amounting to Rs 10 crores). Taking into account the efforts made by the Railways and the

P and T to tap additional resources—Rs 26 crores and Rs 8 crores respectively, the total effort was of the order of Rs 212 crores and is expected to yield Rs 1,000 crores over the Fourth Plan period of which Rs 200 crores are to accrue to the States and Rs 800 crores are to be retained by the Centre. Given the anticipated five year yield of Rs 725 crores (net of States' share) from the additional resource effort launched in the first year of the Plan the aggregate resource effort during the first two years of the Plan should, therefore, have already ensured the accrual of Rs 1,525 crores (net of States' share) as against the Fourth Plan target of Rs 2,100 crores (revised).

The measures undertaken by the State to garner additional resources are estimated to have yielded Rs 52 crores in 1969-70 and Rs 37 crores in 1970-71. Over the five-year period, the total yield from these measures is expected to account for about three-fifths of the Plan target of Rs 1,098 crores suggested for the State Governments. This fact notwithstanding there is a considerable leeway to be made up if the Plan target is to be fulfilled. The effort on the part of the States to tax the rural sector remains halting and inadequate.

Deficit financing

For 1970-71 the Central budget provided for a deficit of Rs 227 crores and the budgets of the States taken together of Rs 184 crores. According to provisional

data, the deficit at the Centre in 1970-71 has turned out to be marginally higher than the budgetary provision at the States, the deficit is likely to be lower than what was budgeted due mainly to additional transfer from the Centre. The combined deficit of the Centre and States, however, would work out to more or less the magnitude as provided in the budget if allowance is made for the RBI net sales of Government securities; it would be lower than the budgeted figure.

Centre-States financial relations

As per the Fifth Finance Commission Award the States' share in Central taxes and statutory grants was estimated to rise from Rs 774 crores in 1969-70 (R E) to Rs 825 crores in 1970-71 (B E). Also, Central assistance towards the Plan outlays of the States was raised from Rs 615 crores in 1969-70 (R E) to Rs 635 crores in 1970-71 (B E). The total transfer of resources as budgeted in 1970-71 was, however, lower than in 1969-70, mainly on account of the lower provisions of assistance to States for natural calamities and due to an anticipated reduced volume of special assistance.

According to the revised estimates for 1970-71, the States' share in Central taxes and statutory grants is expected to be Rs 12 crores higher than the provision in the budget. The revised estimate, at Rs 638.5 crores for Central assistance for the Plan outlays of the States is roughly of the same order as indicated in the budget.

On the other hand, assistance for natural calamities is now estimated at Rs 100 crores; Rs 50 crores higher than what was budgeted. Similarly, special assistance for the States, which was expected to decline from Rs 279 crores in 1969-70 to Rs 175 crores in 1970-71, is estimated to be higher at Rs 195 crores.

The scheme of special assistance was evolved so as to help certain States fulfil their targets of Plan outlays, the expectation being that the additional accommodation offered by the Centre would enable these States to cover the inescapable gaps in their resources. As a result of this measure, it was hoped these States would be able to continue their non-Plan works and implement larger Plans through additional resource mobilisation.

The general financial position of the States however continues to cause concern, judged by the low level of tax effort and the continued indebtedness to the Reserve Bank of India. Despite the fact that in actuality, special accommodation provided to the States has been Rs 20 crores more than what was budgeted for 1970-71, there has been no abatement in the States' recourse to the RBI during the year. At the end of March 1971 there were fourteen States having overdraft with the Reserve Bank amounting to Rs 260 crores. The problem assumes additional gravity in view of the fact that special assistance to States is expected to taper off in the coming years.

Money supply

Money supply with the public which increased at the rate of about 8 per cent during 1968-69, has witnessed a certain accelerated growth during the subsequent two years. The annual rate of growth works out to 10.8 per cent for 1969-70 and 9.2 per cent for 1970-71 (April 1, 1970 to March 26, 1971).

Since monetary data at the closing of the fiscal year 1970-71 are not yet available, at this stage there is some difficulty

in comparing developments during the year under review with those in the preceding. However, on the basis of data for the period April 1, 1970 to March 26, 1971, it would seem that monetary expansion, at Rs 594 crores, has been slightly higher than in the corresponding period (April 1 to March 27) of 1969-70. However, unlike in 1969-70, this expansion is attributable primarily to credit creation in favour of the domestic sectors. The net foreign exchange assets of the Reserve Bank of India have in fact registered a fall of Rs 40 crores as against an increase of Rs 269 crores in the preceding year. Net bank credit to the Government has gone up by Rs 484 crores as against the increase of Rs 79 crores in 1969-70. That the Government's budgetary operations have been an important expansionary factor in 1970-71 is borne out by the fact that the RBI's net credit to Government has expanded by Rs 295 crores in 1969-70 it had declined by Rs 3 crores. However, the pace of increase of net bank credit to the commercial sector has slowed down over the year, it amounted to Rs 203 crores till March 26, 1971 as compared to Rs 250 crores in the previous year. More significantly the expansionary effect of the gross credit creation in favour of the commercial sector has been dampened by the faster growth of time deposits.

The price situation

The somewhat disquieting developments on the price front can be mainly attributed to the shortage of a number of important materials aggravated, in part by the larger creation of credit in the economy over the year. The shortages of raw materials such as cotton and oilseeds and of metals such as steel and non-ferrous categories have affected production, and, therefore, prices, over a wide number of industries. Changes in the price level of industrial raw materials affect the wholesale price index directly via the price index for raw materials and subsequently

through the price index for manufactures. In a situation of over-all shortage of particular commodities, the fact that there has been over the year a general expansion of money supply has further clouded the picture. Irrespective of selective credit and administrative controls, where supplies are constricted, a general increase in credit is bound to leave some influence on prices. Besides, in a situation marked by excess demand, the exercise of group or monopoly power, of which speculative activity is a manifestation cannot but gain a certain ascendancy. Although wage and income adjustments during the year have conceivably had a marginal effect on prices, this is up to a point an inevitable consequence of the bargaining for compensatory adjustments in money incomes, a common enough occurrence in a period of inflation.

External assistance

The volume of external assistance available continued to decline in 1970-71. Fresh aid commitments, including debt relief and unutilised aid commitments of earlier years, together amounted to Rs 2,484 crores, Rs 257 crores less than in 1969-70.

External debts servicing

	(Rs crores)		
	Amortisation	Interest payments	Total debt servicing
	(1)	(2)	(3)
First Plan	10.5	13.3	23.8
Second Plan	55.2	64.2	119.4
Third Plan	305.6	237.0	542.6
1966-67	169.7	114.8	274.5
1967-68	210.7	122.3	333.0
1968-69	236.2	138.8	375.0
1969-70	268.5	144.0	412.5
1970-71 (Provisional)	282.5	152.2	434.7

NOTE: These figures relate to payments made in foreign exchange and through export of goods. Conversions in rupees are at the pre-devaluation rate of exchange for the first three Plans, and at the post-devaluations rate of exchange thereafter.

New commitments, which had risen to Rs 831 crores in 1969-70, after declining in the two previous years, amounted to only Rs 612 crores in 1970-71. The availability of external credit has been affected adversely over the past few years because fresh commitments have lagged behind even the declining levels of utilisation of assistance. Thus, against a utilisation of Rs 1,196 crores, Rs 903 crores and Rs 866 crores in 1967-68, 1968-69 and 1969-70, respectively, commitments in these years amounted to Rs 795 crores, Rs 756 crores and Rs 831 crores, respectively.

As a result the quantum of unutilised aid has been shrinking steadily. Aid in the pipeline, which at the beginning of 1967-68 amounted to Rs 2,451 crores was reduced to only Rs 1,872 crores at the beginning of 1970-71, during 1970-71 it fell further, by Rs 157 crores, to Rs 1,715 crores owing to the decline in fresh aid commitments for the year. Project and non-project credit in the pipeline taken together, which stood at Rs 1,694 crores at the beginning of 1970-71, diminished further during the year to Rs 1,637 crores, almost entirely as a consequence of the drawing down of non-project credit. Outstanding unutilised non-project credit, which at the beginning of 1970-71 amounted to Rs 510

NOTES: 1. The figures of Reserve Bank credit to Government given in the table above represent the change in indebtedness of Government to the Reserve Bank of India. The Accounts for the fiscal year are, however, completely adjusted only some days after the end of the fiscal year. Also, the figures given above include items such as change in the rupee coin held by the Reserve Bank and changes in the Reserve Bank's holdings of long term rupee securities. For these reasons the figures of Reserve Bank credit to Government shown here differ from the budgetary deficits as shown in the budget documents.

2. *Variations in net foreign exchange assets of Reserve Bank represent variations in Reserve Bank's holdings of foreign exchange (i.e., gold and foreign exchange) net of variations in Reserve Bank's non-monetary foreign exchange liabilities (i.e., transactions with International Monetary Fund).

crores, fell to Rs 462 crores by the end of the year, largely because commitments for 1970-71 are expected to amount to only Rs 342 crores as compared to Rs 394 crores for the preceding year.

The tasks ahead

The country was able to achieve the Plan target of a rate of growth of over 5 per cent during 1970-71. For the second year in succession, therefore, the target of over-all growth has been fulfilled. It would, however, be impermissible to assume that no further intensification of effort is called for or that investments even at the present pace will see us through to the major goals. The average rate of growth attained during the first two years of the Plan is to a large extent a reflection of the growth in agricultural output. While good weather has no doubt played a significant part in this increased output, in particular of foodgrains, the contributions of the New Agricultural Strategy in sustaining the progress in agriculture have indeed been substantial.

The general improvement in agricultural conditions in the very recent past has been unable to induce a major stimulus to industry. A part of the hiatus could be for structural reasons; the capacity created in the past may be based on demand estimates which may not correspond to current needs or potentialities. For example, the demands emanating from agriculture currently call for only a limited draft on the existing industrial capacity, particularly the capacity of the relatively sophisticated heavy engineering and machine tools sectors.

In the circumstances, if we are to raise the rate of industrial growth to the level of around 10 per cent per annum as stipulated in the Plan, we cannot rely merely on a spontaneous upsurge of demand. There has to be continued emphasis on enlarging the scale of outlays in carefully selected areas. The climate for private investment appears to be quite encouraging if one takes into account the enthusiastic reception of new capital issues, the num-

ber of new industrial licences sanctioned, the build-up of import licences, and the data with the public financial institutions regarding investment intentions. On its own, however, private investment, given its likely magnitude, will be unable to inject the degree of additional thrust that is needed in the immediate period; there is also the question of reconciling industrial growth with other objectives. What is specifically called for is an increase in the demand for products of the heavy engineering and heavy machine tool units where excess capacity exists, and can be flexibly deployed. Equally desirable is a sufficiently wide regional dispersal of the new investments, with an added emphasis given to outlays in backward areas generally and the eastern region in particular.

Since the limits to deficit financing are clearly etched, the basic task for accelerating the pace of growth of the economy must centre around the mobilisation of resources, more particularly for the public sector. The rate of domestic capital formation needs to be lifted from the current level of 12 per cent of national income to around 15 per cent by the end of the Fourth Plan, and the momentum has to be maintained for a number of years.

The responsibility thrust on the tax instrument becomes all the greater in view of the need to combine its use for bringing about distributive justice. The burden becomes still more heavy if it is demanded that fiscal incongruities carried over from the past should be evened out in the course of a few years. Even so, the question of an appropriate matching between direct and fiscal controls for furthering a given set of social objectives deserves continuous examination. If the controls could be harmonised with the fiscal instruments in the pursuit of the goal of scaling down large incomes and wealth concentrated in the hands of a few, perhaps the objectives of efficiency, distributive justice and adequate revenue could be simultaneously achieved. There will be need for much ingenuity in this area from year to year.

For the phenomenon of prices subsumes two aspects of economic life: the aspect of income distribution and that of efficiency. Once inflationary forces have set in motion, whatever the original source of the inflation, groups and individuals like to take advantage of the supply specificities to improve their own relative economic position. This attempt further pushes forward the inflationary spiral, besides on occasion giving rise to social tension. The price increase in its turn distorts the investment signals and makes project planning difficult for the individual sectors as well as for the economy as a whole. Since, in real terms, there is a falling off of resources, the Plan targets also get lowered. The fact that, in our industrial sector, protection has been offered to a large number of industries under the aegis of blanket import control and on the basis of the cost plus principle further vitiates the process. In the prevailing milieu, there is often little urge to economise on costs and improve upon efficiency, since with external competition ruled out and inflationary conditions fostering high internal demand, producers have a ready market for their commodities irrespective of the level of costs and prices. The industrial community and such others as are able to organise themselves well reap the advantage of this price inflation; the others are left out in the cold. The end-product of the inflation is therefore a further distortion of the distributive pattern.

Both monetary and fiscal policies are under considerable handicap in tackling this kind of a situation. In the wake of the nationalisation of the leading commercial banks and the need to channel credit to the hitherto neglected sectors, it has become difficult not to allow a certain expan-

Public distribution of foodgrains*

Year	(Million tonnes)

1970 ..	3.1	5.4	0.4	8.9

NOTE: Totals may not tally due to rounding off.

sion of credit. And when aggregate credit is expanding, selective credit control, unless worked out to great detail, loses much of its effectiveness. For obvious reasons, fiscal policy is under similar limitations. This is a dilemma which can be resolved without damage to the growth process only to the extent that there is an all-round increase in efficiency and a margin is created for accumulation through taxation as well as internal resources of enterprises without pressure on prices.

The tasks enumerated... add up to a formidable fare. But the Indian economy is now better poised to tackle them than at any other time in recent years. □

(Established 1923)

Registered Office: 11/666, Rabindranath Tagore Road, Machilipatnam

1. Your Directors have the pleasure in submitting the 47th Annual Report together with the audited statement of accounts for the year ended December 31, 1970. The auditors' report is also annexed.

2. The net profit of the bank for the year 1970 after payment of bonus to staff and after providing for taxation and making other usual and necessary provisions stands at Rs. 9,09,709. Adding to this, a sum of Rs. 28,051 being the balance of profit brought forward from the previous year's account and Rs. 97 being the excess provision made towards dividend for the year 1969, the total amount available for appropriation comes to Rs. 9,37,913.

The appropriations already made and those proposed to be made are as under :—

Appropriations made :	Rs.
Transfer to Reserve Fund	4,12,700
Transfer to Investment Fluctuation Fund	-1,00,000
Transfer to Gratuity Fund	60,000
Appropriations now proposed :	
To pay a dividend at 7 per cent (subject to tax) for the year 1970	3,53,120
Carry forward to the next year's account	12,000
	8,27,919

3. The official rate of the Reserve Bank of India remained at 5 per cent during the year 1970. It has since been enhanced to 6 per cent with effect from 9th January, 1971.

4. During the year the Bank opened 85 branches out of which 63 branches are located in Andhra Pradesh and 2 in Orissa. Of these, 18 branches are at places where there were no banking facilities before. Again 43 out of the 85 branches are in rural areas, i.e. at places with a population of 10,000 and below.

5. The deposits increased during the year by Rs. 12.74 crores from Rs. 52.31 crores to Rs. 65.05 crores, representing an increase of 24.35 per cent. The advances rose by Rs. 10.82 crores from Rs. 35.45 crores to Rs. 46.27 crores, representing an increase of 30.52 per cent. As on December 31,

1970 advances to agriculture amounted to Rs. 9.85 crores spread over 65,766 agriculturists, advances to small scale industries amounted to Rs. 7.01 crores covering assistance to 883 units. The outstanding to the Priority Sectors including exports at the end of the year stood at Rs. 18.64 crores which is 40.3 per cent of our total advances.

6. Under the Lead Bank Scheme the bank completed the survey of West Godavari, Srikakulam and Ganjam districts and conducted a joint survey of Krishna District with the Indian Bank. Survey reports in respect of West Godavari and Srikakulam Districts have been released. Reports for the remaining two districts are under finalisation. Survey of Guntur district will be taken up jointly with the Indian Bank shortly. The Bank would also be participating actively in the "Small Farmer Development Agency Scheme" of the Government of India in Srikakulam District. The bank is participating in the scheme of financing Primary Agricultural Credit Societies.

7. Under Articles 93 and 100 of the Bank's Articles of Association (i) Sri Jall Ahmed, (ii) Sri V. Venugopal, (iii) Sri K. L. N. Prasad and (iv) Sri S. Nandagopal retire by rotation and they being eligible offer themselves for re-appointment.

8. You are also requested to appoint Auditors to hold office till the conclusion of the next Annual General Meeting and fix their remuneration. Under Section 30 (1A) of the Banking Regulation Act, 1949, previous approval of the Reserve Bank of India is required for appointment of Auditors for which necessary application will be made in due course.

By Order of the Board.

K. GOPAL RAO,
Chairman.

AUDITORS' REPORT

TO THE MEMBERS OF THE ANDHRA BANK LIMITED

1. We have audited the foregoing Balance Sheet of the Andhra Bank Ltd., as at 31st December, 1970, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 128 Branches audited by us and 65 Branches not visited by us, in respect of which the Central Government granted exemption from audit under Rule 4 (1) (a) of the Companies (Branch Audit Exemption) Rules, 1961, pursuant to Section 228 of the Companies Act, 1956.

2. We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank.

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns.

(e) In respect of the branches not visited by us, the reports of the Officers of the Bank, otherwise qualified for appointment as Branch Auditors, who have audited the accounts of the said branches have been forwarded to us and the same have been considered in preparing this report.

(f) In our opinion and to the best of our information and according to the explanation given to us the said accounts, read along with the notes, appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December 1970, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

CONTENTED father sits reading the magazine beside his favourite reading lamp... house-proud mother gets ready the dinner, cooked just right, over the electric range... the children listen happily to music over the radio. This is the everyday wonder of electricity. More than half a century has passed since Jamsetji Tata's great vision was realised... the vision of Bombay a smokeless city, powered by electricity.

Today, Tata's hydro and thermal power stations together generate more than six per cent of the country's entire electric power, bringing it to the people of Bombay and its surrounding area.

THE LAW OF INCOME-TAX

EXPORT ANGLE

By Stevedore

Brussels Fair

AT the forty-fourth Brussels Commercial Fair concluded recently (April 15 to May 2 1971) Indian participants did a good business. They were able to sell 60 per cent of all their exhibits. These deals would fetch more than double the foreign exchange expenditure involved in taking part in the fair. Besides as a result of the publicity, new negotiations for the sale of a number of items such as made-up articles, jewellery, carpets, and brassware could be started. Several trade inquiries were received which will be followed up in the coming months. The entire space in the Indian pavilion was taken up by 35 exhibitors including business houses, State Government emporia and export promotion organisations. Their exhibits included carpets, wood-carvings, furnishing material, embroidery, shawls, jewellery and a wide range of textiles from the Cotton Textile Export Promotion Council, Silk and Rayon Export Promotion Council and Khadi and Village Industries Commission. □

Movies for Russia

THE Indian Motion Pictures Export Corporation Ltd (IMPEC) signed on May 18 an agreement with Sovexportfilm for the supply of five Indian movies. IMPEC will receive foreign exchange worth Rs 20.6 lakhs for these films. Of the five movies—*Mera Nam Joker*, *Bandhan*, *Aradhana*, *Mumbai Cha Jawai* and *Pratidwandi*—*Mera Nam Joker* has fetched the highest price of Rs 15 lakhs ever paid to an Indian film for exhibition in a foreign territory. Sovexportfilm has also assured Mr A. M. Tariq, Chairman of IMPEC, that hereafter every year it would buy films worth Rs 10 lakhs from India. During the past three years, Sovexportfilm bought three movies each worth Rs 3.6 lakhs in 1967, Rs 3.7 lakhs in 1968 and Rs 4.5 lakhs in 1970. All these films were either dubbed or subtitled in 25 regional languages and screened throughout Russia. □

Railway coaches for Nigeria

NIGERIA may place orders for Indian railway coaches in the near future according to Mr T. I. Awosita, Technical Adviser to the Nigerian Council of Ministers. Nigeria is at present importing railway coaches from the UK, Japan and Canada, but after comparative studies Lagos has found that Indian coaches are cheaper than what is made available by other countries. □

Textile machinery

THE outlook for the export of textile machinery has brightened up considerably. Zell Ate Limited was able to export multi-cylinder cotton sizing machine to Indonesia recently. Famatex (India) Private Ltd of Bombay was able to sell finishing and processing machinery such as hot air jet drying stenter, pneumatic padding machine, polymerising machine etc to Kenya, USSR, Poland, Thailand, Czechoslovakia and West Germany. Famatex is at

present executing orders worth Rs 54 lakhs to Malaysia, Indonesia and the UAR. □

Safety matches

EXPORTS of matches are looking up following a recent diversification of markets. Until last year Indian matches were exported only to Ceylon and Afghanistan, together fetching about Rs 5 lakhs in foreign exchange. But in 1970-71 match exports reached the level of Rs 25 lakhs and covered such new countries as Greece, the UK, and South Yemen. What is significant is the fact that the small manufacturing units located in Sivakasi in Tamilnadu were responsible for the entire in-

crease in exports. The Sivakasi manufacturers have at present in hand orders worth Rs 70 lakhs and hope to execute them provided some of their immediate difficulties are removed by the Government. For instance, prices of glue, match wax and blue match paper, the basic raw materials for match manufacture, have gone up considerably. As the manufacturers do not have direct allocation of match wax, a by-product of petroleum, they have to purchase it from the open market at a very high price. In the case of Greece, light freight charges are the main hurdle and they constitute about 65 per cent of the f.o.b. value of export. □

What India can sell

THE Directorate of Commercial Publicity in the Ministry of Foreign Trade has issued a further list of global tenders. The purchasing authorities, the items required and the closing dates of these tenders are as follows:

Burma

Controller of Stores, Central Stores Department. Electricity Supply Board, Rangoon. Telephone cable PVC sheath outdoor; June 8, 1971. Armature winding wires and accessories; June 15, 1971.

Chief Engineer, State Timber Board, Rangoon. Water bowser and steel sheet piling; June 8, 1971.

The Director, Myanma Bawdwin Corporation Rangoon. Underground cables and accessories; June 21, 1971.

The General Manager, People's Engineering Industry Rangoon. Knife for rotary lathe; June 8, 1971.

Indonesia

Perusahaan Negara Perkebunan V (Government Estate Enterprise V) Medan. Laboratory equipment; June 10, 1971.

Iran

Tehran Regional Electric Company, Tehran. KV transmission system; Closing date not indicated.

Iraq

Directorate of Contracts and Purchases, Ministry of Defence, Baghdad. Raw materials for making barbed wires; June 9, 1971; Mild steel bars; June 9, 1971; Berets, Collapsible beds for other ranks; June 13, 1971.

The Director General, National Electricity Administration, Baghdad. Electric protection rubber gloves; June 5, 1971.

The President Central Foreign Purchasing Board, Baghdad. Surgical instruments, Dental materials; June 20, 1971.

The Ministry of Municipalities Baghdad; Hydraulic thrust boring machine; June 12, 1971.

The Director General, State Organisation for Construction Industries, Iraqi Cement Public Companies, Baghdad. Fork lift truck; June 30, 1971; Supply of crushers; July 15, 1971.

New Zealand

Secretary, Tenders Committee, New Zealand Electricity Department, Wellington. North, Supply and delivery of turbines, Supply and delivery of generators; August 31,

1971; Supply and delivery of 30MVA 220-110/11kV 3-phase transformers; June 29, 1971.

Papua and New Guinea

Supply and Tenders Board, the Administration of the Territory of Papua and New Guinea, Badili. Recovery vehicles; June 15, 1971; Motor cycles, Tool kits; June 22, 1971.

South Vietnam

The Central Logistic Agency, Saigon. Tape recorder, film projector, camera, etc; June 3, 1971; Films and photographic stores, Multilith printing machine M-85 equipment and parts; June 2, 1971.

Sudan

The General Manager, Maspio Cement Corporation, Atbara. Diesel generating set; June 30, 1971.

Syria

The Directorate General of Harbours in Lattakia, Ministry of Defence, Damascus. Transmission equipment; June 19, 1971.

The General Petroleum Company, Damascus. Oil well drilling equipment; July 10, 1971.

The Homs Water Organisation, Homs. Pumping units; June 9, 1971.

UAR

The Egyptian Railways (Purchase & Stores), Cairo. Tyre wheels; June 21, 1971; Axles; June 22, 1971.

The Nile Delta Authority for Tile Drainage Projects, Dokki Giza. Electrically driven drainage pumping stations and transformer substation and auxiliary supplies; October 16, 1971; Tile laying machines and relevant equipment; August 1, 1971.

Uruguay

The Uruguayan Electricity and Telephone Authority (UTE), Uruguay; Underground cable and junction boxes; July 15, 1971.

Zambia

The Secretary, Republic of Zambia Central Supply and Tender Board, Lusaka; Stainless steel ware and sterilizers; June 18, 1971.

Exporters may obtain the tender documents from the purchasing authorities of the respective countries. Further details about these overseas contracts can be had from the *Indian Export Service Bulletin* dated May 15, 1971, issued by the Directorate of Commercial Publicity, in the Ministry of Foreign Trade, Udyog Bhavan, New Delhi.

Manmade fibre industry: A survey

Rayon: New vistas

By S. P. Mandelia

RAYON is the oldest manmade fibre. It reigned unchallenged for a long time until the synthetic fibres, such as polyamide (nylon), and then polyester (terelyne) and acrylic, came on the scene less than thirty years ago. But the synthetic fibre producers were successful in developing a number of speciality fibres and yarns within each generic group and thus made available products more specific to the needs of a particular end-use. This assured for them an ever-growing market. It also resulted in a decreasing share of cellulosic fibres in the total world production of manmade fibres. Similarly, their share in the total world production of all fibres (natural as well as manmade) is also going down. These trends are clear from the following table

Year	Percentage share of cellulosics in total manmade fibre production	Percentage share of cellulosics in total fibre production
1950	95.8	17.1
1955	80.6	17.2
1960	79.0	17.7
1965	62.7	18.5
1966	58.3	19.1
1967	54.5	18.2
1968	49.2	17.6
1969	45.8	17.6
1970	43.2	16.7

Since 1967, there has been a continuous fall in the share of cellulosic fibres in the total fibre production of the world. On the other hand, during the last 20 years, the share of synthetics in manmade fibre production, has gone up, from less than 5 per cent in 1950, to 21 per cent in 1960 and about 56 per cent in 1970. This, by any measure, is a fantastic growth.

Quantity-wise, the production of cellulosic fibres, has proceeded in the following manner:

Year	Filament yarn ('000 m. tonnes)	Staple	Total
1950	871	737	1,608
1955	1,042	1,252	2,294
1960	1,131	1,525	2,656
1965	1,378	2,061	3,439
1966	1,379	2,070	3,449
1967	1,354	2,078	3,430
1968	1,421	2,225	3,646
1969	1,434	2,250	3,684
1970	1,400	2,140	3,540

In 1967, the production of rayon had fallen below even the 1965 level and it was expected that in some quarters that "rayon is out". However, far from being out, it staged a

grand come-back and the 1968 production registered an increase of more than 6 per cent over 1967. However, 1970 has again seen a fall in the total world output. The main reason has been, as stated earlier, the development of a number of synthetic fibres suited to specific end-uses.

In the case of cellulosic fibres, such variants of the original material have been few and far between. However, there is now evidence that a "family" of rayon staples is about to emerge, each one making a new contribution to the overall textile market. The most important among them is the emergence of fleece fabrics or non-woven fabrics. Non-wovens and disposables are the new products that are certain to be the big winners on the world textile market during the seventies. From aprons to carpets, from the surgeon's smock to the sound-absorbing wall facings, the range of their practical applications is vast. The fleece fabrics used in these items will not be made by conventional weaving or knitting processes but by modern methods that bond the fibres permanently together. They can be produced very quickly and, above all, cheaply.

Natural as well as manmade fibres are used for these fabrics, but rayon is the favourite, due, in no small measure, to its cheapness. After all, disposable items can only be accepted by the consumer if their cost is no greater than that of laundering traditional products. In the United States, and especially in the hospitals field there, the non-wovens are regarded as having a great future.

In the apparel area, the new "deep-dye" and acid dyeable types, coupled with mass-dyed rayon and acetate, provide a piece dyeability of multi-colour effects that previously could only be accomplished by yarn- or stock-dyeing. These new rayons in blends with polyester possessing two distinct types of dyeability provide a brand new styling approach.

Modern Textiles recently reported that commercialisation of at least half a dozen innovations in the field of rayon could be expected in the near future. These would include new types of high-wet-modulus or modifical rayon, high-modulus filament, a new tyre cord, flame resistance built into the fibre, a self-bonding fibre, and a ceramic fibre. These would supplement the present 17 basically different types of rayon.

In the field of non-textile uses rayon tyre cord occupies an important place. With the advent of synthetic tyre cords like nylon and polyester, the share of rayon did show a declining trend. This trend was more marked in the US than in Western Europe.

However, the increasing use of radial ply tyres in America as well as Europe has once again established the versatility of rayon. According to the President of the B. F. Goodrich Tyre Company, radial tyres using rayon in the belts and carcasses will account for 10 per cent of the tyre sales by 1973. At present they account for 4 per cent of the total tyre sales in America. The trend in Europe towards radial-ply tyres will increase rapidly in the years to come.

Per cent share of rayon in tyre cord

Rayon is President of Century

Source: Bureau of the Census, Washington, D.C., India, Ministry of Textiles, Bombay, India, Census, August 1970

High-performance rayons are becoming increasingly popular as very good blends with cotton in some uses like shirts, hospital garments and bed-linen; with synthetic fibres like nylon filament in knitted garments, and with polyester staple in shirts, etc. High-performance rayons like Vincel in the UK have found an expanding market in these uses because of its strength, its ability to produce fine clean yarns, bringing a look of quality to standard fabrics, an excellent ability to take colour, and finally the possibility of achieving great stability for the cloth by careful finishing techniques—especially easycare finishes of a very high order. New technical properties can certainly alter the potential of the market which has been static. Besides, after about two decades of increasing preference for synthetics, a strong swing back on the part of the public to all kinds of textile products with a natural feel and appearance is evident. And since cotton alone will not be able to meet the demand, rayon, the only "natural" manmade fibre, has a great future.

Nascent industry with bright future

By S. P. Agarwal

THE manmade fibre industry in India made its beginning in 1951 when the production of viscose rayon yarn was first started. The acetate yarn and viscose staple fibre production commenced in 1964, followed by the production of nylon filament in 1962 and polyester staple in 1966. This industry is, therefore, hardly 20 years old,

Mr Agarwal is Commercial Manager of J. K. Rayon.

whereas it is 50 years old in other developed countries. In spite of the fact that this is a nascent industry and also capital-intensive and research-oriented, it would not be an exaggeration to say that the industry has progressed remarkably in the country. It has vast scope for further expansion on account of its gaining increasing mass acceptance, year after year, with its virtues of presentability, utility and practicability.

Beginning in 1950-51 with a production of only 2.2 million kg, the industry today accounts for about 38 million kg of viscose filament yarn, 70 million kg of viscose staple fibre, two million kg of acetate filament yarn and 20 million kg of viscose industrial yarn per year. Besides the nine units engaged in the production of viscose rayon and acetate filament yarn, six units are currently engaged in the production of synthetic fibre having a combined capacity of 10.5 million kg of nylon filament and 0.6 million kg of polyester staple yarn.

The investment in the industry amounts to Rs 230 crores. It pays about Rs 65 crores by way of excise duty alone to the Government exchequer every year, apart from paying crores of rupees by way of other levies, such as customs duties, sales tax, etc. The industry directly employs about 40,000 persons. It provides, entirely or partly, essential raw materials for the operation of about one lakh powerlooms and more than three lakh handlooms.

The manmade fibre industry has provided a fillip to the development of the heavy chemical industry in that the production of caustic soda, sulphuric acid and carbon bisulphide have increased to a great extent besides several by-products which are essential raw materials for other industries. It has also helped the expansion of the machine building industry as it is now possible to get a substantial part of plant and equipment indigenously. Tyre manufacturing plants and other defence-oriented industries have also sprung up with the necessary raw materials being available from this industry.

With the steady increase in indigenous production of manmade fibres, there has been a perceptible decline in the imports of fibres/yarn. The production of manmade fibre fabrics has been registering a gradual increase over the years. The present production of fabrics is in the region of 1,000 million metres. In 1953 the industry was in a position to export barely Rs 42 lakhs worth of fabrics. Within a decade the quantum increased considerably and in 1964 the exports reached a figure of Rs 830 lakhs. The exports have lately declined as a result of the abolition of the export promotion scheme and certain other unfavourable conditions. But considering the past year's performance there is good reason to believe that they will gradually rise to their original level.

Besides the existing production capacity of one lakh powerlooms and three lakh handlooms, an additional capacity of 40,000 looms is planned in the next few years. Some high-speed warp knitting machines of adequate capacity have been installed and some more have been planned to be installed in the next few years. The prevailing conditions in the country are also favourable for the progress of the manmade fibre industry.

BLOWING OUR OWN TRUMPET

The Council forms an important link between local suppliers and overseas buyers directing its efforts to generate favourable atmosphere abroad and assist home traders to cash in on it.

The Council collects data on overseas markets from various publications, through specialist agencies and personal visits of its delegations. This data is made available to local trade.

Apart from playing a conciliatory role, the Council has formulated standard procedures, pre-shipment inspection, etc. to avoid commercial disputes

To obtain selectivity in trade channels, avoid inter se competition and ensure quality and prompt deliveries the Council has set up Exporters panels for different territories. This has secured better prices and appreciation overseas

World congress of manmade fibres

By N. M. Jain

THE third world congress of manmade fibres being held at Munich from June 2 to June 4, 1971, is being organised by the International Rayon and Synthetic Fibres Committee (CIRFS), Paris. CIRFS was founded in 1950. There are now 24 member countries, namely Argentina, Austria, Belgium, Brazil, Chile, Finland, France, Germany, India, Israel, Italy, Japan, Luxemburg, Netherlands, Norway, Spain, Sweden, Switzerland, Turkey, United Arab Republic, United Kingdom, United States, Uruguay, and Venezuela. The Committee's object is to improve, increase and develop the use of manmade fibres and of products made from them.

CIRFS promotes the exchange of information and experience between its members, within the framework of its

Mr Jain is National Secretary for India of the International Rayon and Synthetic Fibres Committee (CIRFS).

corporate object. It constitutes a forum for the survey of the economic situation within the producing industry, as well as in the textile industry as a whole. It also studies the techniques of the use and development of textile fibres. It co-ordinates all data in order to provide international statistical, economic and technical information of common interest.

CIRFS has direct relations with the international bodies and with the international trade organisation of the producers and users of textile fibres—wool, cotton, silk, linen and jute. Besides the general assembly which brings together all the delegates, member countries and organisations once in a year and the management committee, elected by the general assembly, there are a number of specialised committees such as the economic committee, statistical committee, development and market research committee, the committee for promotion, and the legal committee.

The third world congress of manmade fibres is to be a dialogue between the producers and all branches utilising or consuming these fibres. Rather than a review of questions relating to the present time, it will be oriented towards the future, where modern textiles will be called upon to play an ever increasing part in all facets of life. This idea of immediate and future efficiency is what the organisers wanted to express when they chose for the congress slogan: "Manmade Fibres, Symbol of Progress".

The themes of this congress, unfolding in plenary as well as in working

sessions, will aim at pinpointing the part to be played by the textile and manmade fibres industries in the technical, economic and sociological progress of mankind. The subject of the opening address, "The year 2000, feeding and clothing five thousand million human beings, and getting the nations to prosper through appropriate trade in raw materials, finished goods, and the acquirement of scientific and technical knowledge," shows the form and spirit that give shape to the Munich congress.

What, in this so swiftly changing and many-faced world, will be the influence of manmade fibres? Such is the question one will endeavour to give an answer to during the working sessions. Specialists of world-wide renown will talk about textile technology and economics, about future possibilities in the use of manmade fibres in apparel, the household, industrial uses, and about their involvement with distribution and consumer's information.

Processed foods industry: A survey

Vast potential but tardy growth

By A Special Correspondent

THE National Sample Survey had revealed that the proportion of people with an expenditure of less than a rupee a day had remained at over 80 per cent in 1952, 1960-61 and 1963-64. There is nothing to suggest that any significant change has occurred thereafter in this situation. It is in this context that the processed food industry carries a heavy responsibility. Its products have to reach the large number of low-income and vulnerable groups, millions of whom are under-nourished. Most of them are also under-privileged and their need for all types of processed nutritious food is greater than others.

Processed foods include a variety of products. Canned and bottled fruits and vegetables, pickles, chutneys and condiments, canned and frozen meat and poultry products, malted milk products, ice-cream, confectionery, biscuits, starch and its derivatives, wheat bran, breakfast foods, seafoods, baby foods, butter and ghee are some of the items.

The Government has evolved a comprehensive nutrition programme directed towards children. According to official estimates at least 50 to 60 per cent of the entire infant and child population of the country, totalling about 100 million, suffers from moderate to severe grades of various types of under-nutrition and malnutrition. This only underlines the need for co-operation between the Government and industry for a programme of action that would make processed foods a vehicle for nutrient supplementation.

A look at the conditions that exist in various sub-sectors of the processed foods industries suggests that despite the vast scope for development, the industry has yet to attain rapid growth. In many items the organised sector is facing rough weather because of shortage of necessary raw materials at reasonable costs and the Government's taxation and other policies.

In the case of the biscuit industry, production declined by around 3 per cent to 63,000 tonnes. Three units had to close down. This makes it doubtful whether the Fourth Plan target envisaging an annual increase of 10 per cent in production to 1.10 lakh tonnes by 1973-74 would be reached. The two important factors that have slowed down the development of the industry are decline in demand for biscuits

and labour trouble in some units. Consumer resistance to the increase in biscuit prices is having its impact on the demand. The manufacturers say that this is because of a sharp rise in the prices of the essential raw materials required for the industry. As pointed out by the President of the Biscuit Manufacturers Association, the average prices of skimmed milk powder rose from Rs 4.48 per kg to Rs 8.83 per kg, refined coconut oil from Rs 8.25 to Rs 9.24 per kg, butter from Rs 12.30 to Rs 13.63 per kg, condensed milk from Rs 4.63 to Rs 5.70 per kg, liquid glucose from Rs 1.64 to Rs 2.21 per kg and vanaspati from Rs 4.84 to Rs 5.71 per kg. In addition to this, taxation has made matters more difficult. The Union Government levied an excise duty of 10 per cent on biscuits and a separate duty of 10 per cent on metal containers.

Despite the fact that sugar production has been a record one at 4.2 million tonnes and the prospects for the future are also promising, the high prices of sugar continue to trouble the manufacturers of biscuits and other processed foods. This particularly proves a big handicap in the export of processed foods. The competitors abroad pay for sugar, in the sugar-based products they manufacture, at a much lower level than their counterparts here. The processed food manufacturers here have suggested to the Government that they should be allotted sugar at international prices. But no progress has been made on this proposal.

Another grievance of the manufacturers is that the quality of tin plates is deteriorating. The industry wants that the Central Food Technological Research Institute as well as the can fabricators should sit together and study the problem in greater depth. The ability of the processed food industry to enlarge sales in the domestic as also the overseas markets will be seriously retarded if the ultimate cost to the consumer goes up continuously on account of this factor.

The biscuit industry has made an effort to find an outlet for its products in international markets. But the foreign exchange earnings of Rs 46.50 lakhs in 1969-70 only emphasise that much needs to be done on this front. The main market for biscuits is Nepal, which takes three-fourths of the total biscuit exports from this country.

The situation in the confectionery industry indicates that it still continues to be in doldrums. The production in the organised sector has come down from 40,000 tonnes in 1965 to about 10,000 tonnes in 1970. The demand for the products of the industry has proved to be highly elastic. The rising costs of raw materials and packing and the high incidence of taxation have combined to push up the costs and inhibit the demand. The industry's efforts to find an export outlet have not had any significant success. The exports were worth hardly Rs 6.32 lakhs in 1969-70.

Mr V C Shukla, who was Minister of State for Finance before the recent reshuffle of the Union Cabinet, had promised that the Government would examine the difficulties of the industry. He had then indicated that the Government would generally make a review of the existing duties on various products to arrive at a decision before framing the budget proposals. The fact that 70 per cent of the capacity of the industry remains unutilised is a clear

A generation condemned... because we don't care enough?

Over 60% of India's children suffer from protein malnutrition. These are not just hungry children we're talking about. Here's a generation that may be growing up both physically and mentally retarded.

Why?

Protein is the element in food that builds both body and mind. If children between 6 months and 5 years do not get enough protein they become physically stunted. Worse, their mental development may be affected. And protein later on cannot repair this damage. It lasts a lifetime.

What it forebodes

*Economic ills—Adults below par, prone to illness, mean low productivity, wasted manhours.

*Population problems—Malnutrition is the cause of more infant deaths than all other causes put together. High infant mortality encourages larger families.

*Social unrest—For millions of Indians caught in the vicious cycle of poverty and poor performance—often caused by malnutrition—violence seems the only answer.

Help.

Malnutrition is a hidden famine... and so more dangerous. We must fight it on all fronts.

DEVELOPMENT PLANNERS must recognise that nutrition is an important pre-requisite to socio-economic development.

PRIVATE INDUSTRY must fulfil its social responsibility—low-cost nutritious foods are urgently needed.

GOVERNMENT, BOTH CENTRAL AND LOCAL, must

- *initiate developmental research
- *rationalise distribution of scarce protein foods
- *encourage the food industry with rational laws and licensing policies
- *organise mass-scale relief programmes
- *extend fortification of basic foods
- *use mass communication for nutrition education

Inserted in the public interest by the Protein Foods Association of India

enough signal for the Government to take quick measures to help the industry.

The problem of baby foods is no different. While there has been an yearly growth of 2.5 per cent in the population during the past ten years, the infant milk food industry is bogged down by several factors which are totally out of its control. The price of wet milk has risen from Rs 41 per quintal in 1960 to Rs 95 in the current year. The skim milk powder imported from abroad has shown a sharp price rise. In 1967 it was imported at Rs 1,800 per tonne but now it is distributed by the National Dairy Development Board at Rs 3,050 per tonne. The present output of the industry in the organised sector is 18,000 tonnes per year which is just sufficient to feed about 3.6 lakh babies a year.

The high prices have put the infant milk foods out of range of a majority of families. While the consumer faces periodic shortages of milk food, the Government has announced recently that milk food and malted food industries with an investment of up to Rs 1 crore, which were delicensed from February 1 last year, have been brought back to the licensing list. The industry fears that this might only retard efforts to augment the milk food supplies.

The base of the processed foods industry rests on horticulture. Likewise, the future of horticulture is tied up with the growth of a healthy processing industry. According to the estimates of the Fourth Five-Year Plan, the production of fruits and vegetables is likely to go up from 20 million tonnes to 30 million tonnes, and the value of production from Rs 1,607 crores to Rs 2,576 crores. Mr M. A. Wadud Khan, Chairman, Processed Foods Export Promotion Council, has therefore urged the industry to think ahead and think beyond the conventional bottled, canned and dehydrated products and give attention to new methods of preservation and storage, many of which are already being used in other parts of the world. In line with this, the industry must accept for itself the obligations imposed by the market and, as a technology leader, ensure in the manufacturing processes the highest standards of sanitation and hygiene. The industry should also familiarise itself with mass marketing techniques prevalent in the more advanced countries, where most of our markets for quality foods lie. With the use of mass media for promotional activities, it would be possible for the industry to create a firm demand for its products in foreign markets.

The industry's expectation is that by 1973-74, exports of processed foods would increase from the present Rs 13.5 crores to approximately Rs 21 crores. The production and export achievements of the industry seem to be rather insignificant in comparison with the growth of the processed foods industry in other countries.

The British Food Association, for instance, has announced a record turnover of £524 million (previous year £503 million) for the year 1969-70. In the US, Germany and France, also this industry has grown faster than most other sectors of the economy. In comparison, the Indian processed foods industry has a low growth index and a small quantitative base. The industry has, therefore, to direct its attention to broadening the base of its market.

india exports food

Surprising ! Is that ?

But we mean no dramatics while making this pleasant surprise known to you. We mean business. India has the vast resources and high potential to catch the foreign markets through processed foods.

The mere mentioning of foods 'Indian' spells sumptuous delight, 'romantic' taste and hot, delectable cuisines abroad. They are highly popular overseas. In U.K., Sweden, Denmark, France, West Germany, Netherlands, Switzerland, Bahrain, Kuwait, Iraq, Hong Kong and Singapore, for instance. Already numerous exciting Indian delicacies are delighting many.

The list includes canned fruits and vegetables, pickles and chutneys, biscuits and confectionery, spicy papads, instant tea, instant coffee and a host of other items. During the current year, envisaged exports would be of the order of Rs. 13 crores.

Incidentally, are you manufacturing any variety of processed foods? We are at your service. We'll provide all the information regarding exports and render overall help through planning and publicity abroad.

Census 1971: State-wise data--2

Gujarat

By Commerce Research Bureau

ACCOUNTING for 4.9 per cent (267 lakhs) of the total population of India, on April 1, 1971, Gujarat retained its ninth rank among the 19 States after Uttar Pradesh, Bihar, Maharashtra, West Bengal, Andhra Pradesh, Madhya Pradesh, Tamil Nadu and Mysore. During the decade 1961-71, the State's population registered a growth of 29.2 per cent which was higher than the all-India growth rate (24.6 per cent). Even after the faster-than-average growth of population during the several recent decades, the density of population of Gujarat at 136 persons per sq km continues to be lower compared to 182 persons per sq km for the country as a whole. On the other hand, Gujarat, with a literacy rate of 36 per cent, stands fourth after Kerala, Tamil Nadu and Maharashtra.

As expected, Ahmedabad district ranks first among the 19 districts of Gujarat in terms of population. It is followed by Kaira, Mehsana and Baroda. These four districts account for one-third of the total population of the State. In this respect, the least populated district is Dangs. With the construction of the new capital of Gujarat, the Gandhinagar district has recorded the fastest growth rate of population (46 per cent) during the last decade. The other fast-growing districts are Ahmedabad, Surat, Rajkot and Jamnagar—a clear reflection of the increasing tempo of industrial activity. Kaira district, popular for its agricultural activities, has recorded the highest density in the State. It is closely followed by Ahmedabad and Gandhinagar districts. Both these districts are dominated by urban centres. At the other end, the arid district of Kutch comes out as the most thinly-populated district. In all the districts, with the sole exception of Kutch, males outnumber females. In the case of Kutch, there are 1,018 females per 1,000 males because of a considerable migration of male population in search of employment.

In literacy, Ahmedabad district tops the list, followed by Kaira, Gandhinagar, Baroda, Surat and Rajkot. The districts, which had a literacy level lower than the State level in 1961, have improved their literacy rate much faster than the State as a whole during the last decade. These are Dangs, Bhavnagar, Sabarkantha and Junagadh. But they still rank below the State average. The lowest growth rate of literacy is noticed in Broach district, but its literacy rate is on par with the State level.

With the addition of Nadiad during the 1971 census, there are now seven cities with a population of one lakh or more in Gujarat. These seven cities—Ahmedabad, Surat, Baroda, Rajkot, Bhavnagar, Jamnagar and Nadiad—account for 13 per cent of the State's total population. Among the seven cities, Surat is the most rapidly growing city. The other fast-growing urban centres are Baroda, Rajkot and Jamnagar. Ahmedabad urban agglomeration occupies the sixth place among the nine metropolitan cities of India. (See summary tables on page 1030).

A GUIDE TO THE COMPANIES ACT

June Release

By A. RAMAIYA

Published in view of the constant demand. It is really more than a Guide. Adjudged to be the most useful commentary to those who have to refer to the Companies Act. The Statute Law and case law is brought upto date, with all useful appendices. Completely revised.

There is an attractive pre-publication offer of Rs. 45 open till 15-7-1971. Register for your copies immediately.

Guest Keen Williams Limited

Chairman, Mr K. C. Maitra's Statement

STATEMENT by the Chairman, Mr K. C. Maitra, on the occasion of the Forty-first Annual General Meeting held in Calcutta on the 19th May 1971:

It gives me great pleasure to welcome you to this, the 41st Annual General Meeting of your Company. The Directors' Report and the Statement of Accounts have been with you for some time and with your permission I propose to take them as read.

Board of Directors

Mr J. E. Sawtell who had joined the Board on the 21st November 1968 resigned from it on the 31st January 1971 on his retirement from India. His knowledge and experience of the engineering industry were of great assistance to the Board and, on your behalf and mine, I would like to place on record our appreciation of his services to the Company.

Of the four Directors due to retire this year by rotation, three, namely Mr T. Mathew, Mr A. K. Roy and Mr A. H. Sethna, have expressed their willingness to continue to serve on the Board. Their re-election will be the subject of appropriate resolutions later on.

Mr Brian Eustace, having served for three years in India as General Managing Director of the Company, is returning to the U.K. and does not seek re-election. He will therefore retire at the end of this Meeting. During his period with us he has made a deep impress on the operations of the Company. I am sure you will join me in expressing our appreciation of his contribution to the Company's prosperity and in extending to him our good wishes for the future.

Operations During 1970

1970 has been, on the whole, a satisfactory year for our Company. The Directors' Report gives you details, and I shall add only a few comments.

Whilst the turnover increased from Rs 32.03 crores in 1969 to Rs 42.59 crores in 1970 (increase of 33 per cent), production in terms of tonnage did not rise correspondingly though it was higher than the previous year's figure. The increase in the sales value is thus largely the result of higher prices of raw materials and therefore of finished products due to price rationalisation. Liquidity improved considerably and our finance charges were significantly lower because of saving in overdraft interest. The pre-tax profit improved to Rs 7.12 crores as against Rs 1.61 crores for 1969.

Stocks have fortunately recorded significant increase at the end of 1970, particularly because of large consignments of CRGO steel shipped towards the year end. With their arrival the raw material situation, as far as the Precision Pressings Division is concerned, should be considerably eased.

I must add that almost throughout the year we have been plagued by a shortage of raw materials and it has been, on the whole, a hand-to-mouth existence. Critical

raw materials have often had to be purchased at extremely high prices to keep the production going. Our production was also materially affected by the lockout in the Andul Road Works where operations were completely suspended for eight weeks and could be resumed to a reasonably satisfactory degree only after another six weeks.

Among the four divisions the performance of Precision Pressings Division has been the most encouraging, both in terms of production and despatches. Although a much smaller unit, operations of the Screws and Fasteners Unit of the Fasteners Division can also be regarded as highly satisfactory.

The Units located at Andul Road Works, besides the set back due to lockout, were at all times very severely afflicted by steel shortage. In addition, certain strategic materials, particularly for steel making, remained extremely scarce, notably graphite electrodes and ferro alloys.

The Future

Before I share a few of my thoughts on the future operations of the Company, I would like to place the background against which these are based:—

(1) The results of the last General Elections have established the strength of democracy in our country. The fact, that, in spite of somewhat disturbed conditions in West Bengal, such a large percentage of voters came out to exercise their franchise proves that our people are conscious of their rights and obligations. However, from the point of view of industry and of our Company, what is even more important is that the elections have resulted in the formation of a Central Government whose stability cannot be questioned at least for the next five years. In that period, one might expect a consistent and, I hope, a firm policy not subject to the pulls and pressures of the various Parties on whom it was dependent in the last two or three years. Politically and administratively the Government is thus poised for a big thrust forward to launch upon its "Garibi Hatao" or "Quit Poverty" programme.

(2) One must keep one's fingers crossed, but the international situation so far has been reasonably peaceful for some time. Even though dark clouds appear to be gathering, one may hope that wise counsels will prevail and these international problems will disperse.

(3) The Weather-God has been all along reasonably kind to us during the last four years and we have had good spells of monsoon. Coupled with better techniques, provision of better seeds and better fertilisers and the industry of our peasants, this has helped us to overcome the food crisis and one may expect that the worst is over.

(4) West Bengal, where our largest units are located, has been the scene of unprecedented violence and crimes. Whether these are the results of personal or political vendetta or acts of unsocial elements, the fact remains that there is a feeling of

uncertainty for the future, which is further aggravated by the alarmingly mounting unemployment in the State. To what extent the situation will be further complicated by the continuing influx of refugees from our neighbouring State is still not known. West Bengal thus faces big problems. The administration with its political uncertainty and lack of resources would have a heavy burden cast on it and it appears that the prime need for the State at the moment, more than ever in the past, is its political stability. Since unemployment in the State will continue for a long time, telling phrases or clichés such as, "crash programmes", "war-footing" etc, would appear to be facile unless the State embarks on a 5 or even a 10-Year Plan concentrating on labour-oriented schemes which will at the same time be economically productive. Grave maladies need drastic and effective remedies.

(5) Production in the field of basic raw materials and of heavy industries continues to remain sluggish. The public sector steel plants are still far from producing their rated capacity and the date of starting of the new steel plants at Bokaro and also at other places is being continuously deferred. Railway wagon builders and structural engineering firms continue to suffer from shortage of orders or of raw materials or of both. The construction of the new Howrah Bridge which was expected to give a fillip to local industry has not yet been started. Though the Government has so far managed to electrify one out of every six villages in the country, it is still unable to meet the ever-increasing demand for power and today industries in the Punjab, Haryana and Western UP are languishing under acute power shortage. Against this gloomy picture must, of course, be stated the fact that on account of rising prosperity in agriculture there is a steady and developing demand for consumer products which is bound to lead directly or indirectly to the demand for products of industries of our type. The problem will still, however, be of scarcity of raw materials.

(6) The Fourth Plan is said to be again under revision to be labour-oriented. It is not known to what extent and in what manner the Plan will be revised so as to be consistent with Government's "Garibi Hatao" programme and how soon these plans start giving immediate relief to the unemployed. Whether the importance given to heavy industries will remain unaltered is a moot point.

If my analysis is correct, we appear to be, by and large, in an era of political stability combined with uncertainty of the pace and direction of economic growth. What then should be this Company's policy in the immediate future? With increasing demands for our products, one's thoughts would naturally turn to the idea of a substantial increase in the Company's production capacity. I would like, however, to recall in this connection that we have only recently carried out a major expansion of our steel plant. An application for increase in the capacity of manufacture of wood-screws has been pending with Government for some time. In our other major activities, such as electrical stampings, bolts and nuts, etc, the limitation is not so much of plant capacity as largely of raw materials. Given more, we can certainly produce more.

It should be remembered that in spite of the shortage of raw materials, Government have granted industrial licences for the establishment of several other factories for the manufacture of electrical stampings. In automotive forgings, there is already excess capacity in the country. In our other fields of activity, such as bolts and nuts, screws and fasteners, more and more capacity is being created in the sphere of small-scale industries. It should cause no surprise if, consistent with their declared policies, Government give more favourable treatment to them in the matter of allotment of raw materials.

In this situation, it seems to me that our future lies in making the best use of the resources we have and these, I assure you, are of the highest quality, both in men and plant. Your Company already has the highest reputation for quality and efficiency; but achieving perfection is a continuous process and we must pursue it methodically, vigorously and relentlessly. We have done much but we must do more and I would like to enumerate them in some detail:—

(i) **Consolidation of the Company's Operation:** The restructuring of your Company's organisation in four operating divisions and the closure of the Railway Engineering and Track Department in 1968 have been followed up by intensive training of management in all functional areas, and at all levels to build up a cadre of skilled managers. The keynote of our objective has always been professional engineering and professional management.

(ii) **Products and Product Development:** As is well known, our Company's manufacturing divisions serve several emerging industries whose growth must continue to be a basic urge. At the same time we have to serve a number of established industries whose stability is essential to the country's economic survival. We produce finished and semi-finished components used in generation, transmission and distribution of electricity, in structural, fabrication and construction industry, in automotive industry and in a host of consumer durables. In our time, we have pioneered the manufacture of a number of new items for all these industries and are still pioneering the development of "C" and "E" cores for electronics in India. We have also developed Boron Steel specifically for tractors.

Our customers have faith in the quality of our products and we want to stay and grow in the market on the strength of this reputation. This it would be idle to claim to be an easy task in an increasingly complex and competitive environment. We have to concentrate on learning new skills and disciplines in marketing. We have to build up a highly motivated team of managers, and advanced technology for our diversified operations most of which produce precision components. Their manufacture requires a high degree of professional engineering which will continually provide the basis for further diversification of the products in the Company.

(iii) **Assistance to Customers:** With the increasing importance now being given to small-scale industries, it is no longer enough merely to supply our products to our customers; it is important that we train these small industries in the better and more efficient use of these products to our mutual advantage. This will mean a more

detailed study of our customer's products and we must intensify our efforts in this direction.

Apart from this being a social obligation, it is only through such effort that we can help the country to develop a massive industrial super-structure underpinned by an equally strong and vigorous infrastructure of ancillary and small-scale industries in the country.

(iv) **Labour relations:** After the lock-out in the Andul Road Works last year, we have fortunately had no major labour troubles. Nevertheless, we still continue to have minor labour problems here and there in our various works throughout the country. Although individually minor, their cumulative effect leads to a significant loss of production and it should be our constant endeavour during this period of consolidation to see that they are minimised to the extent possible.

What I have said above may not sound so commonplace when it is revealed that no fewer than 19 million man-days were lost to the country's industry in 1969 and the figure for 1970 is expected to be in the neighbourhood of 25 million man-days. It is important to constantly watch the organisational behaviour of industrial labour in operating a big manufacturing unit like ours, and it is wise to remember that in the field of industrial relation the routine is more effective than the spectacular.

1971

Encouraged by our performance in 1970, we have set our targets fairly high for 1971. Partly due to shortage of raw materials and partly due to minor labour unrest, we have not been able to achieve these high targets during the first four months. Though not comforting, we should have no reason to be unduly worried about it. Our production and sales during the first four months of the current year have continued to follow last year's growth trends. Fall in demand for certain products is counter-balanced by increase in some others and on the whole the situation appears to be not too disquieting. The only uncertainty is about the supplies of steel. Our small inventories of mild steel and poor arrivals from the steel works continue to be our major problem. Given adequate steel and power supply we should expect to match the performance of 1970 in 1971 as the upswing in the country's economy which began in 1969 still continues to gain momentum and the demand for most of our products persists to be strong

Exports

It is a matter of great regret that our earnings from exports last year were not upto expectations. In my statement last year I referred to the difficulties of exports and these were mainly lack of availability of raw materials and high costs in the country. These difficulties still continue to face us. I think, however, that our determined efforts to promote exports of other commodities are beginning to bear fruit and we hope to be able to do better in the current year although on account of recession in the USA there is a possibility of a deferment of export orders for screws and fasteners.

The Restrictive Trade and Monopolies Act will inevitably act as a brake on the growth of already existing and efficient

units. Unless organised industries are allowed to have a strong domestic base firmly anchored to economics of volume production, their performance both in domestic and overseas markets will be adversely affected and this in a decade when the need for exports and self-sustaining economy is vitally essential. Moreover, any unimaginative "policing" of the industrial sector by the Act is likely to retard the research and development work in organised units and without such developmental activity it may be difficult even to continue to maintain the present export markets in the future.

Our Associates:

Our Associates—Guest, Keen & Nettlefolds Limited of UK continue to give us valuable assistance. They have helped us to train our people here and in their various Works in the UK. Their Deputy Chairman, Sir Henry Wilson Smith, who is also on our Board, has visited India three times during the last 12 months and has spent almost two months in this country. I am very glad he is present amongst us today and I take this opportunity of personally thanking him on your behalf and mine for his wise counsel and able guidance.

Conclusion

It remains for me only to thank our employees for their continued co-operation. All of them have had to work in somewhat difficult conditions, particularly those at Calcutta owing to continual disturbances there and the neighbouring areas.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Manager

BOMBAY, 13th May, 1971

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Indian Branches of Banque Nationale de Paris as at 31st December 1970 and the Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date in which we incorporated the returns of the Calcutta Branches of the Bank audited by other auditors and report that —

- We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purposes of our audit
- In our opinion proper books of account as required by law have been kept by the Bank as far as appears from our examination of these books and proper returns adequate for the purposes of our audit have been received from the Calcutta Branches.
- The Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the audited returns.
- The report on the accounts of the Calcutta Branches audited by other Auditors has been forwarded to us and this has been considered in preparing our report.
- In our opinion, and to the best of our information and according to the explanations given to us the said account is a true and correct statement of the affairs of the Bank as at 31st December, 1970, and the Profit and Loss Account gives a true and fair view of the Profit of the Indian Branches for the year ended upon that date.

HINDUSTHAN MERCANTILE BANK LIMITED

DIRECTORS' REPORT

To

THE SHAREHOLDERS,

HINDUSTHAN MERCANTILE BANK LTD.

The Directors submit their Annual Report with Audited Accounts of the Bank for the year ended 31st December, 1970.

During the period under review the gross earnings of the Bank amounted to Rs 23,84,777 46 P. After meeting expenses which amounted to Rs 23,78,014 06 P the net profit for the year came to Rs 6,763 40. Add amount brought forward from previous financial year Rs 19,077 35.

Total .. Rs 25,840 75

which amount the Directors recommend be disposed of as under:

(1) Transfer to Reserve Fund 4,000 00
(2) Contingency Reserve (Gratuity) 10,000 00
(3) To carry forward 11,840 75

Total .. Rs 25,840 75

The business of the Bank during the year 1970 and the results achieved can be termed as satisfactory in the face of interest in establishment charge alone to the tune of about Rs 2,35,000 00 P. In which is included a sum of Rs 1,60,000 00 P was called upon to bear in implementation of 2nd Bipartite Settlement. The Directors are hopeful that during the current year improved working will be recorded.

The Directors are glad to report that in order to implement the provisions of Banking Regulation Act, 1949, Sri Vinayak Mehrotra was appointed as a whole time Chairman and Chief Executive Officer of the Bank for a period of one year with effect from 22nd October, 1970.

Sri M. I. Jalan served as Chairman of the Bank since 1947 and the Board of Directors places on record its deep sense of appreciation of services rendered by him during his Chairmanship.

The Directors have the pleasure to report that Sri Sohanlal Gupta was co-opted as a Director of the Bank on 8th June, 1970, to represent the special interest "Small Scale Industry". He ceased to be a Director on 4th August, 1970, as he did not get the qualification shares. He was again co-opted as a Director of the Bank on 7th January, 1971.

The Directors further report that Sri B. N. Chikarmane, Assistant Chief Officer, Department of Banking Operations and Development, Reserve Bank of India, has been appointed by the Reserve Bank of India as an additional Director of the Bank under Sub-section (1) of Section 86A of the Banking Regulation Act, 1949 (10 of 1949) for a period of one year from 10th February, 1971, and Sri B. K. Jain, whose extended term expired on 10th February, 1971.

The resignation of Sri Mahavirprasad R. Morarka, a Director of the Bank was accepted by the Board on 21st April, 1971, with regret. The Board placed on record its appreciation of the valuable services rendered by him to the Bank.

In terms of Clauses 90 and 91 of the Articles of Association (1) Sri Mohan Kumar Mookerjee and (2) Sri Himmat Singh Jain Directors of the Bank retire by rotation and (3) Sri Sohanlal Gupta Director of the Bank retires under Section 260 of the Companies Act, but being eligible offer themselves for re-election.

The Directors place on record their appreciation of the services rendered by the Chairman, Officers and other members of the staff at Head Office and branches and also take the opportunity of recording their appreciation and gratitude to the depositors, clients and shareholders for their continued support and co-operation.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the Board,

S. N. MEHROTRA

Chairman

** Subject to approval of Central Government under Section 108 (4) of the Companies Act, 1956. The above accounts have been drawn up in accordance with the provisions of Section 29 of the Banking Regulation Act, 1949.

In terms of our Report of even date annexed herewith.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the annexed Balance Sheet of Hindusthan Mercantile Bank Limited as at 31st December, 1970, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the returns of the branches audited by us.

We report that:—

(a) We have obtained all the information and explanations, which to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) In our opinion, proper Books of account as required by law have been kept by the Bank so far as appears from our examination of those Books, and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and returns;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts together with the notes thereon give the information required by the Companies Act, 1956 in the manner so required for banking companies in so far as such banks the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1970 and the Profit and Loss Account gives a true and fair view of the Profit for the year ended on that date.

RAILWAY BUDGET 1971-72

Railways still in the red

The Minister of Railways, Mr K. Hanumanthaiya's budget speech in the Lok Sabha on May 24

THE interim budget presented in the month of March revealed that the revised estimates for the year 1970-71 would have a shortfall of Rs 23.69 crores. The final figures of the year would be available in August on the accounts for the year being closed. However, preliminary actuals of earnings and of expenditure for the year are running close to the revised estimates. The emerging financial picture indicates a shortfall of about Rs 23.88 crores, the marginal variation being about Rs 19 lakhs from the revised estimates.

In the two months of February and March 1971, loadings continued to lag behind the corresponding months of 1970. The level of revenue-earning goods traffic for 1970-71 was then apprehended to be less by about 4.3 million tonnes than the actuals of 1969-70. The shortfall is likely to increase to about 5.2 million tonnes. But the adverse swing has been more than neutralised by longer lead of freight traffic and a larger proportion of high-rated traffic. It is estimated that goods earnings may show an additional income of Rs 3.31 crores. Income from "passengers" and "sundries" has shown shortfalls of Rs 3.87 crores and Rs 2.45 crores respectively. But they have been almost made good by increases of Rs 2.61 crores under "other coaching" and of Rs 3.31 crores under "goods." The total gross earnings would be Rs 1,006.40 crores as compared to Rs 1,006.80 crores shown in the revised estimates. The gross traffic receipts now stand at Rs 1,001.93 crores, as compared to Rs 1,004.00 crores envisaged in the revised estimates.

Gross earnings are almost the same as anticipated in the revised estimates. But gross receipts have got reduced by Rs 2.07 crores, due to earnings awaiting realisation. Ordinary working expenses, however, would be less than the revised estimate of Rs 731.76 crores by Rs 1.35 crores. The miscellaneous expenditure including "open line works revenue," is expected to show a reduction of about Rs 52 lakhs. Appropriation to the depreciation reserve fund, the pension fund, and the dividend to general revenues remain the same. The budget estimates for the current year presented in March, were based on the revised estimates of the last year and on the then existing level of fares, freights and expenses. The latest traffic trends in April are slightly adverse. But no change seems to be necessary in the budget estimates. The total gross traffic receipts at the present levels of fares and freight rates have, therefore, been kept at Rs 1,044.00 crores, that is, about Rs 42 crores more than the approximates for 1970-71. Similarly, the estimate of working expenses in the budget estimates, holds good.

The railways, therefore, are faced with a shortfall of Rs 33.12 crores for 1971-72 as shown in the interim budget. It was envisaged in the interim budget that the indebtedness, of the railways to the general revenues at the close of 1971-72 would amount to Rs 153.6 crores. It was foreseen that the financial position of the current year would be worse by nearly Rs 95 crores as compared with that of 1970-71. The prospects of the year do not seem to have improved since March. The total gross traffic earnings during April 1971 are short by Rs 1.63 crores over the proportionate budget target of Rs 86.89 crores. If this trend continues, it may not be possible to reach the level of earnings stated in the interim budget. The Eastern and South-eastern Railways which account for 60 per cent of the tonnage carried by the Indian railway system as a whole and hold 40 per cent of the total number of broad-gauge wagons, continue to cause anxiety. Their very functioning has been hampered by daily dislocation of train services. Thefts of overhead traction wire, theft of telecommunication cables and equipment, attacks on trains and staff, organised looting of wagons and luggage vans, large-scale thefts of wagon fittings and track fittings, have become the order of the day.

On Eastern Railway alone, during the first three months of the current year, there were as many as 155 cases of theft of overhead electric wire, 369 cases of theft of telecommunication cables and equipment, 305 cases of attack on trains, 39 cases of attack on stations and 33 cases of assault on railway staff. Hundreds of wagons remain immobilised due to theft of brake beams, bearings and other fittings. Goods trains have had to be stopped for several hours a day in the busy sections in the eastern region due to the theft of overhead wires. The two railways should normally have loaded a minimum of 6,500 coal wagons daily in the Bengal and Bihar coalfields. In the last few months they have hardly been able to load 5,500 coal wagons. It is therefore, that coal supplies to industry, power generation brick kilns have been so unsatisfactory. The movement of foodgrains has also been affected.

It is not the number of wagons but their mobility that is now pertinent. The mobility of wagons has to be smooth and speedy. The wagon should not get stuck in large numbers, especially in the busy areas like Calcutta region. Efficient operation requires 30 goods trains to run every day from Calcutta to Andal and another 30 from Andal to Calcutta. These trains run mostly at night, because large numbers of suburban and non-suburban passenger trains have to run during the day. Each theft of overhead wire causes an interrup-

tion in service of about 4 to 4½ hours. This time is required for the repairing team to go to the spot with their special equipment and reconnect the 25,000 volt contact line and the catenary. Since there are at least two thefts occurring daily in these areas, the House can imagine the extent of interruption that is caused to the running of the goods trains.

The Hon'ble Members who are the guardians of national interests have to see how compelling is the necessity to take relentless measures to restore normalcy. These measures have to be preventive as well as punitive. Armed Railway Protection Force units have been already deployed in the specified pockets for intensive patrolling of the track. I have been requesting the Chief Ministers of West Bengal and Bihar to help and co-operate in effectively putting down these organised thefts and violence. I have been discussing with my colleagues in the other Ministries for co-ordinating the needed efforts. I want in particular the help and co-operation of the concerned trade unions. This cumulative and comprehensive move on the part of all of us has become imperative. In the coming months, we have planned to meet as often as required to combat the menace which is turning out to be the enemy internal.

Financial performance of railways suffers from certain other handicaps. I seek your indulgence to explain some of them. The railway finances are muled with some social burdens. Rs 8 crores is the annual loss sustained by the railways on unremunerative branch lines. The loss on passenger traffic is of the order of Rs 59 crores. The railways run 5,200 passenger trains and carry 6.6 million passengers a day. But the income from passenger traffic is not sufficient to cover its expenses. The passenger fare is below cost and it is virtually enjoying a subsidy.

The suburban travellers in the three cities of Bombay, Calcutta and Madras who hold cheap monthly and quarterly season tickets have the benefit of Rs 12 crores of the said sum of Rs 59 crores. The preponderance of low-rated and bulky commodities like coal, ores, stone, cement, fertilisers, foodgrains and salt in the mix of the revenue earning traffic is getting accentuated. The originating tonnage of these commodities increased by 60 per cent between 1960-61 and 1969-70, while traffic in the rest of the commodities increased by only 16 per cent.

In 1969-70, this group of commodities accounted for about 73 per cent of the total revenue earning tonnage but contributed only 53 per cent of earnings from goods carried. The loss in the transport of foodgrains and pulses alone comes to Rs 17.5

crores, that on coal to Rs 12.0 crores, that on fodder and oilcakes to Rs 5.8 crores, that on ores to Rs 3.9 crores. The total loss on the transport of all these and other bulk commodities came to Rs 52 crores in 1970-71. Naturally the aggregate railway earnings have not increased proportionately with the originating tonnage. The Hon'ble members will agree with me that if railways are to become financially viable again, the profitability of the bulk traffic carried should be ensured. These may be termed as social responsibilities and the railways being a public undertaking has to bear its share. Even so there is room for re-thinking on the extent of this share. Railway income must be able to meet the annual expenditure.

The downward trend in railway finances started from 1964-65. The liability for development fund works could not be met fully from that year nor the full annual dividend liability to the general exchequer from 1966-67. The railways, in consequence, had to draw upon their revenue reserve fund and later resort to borrowings from general revenues to meet their obligations. The costs of operation are annually increasing, creating a big lag between the income realised from freight rates and passenger fares on the one hand and the working expenses on the other. The expenditure on staff which accounts for 60 per cent of the working expenses has gone up by 72 per cent since 1963-64. The price of coal has gone up by 47 per cent, that of electricity and diesel oil by approximately 27 per cent each in the same period. Their cumulative effect has pushed up the weighted index of cost of operation by 60 per cent. The fact of the position is that all the increases we have effected during this period in passenger fares and in freight rates have been 19.6 per cent and 22.7 per cent, respectively.

The House will therefore see that the railways recover 36.0 per cent only of the increase in their cost of operation. Hon'ble members are aware that the interim relief awarded by the third pay commission has increased the pay bill of the railways by Rs 36 crores per year. The daily allowance admissible to Government employees has also been subsequently enhanced. This has resulted in an additional expenditure of Rs 13 crores on daily allowances and running allowances for engine drivers, guards and firemen. The total of all these increases amounts to over Rs 49 crores in the annual wage bill during the last 12 months alone. In fact, the cost of staff which has been steadily going up every year has more than doubled itself from Rs 205 crores in 1960-61 to Rs 465 crores in 1970-71.

Proposals

The Hon'ble members will appreciate that these factors and figures have to be so improved as to put the railway finances on an even keel. The proposals I am proceeding to make will neither be a big burden, nor adversely affect our economy. May I now, with your permission, proceed to outline my proposals? It is proposed to raise by one step the freight classification of commodities now charged at class levels 45 and below. But the foodgrains and certain export iron ores from Kiriburu and Bailadilla will be exempted. Commodities now charged at Class 25 (for wagon loads) which is the lowest class, will now be

charged at Class 27.5, those charged at Class 27.5 will be charged at Class 30 and so on up to commodities grouped under Class 45, which will be charged at 47.5.

This would broadly mean an increase in rates of 8.9 per cent in respect of commodities now charged at Class 25, the increase gradually getting reduced to 5.3 per cent only for commodities now charged at Class 45. These low-rated commodities account for the bulk of the losses. The classifications for "smalls," that is, consignments less than wagon loads will be correspondingly refixed. This proposal would bring in an extra revenue of Rs 13.70 crores for the full year. Coal traffic has a separate scale of charges. Coal forms about 30.5 per cent of the originating traffic but accounts for only 19.9 per cent of the total earnings. The cost of haulage of coal is covered up to a lead of 550 kms only at the existing level of rates. No change was effected in the coal rates up to distances of 800 kms in the last revision of freight rates. The position is that the movement of this commodity for distances beyond 550 kms has now become uneconomic.

I propose, therefore, to increase the freight rates for coal and coke in such a manner that the charges cover costs up to about 1,000 kilometres. The gap between the costs and the rates beyond this distance will get slightly reduced. I, however, propose to give an incentive to encourage train load despatches as well as off-season movements. There will be a freight discount of 2 per cent for all distances if the traffic in coal is offered for movements in trainloads from one station to one destination station on a single forwarding note. There will also be a rebate in the freight rates for coal offered for movement for 500 kms and above during the slack season, that is, during the months of June to September. This rebate will vary from 50 paise per tonne for distances beyond 500 kms to Re one per tonne for distances beyond 1,500 kms. The proposal is expected to yield, after allowing for the discount and rebate, and extra revenue of Rs 6.5 crores for the full year. Even at the revised rates, the loss on the transport of coal will be Rs 5.5 crores.

I propose next to step up the rates for categories of iron and steel falling under freight classifications division "A" and division "B" by placing them at a class one step higher than at present. In other words, categories of iron and steel like rope wire, wire net, hammers, hinges, which are at present charged at Class 80 (wagon loads) will be charged at Class 82.5. Iron and steel materials like bars, rods, plates which are now being charged at Class 67.5 will be charged at Class 70. As at present, the "smalls" classifications will be refixed to bear the same relationship with the corresponding wagon load classifications. This increase is expected to yield an additional revenue of Rs 1.6 crores. These new freight rates will bring in a total revenue of about Rs 21.80 crores in a full year. But the total revenue deficit is Rs 33.12 crores. The gap has to be closed and in doing so I have no alternative but to raise the passenger fares, spreading the burden on all passengers. There has been no increase in third class passenger fares for the last three years even though the costs of operation have increased by 15 per cent.

I propose the increase in passenger fares not on a full scale but on a very modest scale. There will be no change in any

class of travel for the first 15 kms nor in respect of season tickets. For distances between 16 and 30 kms it is proposed to increase the third class ordinary fares by five paise per ticket and the third class mail and express fares by 15 paise per ticket; for distances between 31 and 50 kms by 10 paise and 20 paise respectively for third class ordinary, and mail/express travel, and so on. The maximum increase in a third class ordinary ticket will be only 25 paise for all distances above 200 kms and in a third class mail or express ticket Re one only for all distances above 1,000 kms. Thus a third class express ticket from Delhi to Bombay or Calcutta or Madras or a longer distance will cost only one rupee more, which the honourable members will agree is minimal. The proposed increases in third class fares (ordinary and mail/express) are anticipated to produce an extra revenue of Rs 11.60 crores.

The fares for upper class travel, including third class air-conditioned chair car, are being enhanced at proportionately higher rates, the increases varying from 50 paise for the distance zone 16-30 kms to Rs two for distances beyond 1,000 kms in respect of third class air-conditioned chair car and second class (ordinary and mail/express). The maximum increase in respect of first class fares is Rs 3.50 for distances beyond 1,000 kms and Rs seven in respect of air-conditioned first class travel. The extra revenue from changes in the fares of the upper classes is expected to bring in Rs 1.60 crores. A memorandum is being circulated to the honourable members giving the details about the proposals both in respect of freight rates and passenger fares.

All these measures together will bring in a total revenue of Rs 35 crores in a full year. Since the revised rates can take effect only from 1st July of this year, the increase in receipts for the current financial year will be Rs 26.25 crores. This will still leave a deficit of Rs 6.87 crores in the current year. I propose to leave this deficit uncovered in the Budget. The efforts I propose to make along with the railwaymen of all classes from the Chairman of the Railway Board to the last gangman, to effect economy and improve efficiency will be directed to wipe out this deficit. I hope to succeed with your goodwill and co-operation.

I have already initiated action to improve the working of the Railways so as to achieve better realisations in earnings and at the same time economies in expenditure. I have recently had personal discussions with the general managers of all the zonal railways. I have formulated general guidelines as well as specific financial objectives for the year. I have every confidence that the zonal railway administrations will do their best to fulfil the objectives. I have found cost consciousness growing at all levels in the railway hierarchy and a transparent earnestness to maximise earnings and reduce expenditure. Given normalised conditions of working, there is reason to be optimistic that the uncovered deficit will be met by our extra efforts.

The Railways' Fourth Five Year Plan as originally formulated, envisaged 264.7 million tonnes of originating goods traffic during the last year of the Plan in 1973-74. The Plan had forecast 212.35 million tonnes in the first

year, that is, 1969-70, but the actual materialisation was only 207.9 million tonnes. With this, the target for 1970-71 was revised from 224.6 million tonnes to 217 million tonnes in the Budget presented in February 1970. Even this anticipation was upset because of the deterioration in the law and order situation, strikes and bundhs in the industrial belt of the country and the difficulties in the working of the steel plants both in the public and private sectors. The actual traffic for the year 1970-71 was 199 million tonnes—that is, a fall of 18 million tonnes. It, therefore, became necessary to review and to scale down, in consultation with the Planning Commission, the physical targets from 265 million tonnes to 240.5 million tonnes. The Plan outlay was also reduced from Rs 1,525 crores to Rs 1,275 crores. Steps have consequently been taken to cut down investments.

The Plan outlay for 1971-72 has, accordingly, been reduced from the original figure of Rs 308 crores, on works, machinery and rolling stock to Rs 280 crores, in the Interim Budget. The zonal railways were directed to reduce inventories and expeditiously dispose of scrap and released material, thereby eliminating as much dead capital as possible. Much of the developmental expenditure on line capacity works and electrification in the earlier Plans was incurred in the eastern coal-steel belt area. The traffic pattern having changed, we have now to develop the north-south routes covering three zones, the Delhi-Bombay and the Bombay-Ahmedabad routes of the Western Railway and the Jolapettai-Olavakkot section of the Southern Railway. As the House is aware, the mid-term appraisal of Fourth Plan is

in progress. We are having three new steel plants and naturally, they require synchronous development of the railways to serve them. It is also likely that as a result of the revival of the economy, there may be an upsurge in the traffic demands in various parts of the country. We are constantly and continuously reviewing the position in consultation with the Planning Commission and the Economic Ministries concerned.

The Railway Plan is a flexible one and as and when new works are needed by traffic demands, the necessary resources will have to be found. I shall now dwell on a few important aspects of railway working which deserve your consideration.

Gauge conversions

Informed public opinion is insistent on one gauge for the Indian railways. The Administrative Reforms Commission, in their report on the railways, have stated that the multiplicity of gauges, presently in use, is irrational and wasteful. Uniformity of gauge ensures a smooth flow of traffic, increases transport capacity and reduces operating costs. The cost of operation on the metre gauge works out to 50 per cent more than that on the broad gauge for traffic above certain densities. The cost of handling at the break-of-gauge transshipment points is also heavy, being over Rs three per tonne. Besides, the much-complained-of thefts—pilferages and damages generally take place at transshipment points.

The British inflicted the multi-gauge system on India, though in their own country, they strictly adhered to a uni-gauge system. Nor has any other advanced country got the multi-gauge system. The existing four gauges are an economic drag on the progress of India. This drag has to be done away with as soon as possible. To begin with, we have to make at least a policy decision that no more metre gauge and narrow gauge lines will be built, that every new line should be broad gauge and that from now on, the gradual conversion of metre gauge lines to broad gauge should begin. I quite understand, that an outright conversion of the entire smaller gauge systems into broad gauge is not practicable. It is estimated to cost about Rs 2,000 crores on line construction and another Rs 2,000 crores for broad gauge rolling stock. But the baffling unemployment problem facing the country could be solved to a great extent by undertaking this mighty task. It will presently create great employment opportunities and bestow on the nation permanent assets.

The Indian railways have drawn up a 15-year perspective plan of converting about 3,000 route kilometres to broad gauge. The civil works connected with this project are estimated to cost about Rs 175 crores. Rs 15 crores are included in the current plan for the purpose, out of which Rs 7.53 crores have been spent. Railways have undertaken surveys for a number of conversion projects in various parts of the country. Of the survey reports completed and received, the following projects are likely to satisfy the financial criteria. These lines are: (1) Guntakal-Bangalore; (2) Ernakulam-Trivandrum sections of the Southern Railway; and (3) Viramgam-Okha and Kanalus-Porbunder sections of the Western Railway. Some further data and clarifications have been called for from the railways con-

cerned and I have directed that the examination of all these projects should be completed within the next three months. I expect that these three projects would prove to be viable even as they are desirable. I hope that it will be possible for me to come up before this House for supplementary demands for implementing these projects.

Instant employment

There are about 41,000 level-crossings in the country. Now and then an accident occurs at one or the other of these level-crossings. Almost all of them entail delays to the road users. The trains, too, have to slow down when approaching level-crossings and to that extent running time gets increased. There are innumerable demands for construction of over/under bridges from all over the country. Each over/under bridge taken up will give employment to about 400 persons for a period of six to nine months. To finance such works, "railway safety works fund" was set up some years ago and is fed by contributions from the railway revenues. The railways will be contributing Rs 2.29 crores in 1971-72 towards this fund and with this the accumulation in the fund will stand at Rs 10.83 crores. Construction of over/under bridges confers three benefits. It avoids accidents, it makes for smooth and speedier running of trains and road traffic and affords immediate relief to the unemployed, skilled as well as unskilled. I, therefore, attach great importance to it and earnestly propose to launch a campaign to build as many over/under bridges as possible. For this purpose I need the co-operation of the State Governments, as the construction cost has to be borne half by the railways and half by the State Governments. We have accordingly addressed the State Governments to this effect.

I will be happy if the entire amount of Rs 10.83 crores is spent this year itself on the construction of over/under bridges. These projects generate immediate employment opportunities to unemployed graduate engineers. Government of India schemes of providing employment will also get added potential. The principal factor in the growth of traffic on the Indian railways has been the movement of bulk commodities like steel, coal, iron ore, manganese ore, cement, etc., and their concentration in a few selected areas and routes. This is a feature which has created special problems for the railways. The important routes of traffic movement began to get saturated under steam traction. The railways, therefore, had to go in for electrification and dieselisation of traction. The diesel and electric traction have distinct advantages over the steam traction, particularly in sections with heavy traffic density. Steam engines have lower speeds and acceleration, less thermal efficiency and hauling capacity. In addition, they require coaling and watering facilities en route. Diesel and electric engines with higher speed, better acceleration, greater hauling capacity and less need for servicing en route are able to achieve improved operation and substantial savings in working expenses.

The change-over, on a congested section, of even a few of the heavier long distance goods trains to diesel operation can bring about sufficient relief and help to defer expenditure on costly line capacity works, like doubling of track.

THE INDUSTRIAL COURT REPORTER

Started in January 1948, the *Industrial Court Reporter*, issued monthly, contains important orders and awards of the Industrial Court and Tribunals in Maharashtra State, as well as the selected decisions of the High Courts and the Supreme Court of India. The *Reporter* serves employers, employees, trade unions and lawyers in finding at one place the case law on industrial and labour matters.

Dieselisation can be introduced selectively in successive steps embracing more and more goods services as the traffic builds up. For densities of traffic above 8 to 9 million tonnes per annum, electric traction even with its comparatively heavy initial capital outlay generally becomes cheaper than steam or diesel traction. The diesel locomotive has, however, this advantage over the electric locomotive in that it can be readily moved from one section to another as required. Long-distance goods trains and some 25 pairs of important mail and express trains have been dieselised, covering over 23,000 route-kilometres. The Indian Railways have a phased long-term programme of electrification, which, of course, has to be synchronised with the capacity to produce electric locomotives in the country, the availability of electric power and other required materials.

The House would be glad to know that at present electric traction has been introduced on six out of nine zonal railways, namely, Eastern, South-Eastern, Northern, Central, Western and Southern Railways. During the decade 1960-61 to 1970-71, 3,330 route kilometrage has been electrified. Some of the important sections proposed to be taken up during the Fourth Plan are Virar-Sabarmati on the Western Railway, Waltair-Kirandul and Panskora-Haldia on the South-Eastern Railway, Tundla-Delhi on the Northern Railway and Madras-Vijayawada on the Southern/South Central Railways. These schemes together will electrify 1,758 kilometres and involve an expenditure of Rs 103 crores. We are, however, facing several difficulties in the transitional phase of modernisation. One major difficulty experienced by the Railways in the wake of electrification, as already pointed out, is the large-scale recurring thefts of overhead copper wire and its serious consequences. The development of sophisticated methods of signalling, dieselisation and electrification have raised certain staff problems, in that personnel required to maintain and operate these sophisticated items have to be specially trained and suitably qualified.

As Government has decided that no staff would be retrenched as a result of modernisation, arrangements have been made for retraining and proper placement of personnel in the operation and maintenance of the new and modern equipment. Yet another problem, which is perhaps inevitable in the nature of things, is the existence of multiple traction on the same route during the initial stages of modernisation of traction. The Railways are aware of the advantages of homogeneous traction on a given route and are working towards this end. In this context the indigenous manufacture of broad gauge steam locomotives has already been stopped. The Railways have pressed into service high-capacity broad gauge bogie wagons to meet the rising traffic demands particularly of the bulk commodities. These wagons have a carrying capacity of 55 to 65 tonnes against the 22 tonnes of the conventional two-axle wagons, and enable the running of heavier trains with corresponding increase in throughput. With their introduction, the permissible gross load of freight trains has increased from about 2,200 tonnes to about 3,650 tonnes, that is, by nearly 65 per cent. To ensure the maximum utilisation of these high-capacity wagons, they are hauled by multiple diesel or electric locomotives in close circuits.

The Administrative Reforms Commission have, in their report on the Railways, made 49 recommendations. The recommendations are of far-reaching consequence and cover all the important facets of Railway activities. The Commission have emphasised that the Railways, which are owned by the nation as their largest public-sector undertaking, should be enabled to function on sound business and commercial principles within the framework of the policy laid down by the Parliament. Government attach great importance to these recommendations. Some of the recommendations have to be examined at the highest level. So far six recommendations have been accepted fully or with minor modifications. Other recommendations are under various stages of examination.

I am fully conscious of the criticism made against the late running of trains. The punctuality of passenger trains has suffered much this year. The reasons are two-fold. One is the interference the trains suffer at the hands of the wire thieves, the chain pullers, and the political agitators, with their bandhs, dharnas and attacks. The other is the inefficiency of the concerned Railway employees. In the coming year, we have to devise measures and methods for combating interference and punishing inefficiency. Look at the number of cases of alarm chain pulling alone. In 1969, their number was 254,932 and it has grown in the very next year, 1970, to 3,33,911. They are currently as high as a thousand a day.

Continuous efforts are being made to ensure basic amenities at every Railway station, with the resources available. I am glad to inform the House that the work of providing basic amenities like waiting halls, lighting, drinking water, adequate booking arrangements at all the stations on the Indian Railways was completed during 1970-71. Third class sleeper coaches which were introduced in 1954 are now provided in all mail and express trains and certain passenger trains. The total number of third class sleeper coaches in use at present on the Indian Railways is 1,900. The expenditure on passenger amenities has progressively increased from about Rs 24 crores per annum at the beginning of the First Five-Year Plan to about Rs 4 crores per annum in the Fourth Five-Year Plan.

I am sorry, however, to say that amenities provided, like lights, fans and other electrical fittings in the existing passenger coaches, have become the objects of organised thefts. My predecessor, Shri G. L. Nanda, did his best to effect improvement of passenger amenities, fuel economy and elimination of thefts and pilferages at important transhipment points. The public co-operation he initiated deserves to be further secured and augmented. I am aware much more work remains to be done and it will be done.

Concessional return tickets at one and a half times the single journey fares are issued every year since 1951 during the summer months, that is, from April 1 to October 31. The main objective when we started issuing these tickets was to attract traffic to certain hill stations. Till last year this concession was available to some 25 to 40 hill stations from any station from where the chargeable distance is 240 kms or more. The Railways lose about Rs 20 lakhs on account of this concessional

traffic. There is a heavy rush during these months not only for journeys by rail but also for accommodation at the hill stations. Taking all these aspects into consideration, it has been decided to limit these concessions this year to stations situated at a distance of 400 kms or more from the hill stations. We have to see if it is in consonance with economic justice to continue to accord this concession to a limited number and a better off set of people.

Labour relations

The House is aware of the complaint that the management and labour could do better. They are undoubtedly doing much. But it is time that they do much more so that our economic progress may gain added speed. The President in his Address delivered to the joint session of Parliament on March 23, 1971, stressed the importance of consulting the leaders of trade unions and management in order to evolve sound industrial relations and to secure increased productivity consistent with a fair deal for labour. Where the means of production are owned by the people and private profit is not the ruling motive, as in the case of the Railways, strikes must be abjured as a matter of principle. The Administrative Reforms Commission has made several recommendations in this regard. Performance and production-oriented labour relations are vital for making the Railways truly a public benefactor. I agree that there should be an adequate machinery for quick redress of grievances and adjudication of disputes between the management and the employees.

The Prime Minister in her inaugural speech at the conference of trade union organisations has said that "... labour is a major participant in the productive process, and the quality and intensity of its efforts are critical in increasing the rate of growth of production and therefore of investment in the economy... the employed, particularly in the organised sector, who enjoy a measure of social security, should recognise that in our country to be employed is in itself a privilege. Hence they should not seek unilateral gains for themselves but have some compassion for those who are willing to work yet are not able to do so because of the comparatively low rate of capital formation in our country..." Her advice is wholesome and timely and has to be followed if we are to ensure economic and social justice embedded in the Constitution. I am happy to acknowledge that the relations with the organised labour during the year have continued to be generally cordial and satisfactory.

The year has been particularly hard and trying for the railwaymen, specially for those directly connected with the movement of trains. Regardless of the considerations of personal safety, all ranks of railwaymen showed exemplary courage and devotion to duty and gave of their best in running the Railways—the "life-line" of the nation. Labour in particular is wedded to the ideal of socialism and rightly so. The overwhelming majority of us are committed to socialism. We have to realise afresh that the success of socialism in our country is interlinked with the success of our public undertakings. The Railways are the biggest of our public undertakings and, therefore, the best means of proving the worth of socialism. □

Background to Railway Budget: 1971-72

By Commerce Research Bureau

THE capacity of the Railways to carry the freight traffic of the economy has to be the starting point of any meaningful discussion of railway finances. As late as in March 1970, the Railway Ministry placed the target for the freight traffic capacity of the railways for 1973-74 at about 265 million tonnes. In line with this target, it was expected that in 1969-70, the first year of the Fourth Plan, originating revenue earning traffic would increase by nine million tonnes. But the actual increase was only three million tonnes.

Again in 1970-71, the second year of the Fourth Plan, an increase of 10.1 million tonnes (from 173.8 million tonnes in 1969-70 to 183.9 million tonnes in 1970-71) in originating revenue earning traffic was anticipated; but the actual performance has recorded a drop of about 5.2 million tonnes.

Table 1: Volume of goods traffic handled by Indian Railways

(In million tonnes)				
Year	Revenue earning goods traffic			
	Budgeted	Actual	Increase over actual in the previous year	
			Budgeted	Actual
1968-69	169.4	170.8	—	—
Fourth Plan				
1969-70	179.8	173.8	9.0	3.0
1970-71	183.9	168.6	10.1	-5.2
1971-72	177.6	—	9.0	—

SOURCES:

1. Ministry of Railways (Railway Board), Directorate of Statistics and Economics, *A Review of the Performance of the Indian Government Railways*, February 1968, 1969 and 1970 and May, 1971.
2. Ministry of Railways, Government of India. Speech delivered by the Railway Minister while presenting the Railway Budget to Parliament, May 24, 1971.

On account of the downward trend in the revenue earning goods traffic (Table 1), the Plan target for 1973-74 has now been reduced from 265 million tonnes to 240.5 million tonnes. In the meanwhile, wagon shortage is being experienced in some parts of the country—particularly in the movement of cement and coal.

Railways in the Fourth Plan

A total Fourth Plan outlay of Rs 1,525 crores was originally approved for the Railways on the understanding that of this outlay, as much as Rs 940 crores would be found by the railways themselves. The balance of Rs 585 crores was to be made

available from the general reserves of the Central Government. The expectations about the internal resources of the Railways have been belied. The Fourth Plan outlay, therefore, has been pruned from Rs 1,525 crores to Rs 1,275 crores. Accordingly, the outlay for 1971-72 has been reduced from Rs 308 crores to Rs 280 crores. Obviously expansion of capacity of the Railways has been lagging much behind the target (Table 2).

NOTE: (a) Revised estimates

SOURCE: Ministry of Railways (Railway Board), Government of India, *Explanatory Memorandum on the Railway Budget 1971-72*.

Finances

The vote-on-account Railway Budget for 1971-72 presented on March 23, 1971 showed an estimated deficit of Rs 33.12 crores. Being an interim-budget, no proposals for meeting the deficit were presented. The full-fledged budget presented now, at current rates of fares and freights, anticipates a deficit of the same order of Rs 33.12 crores (after providing for the payment of dividend to general revenues on capital-at-charge) for 1971-72 against a deficit of Rs 23.69 crores in 1970-71 (revised estimates). However, after taking into account the net effect of upward adjustments in freight rates and passenger fares, the uncovered deficit amounts to Rs 6.87 crores.

Revised estimates

The final figures of financial results of 1970-71 will be available in August. But the revised estimates for 1970-71 show that the financial position of the Railways has considerably deteriorated: As against a surplus of Rs 9.38 crores in budget estimates (modified), the revised estimates show a deficit of Rs 23.69 crores (Table 3). The budget estimates as originally presented for 1970-71 envisaged a surplus of Rs 22.38 crores. But under political pressure, certain proposed increases in third class passenger fares and in freight rates, particularly that of foodgrains had to be withdrawn. This resulted in the loss of

Rs 13 crores and the surplus shown in the budget estimate came down to Rs 9.38 crores. On the other hand, working expenses increased by Rs 30.77 crores. The cumulative effect of these and other factors led to the deficit of Rs 23.69 crores.

During 1970-71, a number of important factors beyond the control of the Railways have cast a heavy burden on the revenue expenditure of the Railways: (a) There was a substantial fall in the haulage of goods traffic. (b) Working expenses increased by Rs 36 crores on account of the interim relief to the staff in pursuance of the Third Pay Commission's recommendations. (c) Large sums of money had to be found to meet heavy expenditure on flood damage, payment of arbitration tribunal awards to staff and increase in the rates of travelling and daily allowances to staff and increase in prices of various materials.

Budget estimates

In 1971-72, the budget estimates of the gross traffic receipts are placed at Rs 1,044 crores (excluding the net effect of new budget proposals) which are Rs 40 crores higher than the revised estimates in 1970-71. It is assumed that the goods traffic will increase by nine million tonnes during 1971-72 and the passenger traffic by 3 per cent. Against this, the ordinary working expenses estimated at Rs 765 crores are higher by Rs 33.68 crores compared to 1970-71 (revised estimates). After provision of dividend to general revenues, the operations account would show a deficit of Rs 33.12 crores as compared with Rs 23.69 crores in 1970-71 (revised estimates). However, the following new proposals are envisaged in the budget, which will yield Rs 26.25 crores during the remaining period of the current year. Consequently, the uncovered deficit will amount to Rs 6.87 crores in 1971-72.

Proposals

The Railway Minister has made the following main proposals to raise additional resources during 1971-72: *Freight Rates:* Adjustment in freight rates on a selective basis are proposed. Freight classification has been raised by one step in respect of low-rated commodities except foodgrains and certain iron ores. Freight rates on coal and coke have been increased but incentives would be available for all distances, if the traffic in coal was offered for movement in train loads from one station to one destination on a single forwarding note and for movement of coal for 500 kms and above during the slack season—between June and September. Freight rates for categories of iron and

steel such as rope wire, wire-net etc have been raised. Thus, the rise in freight rates after allowing for incentives, is expected to provide additional income of Rs 21.8 crores during the full year. **Passenger fares:** Passenger fares have been increased on a modest scale. There will be no change in any class of travel for the first 15 kms nor in respect of season tickets. The fares for third class ordinary and mail/express and first class fares have been raised for travel, above 15 kms. The rise is different for different distance zones. This rise is likely to yield Rs 13.2 crores during the full year.

All these measures together are expected to provide additional resources of Rs 35.0 crores during the full year. But since the revised rates could take effect only from July 1 this year, the increase in receipts in the current financial year would be Rs 26.25 crores.

For the past several years, the pace of increase in earnings has been less than the pace of increase in the costs of railway operations particularly in recent years. As a result, the railway finances have been going from bad to worse. As can be seen from table 4 the Railways have been in red since 1966-67.

Cost price squeeze

The Railways are caught in cost-price-squeeze. According to the Minister for Railways, expenditure on staff, which accounts for 60 per cent of the working expenditure, has gone up by 72 per cent since 1963-64. The price of coal has gone up by 47 per cent and that of electricity and diesel oil by 27 per cent each. These have cumulatively pushed up the weighted index of cost of operation by 60 per cent. During the same period, passenger fares and freight rates increased only by 19.6 per cent and 22.7 per cent, respectively. The Railways thus recover only 36 per cent

of the increase in the cost of operation through raising fares and freights. As a result, the net return on investment (i.e. net revenue as percentage of capital-at-charge) dropped from the peak level of 7.3 per cent in 1951-52 to 4.1 per cent in 1971-72. Obviously, the rise in fares and freights so far have been inadequate to wipe out the increases in costs.

Table 4 : Net position of railway finances
(Rs crores)

Year	Net position
1965-66	18.6

Dilemma

The main difficulty is that the Railways are expected to run both as a commercial undertaking and as a public utility concern. In the latter role they are expected to maintain unremunerative lines on account of political pressures and give various concessions on freight rates and passenger fares. Following are some outstanding instances;

(a) The Railways have to run as many as 77 unremunerative railway lines which drain the revenue earnings to the extent of Rs 8 crores per annum for their maintenance.

(b) The loss on passenger traffic is of the order of Rs 59 crores. The passenger

fare is below cost. Suburban travellers in Bombay, Calcutta and Madras who use cheap monthly and quarterly season tickets virtually enjoy a subsidy of Rs 12 crores per year.

(c) Finally, the preponderance of lower-rated commodities such as coal, ores, stones, cement, fertilisers, fibres, foodgrains and salt are a feature of traditional mix of revenue earning traffic of the railways. These commodities account for about three-fourths of the total revenue earning traffic but contribute only half the total freight earning. Again, their preponderance in the midst of revenue earning traffic is getting accentuated. Between 1960-61 and 1969-70, the originating tonnage of these commodities increased by 60 per cent while that of other commodities increased by only 16 per cent. In 1970-71, the total loss on the transportation of these commodities came to Rs 52 crores. □

GROSS PROFIT MARGIN IMPROVES

NOCIL's sales higher

NATIONAL Organic Chemical Industries Ltd (Chairman: Mr Arvind N. Mafatlal, Bombay) has a brilliant performance for the year ended December 31, 1970. Sales went up by 47 per cent to Rs 23.52 crores from Rs 15.95 crores in the previous year. The improved sales were due to an aggressive effort in developing outlets for various products of the company. In particular, there was considerable increase in sales of pvc resins and compounds. The gross profit nearly trebled to Rs 5.24 crores from Rs 1.97 crores. The company earned a net profit of Rs 1.91 crores against a loss of Rs 1.33 crores in the previous year. On deducting this amount from the loss of Rs 4.72 crores brought in from the previous year, the loss carried forward amounted to Rs 2.81 crores. No provision has been made for taxation. The company does not anticipate any liability in this respect since losses are carried forward. The company's gross profit margin works out to 22.3 per cent against 12.3 per cent.

The company has repaid the instalments of its long-term loans from the Shell Petroleum Co Ltd and the Indian financing institutions, up to the end of the year 1970,

except the first instalment payable to the IDBI, the IFC and the ICICI totalling Rs 88.32 lakhs. As agreed with these institutions, this amount will now be payable in 1973 and 1974.

In the first quarter of the year under report, production was limited as a result of the scheduled biennial shut-down of all plants for periods ranging from four to six weeks. Subsequently production was further affected by mechanical problems. Afterwards there was an all-round improvement in the rate of production of all plants within the complex compared to the previous year. The plants in general are operating satisfactorily and are able to meet sales requirements.

Early in the year, the manufacturing costs were adversely affected due to an increase in fuel duty, cost of drums and other items. From June, the manufacturing costs were considerably enhanced by the imposition of additional levies which raised the cost of naphtha, the main raw material by nearly 30 per cent. On considering the operational difficulties the foreign collaborator, the Shell International Chemical Co Ltd, has agreed with effect from August 1, 1970, not to claim its right to the balance of the product loan liability amounting to Rs 47.28 lakhs as on July 31, 1970 under the product loan agreement, and the other collaborator, Batafse Internationale Chemie Maatschappij N.V., has agreed not to charge for a period of two years from July 1, 1970 the operating service charge leviable under the operating service agreement. The estimated benefit to the company (including a provision of Rs 8.35 lakhs for freight, insurance, etc on product loan shipments no longer necessary) amounts to nearly Rs 66 lakhs in the year under report.

The company has also taken interest in developing small-scale industries in the field of plastic processing. The technical services laboratory was expanded and relocated at larger premises at Worli, Bombay.

Ahmedabad Advance

THE Tata group of textile mills has done well for the year ended December 31, 1970. All of them, namely the Ahmedabad Advance Mills Ltd, the Svadeshi Mills Co Ltd and the Tata Mills Ltd have increased their sales and improved their profits. They have declared larger dividends for the year under review.

The Ahmedabad Advance Mills Ltd (Chairman: Mr Naval H. Tata, Bombay) has increased its sales for the year ended December 31, 1970 to Rs 9.7 crores from Rs 8 crores in the previous year. The gross profit was Rs 93 lakhs (Rs 57 lakhs). The net profit after depreciation and taxation, amounted to Rs 43 lakhs (Rs 24 lakhs). The ordinary dividend has been stepped up to 12 per cent from 9 per cent.

The company's gross profit margin works out to 9.5 per cent against 7.1 per cent. The ratio of net profit to net worth comes to 18 per cent (11.4 per cent).

The improvement in the financial results was mainly due to higher realisations and increase in sales turnover, both in respect of the textiles division and the metals division. This was in spite of a continuous rise in the price of cotton and dearness allowance payable to employees, as also the scarcity of raw materials experienced in the latter half of the year in respect of the metals division.

The total retail sales of the group, including sales to retail stockists, were about Rs 3 crores, indicating an increase of Rs 10

lakhs over the previous year. There were 77 retail stockists at the end of 1970. During the year under review, new plant and machinery of the total value of Rs 37.73 lakhs was installed at Ahmedabad

and at Navsari. These included a boiler, ring frames, doublers, screen printing tables, a 5-tonne crane, continuous annealing furnace and equipment for the semi-continuous pickling plant. The value of works under construction and machinery received at Ahmedabad and at Navsari

In the market

Elgi Rubber Products

ELGI Rubber Products Ltd (Registered Office: India House, Trichy Road, Coimbatore) is offering for public subscription at par 73,500 ordinary shares of Rs 10 each of the total value of Rs 7.35 lakhs and 5,000—9½ per cent cumulative redeemable preference shares of Rs 100 each of the total value of Rs 5 lakhs. The entire issue is underwritten. The subscription list will open on May 31 and close on June 14 or earlier at the discretion of the directors but not before June 3. Application for ordinary and preference shares must be for a minimum 50 ordinary shares or multiple thereof and five preference shares or multiple thereof.

The company was incorporated on March 31, 1970. The company has received an industrial licence to produce 2,500 tons of reclaimed rubber per annum and proposes to put up a plant near Chingleput, Tamil Nadu. It has received an import licence for machineries valued at Rs 11.24 lakhs. The factory is expected to go on stream early in 1972.

but awaiting installation towards the end of the year, was nearly Rs 7.42 lakhs. Further orders have been placed for machinery of the value of about Rs 6.30 lakhs after the close of the year. In the metals division, the plant achieved a turnover exceeding Rs 1.70 crores nearly as compared to a little over a crore of rupees in the previous year.

During the year under review, the company received an industrial licence for the manufacture of 5,450 tonnes of special-ised steel strips. It is proposed to imple-ment this licence by undertaking an ex-pansion of the company's existing metals division at Navsari. Work at the site will be taken up shortly and the expansion is expected to be completed over the next 3 years at a total cost of about Rs 36 crores. While a considerable portion of this outlay is expected to be financed through the com-pany's internal resources, it will be neces-sary to raise the balance partly through additional share capital and partly through long-term loans. With a view to providing funds for starting construction at the site, the directors have decided to make a rights issue of ordinary shares of Rs 21 lakhs in the ratio of one rights share for every five shares held. Steps have already been taken to finalise orders for machinery worth Rs 1 crore with machinery suppliers in India for certain items of equipment which have extended delivery schedules. The present installed capacity of the mills is 61,232 spindles and 1,222 looms including 336 automatic looms. □

Assam Match

THE Assam Match Co Ltd (Chairman: Mr Tulsidas Kilachand, Bombay) had slightly higher sales for the year ended December 31, 1970 at Rs 5.2 crores against Rs 4.8 crores in the previous year. The gross profit was Rs 65 lakhs (Rs 56 lakhs). The net profit, after depreciation and taxation, amounted to Rs 24 lakhs (Rs 21 lakhs). The dividend has been stepped up by 3 per cent to 20 per cent.

The company's gross profit margin works out to 12.4 per cent against 11.8 per

in the proportion of 1:5 by the company has been refused by the Controller of Capital Issues. However, the company proposes to pursue the matter further and try to obtain sanction. □

Modi Industries

MODI Industries Ltd (Chairman: Mr G. M. Modi, Modinagar, UP) had increased its sales for the year ended October 31, 1970 to Rs 248 crores from Rs 20.9 crores in the previous year. The gross profit was Rs 26 crores (Rs 1.7 crores). The net profit, after depreciation and taxation, amounted to Rs 70 lakhs (Rs 70 lakhs). The fall in net profit was accounted for by a steep rise in taxation to Rs 145 lakhs from Rs 35 lakhs. The ordinary dividend was maintained at 12 per cent, payable on the increased capital. In the year under review, the company's ordinary subscribed capital was raised from Rs 132.10 lakhs to Rs 158.52 lakhs and the preference capital from Rs 25 lakhs to Rs 50 lakhs.

The company's gross profit margin works out to 10.4 per cent against 8.3 per cent. The ratio of net profit to net worth comes to 166 per cent (20.1 per cent).

The working results of the steel factory were satisfactory. One electric arc furnace of 10 tons capacity was commissioned in February 1971. The company has embarked upon an ambitious expansion programme. It is expected to commission two more electric arc furnaces of 10 tons capacity each during this calendar year. The company has also applied to the

Government of India for permission to set up a continuous casting plant and a high speed rolling mill to produce spring steel and alloy steel with a capacity of 40,000 tonnes per annum.

The vanaspathi factory worked during the year under review, under statutory price control and the working results were

satisfactory. The sugar unit crushed 19.49 lakh quintals (12.85 lakh quintals) of sugarcane. The recovery of sugar was 98.7 per cent (8.39 per cent). The working results of other units—lantern, soap, electrodes, distillery, paints and gas except torch unit of the company were quite satisfactory. □

Phillips Carbon Black

Sales of Phillips Carbon Black Ltd., Calcutta, for the year ended November 30, 1970 declined slightly to Rs 3.56 crores from Rs 3.62 crores in the previous year. The net profit, after providing Rs 17.77 lakhs (Rs 20.44 lakhs) for depreciation and Rs 49 lakhs (Rs 48.50 lakhs) for taxation, amounted to Rs 38.27 lakhs (Rs 43.30 lakhs). The dividend was 15 per cent (15 per cent) on the increased capital. The bonus shares in the ratio of one new ordinary share for every ten existing ordinary shares allotted to the members registered on January 8, 1971 rank *pari passu* with other shares for payment of the above dividend. The general reserve got Rs 38.07 lakhs (Rs 44.45 lakhs).

During the year under review, the plant was unable to produce at full capacity and the shortfall can be mainly attributed to inadequate availability of good quality raw materials. The major suppliers of feedstock have not fulfilled their commitments due to the general labour unrest and disruption in their normal working. Domestic sales were seriously affected during the first half of the year due to strikes at two major tyre producing plants and uneasy labour conditions in other companies. Exports to the UAR, Iraq, Iran and Ceylon were increased and with improved production the company hopes to maintain this trend in 1971.

Industrial Investment Trust

Industrial Investment Trust Ltd, Bombay, has earned a net profit of Rs 9.03 lakhs for the year ended December 31, 1970 against Rs 7.12 lakhs in the previous year after providing Rs 2.51 lakhs (Rs 1.56 lakhs) for taxation. The dividend has been stepped up by one per cent to 8 per cent.

Among different classes of undertakings in which the Trust has made investments, chemicals absorbed 16.38 per cent, cotton and silk 14.21 per cent and engineering 6.53 per cent. Out of the total investments of Rs 1.28 crores, 94.75 per cent went to rupee securities and 5.25 per cent to sterling securities. Since December 31, 1970 and up to March 16, 1971 the company has paid Rs 9,375 in respect of the final call of Rs 25 per share on 375 shares of Indian Organic Chemicals Ltd and paid Rs 75,000 on application in respect of 15,000 shares of Porritts & Spencer (Asia) Ltd.

The company has also made sales of shares, the aggregate sale proceeds of these shares amounting to Rs 52,569. The company is at present acting as "registrars and transfer agents" for four companies including Zuari Agro Chemicals Ltd and as trustees for the debenture holders of Hindustan Lever Ltd. During the year, the company ceased to act as registrars and transfer agents to Polyolefins Industries Ltd.

Minerva Mills

Sales of Minerva Mills Ltd, Bombay, for the year ended October 31, 1970 declined to Rs 29.94 lakhs from Rs 226.27 lakhs in the previous year. It was because the operations of the mills had to be temporarily suspended during the entire period under review, the loss sustained amounted to Rs 22.05 lakhs (loss of Rs 22.25 lakhs). After the labour dispute was settled the company restarted partial operations from November 18, 1970 and more than half the total number of spindles are in operation.

254-C, Dr. Annie Besant Road, Prabhadevi, Bombay-25 DD.

on imported cotton. Partial working of the mills, since beginning of the current financial year, has been able to generate satisfactory factory revenues and has considerably stemmed the losses.

Camphor and Allied Products

Sales of Camphor and Allied Products Ltd, Bombay, for the year ended December 31, 1970 rose to Rs 2.52 crores from Rs 1.97 crores in the previous year. The net profit, after providing Rs 8.16 lakhs (Rs 9.54 lakhs) for depreciation and Rs 39.13 lakhs (Rs 26.75 lakhs) for taxation, amounted to Rs 21.34 lakhs (Rs 17.84 lakhs). The ordinary dividend recommended for the year was 12 per cent (12 per cent) payable on the increased capital. During the year under review, ordinary subscribed capital of the company was raised from Rs 50 lakhs to Rs 60 lakhs by issue of bonus shares. The development rebate reserve absorbed Rs 0.30 lakh (Rs 1.45 lakhs) and the general reserve Rs 12.50 lakhs (Rs 7.60 lakhs). An amount of Rs 6 lakhs (nil) has been transferred to the replacement reserve.

In the year under review, the production of camphor has reached 636 tons compared to 571 tons produced in the previous year. The production of other products has also shown a rise of nearly 15 per cent. Sales of the by-products and new chemicals were Rs 73 lakhs (Rs 48 lakhs). Total exports during the year have exceeded Rs 10 lakhs (Rs 2.54 lakhs). The civil construction work for the terpene chemical project has already been completed.

Sardesai Brothers

Sales of Sardesai Brothers Ltd, Bombay, for the year ended December 31, 1970 have increased to Rs 105.83 lakhs from Rs 87.35 lakhs in the previous year. The net profit, after providing Rs 4.82 lakhs (Rs 2.38 lakhs) for depreciation and Rs 2.10 lakhs (nil) for taxation, amounted to Rs 11.30 lakhs (Rs 6.11 lakhs). The dividend for the year was 6 per cent (nil). The development rebate reserve absorbed Rs 1.80 lakhs (Rs 25,699) and the general reserve Rs 2.65 lakhs (nil). The distillery commissioned during the earlier part of the year is now working normally. Further steps are already taken to increase the production of alcohol by installation of certain balancing equipments which would enable the company to produce nearly two million litres of alcohol per year against the present capacity of approximately one million litres.

Commerce (1935) Ltd

The board of directors of Commerce (1935) Limited which publishes this journal, at their meeting held on May 24, 1971, have recommended a dividend of 5 per cent for the year ended December 31, 1970, which subject to approval, will be paid out of the reserves. The dividend will be payable on or after July 5, 1971, to those shareholders whose names stand on the register on June 25, 1971. The company has made satisfactory progress during the year under review. The total gross income increased by 18.7 per cent from Rs 20.28 lakhs in the preceding year to Rs 24.08 lakhs during the year under review. At the same time the expenditure also went up by 14.5 per cent from Rs 20.20 lakhs to Rs 23.14 lakhs due to the expansion activities and increase in cost. Thus the rate of increase in income has had a clear edge over the rate of increase of expenditure. Even while an all-

round expansion was in progress, the company has consolidated its position. The company's profit after providing for depreciation rose from Rs 9,183 for 1969 to Rs 95,213 for the latest year. The entire loss of Rs 31,084 brought forward from the preceding year has been wiped off. After providing Rs 45,000 for taxation (nil), a net surplus of Rs 19,129 has been transferred to the general reserves.

TIRUCHIRAPALLI, 13th May 1971.

*A dream
today,
a reality
tomorrow*

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

EQUITIES

Buoyancy towards end

BOMBAY, May 26

AFTER being listless almost throughout the week, equities turned buoyant on suggestions that the Budget might not prove to be harsh on the private sector. Indeed the market felt encouraged by the Railway Budget but operators had refrained from fresh commitments.

Strangely enough, sugar shares failed to react to the Centre's decision decontrolling the commodity. Not all of them came for trading even on Wednesday. The trend, however, was steady in keeping with the general disposition of the market. Maharashtra and Phaltan were mentioned at Rs 92 and Rs 71 respectively.

Among individual scrips, Century was mentioned at Rs 880 at the close of trading on Wednesday, the firmness also being induced by reports regarding the company's efforts in the direction of joint ventures outside India.

Corporate report, continued to be good, although this factor was ignored during the week. However, Synthetic and Chemicals has proposed to double the dividend to 12 per cent while Tensile has proposed a maiden dividend of Rs 12 per share. Alembic Glass has bettered its profits and Sandvik Asia has been doing well. But these would not influence the market at Budget time.

New Great Eastern Spinning Mills seems to be in a poor way, the profit for 1970 having sizably gone down. The directors make no secret of their anxiety about the outlook for the current year. This seems to be the feeling among many in the textile industry and Mr Kasturbhai Lalbhai confirmed the market's suspicions when recently he told the shareholders of Arvind Mills that out of the nearly 650 cotton mills in the country, about 300 would be hit very hard and would make a loss in the current year while the profits of the rest would decline sharply.

During the first four months of the current calendar year the industry has fared rather poorly. Production of yarn has declined from 327.8 million kg to 293.4 million kg and that of fabrics from 1,413.5 million metres to 1,321.1 million metres. Stocks have risen and there has been a fall in exports.

It is therefore reasonable to expect that so long as the abnormal rise in cotton prices and the shortage of the commodity continues, no support to mill shares would be forthcoming. During the week, however, the market in textile shares was fairly steady in sympathy with the general trend. Standard was mentioned at Rs 669.

Among shippings, Great Eastern was bid up to Rs 40 on rumours that the development rebate would be left untouched. Steels were firm with Tata at Rs 103.75 and Indian Iron at Rs 12. Scindia fetched Rs 21.60. National Rayon was quoted at Rs 523 towards the close, and Telco at Rs 243.50. Among cash scrips, Bayer, PIL, Nocil, Elpro and Borosil Glass were particularly noteworthy.

Taxation proposals

(Concluded from page 963)

existing provision in the Wealth Tax Act excluding from aggregation the assets transferred by an individual to the spouse or minor children is being done away with. A similar provision is being made in respect of conversion of assets of individuals into those of Hindu undivided families. All these changes will have revenue significance only in future and the annual additional yield could be around Rs 145 crores. What is more important, they will impose a virtual ceiling on individual wealth at a much lower level than at present.

Conversion of the separate property of an individual into property belonging to a Hindu undivided family will be brought within the ambit of gift tax.

Taxation of companies

The rates of surtax on company profits will be increased from 25 per cent to 30 per cent in the case of chargeable profits in excess of 15 per cent of the capital. The rates of taxation on the ordinary income of companies are being maintained at existing levels except for the rates on capital gains.

No development rebate in respect of new investment will be allowed on ships acquired or machinery or plant installed after May 31, 1974—from the Fifth Plan onwards. Advance notice of this change may quicken the pace of investment in the remaining years of the Fourth Plan.

At present, in the case of new industrial undertakings, ships and approved hotels, profits up to 6 per cent of the capital employed are entitled to tax exemption for a period of five years. In calculating this limit of the capital for purposes of tax exemption, debentures and long-term borrowings will be excluded. This measure will yield Rs 10 crores during the current year and Rs 14 crores in a full year.

The special tax exemption enjoyed by priority industries is to be brought down from 8 per cent to 5 per cent of their profits. In addition, the list of priority industries is to be shortened by excluding aluminium, motor trucks and buses, cement and refractories, soda ash, petrochemicals and automobile ancillaries. These two measures are likely to yield Rs 6 crores this year and Rs 8 crores in a full year.

The deduction of income up to Rs 3,000 in the aggregate from investments in specified financial assets which was provided for last year will from now on be admissible only to individuals and Hindu undivided families.

The concessional tax treatment of dividends received by foreign companies from

a closely-held Indian company engaged in a priority industry will be discontinued; the foreign companies will be subjected to tax on such dividends at the usual rate of 24.5 per cent.

To discourage payment of high salaries and remunerations it is proposed to impose a ceiling of Rs 5,000 per month on the remuneration of company employees which would be deductible in computing taxable profits. The existing ceiling in case of perquisites is Rs 1,000 per month. It is also proposed to reduce the tax deductible limits of daily allowance to employees while on tour.

Concessions

In the case of employees who own a motorcycle, or scooter or a moped, the deduction allowed for the computation of taxable income is to be raised from Rs 60 to Rs 75 per month. For others who do not possess any of these, the deduction will be raised from Rs 35 to Rs 50 per month.

The quantum of deduction in respect of long-term savings through life insurance, provident fund contributions, etc., is being substantially modified. As a result of the change in the deductions allowed for conveyance and long-term savings, an employee with an annual income of Rs 6,000 will be exempt from income-tax provided he saves at least Rs 400 in the approved form.

The tax concessions for promoting development and export of technical know-how and technical services, which have been available only to companies, will now also apply to individuals, Hindu undivided families and partnership firms.

The special reduction of income up to Rs 3,000 from investments in specified financial assets available to individuals and Hindu undivided families would henceforth also cover interest on deposits with a co-operative society made by its members. Moreover, the interest paid by a co-operative society to its members on deposits made by them will be exempted from the requirement of deduction of tax at source.

Shares of member-deposits with a co-operative society will be regarded as approved investments which are exempt from wealth tax up to Rs 1.5 lakhs. But it is proposed to withdraw the exemption in respect of such investments in the case of discretionary trusts.

Co-operative societies of workers or those engaged in fishing and allied activities will be exempted from tax on their entire business income. Local authorities deriving income from the supply of water or electricity to villages outside their jurisdiction will be exempted from tax on such incomes.

Indirect taxation

It is proposed to have five slabs of duty on cigarettes in place of the existing three. By suitable adjustments of the basic and additional duties on these slabs, it is hoped to raise during the current year Rs 33.20 crores of which Rs 16.40 crores would go to the States by way of additional excise in lieu of sales tax. The effect of the proposals would be a marginal increase in the price of cheaper varieties of cigarettes but a much sharper increase for the more expensive varieties.

The impost on textiles will be modest this year. It is proposed to step up slightly the additional excise duties on medium A and medium B varieties of cotton textiles from 4.8 paise to 6 paise per square metre and also to round off the additional duty leviable on coarse cloth from 3.6 paise to 4 paise per square metre. As for superfine and fine cloth, the rates of additional excise duty are being raised to 25 paise and 15 paise respectively per metre. The charges should bring in an additional revenue of Rs 4.90 crores which will accrue entirely to the States.

To curb the consumption of petroleum and petroleum products which absorb scarce foreign exchange, it is proposed to increase the duty on motor spirit by Rs 200 per kilo litre or 20 paise per litre. This measure would fetch an additional revenue of Rs 36.30 crores in the current year.

To discourage the misuse of certain special boiling point spirits as adulterants for motor spirits, the duty on these is to be raised from Rs 45 to Rs 845 per kilo litre. This will yield Rs 4.25 crores during the current year.

Similarly an extra duty of Rs 100 per metric ton is being imposed on mineral turpentine oil to prevent its adulteration with superior kerosene. In the case of liquid petroleum gas, a specific duty of 25 paise per kilogram is to be imposed and the *ad valorem* duty of 20 per cent abolished. The rate of duty which at present obtains on lubricating stock oils and greases directly derived from refined petroleum would also now apply to blended lubricating oils, greases and calcined petroleum coke. These measures are expected to yield Rs 9 crores during 1971-72.

Exemptions given to gases such as oxygen, chlorine, ammonia and refrigerant gases are being withdrawn. But oxygen for medical use and ammonia used in the manufacture of fertilisers would continue to be exempted from duty. This measure would yield Rs 1.60 crores.

The basic duty on glassware is to be raised to 20 per cent and that on sheet and plate glass to 15 per cent. Glass shells, glass globes and laboratory glassware would be left untouched. Tableware and china which were left undisturbed last year, will now attract a uniform duty of 20 per cent. These changes will bring in about Rs 3.15 crores this year.

The evaporative type of coolers, which have hitherto been exempt from duty, will now be charged a duty of 25 per cent but will be exempted from the payment of the special excise duty. Vacuum flasks, exempt till now, will have to bear a levy of 15 per cent *ad valorem*. The additional revenue this year would be Rs 54 lakhs.

It is proposed to revise the duty on soap from the present effective rate of 11.4

is sold at bookstalls and
COMMERCE news-stands in 59 important
cities throughout the country.

per cent to 15 per cent. This would result in only a marginal increase in the price of toilet soaps. Household and laundry soaps are being left untouched.

The duty on latex foam sponge used extensively in the manufacture of foam mattresses is to be doubled from the present rate of 20 per cent *ad valorem*. A similar levy will be imposed on polyurethane foam as well as certain products made out of it. The basic rate of duty on plates, sheets and strips of rubber is also being stepped up from 20 per cent to 25 per cent *ad valorem* (Yield Rs 260 crores)

The duty on crown corks and pilfer proof caps is to be raised from one paise to two paise each (Yield Rs 190 crores)

Indirect taxes are to be levied selectively on products and equipments used in agricultural operations by the richer sections of the peasantry. There is to be a duty of 10 per cent *ad valorem* on agricultural tractors (Yield Rs 240 crores)

Several new items are being introduced into the orbit of Central excise taxation. The items include perfumed hair oil, shampoos, lipsticks, pressure cookers, playing cards, zip fasteners, photographic cameras, cinematographic projectors, and linoleum—excise levies on which would have little effect on the level of living of the overwhelming mass of the community.

Similarly, there is to be a levy on certain ready-made garments mostly purchased by the well-to-do. In order to protect the small manufacturers, this levy will be confined to ready-made garments manufactured with the use of power and sold under registered trade marks or brand names.

It is proposed to introduce an excise levy on a number of producer goods and four more chemicals are being added to the list of excisable chemicals. (These various measures to yield Rs 15 crores)

It is proposed to levy a duty of 10 paise per kilogram on maida produced by roller flour mills in the organised sector. This measure is intended to meet the cost of the programme for children's health and nutrition. The yield of this levy—Rs 74 crores—which will accrue to the Centre, will be earmarked for being spent on the welfare of children. The States will receive nearly Rs 18 crores from this measure.

The Finance Minister also announced a few excise concessions designed to promote the use of minor oils in the manufacture of soap and to provide some relief to the small and marginal units using power-looms for manufacturing cotton fabrics. These concessions would cost the exchequer Rs 150 crores for the remaining part of the year.

All the proposals for excise duties together will yield during the current year roughly Rs 89 crores for the Centre and Rs 43 crores for the States.

Other measures

A tax is proposed on foreign travel. It will be levied at the rate of 20 per cent *ad valorem* on all tickets purchased in rupees; tickets paid for in foreign exchange will be exempt. The only other major exemption would be for students and scientists. (Estimated revenue Rs 7 crores.)

P and T tariffs

There is to be an upward revision of tariff relating to registration fees for postal articles and telegraph and telephone rates. Items used by the less-affluent sections of the society like post cards, letter cards and letters have been left untouched. The registration and postal fees are being raised by 5 paise and 10 paise respectively for 400 grams. There are also minor adjustments in the charges for telegrams consisting of more than eight words as well as the rentals for telephones, teleprinters and telex services.

Import duties

It is proposed to reduce the number of import duties from the present seven rates to four. The new rates of duty are 30 per

cent, 40 per cent, 60 per cent and 100 per cent.

All items of machinery now attract 30 per cent import levy. This would mean a marginal increase of 25 percentage points on project imports, and reduction of duty by 5 percentage points on machinery in general, this reduction would provide relief to smaller industrial units. Items such as agricultural machinery and implements, dairy and poultry appliances would now attract duty at 30 per cent instead of 15 per cent.

It is also proposed to bring under one rate of duty all similar items.

In order to remove an anomaly in import duties, which enabled the import of automobile components and dry fruits mostly by the affluent, the levy has been enhanced from 60 to 100 per cent. The duty on clothes is being increased from Rs 18 per kilogram to Rs 60.

As a result of the release from the General Agreement on Tariffs and Trade, changes in the import duties can now be effected. This opportunity has been utilised to revise the duty on staple fibre excluding yarn raw wool, unwrought copper, zinc and pig lead. With a view to narrowing the gap between the prices of import and indigenous tractors, a 30 per cent duty on imported tractors is proposed to be levied. A similar levy has been proposed on earth-shifting machinery.

The changes in import duties are expected to yield Rs 54 crores during the remaining part of the year.

COMMODITIES

Spot cotton moves down

BOMBAY May 26

With the spinners' distinct apathy for extending their commitments in view of the paucity of credit facilities and of the right quality of cotton the prices tended to sweep lower levels in most varieties and the volume of transactions continued to remain negligible. Only such of the varieties, the quality of which remained attractive were able to command reasonable enough prices. In all other cases the rates either declined or were kept steady nominally, with no deals taking place.

Reports of accumulation of stocks with the growers in some of the upcountry centres, indicated that the situation elsewhere was no different from that obtaining in the city. Some of the terminal markets reported that the farmers were disinclined to bring kapas to the market on account of the discouraging offers.

The following has been the trend of prices of some of the leading varieties

(Rs per candy)

	For the week ended May 26	For the week ended May 19
Khandesh	2,100	2,100
Berar AK	1,800	1,800-2,100
Digvijay Dabhol	3,025	2,900
Berar L 147	2,400	2,400
Manavdar Co. 2	2,600	2,600

In the foreign section interest was confined to stray lots of Sudanese and American cotton in the main. In the context of the continued credit curbs, the response to the recent tenders issued by the Cotton Corporation of India is considered, in market circles, as encouraging.

The total imports that had reached the country during the current season continued to lag far behind the quantum received this time last year. According to the latest figures, foreign cotton arrivals as on May 1 have been placed at 2,17,590 bales. As against this imports on the

same date last year amounted to as much as 5,23,739 bales. Excepting for African cotton, cotton from all the other destinations remained on the lower side. Thus, imports from America topped the list with 98,488 bales (2,52,945 bales), from Egypt 42,005 bales (91,072 bales) and from the Sudan 31,133 bales (1,29,719 bales). Imports from Africa were put at 41,619 bales against 36,656 bales.

On the export front transactions were on a retail basis mostly confined to choice variety of Bengal Deshi Raw cotton registered for export as on May 15 amounted to 1,51,038 bales against 1,93,217 bales.

YARNS GAIN

BOMBAY May 26

A further gain in the prices of yarns featured trading in the yarns market during the past week. Art silk yarns gained further ground during the week due to paucity of stocks. The slack arrivals in the wake of increased demand especially from upcountry centres imparted strength. Staple fibre yarns were fully maintained. Cotton yarns continued to be sluggish.

In the art silk yarns section 150D National Rayon gained 62 paise to Rs 17.99. 120D put on 11 paise to Rs 19.71. 150D Bright Century spun on 62 paise to Rs 17.99. 120D gathered 42 paise to Rs 19.71. 100D Bright South India improved by 82 paise to Rs 23.02 due to slackened arrivals. Staple fibre yarns (2 x 34 nF) spot Kirari was fully maintained at last week's level of Rs 11.24.

OILSEEDS BUOYANT

BOMBAY, May 26

Although arrivals of summer groundnut crop in the South continued to be satisfactory, groundnuts held firm. Apparently, stocks were being held in anticipation of still higher prices.

In addition to 20,000 tonnes of soyabean oil discharged recently and shipments of another 62,000 tonnes arranged for, reports indicate that 27,000 tonnes have been bought for June shipments. It is also said that Canada would supply 100,000 tonnes of rapeseed during the current season. All these point to a bearish outlook for the market.

Advices from London indicate lower prices for groundnut extractions with spot material being quoted at £38.75 and May/June at £42.50. Business is thin. Japanese buyers have shown interest at 90 dollars per tonne c & f Japanese main ports for July/Aug/Sept/Oct positions and slightly higher prices for distant positions.

The season in kardi seeds has come to an end. Local business has been good but so far as exports of kardi cakes are concerned, market men think that unless Japanese buyers reconcile themselves to pay between 60 and 65 dollars per tonne c & f Japanese ports, it would be impossible to procure more than 5,000 tonnes from India in the remaining months of the year.

Castor and linseed futures were extremely firm and buoyant on persistent speculative support.

Comparative prices in rupees were:

Item	19.5.1971	26.5.1971
Castor June	129.12	132.00
Castor September	130.75	134.50
Linseeds July	160.50	165.75
G. Nuts Khandesh	178.00	186.00
G. Nut oil	41.50	41.75
Castor Madras Small	132.00	131.00
Castor Comm. oil	28.00	28.25
Castor B.S. oil	30.75	31.00
Linseeds Bold	158.00	161.00
Linseed oil	35.00	35.25

FOODGRAINS FIRM

BOMBAY, May 26

In the local market, the prices of food grains moved up further during the past week. In cereals the prices of wheat (Pusa) at Rs 87.92 per quintal showed a rise of Rs 4 on account of good demand. The daily arrivals of wheat by both road and rail were together estimated at around 10,000 bags. The demand was slightly more than the arrivals. The city stock of wheat is meagre at 12,000 bags. In coarse grains the prices of bajra (superior variety) firmed up by Rs 2 to Rs 70-75 per quintal owing to the fall in daily arrivals in the face of good demand. The bajra stock in the local market was small at 15,000 bags. The old stock of maize is practically over. The arrivals of new crop have commenced on a small scale. The price was quoted at Rs 70 per quintal.

In pulses following encouraging upcountry advices the prices of gram at Rs 88-90 per quintal showed a further rise of Rs 3. Millers were active buyers. They mostly bought the gram stock sold by the Food Corporation of India. The city stock was very poor at 7,000 bags. Owing to the acute supply position the prices of urad (Khandesh) and tur (Berar white) at Rs 148.15 and Rs 122-125 per quintal, respectively, showed a rise of Rs 3 each. The prices of moong (Chini) at Rs 230-260 per quintal continued to rule steady. The supplies were limited and the demand was moderate.

SUGAR DECLINES

BOMBAY, May 26

In the local sugar market, the prices of sugar (C-30) at Rs 194-195 per quintal showed a fall of Rs 9 owing to the satisfactory pace of daily arrivals in the face of modern demand. Following the Union Government's decontrol of sugar prices declined still further by Rs 8-10 per quintal. The Government has also fixed a uniform rate of excise duty of 30 per cent *ad valorem* effective from May 26. So far, there were two rates—25 per cent and 37.5 per cent *ad valorem*, on levy sugar and free sale sugar, respectively.

FOODGRAINS QUIET

HAPUR, May 24

Quiet conditions were witnessed in the food-grains market during the past week. Despite the inclement weather the arrival of wheat was good. Grim and other coarse grains arrivals were small. In pulses, peas prices advanced but others were devoid of activity. The untimely rain and hailstorm has considerably damaged the wheat crop and all threshing and winnowing operations have been suspended.

Wheat average is now quoted at Rs 72 to Rs 75, superior farm wheat at Rs 80 to Rs 82 and red Mexican variety at Rs 71.25 per quintal. Government procurement purchases were restricted. Arrivals were not being readily lifted even at lower than the procurement prices. Superior farm wheat, however, is being readily lifted to Bihar, Delhi and other centres. Rice prices were quiet despite increasing seasonal demand as the supply position was reported to be satisfactory. Week-end prices in rupees per quintal were: Rice Basmati Sela 165 to 180, katchha 165 to 182.50, Mainpuri Sela 105, Ramajwahan and Rajmunda 120 each and Gadda 95.

SUGAR STEADY

HAPUR, May 24

Sugar prices in the open market ruled steady as demand was fairly brisk. The trade is anxiously awaiting the release of the new monthly quota which is expected by the week-end. Week-end prices in rupees per quintal were: Inferior 178 to Rs 180 and superior 192 to 194. Sugar in retail was sold at Rs 1.90 to 2 per kg.

Desi Khandasari prices ruled quiet as stockists were withholding stocks expecting better prices. Galawat production will commence in mid-July after the onset of monsoon. Week-end prices in rupees per quintal were: Inferior 135 to 150,

superior 160 to 167.50, crystal 167.50 to 177.50 and boora 160 to 170.

KIPS LISTLESS

MADRAS, May 22

Arrivals of stocks from tanneries were of the usual volume and the offtake was fairly good, at unchanged prices.

The UK buyers booked business for light weight cow hides run fifties selection as also in inferior fifties grade in light and medium weights. Offers of cow calf were meagre. In goat skins, light weights attracted buyers from the Continent. The Japanese buyers evinced interest in 15/16 lbs goat skins. In the sheep section, suede selections only were in demand while other lines remained quiet. Shippers efforts to rouse interest in prime class at even six pence deduction did not meet with genuine response.

BULLION DIVERGENT

BOMBAY, May 26

A divergent trend prevailed in the bullion market during the past week. Silver which ruled strong in the past fortnight lost ground due to increased arrivals and slack offtake. The absence of upcountry demand also imparted weakness. Gold which scaled new highs last week came down. The increased contraband arrivals also pushed down the prices of the yellow metals. The demand from the south is yet pick up. Sovereign was fully maintained.

Silver (996 fineness) began the week Rs 350 higher at Rs 598.50 but lost ground in the following sessions. It receded further in the subsequent sessions and closed the week at Rs 596.50 today, the net loss over the week being Rs 1.50. The weekly delivery was mentioned at between Rs 596 and Rs 586. The weekly average arrivals

and offtake of silver aggregated 54 bars and 49 bars respectively.

Primary gold in unofficial trading commenced at last week's closing level of Rs 195 and improved in the following sessions. It wound up the week at Rs 196 today, with a net gain of a rupee over the week. Standard gold in official trading opened Rs 2 less at Rs 207.50 and declined in the following sessions. It closed the week at Rs 204 today, the net loss over the week being Rs 5. Sovereign was fully maintained at last week's level of Rs 175.

MONEY EASY

BOMBAY, May 26

Comfortable conditions continued to prevail in Bombay's short-term money market in the past week. The call rate was 4½ per cent. In Calcutta renewals were effected at 4½ per cent. In Madras the call rate was 4½ per cent.

Ninety-one days' Government of India treasury bills sold from May 17 to 22 amounted to Rs 10.55 crores as against Rs 8.56 crores in the previous week.

During the week ended May 14, foreign exchange reserves of the Reserve Bank of India increased by Rs 326 crores to Rs 376.45 crores. While foreign securities remained unchanged at Rs 303.42 crores, balances held abroad rose to Rs 73.03 crores from Rs 69.77 crores. There was a rise of Rs 23.36 crores at Rs 4,424.52 crores in notes in circulation. Deposits of scheduled commercial banks with the Reserve Bank of India moved up to Rs 228.31 crores from Rs 192.71 crores.

The week ended May 14 recorded a slight decline of Rs 3.31 crores at Rs 4,683.13 crores in the total credit made available by commercial banks. Aggregate deposits rose to Rs 6,008.45 crores from Rs 5,992.28 crores. Borrowings from the Reserve Bank were higher at Rs 208.19 crores (Rs 205.45 crores).

India and Pakistan

WOOL, HOSIERY AND FABRICS—1971

Annual of the Wool, Worsted, Carpet, Jute, Coir and Hosiery Trades and Industries.

- Comprehensive details of woollen spinners, carpet, hosiery and knit goods manufacturers, wool and hair markets, wool merchants, woollen presses, bulk buyers of raw materials and finished textiles and principal stores and bazaars handling textile lines, including imported piece goods and hand knitting wools.
- This Publication is the only one of its kind catering specifically to the wool, worsted and associated trades in India and Pakistan and has a large circulation amongst Woollen, Worsted and Hosiery Mills and leading firms engaged in Manufacturing, Exporting, and Importing Wool, Hosiery, Carpets, Woollen Machinery, Spares and Accessories.

Full particulars of:

- Woollen, Worsted, Carpet, Hosiery and Jute Mills
- Coir Dealers and Exporters
- Wool Combing and Processing Plants
- Wool Merchants
- Manufacturers and Merchants of Machinery for Woollen Industry
- Raw Material Suppliers—Importers—Exporters
- Trade Organisations and Associations

V.I.P.'S stop here so very often !

Because we care for their moods and humours, and whims.
And we know they like red carpet which is exactly
what they get.

And, of course, they go for that elusive something called
atmosphere - which is everywhere in Rajdoot.

And, before they are gone, we like them to taste the
wonderful Indian and Western cuisines the variety
programmes in the ELDOORADO and STARLIT Restaurants
or an open air session at RAMBLE Connaught Place.

We have a telephone in each room and its own
thermostat control.

What's more, we don't treat them as come-and-go
guests - but like real house guests !

Capital gains tax: (a) In the case of non-corporate assesseees, the deduction from long-term capital gains allowed in computing the taxable income has been scaled down from 45 per cent to 35 per cent where such gains relate to lands and buildings, and from 65 per cent to 50 per cent in respect of other capital gains.

(b) In the case of companies, the incidence of tax on long-term capital gains has been increased by raising the rates of tax from 40 per cent to 45 per cent in respect of gains relating to lands and buildings and from 30 to 35 per cent in respect of other gains.

Wealth tax: The proposals regarding wealth tax are fairly stiff and are likely to go a long way in reducing the concentration of wealth. Thus, the net wealth above Rs 15 lakhs will now onwards attract the uniform rate of 8 per cent against the existing rates of 4 per cent on net wealth between Rs 15 lakhs and Rs 20 lakhs and 5 per cent on net wealth above Rs 20 lakhs.

Further, while no wealth tax will be leviable unless the net wealth exceeded Rs 1 lakh in the case of individuals and Rs 2 lakhs in the case of Hindu undivided families, if they are liable to wealth tax it will apply to their entire wealth.

However, certain exemptions in respect of approved financial investments, owner-occupied houses and agricultural assets have been left undisturbed.

The incidence of wealth tax has been further tightened by withdrawing the exemption currently available for household or personal jewellery and for shares forming a part of the initial capital issues. In the case of conveyances, the exemption will now be limited to Rs 25,000 in the aggregate.

The existing provision of excluding from aggregation the assets transferred by an individual to the spouse or minor children has been done away with. A similar provision has been made in respect of conversion of the assets of individuals into those of Hindu undivided families.

Additional revenue during 1971-72: Nil.

Additional yield in a full year: Rs 145 crores.

Thus, a virtual ceiling on individual wealth would be imposed at a much lower level than at present. Further, to discourage evasion of tax, conversion of separate individual property into property belonging to a Hindu undivided family will be brought within the ambit of the gift tax.

Additional revenue during 1971-72: Rs 27 crores.

Additional revenue from all these proposals during a full year in the field of direct taxation: Rs 57 crores.

INDIRECT TAXES

Custom duties: In order to remove the existing anomalies, the Finance Minister has proposed to have only four effective rates of import duty (30, 40, 60 and 100 per cent) in place of the existing seven ad valorem rates (15, 27½, 35, 40, 50, 60 and 100 per cent).

All items of machinery have been proposed to be brought within the orbit of the 30 per cent import levy. This implies a marginal increase of 2.5 percentage points in the rate of duty in respect of project imports and a decline of 5 per-

Loss on account of new GATT concessions ..					(-) 11
Net additional revenue in a full year ..					(+) 6000

centage points in respect of machinery in general.

Items such as agricultural machinery and implements, and dairy and poultry farming appliances will also attract the duty at the rate of 30 per cent instead of 15 per cent.

Certain basic raw materials and non-ferrous metals will from now on be liable to the duty at the uniform rate of 40 per cent. Iron and steel and unwrought copper will, however, attract a lower duty of 30 per cent.

Items such as automobile components and dry fruits will attract 100 per cent import duty. The specific rate applicable to cloves has been increased from Rs 18 per kg to Rs 60 per kg.

The duty on staple fibre has been fixed at 100 per cent. On unwrought zinc, pig lead and raw wool, the duty will be 40 per cent and on copper 30 per cent. A levy of 30 per cent has also been imposed on imported tractors. The same rate will apply to the earth-moving machinery.

Additional yield during 1971-72 as a result of all the changes in custom duties: Rs 54 crores

Excise duties: The existing three slabs of duty on cigarettes have been replaced by five.

Additional revenue during 1971-72: Rs 33.20 crores.

Table 2: Items for which additional revenue is expected by way of additional Customs duties

Serial No.	Item(s) in the Import Schedule to the Indian Tariff Act	Brief description of goods	Additional revenue expected (+) per annum (Rs lakhs)
(1)	(2)	(3)	(4)
1	27 (6)	Motor Spirit ..	(+) 100
2	72	Agricultural tractors ..	(+) 200
3	Various	Others ..	(+) 100
Total ..			(+) 400

Additional excise duties on medium A and medium B varieties of cotton textiles are proposed to be stepped up from 4.8 paise to 6 paise per square metre, and on coarse cloth from 3.6 paise to 4 paise. However, the rates of additional excise duty on superfine and fine cloth have been raised to 25 paise and 15 paise respectively per square metre.

Additional revenue: Rs 4.90 crores.

Duty on motor spirit has been raised by Rs 200 per kilolitre or by 20 paise per litre.

Additional revenue during 1971-72: Rs 36.30 crores.

The duty on special boiling point spirit, known as solvent oil, has been increased from Rs 45 per kilolitre to Rs 845 per kilolitre. This will help avoid misuse of the oil as an adulterant for motor spirits.

Additional yield during 1971-72: Rs 4.25 crores.

An additional duty of Rs 100 per metric tonne has been imposed on mineral turpentine oil. This was imperative in view of the fact that it was being extensively misused as an adulterant for superior kerosene.

The ad valorem duty of 20 per cent on liquified petroleum gas is being abolished and, instead, a specific duty of 25 paise per kg is to be imposed.

Additional revenue during 1971-72: Rs 9 crores.

The duty exemption enjoyed by oxygen, chlorine, ammonia and refrigerant gases has been withdrawn. However, oxygen for medical use and ammonia used in the manufacture of fertilisers will continue to be exempted from duty.

Additional yield: Rs 1.60 crores.

The basic duty on glassware has been raised to 20 per cent and on sheet and plate glass to 15 per cent. Tableware, chinaware and porcelainware will attract a uniform duty of 20 per cent. Glass shells, glass globes and laboratory glassware have been left untouched.

Additional revenue during 1971-72: Rs 3.15 crores.

On evaporative type of coolers, 25 per cent duty has been imposed. Vacuum flasks, exempt till now, will from now on bear a levy of 15 per cent *ad valorem*.

Additional revenue during 1971-72: Rs 0.54 crores.

There has been an upward revision in the duty on toilet soaps from 11.4 per cent to 15 per cent. Household and laundry soaps have been left untouched.

Additional revenue during 1971-72: Rs 2.55 crores.

The duty on latex foam sponge has been doubled to 40 per cent *ad valorem*. A similar levy has been imposed on polyurethane foam and certain products made out of it.

The rate of duty on plates, sheets and strips of rubber has been stepped up from 20 per cent to 25 per cent *ad valorem*.

Additional revenue during 1971-72: Rs 2.60 crores.

Crown-corks and pilfer-proof caps will bear a duty of 2 paise each as against one

paise each till now.

Additional revenue: Rs 1.90 crores.

The duty on cement has been rounded off to 24 per cent from the existing 23.76 per cent.

The excise levy on prepared and preserved foods has been extended to include dehydrated, canned and bottled vegetables and on preparations of glucose and dextrose.

The special concession of 50 paise per kg on the basic excise duty for certain varieties of staple fibre has been withdrawn.

The duty on woollen yarn has been revised upward. A portion of the incidence has been shifted to wool tops.

The rates of duty on electric lighting bulbs (other than those of 60 watts and less), fluorescent tubes and electric fans

Accrual for the remaining part of 1971-72

Rs. 13,194 lakhs

and industrial fans, other than those of a diameter not exceeding 16 inches, have been revised.

The concession of Rs 500 per tonne on copper used in the manufacture of wires and cables has been withdrawn.

Additional revenue Rs 6 crores

Agricultural tractors have been taxed with an *ad valorem* duty of 10 per cent.

Additional revenue during 1971-72 Rs 340 crores

Certain new items have been brought into the orbit of Central excise taxation. Among them are perfumed hair oil, shampoos, lipsticks, pressure cookers, playing cards, zip fasteners, photographic cameras, cinematographic projectors and linoleum and readymade garments manufactured with the use of power and sold under registered trade marks or brand names.

The rate of duty on the following items will be 10 per cent: Ball and roller bearings, bolts, nuts and screws, electric insulation and non-medical adhesive tapes, welding electrodes, grinding wheels and motor starters, electric supply meters.

typewriter ribbons, mosaic tiles, fork-lift, platform-trucks, certain motor vehicle parts and accessories, four more chemicals, camphor and menthol.

Additional revenue from these new excise levies Rs 15 crores

A duty of 10 paise per kg has been imposed on *maida* processed by roller flour mills in the organised sector. This additional revenue of Rs 74 crores is to be spent on the welfare of children. In addition the States will receive Rs 18 crores from this measure.

Excise concessions in respect of the following items have been proposed: Soap (manufactured by using certain minimum quantity of minor oils such as neem and sal), sodium silicate, cottonseed oil (by way of increase in excise rebate) and rice-bran oil.

The rate of compounded levy on units with not more than four powerlooms installed has been reduced from Rs 50 to Rs 10 per loom per annum.

In the case of units employing more than four powerlooms, the levy will be half of the existing rates.

Marginal concessions have also been offered to the manufacturers of embroidery and leather cloth.

Loss of revenue to the exchequer during 1971-72 on account of these reliefs and concessions: Rs 150 crores.

Additional yield from all the changes in excise duties during 1971-72: Rs 132 crores.

FOREIGN TRAVEL

On all tickets purchased in rupees the levy will be at the rate of 20 per cent *ad valorem*. Tickets paid for in foreign currency will be exempt. Scientists and students have been exempted from this measure.

Additional revenue: Rs 70 crores

Total additional revenue during 1971-72 from all the new proposals of direct and indirect taxes: Rs 220 crores.

POST AND TELEGRAPHS

The proposed increases relate to registration fees for postal articles and telegraph and telephone tariffs.

Additional revenue in a year: Rs 1084 crores.

Table 4: Changes in excise duties

Serial No.	Tariff Item No.	Commodity	Unit	Rate of duty (Basic)		Estimated addl revenue in one full year
				Existing	Proposed	
1	2	3	4	5	6	7
CHANGES PROPOSED BY BILL						
						(Rs lakhs)
1	1E	Glucose and dextrose		The tariff description is proposed to be amended to include 'preparations' also.		12
2	1F	Maida (produced in roller flour mills)	Kilogram		10 paise	1,092
				This new levy has been proposed as a revenue measure. The Central share of the revenue realisation will be utilised to meet the cost of the programme for children's health and nutrition.		
3	6	Motor spirit	Kilolitre	Rs 720 00	Rs 920 00	4,825
		<i>Effective rates of duty</i>				
		(a) Motor spirit	Kilolitre	Rs 720 00	Rs 920 00	4,320
		(b) Certain special boiling point spirits	Kilolitre	Rs 45 00	Rs 845 00	505
						4,825
				While the increase in duty on motor spirit is a revenue measure, the increase in duty on certain special boiling point spirits is to ensure parity in the selling price of such spirits with that of motor spirit so that the incentive for using such S.B.P. spirits for adulteration of motor spirit to avoid the higher duty incidence is taken away.		
4	11A	Petroleum products not otherwise specified				110
		(i) Mineral turpentine oil		20% <i>ad valorem</i>	20% <i>ad valorem</i> plus Rs 100 00 per metric tonne	
		(ii) Liquefied petroleum gas (L.P.G.)		20% <i>ad valorem</i>	Rs 250 00 per metric tonne	
		(iii) Others		20% <i>ad valorem</i>	20% <i>ad valorem</i>	
				The increase in (i) is to take away the incentive for adulteration of kerosene with mineral turpentine oil. The increase in (ii) is a revenue measure. There is no change in the rate of duty against (iii).		
5	11B	Compounded lubricating oils and greases		—	20% <i>ad valorem</i>	900
6	11C	Calcined petroleum coke		—	20% <i>ad valorem</i>	40
				These new levies have been proposed as a revenue measure.		
7	14A	Chemicals, namely —				65
		(1) As existing				
		(2) Bicarbonate of soda		—	10% <i>ad valorem</i>	
		(3) Dichromate of potassium or sodium		—	10% <i>ad valorem</i>	
		(4) Hydrogen peroxide		—	10% <i>ad valorem</i>	
		(5) Potassium permanganate		—	10% <i>ad valorem</i>	
				The new items at S. No. 4 to 7 above are proposed to be levied to excise duty as a revenue measure.		
8	14F	Cosmetics and toilet preparations (Tariff description amended to include lipsticks, perfumed hair oils and shampoos).		25% <i>ad valorem</i>	25% <i>ad valorem</i>	102
		<i>Effective rate of duty</i>				
		(i) Preparations for the care of the skin, etc., including lipsticks.		25% <i>ad valorem</i>	25% <i>ad valorem</i>	

1	2	3	4	5	6	7
						(Rs lakhs)
		(ii) Preparations for the care of the hair :				
		(a) Hair lotions, creams and pomades	25% <i>ad valorem</i>	No change		
		(b) Perfumed hair oils	—	10% <i>ad valorem</i>		
		(c) Shampoos	—	20% <i>ad valorem</i>		
			<i>Note</i> - The existing special excise duty of 20% of the basic duty continues. It is a revenue measure. Relief in duty has been provided for smaller manufacturers of lipsticks, perfumed hair oils and shampoos.			
9	15 I	Soap (produced with the aid of powder)				162
		(1) Household and laundry soap	6 5% <i>ad valorem</i>	No change		
		(2) Other sorts	9 5% <i>ad valorem</i>	12 5% <i>ad valorem</i>		
			<i>Notes</i> - The existing special excise duty of 20% of basic duty continues. It is a revenue measure. The increase in duty will not affect household and laundry soap. 2. It is also proposed to grant relief (by notification) in duty on soap using specified percentage of Neem, Karanj, Kusum and Sal oils in manufacture, with a view to encourage the use of such minor oils in soap manufacture and to reduce the pressure on usage of imported tallow and oils.			
10	15A	Plastics, all sorts				60
			(a) Tariff description amended to increase the basic rate of duty to 30% <i>ad valorem</i> on (i) polyurethane foam and (ii) articles made of polyurethane foam (b) Basic duty on rigid plastic (excluding P.V.C.) boards, sheeting, sheets and films raised from 20% to 25% <i>ad valorem</i> (by notification) (c) Flexible P.V.C. sheets used in the further manufacture of leather cloth exempted (by notification) <i>Note</i> - Existing special excise duty of 20% basic duty continues. Proposals at (a) and (b) above are revenue measures. (c) is a measure of relief.			
11	16A	Rubber products				240
		(1) Latex foam sponge	20% <i>ad valorem</i>	40% <i>ad valorem</i>		
		(2) Unhardened plates, sheets etc., of rubber	20% <i>ad valorem</i>	25% <i>ad valorem</i>		
			<i>Note</i> - The existing special excise duty of 20% of the basic duty continues. It is a revenue measure.			
12	22C	Linoleum	—	20% <i>ad valorem</i>		34
13	22D	Ready made garments produced with the aid of power	—	10% <i>ad valorem</i>		250
14	22E	Typewriter and similar ribbons	—	10% <i>ad valorem</i>		10
			These new levies are proposed as a revenue measure. The levy on ready made garments will (by notification) be confined only to those which are sold under a brand name or a registered trade mark. Further relief has been provided (by notification) for smaller manufacturers of such ready made garments. Only specified garments liable to duty.			
15	23A	Glass and glassware				250
		(1) Sheet glass and plate glass	10% <i>ad valorem</i>	15% <i>ad valorem</i>		
		(2) Other glassware including tableware	15% <i>ad valorem</i>	20% <i>ad valorem</i>		
			<i>Note</i> - The existing special excise duty of 20% of the basic duty on sheet and plate glass continues. It is a revenue measure.			
16	23B	China ware and porcelain ware, all sorts				125
		(1) Tableware	15% <i>ad valorem</i>	20% <i>ad valorem</i>		
		(2) Not otherwise specified	10% <i>ad valorem</i>	20% <i>ad valorem</i>		
			<i>Note</i> - These items continue to be exempted from special excise duty. It is a revenue measure.			
17	23D	Mosaic tiles (produced with the aid of power)	—	10% <i>ad valorem</i>		65
			This new levy has been proposed as a revenue measure. Relief has been provided (by notification) for smaller manufacturers.			
18	27	Aluminium				
			A fresh sub item is proposed to be inserted for containers made of aluminium for clarification and for removal of doubts. It has no revenue significance.			
19	30B	Motor starters	—	10% <i>ad valorem</i>		75
			This new levy has been proposed as a revenue measure. Relief has been provided (by notification) for smaller manufacturers of these articles.			
20	32	Electric lighting bulbs and Fluorescent lighting tubes				120
		(1) Vacuum and gas filled bulbs	11% <i>ad valorem</i>	20% <i>ad valorem</i>		
		(2) Fluorescent tubes	22% <i>ad valorem</i>	30% <i>ad valorem</i>		
		(3) Sodium and mercury vapour discharge lamps	6% <i>ad valorem</i>	10% <i>ad valorem</i>		
		(4) All sorts not otherwise specified	16% <i>ad valorem</i>	25% <i>ad valorem</i>		
			It is a revenue measure. 2. All types of bulbs and fluorescent tubes except bulbs of the type commercially known as "miniature lamps" are proposed to be exempted from special excise duty. 3. Vacuum and gas filled bulbs not exceeding 60 watts will continue to pay the same duty as at present (i.e. 11% <i>ad valorem</i>). 4. Miniature lamps will continue to pay duty at present concessional rates.			
21	33	Electric fans (Tariff description amended to include industrial fans also)				81
		(1) Table, cabin etc., fans not exceeding 40 centimetres	—	No change		
		(2) Industrial fans	—	10% <i>ad valorem</i>		
		(3) Not otherwise specified	8 5% <i>ad valorem</i>	10% <i>ad valorem</i>		
			<i>Note</i> - The existing special excise duty of 20% of basic duty continues. It is a revenue measure.			

1	2	3	4	5	6	7
						(Rs lakhs)
22	33F	Electricity supply meters	—	10% <i>ad valorem</i>		120
23	34A	Motor vehicle parts and accessories	—	10% <i>ad valorem</i>		160
24	34B	Forklift trucks and platform trucks	—	10% <i>ad valorem</i>		40
25	37B	Cinematograph projectors	—	20% <i>ad valorem</i>		24
26	37C	Photographic cameras	—	20% <i>ad valorem</i>		18
These new levies have been proposed as a revenue measure. The levy on motor vehicle parts will for the present be confined (by notification) to certain specified items; those when intended for use as original equipment will not have to bear this duty						
27	41	Crown corks	Per piece	One paise	Two paise	160
28	42	Pilfer proof caps	Per piece	One paise	Two paise	65
29	44	Sparking plugs		It is a revenue measure		(—)15
This item is being deleted from this entry as it would henceforth fall under the new Tariff Item No. 34A and will continue to pay the same duty under the new item read with the relevant notification						
30	46	Metal containers		The change in the tariff description is for the purpose of clarifying its scope and is in line with the change made in Tariff Item 27		—
31	49	Rolling bearings		10% <i>ad valorem</i>		220
32	50	Welding electrodes		10% <i>ad valorem</i>		90
33	51	Coated abrasives and grinding wheels (produced with the aid of power)		10% <i>ad valorem</i>		83
34	52	Bolts and nuts and screws (produced with the aid of power)		10% <i>ad valorem</i>		250
35	53	Zip or Slide Fasteners				20
		(1) Complete		20% <i>ad valorem</i>		
		(2) Parts thereof		25% <i>ad valorem</i>		
36	54	Pressure cookers		20% <i>ad valorem</i>		60
37	55	Vacuum flasks, etc.				44
		(1) Complete		15% <i>ad valorem</i>		
		(2) Parts thereof		20% <i>ad valorem</i>		
38	56	Playing cards		20% <i>ad valorem</i>		45
39	57	Camphor		10% <i>ad valorem</i>		21
40	58	Menthol		10% <i>ad valorem</i>		15
41	59	Electric insulation tapes (produced with the aid of power)		10% <i>ad valorem</i>		10
42	60	Adhesive tapes, not otherwise specified (produced with the aid of power)		10% <i>ad valorem</i>		15
These new levies have been proposed as a revenue measure. Relief has been provided (by notification) for smaller manufacturers of rolling bearings, welding electrodes, bolts and nuts and screws, zip or slide fasteners and playing cards						

ADDITIONAL EXCISE DUTY IN LIEU OF SALES TAX

1	4 II(2)		25% <i>ad valorem</i>	75% <i>ad valorem</i>	3,048

	(vi) Malimo type and non-woven bonded fabrics			4.4	5.0	

It is a measure to raise additional revenue for the States in pursuance of the decision at the National Development Council.

(Notes :—For changes by Notification, Sl. No. 9, Part D may be seen.)

ADDITIONAL DUTIES OF EXCISE AND CUSTOMS ON MINERAL PRODUCTS

8	Refined diesel oils and vaporizing oils .. .	Kilolitre	Rs. 400.00 (ceiling rate)	Rs. 300.00 (ceiling rate)	—
---	--	-----------	------------------------------	------------------------------	---

Note :—No change in the present effective rates of additional excise duty.

It is proposed to increase the ceiling rate to provide an adequate cushion for mopping up any price reductions and cost and freight accumulations as and when they occur. It has no immediate revenue significance as there is no change in the present effective rate of additional excise duty which is fixed by notification.

CHANGES PROPOSED BY NOTIFICATIONS

1	1B	Prepared or Preserved Foods	..	..	10% <i>ad valorem</i>	10% <i>ad valorem</i>	12	
					The notification specifying the excisable items has been amplified to include bottled or canned and dehydrated (packed in cans or foil packets) vegetables.			
2	13	Vegetable product	..	..	..	..	(-)33	
					It is proposed to increase the present quantum of relief in duty for vegetable product using a minimum specified percentage of cotton seed oil in its manufacture. The same concession is being extended to vegetable product when rice-bran oil is used in its manufacture.			
					This proposal is intended to encourage the use of these oils in the manufacture of vegetable product in substitution of other edible oils.			
3	14BB	Sodium silicate	..	..	..	..	(-)84	
					25% <i>ad valorem</i>	15% <i>ad valorem</i>		
					It is a measure of relief to the sodium silicate industry.			
4	14H	Gases	..	..	..	..	190	
					It is proposed to withdraw the exemption from duty hitherto granted to oxygen, chlorine, ammonia and refrigerant gases.			
					Ammonia gas used in fertilisers and oxygen for medicinal use are however proposed to be exempted.			
					Certain other uses of oxygen, chlorine and ammonia will also get the benefit of exemptions.			
5	15AA	Surface active agents	..	..	..	10% <i>ad valorem</i>	10% <i>ad valorem</i>	130
		<i>Effective rates of duty</i>						
		Surface active agents	..	..	..	25 paise per kilogram	10% <i>ad valorem</i>	
					It is a revenue measure.			
6	18	Rayon and synthetic fibre and yarn and	..				} 62	
	18A	Cotton yarn	..	..	..	..		
					It is proposed to withdraw the present concession in duty to staple fibre of cellulose origin of 1.5 denier and above used in spinning of yarn in admixture with cotton.			
7	18B	Woolen yarn, all sorts, including knitting wool	..	..	..	..	120	
		(1) Worsted yarn

		(i) Effective rate reduced to 5% ad valorem.				
		(ii) Tariff values wherever applicable have been withdrawn.				
		(iii) Compounded rates of duty based on metro-basis wherever applicable have been reduced.				
11	23	Cement				48
		Cement				
		10 8% ad valorem 20% ad valorem				
		The rate has been suitably rounded off.				
		Special excise duty at 20% of basic duty will continue to be chargeable.				
12	29A	Evaporative type coolers				20
		Evaporative type coolers				
		Nil 25% ad valorem				
		It is proposed to withdraw the exemption in respect of evaporative type coolers and subject them to 25% ad valorem. They will, however, be exempted from special excise duty.				
13	32B	Electric wires and cables				150
		It is proposed to withdraw the existing concession in duty on copper contents of certain types of electric wires and cables to induce economy in the use of copper.				
14	34(3a)	Tractors, including agricultural tractors				400
		Tractors including agricultural tractors				
		(i) of Draw Bar Horse Power 50 and below				10% ad valorem
		(ii) of Draw Bar Horse Power exceeding 50				
		(a) for agricultural purposes				10% ad valorem
		(b) Others				10% ad valorem
		Note - While tractors covered under (i) and (ii)(a) above will continue to be exempted from special excise duty, those covered under ii(b) will continue to pay special excise duty as at present.				
		It is a revenue measure.				
15	43	Wool tops	Kilogram			110
		Wool tops	Kilogram			
		Rs. 2.45 Rs. 3.55				
		A quantum of the duty incidence which would otherwise have been borne by woollen yarn has been transferred to wool tops.				

Table 5: Proposed revision of postal, telegraph and telephone tariffs

Section I Postal (Inland)

(iii) on rentals paid monthly		—	Rs. 10	—	Rs. 10
5. Concessional Tariffs for Trunk Calls					
Tariff for Trunk Calls on Telegraph Holidays		Ordinary and SVH 50 per cent of normal full rate	Urgent 75 per cent of normal full rate	No concession except on three National Holidays and usual concession on Sundays and between 7.00 p.m. to 8.00 a.m.	
6. (a) Private Manual Exchanges and Private Manual Branch Exchanges					
Size of Board		Annual Rental		Annual Rental	
1 + 3		Rs. 200.00		Rs. 250.00	
2 + 6		Rs. 350.00		Rs. 450.00	
3 + 9		Rs. 500.00		Rs. 625.00	
5 + 20		Rs. 40.00 per equipped termination on the switch board		Rs. 50.00 per equipped termination on the switch board	
10 + 50		- do -		- do -	
20 + 100		- do -		- do -	
(Private Manual Exchange only)					
(b) (i) Private Automatic Branch exchanges upto 100 lines (non-extendable) except 5 lines and 9 lines PAIX's*		Rs. 60.00 per equipped termination on the switch board		Rs. 75.00 per equipped termination on the switch board	
(ii) 5 line Private Automatic Branch exchange (inclusive of the rental for all the 5 internal connections)		Rs. 600.00		Rs. 750.00	
(iii) 9 line Private Automatic Branch exchange (inclusive of the rental for all the 9 internal connections)		Rs. 1,200.00		Rs. 1,500.00	
7. Additional entries in Telephone Directories		Rs. 4.00 per additional entry		Rs. 10.00 per additional entry	

* For all private automatic exchanges, and extendable Private Automatic Branch Exchanges, rentals will be charged as proposed in 6(b)(ii) for private automatic branch exchanges (non-extendable) or on capital cost basis, whichever is higher.

Section III -- Estimated Additional revenue in a year . . . Rs. 5.97 crores

SUMMARY OF ESTIMATED ADDITIONAL REVENUE IN A YEAR

Section I -- Postal Tariffs . . . Rs. 1.76 crores

Section II -- Telegraph Tariffs . . . Rs. 3.11 crores

Section III -- Telephone Tariffs . . . Rs. 5.97 crores

Total . . . Rs. 10.84 crores

DOCUMENTS

The Finance Minister's Budget speech

The Finance Minister, Mr Y. B. Chavan, presented to Parliament on May 28, 1971, the Union Budget for 1971-72. The full text of Part A and Part B of the Budget speech follows:

PART A

ON March 24 this year, I had presented to the Honourable House an interim Budget for 1971-72. I had then assured Honourable Members that the Budget proper to be presented in the current session will provide for a significant increase in the outlays on development and social welfare over and beyond what the interim Budget had indicated. It is in fulfilment of this commitment that I rise before you today.

Economic conditions

Earlier this week, the Government has laid on the floor of the Honourable House the Economic Survey for 1970-71. The Survey shows that the economy presents in general a promising picture indeed and that it is now better poised to tackle the tasks ahead than at any other time in recent years. We have once more been able to fulfil during 1970-71, the target set in the Fourth Plan with respect to the overall rate of economic growth. In agriculture, progress has been maintained; food-grains production has continued to expand at a most satisfactory rate. In the industrial sector, lack of certain essential raw materials has hampered production in some areas and there is still under-utilisation of capacity in a few other areas. But new grounds have been broken in our import substitution efforts, and recovery from the years of recession in the middle 1960's is considerable. Besides, the growth in the small-scale sector is most encouraging. Enough symptoms abound which indicate that once a significant improvement occurs in the scale of public investments, industry as a whole will surge forward. After a few initial set-backs, there has been a remarkable spurt in exports towards the later months of the year. Better organisation is, however, still the major outstanding task for both industry and exports. Apart from raw material shortages and procedural delays, we have also to face problems of low scales of operations and high unit cost in some industries. Cost reduction and improvement in efficiency are thus vital for imparting a new dynamism to industrial growth and exports.

In agriculture too, there is yet no occasion to relent on our efforts. We must continue the search for high-yielding varieties of paddy which will prove durable in our varying agro-climatic conditions. Irrigation facilities will have to be expanded to ensure the extensive propagation of double cropping. Our search for better pest-resistant qualities of seeds for millets must go on. The greatest area of responsibility will lie in improving the productivity per hec-

tare of pulses and the cash crops, including cotton, oilseeds and jute. During 1970-71, there was a marked stability—occasionally even a certain fall—in foodgrains prices. In fact, but for the Government's price support operations intended to protect the farmers, there would have been a steeper order of decline in these prices. Despite this, there was an overall increase in the general price level largely induced by the shortage in the availability of commercial crops. Against this background, we cannot accelerate our rate of growth with price stability unless we raise the output of commercial crops.

On the external side, while we can take credit for repaying our outstanding obligations to the International Monetary Fund, our balance of payments is not as satisfying as it was at the end of 1969-70. Exports have shown a remarkable improvement. At the same time, with the rising tempo of industrial activity, imports have been going up. Outstanding import licences suggest that there will be a further increase in imports during the current year. Because of shortage in steel, cotton, oils and oilseeds, we have had to plan for much larger imports than originally envisaged. Fresh aid allocations have declined during the past year even as the burden of debt servicing has continued to mount. Net aid available to finance imports has, therefore, shrunk. Thus we can scarcely afford to relax in the matter of a prudent management of our balance of payments.

Reorientation of policies

The massive mandate which this Government received from the people three months ago was a mandate for socialism, a mandate for rapid economic growth matched by increased social justice. There can be little doubt that social justice must begin with increasing the opportunities of job and work for every one. A good deal has been done in the course of the past year to initiate measures for creating gainful work for the urban unemployed as well as the rural under-employed. During the past year, the nationalised banks have expanded their scale of operations so as to provide more credit to the hitherto neglected sectors and for purposes of self-employment. They intend to do much more in future. A crash programme for rural employment has been announced and the Government's broad objective is to ensure employment to at least one person in each family in all parts of the country. At the same time, the Government is determined that such schemes for creating employment do not take the form of ad hoc measures but contribute to the accretion of additional physical assets in the countryside in the form of new roads, land reclamation, land development, drainage, etc.

Honourable Members will also remem-

ber that special works programmes were introduced last year to improve job opportunities in the countryside, particularly for the small farmers and in the backward areas. These schemes will continue. In addition, as I shall describe presently, we propose to make a special budgetary provision for assisting the educated unemployed in their search for a constructive opportunity to serve the nation.

The largest stimulus to employment can, however, come only by increasing the tempo of economic activity all round. It is therefore essential that expenditure under the Plan is maintained on projected levels and that no shortfalls occur. I am afraid that our performance in 1970-71 in this respect leaves much to be desired. While I am proposing to increase significantly the Plan outlays over what was allocated last year, the emphasis has to be even more on the timely implementation of Plan projects for which budgetary provision is being made.

Faster growth and greater social justice will be elusive goals unless pursued in a milieu of relative price stability. We can scarcely ignore the adverse effects of unabated price increases on both investment and income distribution. Inflation also dislocates attempts to increase the efficiency of production and to lower unit cost, which in turn affects exports. There is therefore need for continuous vigilance. The drive for a faster rate of growth in this sense, therefore, blends with the parallel goal of achieving price stability. In this task, we must also keep under examination the operation of the monetary forces.

Our procedure for formulating annual Plans is itself in the nature of a reassessment of Plan priorities and objectives. At the present juncture, when we have just received a new mandate, it is also necessary to make a fresh appraisal of the Plan as a whole. The emphasis from now on has to be on measures which will speed up the process of implementation of projects, foster the expansion of employment opportunities and reduce disparities, including regional disparities. Honourable Members are aware of the various steps taken in recent years for encouraging growth, including growth of industry in the backward areas through allocation of Plan assistance and similar fiscal and other means. The same objective has to be kept in mind in the allocation of our foreign exchange resources including those mobilised through external assistance. Schemes intended for backward areas have to be given due consideration at the stage of the formulation of the Plan itself, so that in the general allotment of internal and external resources under the Plan, the different parts of the country, and particularly the retarded regions, get their due share.

Our public sector enterprises have

deepened and widened the industrial base of the economy and achieved certain basic social objectives. Efficient performance on the part of these enterprises is crucial for the Government's overall development effort. The extent of buoyancy that can be added to the economy each year will be largely related to the ability of the public sector to implement the Plan proposals. Administrative and procedural delays which hold back progress of these enterprises are thus matters of considerable concern. Similarly, the public sector has to yield a sizable surplus, since this surplus is a key source of future growth. During the past year, a number of steps have been taken to raise the general efficiency of public enterprises. Increasing attention is being devoted for the proper maintenance of inventories as well as of plant and machinery in each public sector unit, and towards tackling the problem of personnel management and industrial relations. In regard to the latter, we would certainly like to have the advice and counsel of trade unions. They have an equal stake in the efficiency of the public sector. I hope that, with their co-operation, it will be possible to initiate a new chapter of industrial relations in our public enterprises.

A large segment of the commercial banks is also now a part of the public sector. Here too, I would seek the co-operation of the trade union leaders to improve the efficiency of the banking system. A beginning was made recently when I initiated a dialogue with the employees and the management of the banks; our discussions covered such areas as credit planning and deposit mobilisation. I propose to continue this practice. The new boards of directors, the composition of which will be announced soon and which will include representatives of the Award staff and officers, will, I hope, carry forward the task of improving the procedures and policies of the banks along intended lines.

Each of the nationalised banks has been urged to have an annual credit plan which could ensure that the credit apportioned to the different sectors, and particularly the sectors neglected hitherto, is in conformity with their needs and at the same time within the norms of monetary

expansion. The committee appointed by the Reserve Bank of India to suggest credit schemes for promoting self-employment has made a number of valuable suggestions which are being given shape to by the commercial banks. Another committee which was asked to recommend a scheme of differential lending rates for helping the smaller borrowers and the weaker sections of the community has just submitted its report. A credit guarantee corporation has been set up with effect from April 1 to underwrite the advances offered by banks to small borrowers. Honourable Members are also aware that the Government has recently framed the guidelines for the conversion into equity of loans offered by public financial institutions. These guidelines should go a long way to promote the establishment of a joint sector to which we attach considerable significance.

Honourable Members, I am sure, are happy with our decision to take over the business of general insurance in the country. This decision marks a culmination of the process which was started when we nationalised the Imperial Bank of India and the life insurance business and to which we gave a major thrust less than two years ago through nationalisation of major commercial banks. With these measures, virtually all the savings of the people mobilised by financial institutions can now be deployed in accordance with national priorities.

Revised Estimates 1971-72

In the Interim Budget, I had indicated that the year 1970-71 will close with an overall deficit of Rs 230 crores. The Budget documents I am presenting today repeat from the interim Budget the Revised Estimates for 1970-71, since actuals are not yet available in most cases. According to the latest indications, however, the overall deficit for 1970-71, I am afraid, may be of the order of Rs 270 crores.

While presenting the interim Budget I had occasion to express concern over the fact that a number of States were over-drawing their accounts with the Reserve Bank of India. I regret to say that despite the increased special assistance of Rs 195 crores to the States during 1970-71, there

DOCUMENTS

has been no abatement in the States' recourse to overdrafts from the Reserve Bank as will be evident from the fact that, at the end of last March, as many as 14 States had overdrafts aggregating to Rs 260 crores. The special assistance to the States, which was designed to help them to fulfil their targets of Plan outlays, is to taper off in the coming years. In this context, the problem of overdrafts assumes an additional gravity. I would appeal to the States to maximise their efforts for raising additional resources and to enforce the strictest discipline on the growth of non-Plan expenditure.

Budget Estimates 1971-72

Honourable Members will recall that in the interim Budget I had provided a sum of Rs 1,195 crores for the Central Plan for 1971-72, that is, at the same level as in the Budget for 1970-71. I had then stated that the provision for the Central Plan for the current year was to be augmented following a review of requirements and resources. I propose to raise the outlay under the Central Plan by Rs 155 crores, that is, to Rs 1,350 crores. This represents an increase of more than Rs 300 crores over the likely actual level of expenditure in 1970-71. The more important areas where the budgetary provisions have been significantly raised over what was provided in the interim Budget include shipping (Rs 16 crores), ports (Rs 13 crores), roads (Rs 10 crores), mines and metals (Rs 9 crores), health and family planning (Rs 12 crores), posts and telegraphs (Rs 11 crores), agriculture (Rs 32 crores) and food procurement (Rs 18 crores). I had already provided in full in the interim Budget the sum of Rs 785 crores towards Central assistance for the Plans of the States and the Union Territories, as against a provision of Rs 711 crores in the Budget for 1970-71.

For creating immediate employment opportunities, even a larger Plan outlay may not be enough in the short period. I have therefore decided to add a further thrust to the public sector outlay which could both generate additional employment and provide relief to the weaker sections of the community. For the crash programme for rural employment a provision of Rs 50 crores was already made in the March Budget. But the problem of unemployment is equally acute among our educated young men and women. We are determined not to permit them to be a lost and frustrated generation. We propose to assist them actively so that they might set themselves up in gainful creative endeavours which would at the same time accelerate the pace of economic progress of the country. To this end, in the Budget I am now presenting, we propose to allot a further sum of Rs 25 crores for schemes specially designed to suit the educated unemployed including engineers and technicians. The details of these schemes are being worked out in consultation with the Planning Commission and the Ministries concerned.

Honourable Members will be glad to know that the provision of Rs 4 crores made in the interim Budget for a nutrition programme for children is now being raised to Rs 10 crores, and included in the

FROM WHERE MONEY COMES

WHERE IT GOES

DOCUMENTS

Plan. I have no illusion that even this larger provision will mean much more than a beginning in the task of protecting and nurturing the health and welfare of the poor children. I do hope that, in this matter, we will be in a position to do substantially more in the coming years. I might also mention here that we propose to reserve 25 per cent of fresh admissions to public schools for meritorious candidates, who will be offered Government scholarships.

The special provisions made last year for improvement of slums are being maintained. The work of the Calcutta Metropolitan Development Authority will be pursued with vigour. I would also like to state here that the Government would consider sympathetically proposals for a similar improvement in living conditions for slum dwellers in other metropolitan cities and towns; if State Governments and municipal bodies could initiate viable schemes for this purpose, we will consider the question of financial accommodation.

Finally, I have to refer to the tragedy that has been enacted over the past two months in East Bengal representing some of the darkest episodes in human history. Already, some three million evacuees have crossed over the borders. It is our hope and endeavour that all these unfortunate people will be able soon to return to their homes and hearths in dignity and honour. Meanwhile, we shall do our utmost to offer succour and relief to all those who have taken temporary shelter with us. It will clearly be beyond our capability to meet on our own the financial burden involved. We regard it as the responsibility of the international community to share with us this burden. In the Budget, I have tentatively made a provision of Rs 60 crores for providing relief to the evacuees from East Bengal. For the present, we have taken credit on the revenue side to the extent of Rs 20 crores which we expect will accrue to the Budget by way of external assistance for the relief of the evacuees. In addition, it is our hope that substantial sup-

plies from abroad will be available for providing relief without being routed through the Budget. Honourable Members will note that the provision we have made will suffice only for a limited period and that a considerably higher order of assistance from the international community will be necessary.

Let me now sum up the overall budgetary picture as it emerges following the increase in the Plan outlay, the provision for employment assistance, and certain inescapable additions to the non-Plan items of expenditure since the presentation of the interim Budget in March. Apart from the provision for evacuee relief, I might mention in particular the addition in the expenditure on account of food subsidy, which is now placed at Rs 30 crores instead of Rs 10 crores as indicated in the interim Budget. On present reckoning, the revenue receipts in 1971-72 are likely to be of the order of Rs 3,562 crores. Expenditure to be met from revenue will amount to Rs 3,587 crores. Thus the revenue surplus, placed in the interim Budget at Rs 114 crores, will now turn into a deficit of Rs 25 crores. On the capital side, collections under the various small savings schemes are now expected to be Rs 180 crores as against Rs 155 crores indicated in the interim Budget; correspondingly, however, loans to the States will also go up by Rs 16 crores, so that the net increase under this head will be only Rs 9 crores. I have also taken credit for an additional accrual of Rs 40 crores under PL 480 receipts representing largely the spill-over from 1970-71. Total capital receipts, inclusive of loans and advances and transactions under various debt deposit heads, are now placed at Rs 2,024 crores and total capital expenditure, including loans and advances, is estimated at Rs 2,396 crores. The capital budget will, therefore, show a deficit of Rs 372 crores as against Rs 354 crores in the interim Budget. The overall budgetary gap, taking revenue and capital accounts together, will now be of the order of Rs 397 crores. This takes into account the effect on the Central Budget of the changes in railway fares and freight rates announced a few days ago and of changes in the post and telegraph tariff to which I will refer a little later.

Honourable Members, I am sure, would

not like me to leave uncovered a deficit of this magnitude in the Budget. I will, therefore, seek their indulgence if I have now to turn to what all of you, I am sure, are waiting for, namely, proposals to bring down the deficit to a more tolerable order.

PART B

The task of raising additional resources through fresh imposts on the people is the least enviable of a Finance Minister's responsibility. If I still have to approach this House with proposals to raise additional resources, it is because of the imperatives of the situation, including the need to augment the Plan outlay, to create additional employment opportunities and to offer succour to the evacuees from East Bengal.

In framing these proposals, I have endeavoured to follow certain broad principles. These are:

(a) The tax structure must be simplified and rationalised in such a way that the burden of assessment for the assessee as well as the tax collector and the opportunities for evasion are minimised;

(b) The overall burden of taxation must be distributed among the different sections of the community in such a manner that, in the process, there is an appreciable scaling down of the concentration of economic power and reduction in the inequalities in income and wealth; and

(c) The incidence of the fresh imposts should not, as far as possible, disturb the general level of prices of essential goods.

Accordingly, the concentration of the additional tax effort, to the extent feasible, should be on direct taxes, particularly on the affluent groups, and on such categories of indirect taxes as affect the luxury and near-luxury commodities. In so far as we succeed in limiting the burden of indirect levies on the latter group of commodities, we are also able to achieve in part the other objective of improving the structure of income distribution in society.

Tax administration

The tightening and streamlining of tax administration has two facets. First, it helps to garner additional yield from the existing tax sources and thus makes it less necessary to look for fresh tax heads every year. Second, since it is generally the well-to-do and the rich who avoid and evade taxes, a tightening of tax administration, including closing of loopholes, would compel them to part with a larger proportion of their incomes and assets and would therefore further one of the overriding objectives of fiscal policy.

Undervaluation of property has been one of the means to evade wealth tax, capital gains tax and stamp duties. It has also been an important avenue for the circulation of black money. This practice could be greatly discouraged if the Government had the power to acquire properties at prices that correspond to what is recorded in sale deeds. Accordingly, we propose to move a Bill during the current session to acquire this power. I hope it would not be

GROSS CAPITAL FORMATION

Out of budgetary resources of Central Government

Rupees crores and as percentage of GNP

considered dishonourable to take a dishonest man at his word

In pursuance of the Administrative Reforms Commission's recommendations it is also proposed to sponsor legislation in the current session to discourage benami holding of property. If, at the time of assessment, a person fails to declare income from a piece of property or the property itself so as to evade payment of income and wealth taxes, the intended legislation will debar him from enforcing his claim to such property in a court of law.

Pursuant to the recommendations of the Administrative Reforms Commission we further propose to transfer the work of recovery of arrears of estate duty from the State Governments to the income tax department at the Centre. Since, in this matter, we can move only with the concurrence of the State Legislatures, a Bill is being drafted for circulation among the States.

It is proposed to strengthen the valuation cell located in the Central Board of Direct Taxes for making valuation of buildings in order to enable it to extend its activities and speed up valuations in cases involving the assessment of wealth tax. For assessment of income tax under the new procedure which has come into effect from the current year, summary assessments will be completed in most cases which do not involve substantial points of dispute, and only a small proportion of the cases will be subjected to a sample scrutiny subsequently. This will enable the income tax officers to devote correspondingly more time for cases involving substantial revenue.

In the field of excise duties I propose to set up a committee to review the Self Removal Procedure scheme, which has been in operation for the last two to three years, with a view to suggesting improvements which could reduce leakage of revenue. A study team which considered the issues relating to over and underinvoicing has made a number of suggestions for checking the leakage of foreign exchange through manipulation of invoice values. The Government will give early consideration to implement its recommendations. With a similar purpose, a comprehensive review is being undertaken of the Foreign Exchange Regulation Act, and we propose to introduce soon a Bill to amend several provisions of this Act.

In the past, at the Centre, we have taken several fiscal steps to discourage the growth and concentration of excessive income and wealth in a few hands in the urban areas. The constitutional prerogative of the Union Government to initiate measures for similar reforms in the countryside is however severely restricted. But this does not mean that some of the present anomalies must continue, or that we can be oblivious of growing inequalities in rural areas. Ultimately, the basis of tax has to be the size of income or wealth irrespective of whether it is derived from agricultural or non-agricultural sources.

Similarly, there are constitutional limitations on the powers of the Centre to tax services even when these are of a luxury or semi-luxury character. As the States

INDIA'S TAX EFFORT

Tax revenue in rupees crores and as percentage of GNP

and the Centre have to share the responsibility of raising resources for economic development it is the duty and obligation of the Centre to point out to the States untapped resources for mobilisation where the Union Government itself is precluded by the constitutional provisions to impose any levy. It is my intention to consult and seek the advice of the State Finance Ministers on the entire range of these issues and to remain in continuous touch with them so that a concerted view is taken.

Direct taxation

I now come to the new proposals in respect of direct taxation. If we are going to make an effective dent on the problem of income inequalities in our society we cannot possibly flinch from deploying increasingly the instrument of direct taxation. The proposals that I am outlining will have only a limited yield of revenue in the current year. Over a number of years however the cumulative effect of these proposals will be to raise revenue of a considerable order, what is much more significant, they will bring about a significant change in the distribution of disposable income and wealth.

(a) *Taxation on income and wealth*
In the field of personal income taxation the rate of surcharge in the case of individuals as well as Hindu undivided families is being increased from 10 per cent to 15 per cent provided the total income exceeds Rs. 15,000 per annum. In a full year, the impact of the proposal will be to provide an additional Rs. 20 crores to the exchequer for 1971-72; the revenue yield is expected to be around Rs. 12 crores.

I also want to take this opportunity to increase the tax on capital gains, which are a species of unearned income. The deduction from long-term capital gains allowed in computing the taxable income of non-corporate assessee is being reduced from 45 per cent to 35 per cent where such gains relate to lands and buildings and from 65 per cent to 50 per cent in respect of other capital gains.

The incidence of tax on long-term capital gains will be increased in the case

of companies as well. This increase is being brought about by raising the rates of tax from 40 per cent to 45 per cent in respect of gains relating to lands and buildings and from 30 per cent to 35 per cent in respect of other gains.

I have some fairly stiff proposals regarding wealth tax. If a significant reduction in the concentration of wealth is to be brought about it is essential that the taxation of wealth is made more rigorous. Honourable Members will recollect that last year's Budget made a beginning in this direction by raising the rates of additional wealth tax on urban property. This year, I propose to raise drastically taxation on slabs of net wealth above Rs. 15 lakhs, where the rate of tax will now be uniformly 8 per cent as against the current rates of 4 per cent on net wealth between Rs. 15 lakhs and Rs. 20 lakhs and 5 per cent on net wealth above Rs. 20 lakhs. I also propose to include in net wealth for purpose of taxation the first Rs. 1 lakh of wealth in the case of all individual assessee and the first Rs. 2 lakhs for Hindu undivided families. Thus while no wealth tax will be leviable unless the net wealth exceeds Rs. 1 lakh in the case of individuals and Rs. 2 lakhs in the case of Hindu undivided families once they are liable to tax it will apply to their entire wealth. However the exemptions in respect of approved financial investments, owner-occupied house and agricultural assets will continue.

To tighten the incidence, the exemption from wealth tax currently available for household or personal jewellery and for shares forming part of initial capital issues is being withdrawn. In the case of conveyances, the exemption will now be limited to Rs. 25,000 in the aggregate. The existing provision in the Wealth Tax Act excluding from aggregation the assets transferred by an individual to the spouse or minor children is being done away with. A similar provision is being made in respect of conversion of assets of individuals into those of Hindu undivided families. While all these changes will not naturally yield any revenue this year, in future the annual additional yield from these measures affecting wealth tax could

DOCUMENTS

be around Rs 14.5 crores. What is more important, they will impose a virtual ceiling on individual wealth at a much lower level than at present.

As a further measure to discourage evasion of tax, conversion of the separate property of an individual into property belonging to a Hindu undivided family will be brought within the ambit of the gift tax.

(b) *Taxation of companies:* I am proposing several structural changes affecting the incidence of company taxation. While the rates of taxation on the ordinary income of companies are being maintained at existing levels, except for the rates on capital gains, the rate of surtax on company profits will be increased from 25 per cent to 30 per cent in the case of chargeable profits in excess of 15 per cent of the capital.

The practice of offering a development rebate in respect of new investment has had, I feel, a full play. I am accordingly serving the required notice that no development rebate will be allowed on ships acquired or machinery or plant installed after May 31, 1974. Whatever the revenue implications of this step—and they are sizable—will be fully revealed only after 1974-75, that is, from the Fifth Plan onwards. But I shall consider myself amply rewarded if advance notice of this change quickens the pace of investment in the remaining years of the Fourth Plan.

At present, in the case of new industrial undertakings, ships and approved hotels, profits up to 6 per cent of the capital employed are entitled to tax exemption for a period of five years. Since debentures and long-term borrowings do not in any manner represent risk capital and interest thereon is in any case deducted, it was generosity on the part of the Government to extend the tax holiday provision even to such constituents of capital. I

now propose that in calculating the limit of 6 per cent of the capital for purposes of tax-exemption, debentures and long-term borrowings will be excluded. This single measure will provide the exchequer with Rs 10 crores during the current year; the yield for a full year will be of the order of Rs 14 crores.

Priority industries currently enjoy a special tax exemption up to 8 per cent of their profits. I am proposing that the special exemption be reduced to 5 per cent of such profits. In addition, we have also decided to shorten the list of priority industries by excluding aluminium, motor trucks and buses, cement and refractories, soda ash, petrochemicals and automobile ancillaries. The general economic conditions are now such that it is not necessary that these industries should continue to enjoy special benefits which were accruing to them hitherto. The two measures in relation to priority industries should yield Rs 8 crores in future years; in 1971-72, the yield is likely to be about Rs 6 crores.

The deduction of income up to Rs 3,000 in the aggregate from investments in specified financial assets which was provided for last year will from now on be admissible only to individuals and Hindu undivided families.

The concessional tax treatment of dividends received by foreign companies from a closely-held Indian company engaged in a priority industry will be discontinued; the foreign companies will be subjected to tax on such dividends at the usual rate of 24.5 per cent.

I am firmly of the view that the fiscal instrument must be deployed to discourage payment of high salaries and remunerations which go ill with the norms of egalitarian society. I accordingly propose to impose a ceiling on the remuneration of company employees which would be deductible in the computation of taxable profits. The ceiling is being set at Rs 5,000 per month. Together with the existing ceiling of Rs 1,000 per month in the case of perquisites, the allowable overall ceiling on remuneration and perquisites, for pur-

poses of taxation, will be at Rs 6,000 per month. In addition, I am proposing to reduce the tax deductible limits of daily allowance to employees while on tour.

(c) *Miscellaneous concessions:* Having already delivered the rough tidings, let me now detail some of the smoother ones. I propose to raise the standard deduction currently allowed for the computation of taxable income of employees who own a motorcycle, a scooter or a moped from Rs 60 to Rs 75 per month; for others, who do not possess any of these, the standard deduction will be raised from Rs 35 to Rs 50 per month.

The quantum of deduction in respect of long-term savings through life insurance, provident fund contributions, etc. is being substantially modified. At present, 60 per cent of the first Rs 5,000 together with 50 per cent of the balance of such long-term savings are tax exempt. I am now proposing that for the first Rs 1,000 of such savings, the quantum of deduction should be 100 per cent. On the next Rs 4,000 of the qualifying savings, the proposed deduction will be 50 per cent, and on the balance 40 per cent. The limit for the savings qualifying for deduction will be raised from Rs 15,000 to Rs 20,000 in the case of individuals.

As a result of the changes in the standard deductions allowable for conveyance and long-term savings, an employee with an annual income of Rs 6,000 will be exempt from income taxation provided he saves at least Rs 400 in the approved form.

The tax concessions for promoting development and export of technical know-how and technical services, which have been available only to companies, will from now on also apply to individuals. Hindu undivided families and partnership firms. Certain further tax concessions are also at present available for expenditure on research and development. A committee has recently been set up by the Government to review the position and make recommendations regarding further fiscal incentives that could be offered to encourage industrial research. The recommendations of the committee will be given due weight.

The special deduction of income up to Rs 3,000 from investments in specified financial assets available to individuals and Hindu undivided families would henceforth also cover interest on deposits with a co-operative society made by its members. Moreover, the interest paid by a co-operative society to its members on deposits made by them will be exempted from the requirement of deduction of tax at source. Shares of, and member-deposits with, a co-operative society will be regarded as approved investments which are exempt from wealth tax up to Rs 1.5 lakhs. But I propose to withdraw the exemption in respect of such investment in the case of discretionary trusts which are subject to taxation on their net wealth at the flat rate of 1.5 per cent, or at the rate applicable in the case of an individual, whichever is higher.

There are certain minor concessions which I would now mention together. Co-operative societies of workers or those engaged in fishing and allied activities will be exempted from tax on their entire business income. Local authorities deriv-

TRANSFER OF FUNDS TO STATES

(revenue and capital)

Rupees crores and as percentage to total State expenditure

ing income, from the supply of water or electricity to villages outside their jurisdiction will be exempted from tax on such incomes. A member of a co-operative housing society, to whom a building or a flat has been allotted under a house-building scheme of the society, will be regarded as the owner of that piece of property for purposes of wealth tax.

The Housing and Urban Development Finance Corporation will be exempted from tax on its income for a period of ten years; the tax-exempt status of the Deposit Insurance Corporation will be extended by a further period of five years.

This brings me to the close of the various proposals relating to direct taxation. After taking into account the concessions, the net yield from the new direct tax measures from 1972-73 will be of the order of Rs 57 crores. For 1971-72, however, the realisation is unlikely to exceed Rs 27 crores.

Indirect taxation

I now turn to indirect taxes. My proposals regarding customs duties belong broadly to two categories. The first set of proposals is aimed at rationalising the rates structure of import duties. The other group of proposals is related to, and consequent on, the arrangements reached with a number of foreign countries who have agreed to release us from the bindings under the General Agreement on Tariffs and Trade in the matter of import levy on certain commodities.

(a) *Import duties:* The existing rates structure of import duties, I confess, forms a complicated pattern. As of now, there are seven *ad valorem* rates of duty in force: 15 per cent, 27½ per cent, 35 per cent, 40 per cent, 50 per cent, 60 per cent and, finally, 100 per cent. In order to introduce an across-the-board simplification and to remove existing anomalies, I propose to have only four effective rates of import duty, namely, 30 per cent, 40 per cent, 60 per cent and 100 per cent.

I propose to bring in all items of machinery within the orbit of 30 per cent import levy. While this would imply a marginal increase of 2½ percentage points in the rate of duty in respect of project imports, the decrease of duty by 5 percentage points in respect of machinery in general would provide relief to smaller industrial units and units manufacturing equipment who import a part of the components and to all those who need to import small items of machinery by way of spares or balancing equipment. The equalisation of rates for all kinds of machinery would also simplify assessment and, I hope, speed up assessment work. Items such as agricultural machinery and implements, dairy and poultry farming appliances would also now attract duty at the rate of 30 per cent instead of 15 per cent.

Certain basic raw materials and non-ferrous metals will from now on be liable to duty at the uniform rate of 40 per cent. Iron and steel and unwrought copper will, however, attract the lower duty of 30 per cent.

It is proposed to eliminate the present rate of duty of 50 per cent and levy instead a higher rate of 60 per cent on most items. A similar upward revision has already

been made in the course of the past two years with respect to the duty on chemicals, drugs, medicines, electrical and non-electrical appliances. What I am proposing now, therefore, is to bring all similar items together under the umbrella of the same rate of duty.

Till now, certain items used by the more affluent sections of the community, such as automobile components and dry fruits, were liable to a duty of 60 per cent instead of 100 per cent which is the standard rate for most imported consumer goods. This anomaly is now being removed. In addition, in view of the increase in the c.i.f. price as well as the high margin of profit, the specific rate applicable to cloves is being increased from Rs 18 per kilogram to Rs 60 per kilogram.

As a result of the release from the Gatt bindings, we are now in a position to either impose a duty, or raise the existing rates of duty, on a number of items, including agricultural tractors, earth-shifting machinery, staple fibre excluding yarn, raw wool, unwrought copper, zinc and pig lead. I propose to avail of the opportunity. In view of the high margin of profit on imported staple fibre, I am proposing that the duty on it be fixed at 100 per cent. On unwrought zinc, pig lead and raw wool, the duty will be 40 per cent, and on copper, 30 per cent. Given the large disparity between the prices of imported and indigenous tractors, I have also decided on a levy of 30 per cent on imported agricultural tractors. The same rate of duty will apply on earth-shifting machinery.

Taking into account the effect of the rationalisation of import duties as well as the adjustments following from the release from the Gatt bindings and the counter-vailing levies related to changes in excise duties to which I would soon turn, we should be able to get additional revenue to the extent of nearly Rs 54 crores during the remaining part of the year.

(b) *Excise duties:* I now come to the proposals with respect to excise duties. Pursuant to the decision to continue the scheme of levying additional excise duties in lieu of sales tax on sugar, textiles and tobacco, we are committed to raise the overall incidence of these additional duties to 10.8 per cent on the value of clearances by the end of the Fourth Plan period.

Since this target has to be attained by 1973-74, it has become necessary to make a substantial beginning in the current year itself. For the present, I have decided to concentrate on cigarettes and, to some extent, on textiles.

There comes perhaps a time in the life of every smoker when the concern for his own health begins to outweigh the loyalty to an old and faithful companion. For those who cannot shake off their consuming passion, there is at least the consolation that the more taxes they pay, the more they serve the common cause. I am, therefore, fortified in my decision to increase once again the taxation on cigarettes by the thought that whichever way my smoking friends react, there would be a net gain to the national welfare. In place of the existing three slabs of duty on cigarettes, I propose to have five. By suitable adjustments of the basic and additional duties on these slabs, I hope to raise during the current year Rs 33.20 crores of which Rs 16.40 crores would go to the States by way of additional excise in lieu of sales tax. The effect of the proposals would be a marginal increase in the price of the cheaper varieties of cigarettes, but a much sharper increase for the more expensive varieties.

Textiles, particularly coarse and medium varieties of cloth, are a basic necessity, and their prices rose rather inordinately in 1970-71. Despite other constraints, I have therefore decided that the impost on textiles should be modest this year. I propose to step up slightly the additional excise duties on medium A and medium B varieties of cotton textiles from 4.8 paise to 6 paise per square metre and also to round off the additional duty leviable on coarse cloth from 3.6 paise to 4 paise per square metre. With respect to superfine and fine cloth, however, I propose to go much further, and raise the rates of the additional excise duty to 25 paise and 15 paise respectively per square metre. These several measures should fetch an additional revenue of Rs 4.90 crores which will accrue entirely to the States.

My other major proposal in regard to excises is in the area of motor spirit, solvents and a number of other minor lubricants. In view of the rise in inter-

DOCUMENTS

national oil prices, there is need for the maximum economy in the utilisation of petroleum and petroleum products if we are to conserve our scarce foreign exchange resources. No doubt, there will be a certain hardship involved in this, but I am afraid it has to be borne by our people. To curb consumption, I, therefore, propose to increase the duty on motor spirit by Rs 200 per kilo litre or 20 paise per litre. This measure will fetch an additional revenue of Rs 36.30 crores in the current year.

There is extensive misuse of certain special boiling point spirits, otherwise known as solvent oils, as adulterants for motor spirit. To discourage this practice, I propose to raise the duty on solvents from the present rate of Rs 45 per kilo litre to Rs 845 per kilo litre. This measure will yield Rs 4.25 crores during the current year.

Similarly, to prevent the adulteration of mineral turpentine oil with superior kerosene, an extra duty of Rs 100 per metric tonne is being imposed on the former. In the case of liquid petroleum gas, I am proposing to abolish the *ad valorem* duty of 20 per cent and, instead, impose a specific duty of 25 paise per kilogram. The rate of duty which at present obtains on lubricating stock oils and greases directly derived from refined petroleum would also from now on apply to blended lubricating oils, greases and calcined petroleum coke. However, the base petroleum products used in the manufacture of the latter items would be given a credit for the duty that might already have been paid. I expect these measures to yield an additional revenue of Rs 9 crores during 1971-72.

At present, carbon dioxide is liable to duty, but other gases, such as oxygen, chlorine, ammonia and refrigerant gases are exempt; these exemptions are being withdrawn. However, oxygen for medicinal use and ammonia used in the manufacture of fertilisers would continue to be exempted from duty. This measure is expected to yield Rs 1.60 crores.

I also propose to raise the basic duty on glassware to 20 per cent and on sheet and plate glass to 15 per cent. Glass shells, glass globes and laboratory glassware would be left untouched. While the duty on sanitary and glazed wares was revised last year, tableware and china were left undisturbed. This deficiency I propose to make good this year; both these items will now attract a uniform duty of 20 per cent. These two changes are estimated to provide us this year with additional revenue of around Rs 3.15 crores.

While air-conditioners pay a duty at the rate of 53.3 per cent, till now, the evaporative type of coolers have been exempt from duty. This discrimination deserves to be removed. However, I am proposing a duty of only 25 per cent on them and, at the same time, exempting them from the payment of the special excise duty. Vacuum flasks, similarly exempt till now, will also have to bear a levy of 15 per cent *ad valorem*. The gain

to revenue would be Rs 54 lakhs in the current year.

It is proposed to revise the duty on soap from the present effective rate of 11.4 per cent to 15 per cent. This would result in only a marginal increase in the price of toilet soaps. Household and laundry soaps are being left untouched. Because of partial exemption, the effective rate of duty on surface active agents works out to even less than that on ordinary household and laundry soaps. It is therefore proposed to abolish the partial exemption and restore the full statutory rate of duty on these products. These two revisions—relating to soap and surface active agents—are likely to yield a revenue of Rs 2.55 crores for the rest of the year.

It is also proposed to tax certain other luxury items. Latex foam sponge, used extensively in the manufacture of foam mattresses, bears at present a relatively low basic rate of duty of 20 per cent *ad valorem*; I propose to double this rate of duty. A similar levy will be imposed on polyurethane foam as well as certain products made out of this particular foam. The basic rate of duty on plates, sheets and strips of rubber is also being stepped up from 20 per cent to 25 per cent *ad valorem*. These measures would bring in Rs 2.60 crores of additional revenue in 1971-72.

The duty on crown corks and pilfer-proof caps is proposed to be raised from 1 paise to 2 paise each. This measure is expected to yield Rs 1.90 crores.

A few other changes are being proposed by way of rationalisation. These include an excise levy on dehydrated canned and bottled vegetables and on preparations of glucose and dextrose, the removal of the special concession of 50 paise per kg on the basic excise duty for certain varieties of staple fibre, the rounding off of the duty on cement from 23.76 per cent to 24 per cent, revising the duty upwards on woollen yarn and shifting a portion of the incidence to wool tops, revising the rates of duty on electric lighting bulbs other than those of 60 watts and less, revising the rates for fluorescent tubes as well as for electric fans and industrial fans other than those of a diameter not exceeding 16 inches, and removal of the concession of Rs 500 per tonne on copper used in the manufacture of wires and cables. These assorted measures would yield a combined revenue of over Rs 6 crores.

I have talked earlier about the need for the rapid reduction of income inequalities not only in the urban areas but also in the countryside. One way in which this could be brought about is through levying selectively indirect taxes on products and equipment used in agricultural operations by the richer sections of the peasantry. I propose, therefore, to tax agricultural tractors by charging a duty of 10 per cent *ad valorem*; this levy is likely to fetch a revenue of Rs 3.40 crores in the current year.

To augment revenue, several new items are being introduced into the orbit of Central excise taxation. The commodities and the rates of duty are being so chosen that the net effect of these imposts on the price level will be negligible. The items I propose to bring in include perfumed hair oil, shampoos, lipsticks, pressure cookers, playing cards, zip fasteners,

photographic cameras, cinematographic projectors and linoleum. Very few of us perhaps would like to venture an opinion on the contribution made by perfumed hair oil, lipsticks or playing cards to the style, pace and quality of living in modern India. But Honourable Members will, I am sure, agree with me that most of these commodities constitute the appurtenances of high living; excise levies on them will have little effect on the level of living of the overwhelming mass of the community.

For the same reason, I am proposing a levy on certain ready-made garments which are mostly purchased by the well-to-do. However, in order to protect the small manufacturers, this levy will be confined to ready-made garments manufactured with the use of power and sold under registered trade marks or brand names. As a further concession to the small producers, clearances up to a specified value would be excluded from the excise provided the aggregate annual output in the unit concerned does not exceed a ceiling.

I also propose to introduce an excise levy on a number of producer goods such as ball and roller bearings, bolts, nuts and screws, electric insulation and non-medical adhesive tapes, welding electrodes, grinding wheels and motor starters, as it is difficult to tax the end-products of these items and we are currently losing some potential revenue. The rate of duty will be 10 per cent. It is also proposed to charge a duty of 10 per cent on electric supply meters, typewriter ribbons, mosaic tiles, fork lift and platform trucks and certain motor vehicle parts and accessories. Wherever necessary, the interests of the small producers will be protected by a concession similar to the one I have mentioned in the context of ready-made garments.

Four more chemicals are being added to the list of excisable chemicals, and will be liable to duty at 10 per cent. A similar levy will also be imposed on camphor and menthol.

These various measures of new excise levies together are likely to yield Rs 15 crores.

I now want to announce an important new measure intended to meet the cost of the programme for children's health and nutrition. I propose to levy a duty of 10 paise per kg on maida processed by roller flour mills in the organised sector. This particular flour is usually consumed by the richer sections of the population and otherwise used in the manufacture of sweets; the consumption of bread, another item in the manufacture of which maida is used, is again mostly confined among the higher income groups. I am sure the slight additional expenditure which this levy would imply would be cheerfully borne by these consumers since the resultant revenue of Rs 7.4 crores which will accrue to the Centre will be earmarked for being spent on the welfare of children. In addition, the States also will receive nearly Rs 1.8 crores from this measure.

I will now refer to a few excise concessions which I have considered desirable. To promote the use of minor oils in the manufacture of soap and thereby reduce our dependence on imported tallow and oils, I propose to reduce the incidence of the duty on soap wherever there is cer-

tain minimum use of minor oils like neem and sal. The rate of duty on sodium silicate will be reduced to encourage the output of cheaper varieties of soap in the small-scale sector. In order to foster the greater utilisation of cottonseed oil, the existing excise rebate for using this oil in the manufacture of vanaspati will be increased. A similar concession is also proposed to be accorded to rice-bran oil.

With a view to providing some relief to the small and marginal units using powerlooms for manufacturing cotton fabrics, I propose to reduce the rate of compounded levy on units where not more than four powerlooms are installed from Rs 50 to Rs 10 per loom per annum. In the case of units employing more than four powerlooms, the compounded levy will be half of the existing rates. The concession at present available to independent processors, will be rationalised. There are also a couple of marginal concessions for the manufacturers of embroidery and leather cloth.

All these reliefs and concessions together would cost the exchequer around Rs 1.50 crores for the remaining part of the year.

This brings me to the end of the rather long enumeration of the proposed changes with regard to excise duties. Taking all the proposals for excise duties together, the total yield for the rest of the current financial year will be roughly Rs 89 crores for the Centre and Rs 43 crores for the States.

(c) *Other measures:* I am afraid, having dealt with direct taxes, customs and excises, I am not quite through as I have yet to propose to the Honourable Members a new measure which is not quite in the nature of an excise levy. This is a tax which I propose to impose on foreign travel. The levy will be at the rate of 20 per cent *ad valorem* on all tickets purchased in rupees; tickets paid for in foreign exchange will be exempt. The only other major exemption would be for students and scientists. The estimated revenue from this measure which would come into effect from a date to be notified later, would be about Rs 7.0 crores. In case any Honourable Member feels that I am taking away what many airlines have graciously offered by way of concessional fares, I wish to assure them that with the proposed *ad valorem* tax, the value of the concession in absolute terms would in fact be enhanced.

And now I come to the final set of proposals I have to announce on behalf of my colleague, the Minister for Communications. Honourable Members are aware that Posts and Telegraph branches have incurred heavy losses in the past and are anticipated to show a loss of as much as Rs 15 crores during the current year. Both the Tariff Inquiry Committee which was set up to examine the rates structure of the Posts and Telegraphs Department and the Administrative Reforms Commission have recommended the need for financial viability and the desirability of surplus being generated from the operation of Posts and Telegraphs. A certain upward revision in tariffs is therefore inescapable. While proposing this revision, we have kept in view the problems faced by the less affluent sections of society; items like post-

cards, letter cards, and letters have thus been kept completely out of the purview of the upward adjustment of rates. Most of the proposed increases relate to registration fees for postal articles, and telegraph and telephone tariffs. The registration and parcel fees are being raised by 5 paise and 10 paise respectively for 400 grams. There are also minor adjustments in the charges for telegrams consisting of more than eight words as well as in the rentals for telephones, teleprinters and telex services. The Memorandum detailing the proposed changes is being circulated along with the Budget papers.

So far as the Union Budget is concerned, the various proposals outlined would imply, for 1971-72, additional revenue aggregating to Rs 177 crores. The budgetary gap of Rs 397 crores I had indicated earlier will accordingly be now scaled down to Rs 220 crores.

I have now come to the end of my labours. Quite candidly, it has been for me a difficult Budget to frame. There are a wide range of fiscal proposals and, in some directions, the impact of the new levies cannot but be considerable. Let me remind Honourable Members, however, that the price rise in the economy has been sufficiently disquieting last year, and the budgetary deficit must therefore be kept within reasonable limits. In addition to the obligation that we owe to the community to increase substantially the size of the Plan and to provide for greater employment opportunities, there is, at this stage, still the imponderable factor of the

DOCUMENTS

developments in East Bengal and the rising flood of evacuees.

Fiscal policy, however, is not a matter simply, or even primarily, of raising resources to meet the inescapable demands on the national exchequer. It must serve larger objectives as well and guide the economy in desired directions. It must, in particular, make a significant impact on existing inequalities in income, wealth and economic power and reduce ostentatious consumption. It is for this reason that, in the field of direct taxation, I have introduced a number of measures whose significance to revenue in the short run may not be so great but which are vital for the achievement of a just society. In the field of indirect taxation also, objectives such as those of reducing pressures on our balance of payments have been kept in mind; and care has been taken to ensure that only a small proportion of the additional burden is borne by the common man.

It is hardly possible to claim that a new social and economic order can be ushered in through budgetary policy alone, much less through a single Budget. In a Budget of this magnitude it is also difficult to reconcile all the objectives we have set before ourselves. But I hope I have not flinched from the duty of trying to meet the immediate and urgent requirements while furthering our accepted objective of a truly socialist society.

Rural works programme for drought-affected areas

THE Rural Works Programme for chronically drought-affected areas, with an outlay of Rs 100 crores during the Fourth Five-Year Plan period in the non-Plan Central sector, is one of the special programmes in the Ministry of Food, Agriculture, Community Development and Co-operation (Department of Agriculture) initiated during 1970. The programme was introduced with the Budget of the financial year 1970-71 and an outline of the programme was given in the Budget document entitled "Towards Growth With Social Justice." (See *Commerce*, March 7, 1970.)

The problems of agricultural labour are particularly acute in chronically drought-affected areas and relief can be provided to them only by taking up a concerted programme of rural works which has a high employment potential and can, at the same time, increase the productivity of land and labour. With this objective, a substantial provision of Rs 100 crores is proposed to be spent on rural works in the

four years of the Fourth Plan period in chronically drought-affected areas

Having regard to various relevant factors and based on objective criteria such as rainfall distribution, irrigation facilities, frequency of occurrence of drought, etc. 54 chronically drought-prone districts of the country have been identified for the implementation of the programme. The names of the districts are given in the accompanying State-wise list.

Nature of Rural Works Programme

In these districts, planned action has been taken to frame a suitable work programme which will be labour-intensive. In the hard core of the drought-affected areas, conservation and development of natural resources of land and water are most important. The relevant labour-intensive programmes for this purpose include the following schemes

(i) Medium and minor irrigation projects (all aspects, including field utilisation

DOCUMENTS

tion activities, land levelling and other infra-structure facilities necessary to develop the entire command area; this will include roads and marketing complexes where these are necessary).

(ii) Soil conservation and afforestation.

(iii) Village and district roads necessary to open up the area and for increasing agricultural production.

The emphasis in the new Rural Works Programme for chronically drought-affected areas would be on the construction of civil works of a permanent nature as would contribute to the mitigation, if not the total eradication, of the scarcity conditions in the areas concerned.

During the period of construction, they would contribute to the direct employment of the persons of the locality; one of the safeguards to be taken would be to ensure that they do not result in influx of labour from elsewhere into these areas, thus, in a sense, aggravating the existing situation. All these works will be integrated into local areas' development programmes designed to generate a longer-term employment potential for agricultural labour.

Master Plans

For each selected Rural Works Programme district, a Master Plan will be prepared for a suitable period of time. The Master Plans will include schemes relevant to the objectives of the Rural Works Programme keeping in view the potentials and the needs of the local areas.

All these schemes would be integrated with the on-going development programmes, and Rural Works Programme schemes would be an additionality to the effort under the normal Plan. The assistance made available to the States under the programme is 100 per cent grant except in case of a small component of soil conservation works carried out on the private lands of the farmers, in which case, according to the practice in various States, the pattern of assistance is 25 per cent grant and 75 per cent loan.

The Master Plans would be fairly exhaustive to provide a ready-made source of well-considered viable schemes so that the programme can be enlarged in the unfortunate event of any future scarcity during the operation of the programme.

The programme is thus both preventive as well as curative. It is curative insofar as advance planning would be introduced in taking up works under scarcity relief operations. It is preventive in the sense that development works to increase the productivity of land and labour in the longer run would contribute to the mitigation of scarcity. Appropriate guidelines and a format for preparation of Master Plans have been worked out and circulated to the States.

Employment generation

It is not possible precisely to quantify the employment potential of the programme at this stage; however, for every Rs 1 crore of expenditure under the programme, employment is expected to be provided in the relevant working season of

the year for about 25,000 to 30,000 persons. The degree of labour intensiveness is different for schemes in different sectors.

The State Governments have been requested to estimate the employment generation of the proposed schemes. Steps have already been taken to ensure maintenance of adequate records at the works sites for collection of necessary data. Simultaneous steps have also been taken to study the actual effects on employment generation and for long-term evaluation of the programme.

Administration and co-ordination

The administrative responsibility for various programmes rests with the State Governments and the Union Ministries concerned. For co-ordination at the Centre, the Government of India has set up in the Planning Commission a Committee for Co-ordination of Rural Development and Employment. This committee is responsible for formulation and review of the progress, co-ordination at all appropriate stages and evaluation at suitable intervals of various special programmes including the Rural Works Programme for chronically drought-affected areas.

With a view to securing needed co-ordination at the State level, instructions have been issued to the State Governments for constitution of appropriate co-ordination committees at the State level and for the appointment of a suitable senior officer, who should be in a position to supervise, guide, plan and co-ordinate the various schemes throughout the State and be responsible for their implementation and execution.

As regards field agencies for implementation of schemes, this will have to be determined by the State Governments, for each item of work under the new programme, whether the existing agencies would be the most effective instrument or whether any adjustment would be necessary. The State Governments will have to determine the most suitable method of implementation of the programme and ensure that there is proper co-ordination, supervision, planning and execution at the district level.

The schemes are drawn up by the State Governments in consultation with the local authorities and scrutinised by the respective technical divisions of the Ministries in the Government of India. A streamlined procedure for early sanction of schemes has been evolved.

Of the 54 districts selected for implementation of Rural Works Programme in 13 States, schemes to be implemented during the current year (1970-71) had been sanctioned for 45 districts by the middle of February 1971. (Italics added.) An outlay of Rs 13.85 crores has been approved for the schemes to be implemented during the year 1970-71. Schemes for the remaining nine districts are under formulation. Simultaneously, action is being taken for formulation of Master Plans on the basis of which the programme for the future years would be sanctioned.

According to the reports so far received from the States, field implementation is in progress in almost all the 45 districts with varying degrees of intensity. The programme has been organised very speedily and the expenditure is likely to be of the order of about Rs 9 crores during the current year. Since various organisational, procedural and financial details have been sorted out, the programme would have a much higher tempo in the coming years.

List of 54 Districts selected for implementation of Rural Works Programme.

Andhra Pradesh: Anantapur, Kurnool, Cuddappah, Chittoor, Mehboobnagar.

Bihar: Monghyr, Palamau, one unit for 3 sub-divisions, namely Nawada sub-division of Gaya district and Bhabhua and Sasaram sub-divisions of Shahabad district.

Gujarat: Panchmahals, Kutch, Jamnagar, Rajkot, Amreli, Banaskantha, Surendranagar.

Haryana: Mohindergarh.

Madhya Pradesh: Jabua, Dhar, Sidhi, Betul.

Maharashtra: Ahmednagar, Sholapur, Nasik, Poona, Satara, Sangli.

Mysore: Bijapur, Chitradurga, Kolar, Dharwar, Belgaum.

Orissa: Kalahandi, Boudh, Phulbani.

Rajasthan: Jaisalmer, Barmer, Pali, Jalore, Bikaner, Churu, Jodhpur, Banskara, Nagaur, Dungarpur.

Tamil Nadu: Dharmapuri, Ramanathapuram.

Uttar Pradesh: Mirzapur, Banda, Allahabad, Varanasi, Hamirpur, Jalaun.

West Bengal: Purulia and Midnapur (one unit) and Bankura (one unit).

Jammu and Kashmir: To be identified.

COMMERCE PAMPHLETS SERIES 1971

Crash scheme for rural employment

The following is the crash scheme for rural employment announced by the Union Ministry of Food and Agriculture, Community Development and Co-operation (Department of Community Development).

WITH a view to alleviating the prevailing condition of unemployment and under-employment in rural areas, the Government of India has decided that a scheme for the execution of essentially labour-intensive projects in all the districts of the country should be implemented with utmost urgency. This scheme has been designated as "Crash Scheme for Rural Employment". The essential elements of this scheme are indicated below:

Already several schemes, which have both employment generation and production aspects, are in operation in various parts of the country. Notable among these are the schemes in respect of Small Farmers Development Agencies (SFDA) and Marginal Farmers and Agricultural Labourers (MFAL). In addition, there is also the Rural Works Programme which is designed to produce durable assets through labour-intensive projects in areas that are chronically prone to drought. The majority of the districts of the country do not come within the purview of these schemes. The Crash Programme for Rural Employment (hereinafter referred to simply as the Scheme) is, therefore, intended for the benefit of all the districts of the country and particularly districts not covered by the other schemes.

The Scheme will come into operation in April, 1971 and, as decided so far, will remain in operation till the end of the Fourth Plan period, that is, till March 31, 1974. The Scheme will be a Centrally-sponsored one but implemented through the agency of State Governments and Union Territories. At present it is outside the Plan. If approved by the National Development Council it will be included in the Plan. The Scheme is likely to cost Rs 50 crores per annum. This cost will be borne entirely by the Government of India.

The Scheme contemplates direct generation of employment through the execution of projects which are essentially labour-intensive in all the districts of the country. The Scheme has a two-fold purpose. First, each project should provide employment for 1,000 persons on an average continuously over a working season of ten months in a year in every district. Secondly, each project should produce works or assets of a durable nature in consonance with local development plans.

The quota of 1,000 persons per district is not to be regarded as rigid. Some flexi-

bility is permissible. The need for the generation of employment in some districts may be more acute than in other districts for the reason that other schemes for providing alternative opportunities of employment may be available in the latter and not in the former, or that the former are more populous than the latter or for similar other reasons. Therefore, deviation from the thousand person quota is permissible in some cases. The extension of the quota in such cases will however be limited to a number which will be equivalent to the number of blocks in the districts multiplied by 100.

The projects should employ as far as possible persons belonging to families where no adult member is employed. If it is not always possible to adhere to this principle, persons should be selected for employment with due regard to the possibility of their finding alternative employment. In other words, a person who is not likely to find any employment anywhere should be given preference over one who is likely to find some employment somewhere.

The rate of wage to be paid to the persons employed in the district projects shall be equal to the off-season rate for agricultural labourers in the district and shall not, in any case, exceed Rs 100 per month. Care should be taken to see that the rate of wage is not fixed in such a manner as either to induce people to give up employment which they have already secured and to seek employment in the projects or to fail to attract unemployed or under-employed people.

The projects that will be undertaken should be essentially labour-intensive like: (a) road-building; (b) reclamation and development of land; (c) drainage, embankments etc; (d) water conservation and ground-water recharging; (e) minor irrigation; (f) soil conservation; (g) afforestation; and (h) special repairs—as distinguished from ordinary, day-to-day, maintenance repairs—of existing assets with a view to making them durable and more useful.

This list is illustrative and not exhaustive. Any project that is labour-intensive can be undertaken subject only to the condition that works or assets of a durable nature are produced and they are in consonance with local development needs.

It is realised that if the projects are to produce durable assets they may require for their execution not only labour—although that will be the more important part of it but also materials, equipment etc. The Scheme, therefore, permits some expenditure on these items. Their cost should not however exceed 25 per cent of the cost of labour. From the indications

DOCUMENTS

given above, the cost of labour for any project can be determined. The cost of materials etc may however vary from project to project but will have to be limited to 25 per cent of the cost of labour. The following illustration in this regard will be helpful. If 1,000 persons on an average are employed in every district for ten months in the year at a wage of Rs 100 per month, the cost of labour for every project will be Rs 10 lakhs per annum. Twenty-five per cent of this sum is Rs 2.50 lakhs. Thus each district can expect to get Rs 12.50 lakhs per annum.

The responsibility for the maintenance of the works or assets that will emerge after the completion of every project will be that of the State Governments and Union Territories. Guidelines have been sent to all State Governments and Union Territories for the implementation of the Scheme. The State Governments and Union Territories will be formulating projects in accordance with these guidelines for the remaining three years of the Fourth Plan period commencing from April 1971. The projects will be sent to the Government of India as and when they are ready for sanction. The projects will be sanctioned by the Government of India in the Department of Community Development after the latter are satisfied that the projects are in accordance with the Scheme.

Suitable machinery has been devised by the Government of India to ensure that the projects of the States and Union Territories are scrutinised expeditiously and sanctions are also issued expeditiously. The States and Union Territories have been requested to make similar arrangements for ensuring that the projects are executed efficiently.

For the success of the Scheme much will depend upon the interest taken in it by the States and Union Territories, and upon the co-operation and assistance extended by them to the Government of India. The Prime Minister has written letters to all Chief Ministers and the Governors of the two States which are at present under President's Rule—West Bengal and Orissa—emphasising the importance of the Scheme and the need for its urgent and effective implementation. The Union Minister in charge of the Community Development Department will be speaking to the Chief Secretaries of all States and Union Territories in this connection at a conference in New Delhi shortly.

In conclusion, it is to be emphasised that the Scheme is not intended to be either a scheme for test relief or gratuitous relief. Undoubtedly, the primary objective of the Scheme is to provide employment for a section of unemployed or under-employed people. Such employment is however to be found in ventures that will be conducive to the total development effort of the nation. Since the intention of the Government of India is not to spend money gratuitously, the expenditure of money has to be justified by the production of durable assets of value to the nation. The generation of employment is an important part of the Scheme. The final product of the employment to be generated is perhaps a more important part.

Amar Dye-Chem Ltd

Chairman, Shri Amritlal Kalidas Doshi's Speech

SPEECH by the Chairman, Shri Amritlal Kalidas Doshi delivered at the 17th Annual General Meeting of the Company on 3rd June 1971:

I have great pleasure in welcoming you this afternoon to the 17th Annual General Meeting of the Company and to place before you the Annual Report of the Board of Directors and the Audited Accounts of the Company for the year ended 31st December 1970 which have already been circulated.

I hope you had an opportunity to go through the Directors' Report and the Accounts. With your permission, I shall take them as read.

Company's Operations

I am glad to report to you that the year 1970 has been unusually good in comparison with the last year. There was an increase in sales both in quantity and value during the period under review. The Sales Turnover of the Company was little more than 50 per cent in terms of value as compared to the year 1969 as can be seen from the following figures:

	Year	Value
Sales	1969 Rs.	6 71 34,410
	1970 Rs.	10 10 93,090

The year under review was also an year marked for the shortage of some imported and indigenous raw materials and for delay in getting necessary import licences. The Company therefore was forced to buy import entitlements at very high premiums to meet the demand which came up very suddenly in the second half of the year.

Progress During the Current Year

However the demand has abated from the beginning of the year, due to various factors, major ones being (1) tight money position and (2) crisis that has overtaken the textile industry. The Sales Turnover, therefore, for the four months of the current year is as below:

Period	Value (in crores)
January to April 1970	Rs. 3 20
January to April 1971	Rs. 3 07

Nevertheless your Company has a wide spectrum of dyes and operations are fairly broad-based to tide over such slump periods. But this shall call for greater efforts on the part of the Company to maintain sales in the current year. It is, however, too early to say that working results of the current year will be as favourable as those of the last year.

K.C.A. Private Limited, a Subsidiary of the Company

As indicated in the Directors' Report, K.C.A. Private Limited has become a subsidiary concern in the year under review. K.C.A. is expected to make good progress with the guidance of your Company and will extend its operations to other groups of dyes and intermediates so as to enlarge its present production. Your Directors hope that very soon K.C.A. will contribute to the profitability of your Company.

K.C.A. has manufacturing licences of the following categories of Dyes and Intermediates:

1 Licence No. L/21/N-20/60 Dated 17th March 1960 for:

(a) Azo Dyes comprising of Chromium complex colours and Acid and Direct colours 600 tonnes per year.

(b) Intermediates required in the manufacture of dyes mentioned above 425 tonnes per year.

2 Licence No. L/21/10/60-CH III dated 31-1-1961 for:

Food Colours
Acetate Colours
Silk Colours
Chrome Colours
Light Fast Colours
Oil Colours
Special Dyes for Leather
Paper and other Industries

380 Tonne

After implementation of this programme which will of course, take some time the Company will make additional groups of Dyestuffs, and thus it will be further broad-based to meet and cope with the requirements of the country's demand of almost all dyes consuming industries.

Research

Your Company has enlarged its research activities and as in the past these have paid rich dividends.

After receiving Sir P. C. Ray Award in 1966, the Company has again been awarded 'Mafatlal Group Award' newly instituted by the Indian Merchants' Chamber for 'Original Research and Invention Contributing to the Development and Manufacture of Fibre Reactive Dyestuffs'.

Expansion

As indicated in the Directors' Report, your Company has expansion scheme of Vat Dyes, Rubber Chemicals and Cyanuric Chloride, on hand. Our diversification plans, as already mentioned in the Directors' Report, are designed to broaden the base of the Company's manufacturing activities.

Exports

The exports during the year 1970 were more than those in the year 1969 as can be seen from the following figures:

Year	Value
1969	Rs. 25 17 lacs
1970	Rs. 28 80 lacs

Your Company's performance, in this field, would have been much better had it not been for the international shortage of intermediates and increased demand in the country. However, the exports during the current year, for first four months, are considerably more in comparison with those of 1970. We have already reached the figure of Rs. 17.64 lacs as against Rs. 5.26 lacs during the same period in 1970.

Technical Collaboration with a Company in Argentina

The Company has established a precedent by exporting know-how and technical

assistance to a concern in Argentina for the manufacture of Reactive Dyes and Optical Whiteners for Cotton Nylon and Polyester Fibres. Your Directors are glad to inform you that your Company is the first Indian concern to offer Technical Collaboration, in the Dyestuff Field to a foreign country.

Training Scheme and Labour

In order to mitigate unemployment of engineers, the Government of India have initiated a practical training stipend scheme. Your Company has fully co-operated with the Western Region Board and has accepted ten young engineers for one year's practical training in engineering in the Kalyan Factory under the Government Scheme and a stipend of Rs. 250 per month is paid to each such trainee.

Besides above scheme, the Company has also a training scheme for Graduate Engineers, initiated in 1968 and the scheme has expanded since then. At present the Company has three years training scheme in the field of Civil Mechanical and Electrical Engineering and is paying stipend of Rs. 250, Rs. 300 and Rs. 350 per month during the first, second and third years training respectively. These trainees, if they are found suitable and efficient on the conclusion of the training period are absorbed in the Company subject to vacancy.

In this manner your Company is playing its part in helping the country's technical manpower to gain practical experience in engineering and find suitable employment either in your Company or in any other industrial concerns.

Our relations with the workers continue to be cordial. In 1970 we concluded negotiations and signed a new agreement, for three years for wage scale and other demands, as the previous agreement in the matter had expired.

General

It is my pleasant duty to express my deep sense of gratitude to my colleagues on your Company's Board of Directors for all their co-operation and valuable guidance in managing the affairs of the Company and to the Managing Director who has been wholeheartedly devoting all his time in developing and enhancing the business of your Company.

Finally I shall be failing in my duty if I was not to express my appreciation to the officers and members of the staff for services rendered and for their team spirit.

While thanking you all once again for your continued support and for the confidence expressed in us in all the new ventures, I now commend the Report and Statement of Accounts for adoption and propose the following Resolution:

'RESOLVED that the Directors Report Audited Accounts, Balance Sheet and Profit and Loss Account, of the Company for the financial year that ended on 31st December 1970 with the Auditors' Report thereon be and they are hereby approved.'

Thank you

A. K. Doshi
Chairman

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

UNION BANK OF INDIA

REPORT OF THE BOARD OF DIRECTORS

1. The Directors have pleasure in presenting the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1970.

2. In the first full year after nationalisation the Bank's performance can generally be considered quite satisfactory. In spite of the rise in operational expenses, burden of implementation of new wage scales, both for workmen and officer staff of the Bank, and load resulting from opening of as many as 101 new branches, the working results were quite satisfactory. The net profit for the year, after providing for taxation, came to Rs 48,73,826 75 from which the following appropriations have been made:

1969		1970
Rs.	Amount transferred to Reserve Fund in terms of Section 3 (b) of the Banking Companies (Acquisition and Transfer of Undertakings) Act, 1970	Rs.
8,75,000 00		9,75,000 00
15,00,000 00	Amount provided for Bonus to Staff	21,50,000 00
	Balance amount to be transferred to Government in terms of Section 10 (7) of the Banking Companies (Acquisition and Transfer of Undertakings) Act, 1970	
8,67,347 40		17,48,826 75
32,42,347 40		48,73,826 75

3. Both in respect of resources mobilisation and resources utilisation, the performance of the Bank can be considered very satisfactory and in tune with the national objectives. Organisationally also, there is room for cautious optimism about the Bank's ability to face the new challenges and resulting problems better than in the past. As a result of various measures already introduced or proposed to be introduced, the Bank should be equipped to meet the new situation with confidence.

4. Statistically speaking, in the year 1970 the Bank had the satisfaction of registering deposit growth at a rate faster than that achieved by the banking industry as a whole. In terms of point to point rise deposits of the Bank increased from about Rs 133 crores as at 31st December, 1969 to about Rs 175 crores as of 31st December, 1970. Even disregarding the quantum of about Rs 12 crores of current deposits, representing share money on a new issue of one of the reputed companies, which were placed with the Bank in the last fortnight of December, the rate of growth in deposits at 2.6 per cent compared quite favourably with 1.5 per cent growth rate recorded by the banking industry.

5. Though the Bank had introduced quite a few new schemes for deposit mobilisation, their contribution to sustained deposit mobilisation appears, in our experience, to be marginal. The real contribution to the deposit mobilisation drive, it is realised, comes only through advanced planning, good customer service, vigilance on economic environment and sustained efforts and keen sense to tap any new funds generated in the area. It is a matter of gratification for the Board that in the year under review not only did the Branch Managers show considerable enthusiasm but also there were quite a few notable instances where members of the staff, including those in the subordinate cadre, showed a sense of involvement in mobilising the people's savings and catching the imagination of those who were hitherto outside the banking fold.

6. The Bank's lending operations were kept strictly in line with the policies laid down by the monetary authorities. Its anxiety to follow the Reserve Bank's guidelines to restrict credit with a view to keeping the price line in check, can be judged from the fact that during the current busy season, the Bank's credit deposit ratio was maintained well within 72 per cent without, at the same time, denying credit to key areas.

7. The process of qualitative changes in the Bank's advances portfolio was further carried in the year 1970 which witnessed a marked emphasis on priority and neglected sectors. Both the number of accounts and outstandings in respect of each of the sectors recorded significant increase during the year. The ratio of priority sector advances to total advances increased from 31.8 per cent at the end of 1969 to 38.8 per cent at the end of 1970. This was mainly due to the increased assistance to the agricultural and small scale sectors. Export sector also continued to enjoy the priority it has always had since 1965. The following comparative table reveals the significant rise in the assistance granted by the Bank to the weaker sections —

Sectors	December, 1969			(Rupees in lacs)		
	Number of accounts	Balance outstanding	Percentage to total advances	Number of accounts	Balance outstanding	Percentage to total advances
Agriculture	4808	4,42 8	5.2	21335	10,53 2	9.4
(a) Direct	3719	2,44 0		20497	7,48 3	
(b) Indirect	1081	1,98 0		838	3,04 9	
Small-scale Industries	2420	7,75 0	9.0	4073	14,44 6	12.1
Exports		14,82 0	17.3		17,64 0	15.8
Transport Operators	53	15 0		415	76 8	
Retail Trade and Small Business	291	10 0	0.3	1850	70 9	1.5
Professionals and self-employed	29	0 8		430	15 5	
Educational Loans	11	0 2		221	7 0	
Total	27,23 0	91.8		43,80 0	38.8	

8. The importance attached by the Bank to the priority sectors can be best appreciated from the fact that as much as 80 per cent of the investible resources gathered by the Bank during the year under review went to finance these sectors. Regarding the purely short term inflow of Rs. 12 crores in the last week of December 1970, deposit accretion during the year amounted to Rs. 30 crores. After meeting the statutory liquidity requirements, Rs. 20 crores were available to the Bank for deployment. Of this, growth in total advances to priority sectors accounted for Rs. 16 crores, i.e. 80 per cent of the accretion to deployable resources.

9. With the transfer of Rs. 9,75,000 from the net profit, as stated above, the Reserve Fund of the Bank now stands at Rs. 1,33,50,000.

10. In pursuance of the national policy of taking banking services to hitherto uncovered sectors, the branch expansion activity of the Bank reached an unprecedented scale. The year under review witnessed the Bank opening 101 new branches taking the total number of branches from 273 in 1969 to 374. Of the new branches, 43 were in rural centres, 37 in semi-urban, 16 in urban and 5 in metropolitan centres. As a result, the ratio of rural and semi urban branches to total branches of the Bank improved from 46.9 per cent at the end of 1969 to 55.6 per cent as at 31st December, 1970.

11. Of the five districts allotted to the Bank under the Lead Bank Scheme, the Bank has already submitted Survey Reports on three districts. Survey in depth of two other districts have also been completed within the scheduled time and reports thereon are expected to be submitted shortly. Administrative steps are also being taken particularly to educate Branch Managers in the area on the objectives of Lead Bank Scheme and to ensure their active involvement. It is realised that the Bank's lead role responsibilities really begin only after the surveys are completed and backward areas and sectors needing special attention and assistance are identified. In order to ensure effective implementation of the schemes drawn up in the light of the Survey Reports, two special Lead Offices—one each in the Pudukkottai U.P. and Ernakulam District in Kerala—have been opened. These offices are manned by a team of development officers including technical personnel in Agriculture and Small Scale Industries.

12. While the Bank's standard of customer service can be considered satisfactory, there is room for improvement in various directions. The Bank also recognises that good customer service is not confined to the service at the counters only. It is the Bank's firm belief that the standard of customer service can be improved and operational costs reduced only by rationalising procedures and introducing innovations. This aspect is being given priority of attention and bold and imaginative steps are being taken to change time worn procedures and methods. During the year under review, several such innovative steps have been taken and the improvement in the standard of customer service is reflected in the more than satisfactory growth in deposits and other operations of the Bank.

13. While the Bank's business and working results are also commendable to the new ideals and policies are heartening, the Board of Directors are conscious of the inbuilt and unavoidable organisational weaknesses and deficiencies and are alive to the thought that process of geographical and functional expansion has to be accompanied by the process of organisational consolidation. The rapid expansion of branches all over the country, coupled with the Bank's entry in the hitherto unexplored fields, has put severe strain on the entire organisation. As a result of the acute shortage of trained personnel, most of the new branches have to be placed in charge of comparatively inexperienced officers who, despite their sincerity and zeal, need constant and purposeful guidance from the Central Office. Serious attention is, therefore, paid to the organisational structure of the Bank and the Central Office set up is closely reviewed and strengthened from time to time.

14. The personnel constraints which inhibit almost every aspect of growth of the Bank needed priority of attention. Accepting the suggestion made by the Reserve Bank of India, it was decided to set up a Management Development Department in the Custodian's Secretariat. Though the Department has not formally been constituted, important aspects of Management Development have already been given a close scrutiny. The recruitment policy is being revised. Qualitative changes in composition of staff are made with recruitment of specialists in Agriculture, Industrial Finance and other fields with a view to improving the quality of assistance given to the weaker and priority sectors and to providing purposeful guidance to branches. Steps have been initiated to develop a personnel inventory, and training programmes have been recast to meet the new situations. Apart from strengthening the existing Training College in Bombay, steps are afoot to set up a few regional training centres. Possibilities of collaboration with some of the other banks for setting up joint regional training centres are also being explored. The new training programmes, including the workshops proposed, should assist in bridging the gap in trained personnel. The steps taken so far are, admittedly, far from adequate but the management is constantly seized of the problem.

15. Whether it is deposit mobilisation, customer service or cost control involvement of employees is vital. Both in the field of deposit mobilisation and customer service, involvement of the employees at all levels, has been quite encouraging. Considered in the overall context of industrial relations in the country, the employer-employee relations in the Bank can be said to be generally good. There are encouraging signs of co-operation by the unions in promoting staff involvement in achieving the objectives set before the Bank.

16. After rendering highly meritorious services extending over a period of over thirty seven years, the Bank's Custodian Shri F. K. F. Narman relinquished his office on retirement in July 1970. It would not be exaggeration to refer to Shri Narman as the architect of the Bank. His sagacity and vision in building up Union Bank from a very small bank to its present size and reputation deserves special mention. His tenure was characterised by lofty ideals of clean and dynamic management and happy industrial relations.

17. On Shri Narman's retirement, the Bank's Deputy General Manager, Shri P. F. Gutta was appointed as the Custodian.

18. In August 1970, an interim Board of Directors consisting, besides the Custodian, of Sarvaswami K. H. Parikh, P. K. Sadasnanandan, H. M. Trivedi, D. P. Gupta and P. K. Kaul was constituted.

19. In conclusion the Board express their thanks and appreciation to the Custodian, Executives, Officers, and other Members of Staff but for whose co-operation and efforts these results would not have been possible.

For and on behalf of the Board,

P. F. GUTTA,

Custodian.

BOMBAY, 20th May, 1971.

AUDITORS' REPORT

To
THE PRESIDENT OF INDIA

1 We have audited the foregoing Balance Sheet of Union Bank of India as at 31st December 1970 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date which are incorporated in the returns of 102 Branches audited by us, 68 branches audited by other auditors and the unaudited returns in respect of 215 Branches not visited by us, for the exclusion of which Branches from audit, concurrence of the Reserve Bank of India was obtained.

The Balance Sheet and the Profit and Loss Account have been drawn up in Forms 'A' and 'B' respectively of the Third Schedule to the Banking Regulation Act, 1949. Accordingly, they disclose such matters as were required to be disclosed in the case of banking companies prior to nationalisation by virtue of the provisions of the said Act as read with the related provisions of the Companies Act 1956 subject to the limitations of such disclosure and on the basis of the audit indicated in the first paragraph we report that—

(a) in our opinion and to the best of our information and according to the explanations given to us and as shown by the books of the Bank

(i) the Balance Sheet read with the Note thereon is a full and fair Balance Sheet containing the necessary particulars and it is properly drawn up so as to exhibit a true and fair view of the affairs of the Bank as at 31st December, 1970

(ii) the Profit and Loss Account read with the Notes thereon shows a true balance of profit for the year ended upon that date.

(b) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory;

(c) the transactions of the Bank which have come to our notice have been within the powers of the Bank.

(d) the returns received from the branches of the Bank have been found adequate for the purposes of our audit.

BALANCE SHEETS

EXPANSION CONTINUES

Century's performance encouraging

THE Century Spinning and Manufacturing Company Ltd (Chairman: Mr R. D. Birla, Bombay) had an excellent performance for the year ended December 31, 1970. Sales rose to Rs 52.6 crores from Rs 48.4 crores in the previous year. The gross profit was Rs 14.5 crores (Rs 12.5 crores). The net profit, after depreciation and taxation, amounted to Rs 4.6 crores (Rs 4.4 crores). The ordinary dividend has been stepped up by 5 per cent to 45 per cent.

The company's gross profit margin works out to 27.6 per cent against 25.9 per cent. The ratio of net profit to net worth comes to 21.1 per cent (23.8 per cent).

During the year under report the cost of raw materials was higher than that of the earlier year. Wage bill too went up. Exports of cloth for the year amounted to Rs 1.56 crores (Rs 1.18 crores). The production was maintained in the textile division.

The working of the rayon plant was satisfactory. Continuous modifications and improvements to the machinery and equipment are being effected to improve still

the Government for expanding the weaving capacity of tyre cord fabrics from 50 per cent to 75 per cent and it is taking steps to implement the same.

In the caustic soda plant, the offtake of the by-products—hydrochloric acid and chlorine—has further improved in the year under report. There was considerable progress in the working of the salt plant both in regard to quality and quantity. It is the intention of the company to acquire an additional 576 acres of land adjoining the existing salt works and necessary application for this has been made to the Central Government.

In the year under review, exports of rayon yarn and tyre cord amounted to Rs 1.65 crores. The tyre cord manufactured by the company has been exported even to highly industrialised countries, such as, Australia, Holland, Italy, Austria and Poland.

The renovation programme of the textile mills is in progress. During the year, 60 auto looms, nine ring frames and other ancillary machinery have been replaced. As many as 204 looms and 42 ring frames are being replaced in the current year.

The cement project of the company is progressing well and it is expected to go on stream in two years' time. The UP Government has approved in principle the company's proposal to manufacture 30,000 tons each of chemical pulp and paper. The company is exploring the possibilities of starting joint ventures outside India. Negotiations are going on for a joint venture in Indonesia for a composite textile mill. □

Goodlass Nerolac

GOODLASS Nerolac Paints Ltd (Chairman: Mr F. H. Kemple, Bombay) had higher sales for the year ended December 31, 1970 at Rs 6.2 crores against Rs 5.4 crores in the previous year. The gross profit was Rs 61 lakhs (Rs 53 lakhs). The net profit, after depreciation and taxation, amounted to Rs 19 lakhs (Rs 14 lakhs). The dividend has been maintained at 12 per cent.

The company's gross profit margin works out to 9.8 per cent as in the previous year. The ratio of net profit to net worth comes to 10.1 per cent (7.9 per cent).

During the year under review, the company has done well in spite of continued competitive conditions in the paints industry. Exports for the year amounted to Rs 14.4 lakhs (Rs 10.2 lakhs). The construction of the pigment factory at the new site at Kavesar and also the expansion of the paint production in Ferguson Road are nearing completion. But full production from the increased facilities at both sites has been delayed by three to four months due to some unavoidable reasons.

In the year under review, the paint industry continued to experience shortages of raw materials and faced soaring prices

of locally available raw materials. The company's turnover for the first four months

further the efficiency and economics of the plant. There was sharp rise in the cost of production. The production of rayon yarn was slightly curtailed for want of pulp. The company is making efforts to get adequate allotment of pulp from the Government.

The working of the tyre cord plant continued to be up to the mark and the quality of the yarn manufactured by the company had good reputation in domestic and foreign markets. But the offtake in the home market is still below expectation. The company has obtained permission from

Advances rose to Rs 1.68 crores from Rs 1.38 crores. Investments were higher at Rs 69.10 lakhs (Rs 42.66 lakhs). The ratio of advances to deposits was higher at 65.4 per cent (61.5 per cent) and that of investments to deposits was also higher at 26.9 per cent (19 per cent). On the other hand, the ratio of cash to deposits was lower at 30 per cent (44.7 per cent). □

Mahendra Electricals

Sales of Mahendra Electricals Ltd, Nadiad, for the year ended December 31, 1970 have slightly declined to Rs 1.10 crores from Rs 1.12 crores in the previous year. The net profit, after providing Rs 4.43 lakhs (Rs 4.62 lakhs) for depreciation and Rs 11.20 lakhs (Rs 12.20 lakhs) for taxation, amounted to Rs 13.51 lakhs (Rs 11.78 lakhs). The dividend has been maintained at 9 per cent. The general reserve got Rs 10.20 lakhs (Rs 11.30 lakhs).

Ultramarine and Pigments

Sales of Ultramarine and Pigments Ltd, Bombay, for the year ended December 31, 1970, have increased to Rs 94.51 lakhs from Rs 84.09 lakhs in the previous year. The net profit, after providing Rs 4.43 lakhs (Rs 3.27 lakhs) for depreciation and Rs 19.56 lakhs (Rs 19.89 lakhs) for taxation, amounted to Rs 17.56 lakhs (Rs 13.07 lakhs). The dividend has been pruned to 16 per cent from 18 per cent. The development rebate absorbed Rs 1.61 lakhs (Rs 1.17 lakhs) and the general reserve Rs 13.84 lakhs (Rs 10.11 lakhs). An amount of Rs 6.62 lakhs (nil) has been transferred to the special reserve. In the past two years, the company has spent nearly Rs 17 lakhs on fixed assets for increasing the manufacturing capacity.

Adarsh Chemicals and Fertilizers

Sales of Adarsh Chemicals and Fertilizers Ltd, Udhna, Surat, for the year ended December 31, 1970 have increased to Rs 136.47 lakhs from Rs 95.98 lakhs in the previous year. The net profit, after providing Rs 6.81 lakhs (Rs 5.83 lakhs) for depreciation, amounted to Rs 9.37 lakhs (loss of Rs 67,747). The dividend for the year was 10 per cent on the ordinary shares. An amount of Rs 5.39 lakhs has been transferred to the taxation reserve and Rs 2.60 lakhs to the general reserve. The company proposes to issue bonus shares in the ratio of two bonus shares for every five shares held. The issue is subject to the approval of the Government. The Government has approved the foreign technical collaboration for the manufacture of maleic anhydride. A part of the funds required will be financed by right issue. The authorised capital of the company is proposed to be raised for this purpose.

Jagatjit Industries

Sales of Jagatjit Industries Ltd, Kapurthala, for the year ended December 31, 1970 have increased to Rs 4.68 crores from Rs 3.61 crores in the previous year. The company has declared a maiden dividend of 12 per cent for the year under review. The general reserve got Rs 50.81 lakhs (Rs 18.81 lakhs). The development rebate reserve absorbed Rs 29.55 lakhs (nil). All the detergent manufacturers have been obtaining their full requirements of sodium tripolyphosphate from the company with the result that the sodium tripolyphosphate plant operated throughout the year

at a satisfactory level. With the improvement in sales and better generation of cash, the company has repaid the entire public deposits of Rs 23.32 lakhs outstanding as on October 31, 1969, in addition to meeting the instalments of medium-term loans amounting to Rs 16.07 lakhs.

Gujarat Steel Tubes

Sales of Gujarat Steel Tubes Ltd, Ahmedabad, for the year ended December 31, 1970 have increased to Rs 4.17 crores from Rs 3.77 crores in the previous year. The net profit, after providing Rs 12.60 lakhs (Rs 9.54 lakhs) for depreciation and Rs 36.03 lakhs (Rs 37.75 lakhs) for taxation, amounted to Rs 36.03 lakhs (Rs 28.31 lakhs). The dividend was 10 per cent (10 per cent) payable on the increased capital of Rs 1.2 crores. During the year under review, the ordinary share capital of the company was increased from Rs 1 crore to Rs 1.2 crores by the issue of bonus shares. An amount of Rs 3.70 lakhs (Rs 0.50 lakh) was transferred to the development rebate reserve. The general

reserve got Rs 32.33 lakhs (Rs 32.81 lakhs). Exports for the year was Rs 1.04 crores (Rs 1.78 crores).

Preliminaries

Bharat Commerce

Sales of Bharat Commerce and Industries Ltd, Calcutta, for the year ended December 31, 1970, have increased to Rs 19.17 crores from Rs 16.94 crores in the previous year. The net profit, after providing Rs 54.03 lakhs (Rs 49.22 lakhs) for depreciation, Rs 26.74 lakhs (nil) for gratuity and Rs 37 lakhs (Rs 35 lakhs) for taxation, amounted to Rs 36.19 lakhs (Rs 43.63 lakhs). The ordinary dividend for the year was 12 per cent (15 per cent) payable on the higher capital of Rs 1.5 crores. In the year under review, ordinary paid-up capital of the company was raised from Rs 100 lakhs to Rs 150 lakhs by issue of bonus shares in the ratio of 1:2. An amount of Rs 4 lakhs (Rs 2.60 lakhs) has been transferred to the development rebate reserve. The allocation to the general reserve was Rs 32.99 lakhs (Rs 41.03 lakhs).

Aditya Mills

Aditya Mills Ltd, Calcutta, has earned a higher net profit of Rs 12.45 lakhs for the year ended December 31, 1970 against Rs 11.18 lakhs in the previous year, after providing Rs 11.08 lakhs (Rs 10.49 lakhs) for depreciation. The ordinary dividend has been maintained at 7½ per cent. An amount of Rs 10 lakhs (Rs 5.75 lakhs) has been transferred to the development rebate reserve. In the year under review, the total production value increased to Rs 3.56 crores from Rs 2.99 crores in the previous year. The mill is gradually going in for increased production of synthetic and blended yarns.

Enfield India

Sales turnover of the Enfield India Ltd, Madras, for the year ended December 31, 1970 have increased to Rs 6.14 crores from Rs 5.71 crores in the previous year. The profit before depreciation was Rs 40.40 lakhs (Rs 35.69 lakhs). The depreciation absorbed Rs 20.27 lakhs (Rs 16.42 lakhs). The general reserve got Rs 9 lakhs (Rs 4.5 lakhs). An amount of Rs 3.10 lakhs (Rs 6.18 lakhs) has been transferred to the development rebate reserve. The ordinary dividend was maintained at 10 per cent. The company has decided to expand its production from the present 12,800 units of motor cycles to 30,000 units per annum. It hopes to secure a loan of Rs 30 lakhs from the Industrial Finance Corporation.

Elecon Engineering

The turnover of Elecon Engineering Co Ltd, Vallabh Vidyanagar, Gujarat, for the year ended December 31, 1970 has crossed Rs 3 crores. The net profit, after providing Rs 14.34 lakhs (Rs 14.50 lakhs) for depreciation and Rs 8.63 lakhs (Rs 6.85 lakhs) for taxation, amounted to Rs 8.08 lakhs (Rs 8.75 lakhs). The ordinary dividend has been stepped up to 9 per cent from 6 per cent. The development rebate reserve got Rs 1.50 lakhs (Rs 3.58 lakhs).

make the quality of your PAPER felt with dinesh ENDLESS FELTS

Comparable to the best imported felts, **dinesh endless felts**, have better dimensional stability, excellent absorption and drainage properties to impart that distinctly superior finish to your paper, board and/or allied items.

dinesh endless felts, moreover, are easily made available all over the country. Designed specifically to suit your individual requirements, their trouble-free operation and longer service life further speed up your production.

dinesh felts are also backed by useful technical advice, prompt and efficient after-sales service.

dinesh endless felts make the quality felt.

EQUITIES

Investors apathetic

BOMBAY, June 2

ACTIVITY on the stock market declined noticeably during the week. Maybe values did not fall sharply, but investors were just not interested in supporting the market. It looked as though the Budget left the market rather disillusioned and the consensus was that it would kill whatever incentive that was there to invest in joint-stock shares. Price movements were narrow and the volume of trading was about moderate.

The merits or demerits of the Budget apart, the proposals increasing the surcharge on corporation tax and making the wealth tax burden even stiffer than now have not been liked by professional investors. The increase in the excise duties on several consumer goods as also the rise in the incidence of income-tax, small though it is, have hurt the middle classes—in other words the small investor.

Besides these is the recurring threat to impose a ceiling on urban property holdings. This is likely to affect building activity in the cities but one must not forget that the entrepreneurs in this section are supporting a large number of industries. Cement, timber, steel, hardware and a number of allied industries will suffer from a decline in building activity. The situation following the large influx of East Bengalis has caused not a little apprehension.

The apathy of the investors has been reflected in the decline in the rates of premiums which some of the new issues had been fetching before the Budget. There has been no fresh support either to cash shares. A silver lining however has been the hope that the flow of bonus issues would be maintained. It is true that the residual reserve after a bonus issue is now raised from 20 per cent to 33-1/3 per cent but reliable reports indicate that the base for computing the residual reserves has been enlarged simultaneously. Development rebate, moreover, will be included in this reserve.

Section-wise, there was nothing which merited special attention. But a welcome feature has been the optimistic reckoning in respect of pharmaceutical shares. During the first five months of the current year, sales of Sandoz pharmaceutical products are up by 15 per cent and those of its agro-chemicals by 50 per cent. In the same five months, Pfizer has bettered its sales by 16 per cent and expects to pay two more interim dividends before the final dividend for 1971. There are also hopes of the Pfizer bonus proposal going through. In these circumstances a shift in investor-interest, from, say, textiles to pharmaceuticals seems likely.

The future of textile shares seems rather bleak although units which have diversified interests will more than make both ends meet. Century was comparatively well maintained owing to what was described as speculative support. Standard attracted scattered attention but buyers held back their support to Kohinoor. □

COMMODITIES

Marked recovery in spot cotton

BOMBAY, June 2

A marked recovery in cotton prices was noticed during the past week following the revival of buying interest from the mills, which have been helped to some extent, in finding funds through the introduction of the bill market scheme. This apart, the rather prolonged absence from the market has induced quite a few spinners to effect fairly sizable deals, now that they have resumed purchases.

The price rise ranged from Rs 100 to Rs 400 per candy depending on the quality of the cotton that is offered. Reports from upcountry centres indicated that although the monsoon has started in right earnest in most of the cotton growing centres, the farmers have not undertaken sowing operations in right earnest pending further showers.

The following has been the trend of prices of some of the leading varieties:

	(Rs per candy)	For the week ended June 2	For the week ended May 26
Khandesh ..	..	2,300	2,100
Bera AK ..	..	2,200	1,800
Digvijay Dabhoi ..	..	3,201	3,025
Berar L 147 ..	..	2,600	2,400
Manavadar CO 2 ..	..	2,875	2,600

In the foreign section interest was mainly centred round good lots of American cotton. The issuance of tenders by the Cotton Corporation

of India has evoked encouraging response from the trade. According to private sources, the actual arrivals of foreign cotton this season as at the end of April have been placed at 4,89,193 bales, comprising 161,661 bales of American, 133,363 bales of Sudanese, 103,930 bales of Egyptian, 58,843 bales of African, 16,538 bales of Peruvian, 3,925 bales of Abyan and 476 bales of "other" cottons. This compares with 5.23 lakh bales of cotton imported by the end of April last year. This indicates that the pace of cotton imports had picked up considerably of late.

ART SILK YARNS EASY

BOMBAY, June 2

An easier trend in the prices of art silk yarns characterised trading in the yarns market during the past week. The Budget proposals had little effect on the prices as the Finance Minister had spared various types of yarns from levies. There is no increase or change in excise levies on yarns. The 100 per cent duty on the import of staple fibre did not produce any immediate impact on the prices. However, it was stated that it would affect the sentiment later. Art silk yarns lost ground due to stock liquidation and improved arrivals. Staple fibre yarns were neglected. Cotton yarns were listless.

In the art silk yarns section, 150D National Rayon declined by 30 paise to Rs 17.69. 120D receded by 37 paise to Rs 19.34. 150D Bright Century eased by 49 paise to Rs 17.50. 120D lost 49 paise to Rs 19.22. 100D Bright South India was neglected at last week's level of Rs 23.02. Staple fibre yarns (2 x 34 nF) spot Kiran was listless at Rs 11.24.

JUTE GOODS DECLINE

CALCUTTA, June 1

There was a sigh of relief in the jute goods market when the Budget was announced. The excise duty on jute goods was left untouched. At the same time, it was noted that costs would rise as a result of the increased import duty on plant and machinery and mills' stores. The rise in freight rates would boost mills' costs. It was disappointing that the Budget contained no incentives for boosting the export of jute goods. The minimum that is necessary, according to market circles, is the complete abolition of export duty.

In the past week, foreign inquiries were affected in the expectation of cancellation of export duties. At the same time business was done with the USSR, the US, Argentina, and Africa. The inquiries from the UAR did not materialise. The expectation of a rise in the excise duty on jute goods had revived internal buying earlier and a sizable quantity of D. W. flours was bought on government account. Non-official agencies also accounted for good business in sacking. As the week progressed, the bullishness was neutralised by profit-taking, and B. twills closed at Rs 260 against Rs 264.50 earlier in the week. Hessian 40" 10 oz finished at Rs 98 showing a loss of one rupee.

Raw jute prices remained unchanged, with Assam bottoms quoting at Rs 61 per maund; Daissee bottoms Rs 62.50, and northern bottoms at Rs 59. Mills were keen buyers.

OILSEEDS SUBDUED

BOMBAY, June 2

With the early onset of the monsoon and lack of support from vanaspathi interests, the trend in the oilseeds market was rather subdued.

Sentiment was also affected by the ban imposed on the export of rape and mustard oil until March 1972. Export of seeds has been subjected to a system of restricted ceiling. In consequence, upcountry operators liquidated their positions while replacement support was not forthcoming. The undertone was distinctly subdued.

East European countries showed some interest in groundnut extractions for September/October positions at around Rs 540 on f.o.b. basis. Inquiries from the UK were limited. July/August positions were quoted at £42.50 per tonne c.i.f. while higher rates were offered for distant positions.

Japanese buyers were active with about 40,000 tonnes to their credit for March/October positions. Export business in castor oil was virtually at a standstill. Only about 250 tonnes

TEA RECEDES

CALCUTTA, June 1

The slow arrivals of tea continue to cause concern and unless more wagons are allotted, the financial strain on the tea industry would become severe. A particular feature of the past week's leaf sale was the decline in the prices of Darjeeling teas. Although there was a fall in quality, the depression could not be solely ascribed to this factor alone. Against this background, the trade was glad to note that the Tea Board was investigating complaints of re-exports of Indian tea to the West European countries. It had been represented that countries which pay in rupees were figuring in re-exports. The season's first consignment of tea to the UK left last week, and this included a small portion of pallets.

Leaf on offer at Sale No. 8 held on the May 24 totalled 23,590 chests, of which the new season's teas were 22,513 chests. Support was generally poor, and prices eased. All teas, including whole leaf grades, CTCs, orthodox broken and fannings, shared the general trend and eased. Darjeelings also declined.

Dusts on offer at the internal consumption sale totalled 3,684 packages, including 1,272 chests of old teas. There was good support, with CTCs recording an irregular trend following quality. Orthodox teas evoked poor attention, but the brighter lines were steady. Due to the limited quantity on offer, no quotations were issued for both the sales.

FOODGRAINS RISE

BOMBAY, June 1

The prices of foodgrains in the local market continued to rule firm during the week. In cereals, wheat (Pissi) moved up nominally by a rupee to Rs 88-92 per quintal. The city market is getting its supplies mainly from Gujarat and some centres from Maharashtra. The daily arrivals were around 4,000 bags, against the demand for 5,000 bags. The stock in the local market was hardly 10,000 bags. In coarse grains, the prices of bajra (superior quality) at Rs 70-75 per quintal showed a further rise of Rs 3 on account of seasonal fall in supplies. The old stock of maize is now exhausted. The new maize crop arrivals have commenced; the price was quoted at Rs 70 per quintal.

In pulses, gram (Punjab) declined marginally by a rupee to Rs 88-89 per quintal on account of slack demand. As millers had large stocks they refrained from making immediate commitments. The stock in the city market was estimated at 8,000 bags. The prices of urad (Khandesh) moved up by Rs 5 to Rs 150-155 per quintal on account of the tight supply position. The prices of tur (Berar white) at Rs 125-127 per quintal showed a further increase of Rs 3 owing to the good demand in the face of limited offerings. The prices of moong (Chinal) firmed up sharply by Rs 20-40 to Rs 230-260 per quintal on account of acute shortage of supplies.

SUGAR DECLINES

BOMBAY, June 1

In the local sugar market, the prices of sugar (C-30) at Rs 188-189 per quintal showed a further decline of Rs 6. With the onset of the monsoon, there has been a rather sharp fall in demand for sugar. Market reports indicate that even buying at lower levels is very restricted. Today about 10,000 bags of sugar (C-30) were sold at Rs 179 per bag, ex-mill with duty.

METALS STEADY

CALCUTTA, June 1

Fully steady conditions marked the activity in the base metal market during the past week. The steep rise in the import duty on non-

Look
WHAT GOES INTO
AMARYL REACTIVE DYES!

You will be surprised.

- *15 years of dye-stuffs' manufacturing experience.
- *About as many years of painstaking research.
- *The skill and devotion of highly qualified and experienced technicians and workers.

Consequently, Amaryl Reactive Dyes are the most versatile dyestuffs available to the Dyeing and Printing Industry today. They offer a variety of brilliant, long-lasting colours.

ferrous metals from Rs 1,500 per tonne on copper and Rs 500 per tonne on zinc to 30 per cent *ad valorem* on copper and 40 per cent *ad valorem* on zinc and pig lead would naturally mean higher prices. There was no change in the excise duty on aluminium, but two days prior to the Budget the Government of India had announced the fixation of uniform selling prices for aluminium ingots, wire-bars or billets, rods and rolled products of aluminium. The controlled price is about Rs 370 a tonne lower than the selling price as on May 25. Aluminium extruded products and foils have been excluded from the price fixation.

Even despite the good releases being maintained by the Minerals and Metals Trading Corporation to both the scheduled sector and the small scale units, prices of non-ferrous scrap rose during the past week. Producers of non-ferrous metals have been assured of a steady flow of the required supplies of copper and zinc to meet their requirements. The MMTC has now contracted for the import of about 7,000 tonnes of zinc from Japan.

In the past week offers were limited in view of the Budget uncertainties. Buyers were also keen. In the process clean copper wire scrap rose from Rs 1,420 to Rs 1,430, and utensil copper scrap from Rs 1,340 to Rs 1,360. Virgin lead added Rs 2 to Rs 460 though both tin and electrolytic zinc remained unchanged at Rs 4,800 and Rs 475 respectively.

KIPS NEGLECTED

MADRAS, May 29

Though the undertone of the market was good the volume of sales put through was meagre. Importers were saying that Madras prices were not economical while shippers were not able to buy raw stocks at workable levels. There was persistent demand for lower grade cow hides in 5/54 lbs and 8/84 lbs averages. Inquiries for cowcalf light weight fourths were free but stocks were scarce. Due to off-season, sellers of buff calf were few. Inquiries were sporadic in tanned goat skins and orders booked were poor due to high prices.

BULLION WEAK

BOMBAY, June 2

A weak sentiment prevailed in the bullion market during the past week. Silver lost further ground during the week on increased arrivals and reduced off-take. The easy overseas advices also imparted weakness. Gold too receded due to heavy inflow. Sovereign was listless at last week's levels.

Silver (996 fineness) began the week Rs 2.50 lower at Rs 594 and declined in the following sessions. It moved at between Rs 591 and Rs 589 before closing at Rs 589.50 today. The net loss over the week being Rs 6.50. The week-

ly delivery was mentioned at between Rs 588 and Rs 588.50. The weekly average arrivals and off-take of silver aggregated 50 bars and 41 bars, respectively.

Primary gold in unofficial trading commenced Rs 3 lower at Rs 193 but increased in the next session. It however lost ground in the following session and wound up the week at Rs 187.50 today, with a net loss of Rs 8.50 over the week. Standard gold in official trading opened Rs 2 lower at Rs 200 and declined in the subsequent sessions. It closed at Rs 197.50 today, the net loss over the week being Rs 4.50. Sovereign was listless at Rs 174.

MONEY UNCHANGED

BOMBAY, June 2

Conditions in Bombay's short-term money market remained unchanged in the past week. The call rate was steady at 4½ per cent. In Madras the inter-bank call rate ruled at 4½ per cent.

Ninety-one days' Government of India treasury bills sold from May 24 to 29 amounted to Rs 356 crores against Rs 10.55 crores in the preceding week.

During the week ended May 21, foreign exchange reserves of the Reserve Bank of India increased by Rs 2.79 crores to Rs 379.24 crores. While foreign securities remained unchanged at Rs 303.42 crores, balances held abroad rose to Rs 75.82 crores from Rs 73.03 crores. Notes in circulation declined by Rs 26.66 crores to Rs 4,397.86 crores. Deposits of scheduled commercial banks with the Reserve Bank of India came down to Rs 208.44 crores from Rs 228.31 crores.

The week ended May 21 recorded a rise of Rs 21.64 crores at Rs 4,704.77 crores in the total credit made available by scheduled commercial banks. Aggregate deposits expanded to Rs 6,051.45 crores from Rs 6,008.45 crores. Borrowings from the Reserve Bank were lower at Rs 125.49 crores (Rs 208.19 crores).

STOCK & SHARE QUOTATIONS

Abbreviations: D—Deferred shares, P.O.—Preferred Ordinary shares, N—Nominal quotations, a.d.—Ex. Dividend, a.d.—Cum. Dividend, I—Interim Dividend, C.R.—Cum. Right, X.R.—Ex. Right.

Shares:—If a company has different classes of shares—as for example: 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share'.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June

and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provision fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

V.I.P.'S stop here so very often !

Because we care for their needs, and benches, and whistles.
And we know they like red carpets - which is exactly
what they get.

And, of course, they go for that elusive something called
atmosphere - which is everywhere in Rajdoot.

And, before they are gone, we like them to taste the
wonderful Indian and Western cuisines, the variety
programmes in the EL DORADO and STARLIT Restaurants
or an open air session at RAMBLE Connaught Place.

We have a telephone in each room, and its own
thermostat control.

What's more, we don't treat them as come-and-go
guys - but like real house guests!

*A dream
today,
a reality
tomorrow*

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

WE HELP YOU KEEP IN STEP

PRINTS & DESIGNS CENTRE

Export with confidence — confidence in the customers' preference for your fabrics. We help you gain that confidence. "Prints and Designs Centre", set up by the Council, for instance. It is a treasure-house of popular textiles samples drawn from all over our export markets. Variety of international prints, designs and patterns for you to choose. Make it a point to visit the Centre . . . Adapt your production to suit your customers' taste. We help you keep in step with world markets.

**Diesel or Electric.
You name the power.**

YALE VOLTAS

have the most powerful performers.

Manufactured in collaboration with Eaton Corporation, U.S.A., these trucks are reducing handling costs in warehouses, factories, pharmaceutical and processed food industries, ports, refineries, cement and heavy engineering industries, steel mills, automobile and ordnance factories all over the country.

The exclusive fluid drive on the Yale Voltas diesel fork lift truck ensures:

- Smoother stops and starts
- Longer engine and transmission life
- Maximum utilization
- Minimum operating costs
- Maximum operator efficiency

The Yale Voltas electric fork lift truck guarantees:

- Low operational costs
- Compactness—to work in the narrowest aisles

- High manoeuvrability
- Clean and smooth performance—no noise or smoke hazards

Also available YALE VOLTAS Hylite Hand Lift Pallet Trucks

Diesel Fork Lift Trucks

Backed by Voltas' country-wide after-sales service and spare parts organisation.

Up goes efficiency—Down go costs with

A poser to the Centre

THE report of the Rajamannar Committee on Centre-State Relations, appointed by the Tamil Nadu Government, has evoked a lively controversy in political quarters and elsewhere. The Committee itself has stated that the main objective before it was "to secure for the States fullest extent of autonomy within the general framework of the Constitution, without in any way impairing the integrity of the country." This is a formula which can be adopted as a basis for discussion. But the real issue would be to determine whether this formulation of the problem involves any contradiction. The Committee is of the view that when the Constitution was on the anvil there were some apprehensions regarding attempts at disruption of the integrity of the country and that some of the provisions of the Constitution reflected this anxiety. Was this fear exaggerated? Are there at the moment no forces challenging the integrity of the country? Is it possible to devise an arrangement whereby when such integrity is threatened the nation and its resources could be mobilised fully to deal with such threats? It is not difficult to consider all these questions dispassionately and to forge a consensus that could be accepted by all the parties concerned.

The Committee has accepted that the general trend of the recommendations is in favour of autonomy for the States. It considers that this is an ideal federal arrangement. In view of this it has recommended deletion of a number of Articles of the

Constitution that deal with the emergency provisions and issue of directions to the States by the Union. It has suggested that no appeal from the High Court should lie to the Supreme Court except in a case involving Constitutional issues or the interpretation of a Central Act. The schedules to the Constitution would be modified if its recommendations are accepted in a manner whereby the States would get more powers, fiscal as well as legislative. There are recommendations regarding the office of Governor. The Governor should be appointed in consultation with the State Cabinet. He should be liable to removal only for approved misbehaviour or incapacity after an inquiry by the Supreme Court. The President should issue instruments of instructions to the Governor dealing with who should be appointed as Chief Minister and also under what circumstances he should be dismissed. The instrument would also lay down that the Governor should exercise discretion only in relation to matters in respect of which the Constitution makes a special provision. The President's rule could be imposed only when there is a complete breakdown of law and order in a State or when the State Government itself is unable or unwilling to maintain the safety and security of the people and property in the State. If all these recommendations are accepted, there might arise a situation in which the integrity of the nation might be in jeopardy and any measure adequate to deal with the situation might prove difficult. There is here ample scope for critically examining the full implications of these recommendations.

so that the integrity of the country could be placed at the centre of the main concern of the Constitution.

Advocates of greater autonomy to the States could possibly maintain that the constitutional provisions and practices dealing with fiscal and economic matters are the real source of friction. As far as fiscal matters are concerned, there is some ground for re-examination. It is true that the States have not made full use of the fiscal powers vested in them. They have heavily depended on the Centre for their financial requirements. They have resorted too frequently to the overdraft facilities to get them out of financial stringencies. There is, however, some truth in the contention of the States that the items available to them for taxation are such that it is difficult for them to exploit them to the full due to political reasons. These items again are not elastic enough to enable the States to discharge the heavy responsibilities that are imposed on them due to what is popularly called the explosion of expectations.

Still more important, however, is the issue of economic power in a planned economy. Government at the Centre has a major say in determining plan priorities, location of industries, incentives to industries and cognate matters. The Ministers and Secretaries who have to deal with these problems do acquire huge powers. These ministries thus become prestige ministries giving special status and even privileges to the persons in authority. There are no ministries of equivalent stature in the States. The result is that the cream of the civil services tends to get concentrated in New Delhi and the State Governments find it difficult to get the best talents. These dangers should be attended to and methods should be devised whereby effective economic power is shared between the Centre and the States.

The Committee has suggested certain institutional arrangements to bring about co-ordination among States and between the States and the Centre on matters of common interest. The immediate setting up of an Inter-State Council under Article 263 of the Constitution consisting of all the Chief Ministers or their nominees with the Prime Minister as its Chairman has been recommended. It is also provided that no other Union Minister should be on the Council. This Council is to consider every bill or a decision to be taken by the Union Government having national importance or likely to affect the interests of one or more States. The decisions of this Council should be binding on the Centre and the States. While there is a need for an Inter-State Council it is a matter for debate whether it should be invested with such drastic powers as would take away the rights of Parliament and the Union executive as they are exercised today.

The other suggestion is that there should be a permanent Finance Commission with its own secretariat. This recommendation is worth considering. This body is to be entrusted with the task of determining grants by the Centre to the States both for Plan and non-Plan expenditure and its recommendations have to be binding on all the parties. The Planning Commission, it is recommended, should be placed on an independent footing without being subject to control by the Union executive or to political influences, and it should be put on a statutory basis. It is also suggested that the provisions in the Industries Regulation and Control Act relating to grant of licence should be completely omitted. These recommendations also reflect the growing uneasiness among the States regarding the immense powers that are today concentrated in the Union executive. Either some very well defined rules should be laid down for the exercise of these powers so as to immunise it from party politics or the Union executive should be ready to share these powers with the States. All these questions are so vital to the peace and prosperity of our country that nothing can be decided on an *ad hoc* basis. Very detailed discussions and exchange of views are necessary. The point is that this process should start immediately. Otherwise the frustrations and recriminations might lead to avoidable explosive situations.

The scarcer cotton

LAST October the International Cotton Advisory Committee had sounded a note of caution that supplies of cotton during the current season were likely to be lower than in 1969-70. This development, according to the committee, would be the result of the decline in the opening carry-over on August 1, 1970, from the previous year's 23 million bales to 21.39 million bales. As for production the committee had, in fact, expected a recovery from the disappointing 1969-70 level of 52 million bales. This assessment was based on the expectation of a higher output in the US and the USSR. But with bad weather in the Texas and in the south-eastern region hitting the US crop hard, the situation would appear to have turned worse than envisaged by the committee. The US crop estimates have been reduced sharply from 12 million to 9 million bales. With a carry-over of just 4.5 million bales on August 1, 1970, this has put the US cotton economy in a vulnerable position. Domestic demand has usually been of the order of 8 million bales, which means that this year's production would just meet the needs of the domestic mill industry and other consumers. The possibility of the US, which has been the major exporter for the past 10 years, turning into an importer is thus not ruled out. Should this happen, a critical situation will have been reached in world cotton supply. The implications of this for us will be far-reaching, particularly at a time when we have run into an acute shortage of this fibre.

The Union Minister of Foreign Trade, Mr L. N. Mishra, has announced that the Government plans to import 10.55 lakh bales of cotton during the current season ending August. The imports have been moving at a slow pace and the cotton textile industry has already felt the pinch. The sharp fall in US cotton output is sure to cast doubts on the ability of the Government to arrange for the contemplated supply of the fibre. The UAR has already let it be known that she has no extra cotton to sell to us. It is unlikely that the US which, often in the recent past, has been the source for more than half of our imports can help us at all; in fact, the prospect is that the US might be forced to import the fibre, and even if it chooses to offer us limited quantities these might well be at a very high cost. According to reports from the US, speculative trading has already pushed up the prices of cotton on the New York Cotton Exchange. Costlier cotton from abroad and in inadequate quantities is the situation which our mill industry is likely to face this season. With domestic production placed at no more than 54 lakh bales, the total availability will be much short of the requirements, with its consequent adverse impact on cloth production and on the fortunes of the industry. Imports of staple fibre in large quantities could be a way out, but many in the textile industry have already begun wondering whether such imports are worth our while with the imposition of a 100 per cent duty in the latest Budget proposals.

Mr Mishra has resigned himself to a cotton shortage in the country for several years to come. The Cotton Development Council, too, displayed a similar mood when it met in Bombay last May. With the 1970-71 output some 11 to 12 lakh bales short of the 65 lakh bales target fixed by it, the Council saw no point in placing before the cotton growers a higher goal for 1971-72. This is a desperate attitude to take and could starve our people of the needed cloth because the mills will not have enough raw material to process. There has been apathy on the part of the Union and State Governments towards cotton development programmes, and the allocations made for them have been miserly. It should not be impossible for the Government and the cotton mill industry jointly to make an annual investment of Rs 10 crores over the next few years in implementing programmes to double the productivity of cotton. The projects undertaken by the Indian Cotton Mills Federation have shown that this can work.

It is regrettable that so sincere a socialist as Mr Chavan has applied double standards in his Budget for the implementation of his progressive policies. To put it bluntly, according to Mr Chavan's Budget, there are two classes of citizens—one, normal citizens like you and me, and the other, Ministers. In his Budget speech he declared: "I am firmly of the view that the fiscal instrument must be deployed to discourage payment of high salaries and remuneration which go ill with the norms of egalitarian society." Then he proposed a ceiling on the remuneration and perquisites of company employees at Rs 6,000 per month—Rs 5,000 salary and Rs 1,000 perquisites. Mr Chavan also proposed to reduce the taxable limit of daily allowances of employees while on tour. It is surprising that he kept quiet about the perquisites and the tour expenditure of Ministers. His espousal of egalitarianism would have gained greater credibility if he had included Ministers also in his tax net.

This was all the more necessary because we do not hope to see our socialist Ministers setting an example by voluntarily giving up their palatial residences, retinue of personal assistants, peons, gunmen and mallas, imported air-conditioned cars, unlimited entertainment at State expense (which is in addition to the handsome tax-free sumptuary allowances) and the host of other perks, visible and invisible. All these are paid out of the tax-payers' money. Some time ago Mr N. Dandekar, a former member of the ICS and a former Income-tax Commissioner, disclosed that a Union Cabinet Minister earns in effect nearly Rs 40,000 a month if one took into account such perquisites as subsidised housing, servants, personal staff, free furniture, water, electricity and free travelling. So the earnings of our Cabinet Ministers are nearly three times those of a seniormost executive who is dubbed monopolist by the socialist angels. I do not mind a Minister getting Rs 10,000 a month. What I want to emphasise is that whatever is given to the Minister by the exchequer should be brought within the purview of Mr Chavan's fiscal net. Those who talk about the norms of egalitarian society should not impose two norms for income-tax—one for the ordinary citizens and the other for themselves.

★

I notice that the younger generation is getting increasingly disgusted with the hypocrisy in public life which the current year's Budget so glaringly symbolises. Commenting on Mr Chavan's decision to impose an overall ceiling on remuneration and perquisites and a heavy duty on motor spirit, my 16-year-old son said: "Our Ministers are really *gathias* (clever chaps). When Ministers from Delhi enter the city of Bombay with three cars in front and three behind, who pays for the petrol consumed by this cavalcade?" Normally, like all youngsters my son is mostly interested in space travel, sports and films. So I was quite surprised when he made these remarks about our public life. One finds that in Ceylon it is the young boys and girls who have threatened the very foundations of the Ceylonese society. It is again the flower of Indian youth that has been swelling the ranks of Naxalites. The prevalence of dual standards in our public life provokes young men to discard peaceful methods which they equate with the norms of present-day society. So, along with the bath water of our hypocrisy

EDITOR'S NOTEBOOK

the young men and women would like to throw out the baby of our society as well.

A similar issue has been raised recently in the UK where the Editor of *New Statesman* has shocked the monarchy-loving British subjects. Accusing the Queen and her family as "The Royal Tax Avoiders", Mr Crossman asks in the May 28 issue of the *New Statesman*: "What is the connection between the way in which we pay and tax—Her Majesty the Queen, and the Paris Commune, which collapsed in bloody ruins a hundred years ago this week? The connection, one which Marx would instantly have perceived, is the effort established societies make to maintain the class structure." What is relevant to the Indian situation is Mr Crossman's statement that society is still governed by the principle that "different social categories deserve fundamentally different treatment from the state." In England it is the Royal family vs the people. In India it is the Ministers vs the people. Perhaps the privy purses will be abolished in a peaceful manner. One hopes this great country will not be plunged into a blood bath for the abolition of the privileges of the new class which has been ruling India in the States and at the Centre. Reflecting on the occasion of the centenary of Paris Commune, the noted British historian, A. J. P. Taylor, appropriately observed: "The Commune illustrates the general principle that a revolution occurs not simply as a result of material suffering, but when a regime is discredited by incompetence and failure. This is what happened in 1871." A regime can only be discredited by incompetence and failure when it adopts two standards, one for the people and the other for itself.

★

If one finds my comparison of the present situation in India with that of Paris Commune in 1871 a little exaggerated, one should read the fantastic account of a marriage ceremony of the son and daughter of Mr Shankarrao Mohite Patil, an MLA from the Sholapur district of Maharashtra belonging to Mrs Gandhi's Congress party. The country should be grateful to *Kesari* of Poona and *Maharashtra Times* of Bombay for describing in detail the ceremony which was held on May 17 at Akhuj in Sholapur. *Maharashtra Times* has published in its issue of May 31 a detailed report from "An Invitee to the Ceremony", with the appropriate caption "Never again such fun can you see, Man". A recital of the bare facts in the report may lead one to exclaim: "Only a bloody revolution can save this country". Nearly one lakh people were fed at this wedding ceremony, the preparations for which had been made by 27 committees comprising prominent citizens who were on their feet for months together. Ghee worth Rs 27,000 was used in feeding the invitees, who included 10 Ministers from the Centre and the State, led by the Finance Minister, Mr Y. B. Chavan. Five thousand fluorescent tubes and a lakh and a half coloured bulbs were used for the decoration of the marriage

pandal (as a result of these festivities indulged in by a single Congress MLA, electricity supply to the neighbouring flour mills and agricultural pumpsets had to be stopped). Seven hundred vehicles plied between Sholapur and Akhuj. Appropriately for such an occasion, the wedding presents received included one Ambassador car, one Fiat car, one jeep, and 500 gold rings weighing about a tola each. Our rulers have lost all sense of shame. Had it not been so, Mr Mohite Patil would not have defended this extravaganza in a speech at the ceremony in these words: "This marriage ceremony is of the people. People are participating in it with enthusiasm and with a sense of belonging. I have not done anything."

★

In this column on January 5, 1969, I suggested that the purpose of our P Form would be better served if we followed the Israeli example of imposing a tax on those who went abroad. I must congratulate Mr Chavan on levying a tax at the rate of 20 per cent *ad valorem* on tickets purchased in rupees for overseas trips. In Israel also you are required to pay tax at 20 per cent of the cost of the ticket to the exchequer. While emulating the Israeli example, the Finance Minister has not done away with P Form which still remains with us in an attenuated form. He is trying to have the best of both the worlds. He would like to impose a tax on foreign travel as well as retain the P Form. The retention of P Form after the imposition of tax on foreign travel is indefensible.

★

During my recent visit to Japan and Hongkong I came across several instances which indicated that China has again become a normal country. Who reversed the gears of the cultural revolution? A Japanese student of China affairs told me that the Chinese army was fed up with the chaos of the cultural revolution. It wanted more modern arms and less of Mao's puritanism. So the army took the matter into its hands and opened the doors of the country to the outside world. This impression is confirmed by a letter we received from a West European journalist who recently visited China. He writes:

I am just back from China after participating in ping-pong diplomacy. China is a very different country from 1967, it is almost like it was before the cultural revolution, with a few exceptions. What struck me most strongly was the obvious dominance of the PLA (People's Liberation Army) who have almost started to behave like a new elite. There is, however, a tendency to allow more democratic procedures in the various decision processes on the different levels, within the framework of 'democratic centralism'. China is, of course, very far from being an open country, but it is more open than it was before the cultural revolution in many aspects.

MARKET GOSSIP

Meaningful bonus issues

LAST year, the Controller of Capital Issues came out with a set of guidelines on bonus issues. They had a healthy impact on the corporate sector. But obviously the Government thought that the restrictions imposed on the issue of bonus shares were not enough. Last week some modifications were announced and these should be welcomed. The residual amount of reserves left after the proposed capitalisation should now be at least 33-1/3 per cent instead of 20 per cent as at present, of the increased capital. One view on the guidelines is that if the Finance Minister avoided taxing bonus issues, the same objective has been achieved by laying down the minimum requirement of 33-1/3 per cent of residual reserves. This would have the effect of discouraging bonus issues. The Government has not yet come out with what constitutes the reserves. But according to New Delhi reports, development rebate is to be included in the reserves. In the case of companies which have large amounts in development rebate this could soften down the rigours of the enhanced proportion.

Though from the investor's point of view the guidelines tend to limit the scope for large bonus issues, it would be a blessing in disguise. There have been occasions in the past when some of the giants in the corporate sector issued bonus shares but immediately followed it up by curtailment of dividend. In some cases the dividends were even halved. It is to meet this situation that the guidelines provide that in the notice issued to shareholders for seeking their approval to a bonus issue, there should be a clear indication of the intentions of the management as regards the first annual dividend payable on the expanded capital of the company. The issue of bonus shares could, therefore, be more meaningful by a real increase in the reward to the investors. Market circles expect that the Controller of Capital Issues would expedite the sanction of bonus issues once they are approved by the general body meeting after taking note of the intentions of the company about future dividends. □

Cruel joke on mills

BOTH the cotton mill industry and the ready-made garment industry have urged the Union Finance Ministry to reconsider the excise imposts levied under the Budget with a view to providing suitable relief. It is the cotton mill industry's contention that the levy on coarse and medium varieties of cloth, although raised with a view to making good the loss of the State Governments, which have been denied the revenue from the sales tax on this account, is bound to hit the "janata" cloth consumer. Already during the current cotton year, the prices of all types of cloth had reached unconscionably high levels and as such the additional levy could have been avoided, it is being argued. If the industry had not officially taken exception to this aspect it is because

the representative organisations had themselves pleaded for additional excise levy in lieu of sales tax, opting in favour of the lesser evil.

The levy of a 100 per cent import duty on staple fibre comes in the nature of a cruel joke on the mill industry as it had been promised a fairly good chunk of staple fibre to supplement its cotton shortage. It is a moot point whether, with the added burden, it would be worth the while of the millowners to go in for staple fibre, cotton shortage or no cotton shortage. The irony of it is that staple fibre is the only man-made fibre which can be considered cheap enough for the common man to go in for an occasional shirt. Quite a few small-scale weavers in Surat and Ludhiana, who are the bulk consumers of staple fibre, have been adversely affected.

Although with the onset of the monsoon the slack season for textiles has commenced, inducing many of the garment retailers to offer discounts, ranging from 5 per cent to 50 per cent, the price of branded goods of reputed manufacturers has been put up since the Budget, the rise ranging from Rs 4 to Rs 7 per shirt. And there are no buyers. One can visualise brand tags gradually disappearing once the retailers are hardpressed. And the next step would be the flooding of the market, in due season, with spurious products and the salesmen whispering to you that the stuff that he is selling is really Mafatlal's or Binny's. Only the tag is not there for obvious reasons! □

Budget and foreign investor

IF the Indian entrepreneur is disappointed with the Budget, the foreign investor, too, finds little in the proposals to be cheerful about. First, there is the ceiling for him of Rs 6,000 on salaries and perquisites, which means that amounts exceeding the ceiling would not be deductible in the computation of taxable profits. Normally, foreign corporate companies pay much higher remuneration than this ceiling to the top personnel. This cannot be reduced and to that extent the profits available for distribution and ploughing back into business will be smaller.

Secondly, the Finance Minister has withdrawn the concessional treatment of dividends received by foreign companies from a closely-held Indian company engaged in a priority industry. So far, the tax on dividend was 14 per cent. Now the foreign collaborator will be required to pay a tax of 24.5 per cent. This enhancement in dividend tax is described as an unkindly cut particularly when the closely-held companies have to pay the usual corporation tax of 60 per cent. The foreign investor has also been deprived of another concession. He was exempted from the capital gains tax if he invested the appreciation in capital in specified Government

securities or in approved new enterprises. The Government's contention is that this concession had not proved beneficial in any particular way and the investments visualised from this concession, if any, were marginal. This may be true, but perhaps the most worrying point from the point of view of the foreign investor is that assurances given earlier are now sought to be cancelled. □

NRC: Another proxy battle?

THE trial of strength between Chinais and Kapadias for the control of National Rayon Corporation promises to continue. Market circles think that the next annual general meeting of the company, scheduled to be held on July 20, may witness another proxy war, much bitter than that of last year. Each of the groups is expected to sponsor its own candidates for elections to the board and thus join the proxy battle. Meanwhile, the Company Law Board last week decided that there is need to take action to ensure smooth working of the company under section 408 after affording an opportunity to the company to make representation in this behalf. The section empowers the Central Government to appoint not more than two persons as directors for a period not exceeding three years to prevent the affairs of the company being conducted in a manner oppressive to any members of the company or prejudicial to the interests of the company. □

Jayanti's future

THE question whether the large fleet of Jayanti Shipping Company consisting of eight bulk carriers, three oil carriers, two tankers and three dry cargo vessels will pass into the hands of the private sector or remain with the Shipping Corporation of India will be decided on June 14. On that day 212,472 shares of the company standing in the name of Dr Jayanti Dharma Teja will be auctioned in Bombay under the orders of the High Court. Dr Teja's shares represent about 74 per cent of the total paid-up capital of Rs 2.88 crores and these have to be sold in one block. So, whoever gets hold of this block will be in control of the management of the company. There was speculation at one time that one or two private shipping companies were ready to pay as much as Rs 5 crores for these shares or more than double their face value. Dr Teja himself has been adjudged a defaulter in the payment of income-tax and wealth tax, and according to a recent public notice the tax arrears to be recovered from Dr Teja together with penalty amount to Rs 4.91 crores. □

7 years old and in 35 places all at once

In just seven years Gujarat Steel Tubes account for 10 per cent of the country's total exports of steel tubes and pipes. Earn over a crore in foreign exchange. Are in demand in 35 countries all over the world. Including sophisticated markets such as U.S. and West Germany.

Since 1966 we have increased our exports by 220 per cent—twice winning Engineering Export Promotion Council awards. Today we are among India's largest exporters of steel tubes and one of 73 export houses recognised by the Government of India.

We started with advantages: the enthusiasm and enterprise of youth. Sound technical know-how. An uncompromising dedication to quality. All of which enabled us to declare a dividend in our first year of production.

Since 1966 we have doubled our sales. And added the most modern welding technique—TUFFWELD—high frequency induction welding.

We look forward to the future with confidence. A confidence born of achievement. The trust of our dealers. The satisfaction of customers. Above all, the unsurpassable quality of our products.

GUJARAT STEEL TUBES LIMITED,
Bank of India Bldg., Bhadra, Ahmedabad 1

SURVEY

SPIRITED INTENTION

THE Finance Minister, Mr Y. B. Chavan, has shown the welcome realisation that consumption of petroleum products will have to be curbed if we are to conserve our scarce foreign exchange resources. Imports of crude oil have been on the increase in recent years. Between 1968-69 and 1970-71 they moved up from 10.6 million tonnes to 13 million tonnes, and during the last financial year they involved a foreign exchange outgo of Rs 11332 crores, not taking into account the tanker freight for the transport of this crude. According to official estimates imports between 1971 and 1974 will rise from 12.85 million tonnes to 17.7 million tonnes, which would mean we would be paying over Rs 100 crores more for these imports by 1974 than the cost at the last year's prices because of the recent Teheran agreement that has pushed up the posted prices of crude oil. The anxiety of the Government, therefore, to limit these imports to the minimum can well be appreciated.

However, this good intention will not be achieved by the Budget proposal to increase the duty on motor spirit by 20 paise per litre. The proposal itself has proved a controversial one and has invited the wrath of taxi drivers and owners of petrol-driven trucks. Some of the backward States such as Orissa, Jammu and Kashmir and Himachal Pradesh, where communications are difficult and there is considerable transport by road, have also expressed the fear that transport economics in their areas will be upset and this will have a reflection in higher prices of even daily necessities. This apart, mere curbing of the consumption of motor spirit while leaving undisturbed the growing demand for such products as kerosene or diesel oil cannot lead to a cut in imports of crude oil. While the refineries can make certain adjustments in the product mix, these are not such as would lead, given the types of crudes imported, to higher production of kerosene and diesel oil, which are in short supply, and to lower output of motor gasoline, which is in surplus. Of course, the lesser consumption of motor gasoline would mean greater availability of naphtha which can be utilised by the fertiliser industry. That perhaps will be the only benefit flowing from lower demand for motor gasoline. But the assumption that the Government is keen on curbing the consumption of this product is itself questionable. The Lok Sabha has been told officially that the production of cars is to be increased and two new units with an output of 50,000 cars each are to be set up. More cars must necessarily mean higher demand for gasoline. Mr Chavan, therefore, would have been more honest to himself if he had declared that the duty on petrol was being increased to net in an additional revenue of Rs 36 crores rather than describing it as a measure intended to reduce the import of crude. As it is, the Government has already before it a report of a study group set up to demarcate fields in which the market for petroleum

products could be curtailed in view of the sharp rise in price demanded by foreign oil companies for imported crude. The Petroleum Minister, Mr P. C. Sethi, has stated recently that the recommendations of this group were still under consideration. It remains to be seen whether these recommendations lead to a genuine policy that will help achieve the objective Mr Chavan has in view. □

HURDLES FOR POWER GOAL

IN spite of the recognition by all that electricity constitutes the springboard for accelerated economic development, power generation in the country is lagging behind. The chairmen of State Electricity Boards who met in New Delhi last week to review the progress of power development programmes must have found much that was discouraging. The Fourth Plan envisages addition of 9.2 million kw raising the total capacity to 23.1 million kw by 1973-74. To achieve this the annual targets during the first two years of the Plan were fixed at 2 million and 1.6 million kw respectively, but actually an additional generating capacity of 1.2 million kw and about 1 million kw were installed. In view of these shortfalls, capacity will have to be added at the rate of 2.3 million kw annually in the remaining three years of the Plan in order to reach the target.

Even allowing for a quickening of the tempo of work on power projects during this period, it would be futile to expect that the target of 23.1 million kw will be attained. The factors causing delays in the implementation of the projects persist, and since some of these are beyond the control of the project authorities, there is likely to be no significant improvement in the situation in the coming years. An important reason for the delays is the failure on the part of indigenous manufacturers to deliver equipment on time, which has necessitated frequent revision of schedules for the commissioning of many projects. The main culprits are the heavy electrical undertakings in the public sector.

Some idea of the delays in store for power generation schemes can be had from the fact that for the 7 million kw capacity that has to be established between the current year and the end of the Fourth Plan in order to achieve the target, equipment for generating 4.6 million kw is to be supplied by indigenous manufacturers and the balance imported. Foreign suppliers have generally adhered to the delivery schedules agreed upon, but even so delays have occurred in commissioning some projects because the civil works had not been completed in time. Lately the steel shortage in the country has added to the problems of the project authorities. Unless power projects are given a high priority in the allocation of steel, the existing shortage of electricity will become acute.

However, this should not deter advance planning and timely administrative decisions in regard to power development in the Fifth Plan and thereafter. This is

all the more necessary as power projects involve long gestation periods ranging from five to eight years. Moreover, long-term planning is necessary to ensure the most economic pattern of power generation, transmission and distribution. This assumes greater importance in view of the Government's decision to undertake power development increasingly on a regional basis.

Keeping all this in view, the Ministry of Irrigation and Power has prepared a power plan for the current decade as a first step towards evolving a long-term perspective plan. According to the ten-year plan, an additional generating capacity of 25 million kw will have to be created by 1981 if the anticipated demand for power is to be met adequately and in a reliable manner. This is a stupendous task which may be difficult to achieve. But the plan should help in advance planning for building up the necessary design and engineering capacity, trained manpower and material balances, which should contribute to better performance in the field of power generation in the seventies. □

NOTICE FROM YUGOSLAVIA

MANY may be inclined to see signs of a setback to India's rupee trade in Yugoslavia's insistence on changing the payments arrangement for her trade with this country. A Yugoslav delegation was in New Delhi recently to persuade the Government of India to agree to the changeover, but New Delhi has resisted the move. Belgrade had given clear notice early in 1970 that when the present trade agreement between the two countries expired on March 31, 1972, it would like to dispense with the existing system of payment. In fact, Yugoslavia's Foreign Trade Minister, Mr M. Hadzic who came to India in March last year, categorically stated that the trade between the two countries thereafter could be based on any system of exchange but rupee payment. He was not specific about the alternative arrangements, although it seemed he would prefer a convertible currency.

The reason for Yugoslavia's wanting a change in the system of payment was the large rupee funds she had accumulated as a result of her exports to India outstripping her imports from this country. The situation has no doubt, changed considerably now and the balance of trade has swung sharply in favour of India. India's exports to Yugoslavia during the first half of 1970-71 were about Rs 27 crores whereas her imports from that country amounted to only Rs 4 crores.

Nevertheless, India would do well to prepare herself for a change in the payments arrangement with Yugoslavia. The fear that this would affect the trade with other rupee payment countries is unfounded. Actually her trade with the East European countries, which accounts for a bulk of her rupee trade, has been growing rapidly, and the prospects are that it will still expand at a faster rate. The economic conditions in India and in her rupee trad-

ing partners which favoured the growth of rupee trade in the initial years have, of course, changed, but both sides have adapted themselves to the changing situation by diversifying their trade which guarantees its further growth. Therefore, there need be no fear of the rupee trade being undermined by its abrogation on the part of Yugoslavia. □

THE TOPPLING GAME IN BIHAR

MR Karpoori Thakur has resigned. He could not maintain his position as Chief Minister of Bihar in the face of large-scale defections from his Samyukta Vidhayak Dal. He did all he could do to remain in power. The Ministry was enlarged far in excess of the administrative requirements. He had warned the members of the Assembly that the Congress (R) which had taken a lead in toppling his Government was not interested in an alternative Government. The idea was to impose President's rule in the State and ultimately to hold a mid-term election. Even this warning had no effect, and just an hour before the scheduled meeting of the Assembly to consider a vote of no-confidence against his Government, Mr Thakur resigned. The Governor of Bihar, Mr Deva Kant Barooah, did not accept his advice to hold fresh elections forthwith in the State. Instead he has invited Mr Bhola Paswan, leader of the Progressive Vidhayak Dal to form the Government. This would be the ninth Government to assume office in Bihar since the last general election in 1967 and the fifth since the mid-term poll to the Assembly in 1969. The Bihar Assembly has an effective strength of 312 and the PVD claims the support of 177 members. The Congress (R) which claims 112 followers will be the largest constituent of the PVD. The other parties in the alliance are the CPI, PSP, BKD, Forward Bloc and factions of the Jharkhand, the Hul Jharkhand, the Hindustani Shoshit Dal and the Shoshit Dal. Some independents are also reported to have pledged their support to the new Government. It remains to be seen how many of these constituents opt for joining the Government and how many would support the new Ministry from outside.

Looking to the recent history of ministry formation in Bihar there are ample grounds for scepticism regarding the life of the new Ministry. Many of the defectors might have decided to desert Mr Thakur in the hope that by joining the PVD in time they stood some chance of being included in the new Ministry. The continuous in-fighting in the SSP and the advice of some of its national leaders that Mr Karpoori Thakur should resign forthwith had raised doubts regarding his Ministry remaining in power for long. This seems to have been the main factor responsible for recent defections. This being the situation there is no guarantee that these power seekers will remain loyal to Mr Bhola Paswan in case he finds it difficult to continue in office. It is reported that nearly 40 per cent of the Assembly members have recently given signs of their inability to decide their party loyalties. This is a potential threat to any ministry in Bihar. In such a fluid situation it will be difficult for any ministry to address itself to the innumerable problems facing the State. □

THE WEEK

MR Bhola Paswan, an independent MLA and leader of the Progressive Vidhayak Dal, was sworn in on June 2 as Chief Minister of Bihar. Along with Mr Paswan, two other Cabinet Ministers, Mr Ram Jai Singh Yadav (Congress-R) and Mr Hari Charan Soy of the Jharkhand Party were also sworn in. It was indicated later that the Cabinet would be expanded in stages, Mr Paswan's Ministry ninth since the last general election in 1967 took over after the resignation of the Karpoori Thakur Ministry on June 1 in the wake of a series of defections from the Samyukta Vidhayak Dal.

The management of Indian Airlines and the Air Corporation Employees' Union signed a three-year agreement on June 2 giving substantial monetary benefits to the employees. The agreement effective from April 1, 1969 and covering 8,000 of the 14,000 Indian Airlines employees provides for a special allowance of 15 per cent of the salary, subject to a minimum of Rs. 60 per month, to employees drawing a basic salary up to Rs 149 per month and Rs 80 per month to employees drawing a basic salary of Rs 150 and above. Among the allowances revised are the transport allowance, flying allowance and meal allowance. The union has agreed to eschew agitational steps which may disrupt operations.

A Marxist-sponsored 24-hour general strike paralysed life in Calcutta on June 1. The sponsors claimed that the strike was in protest against police "atrocities".

The West Bengal Government placed under preventive detention on June 1 Dr Gholam Yazdani, a minister in a former United Front Government led by Mr Ajoy Mukherjee, and Sved Badruddoja, a former MP. They were charged with "anti-State activities and association with a Pakistani spy ring".

According to district authorities, cholera has broken out in epidemic proportions among the refugees in the Nadia district of West Bengal, and about 600 of them died between May 31 and June 2.

Coastal shipping companies propose to step up with effect from June 15 the freight rate on coal by 20 per cent. According to these companies, the current freight rates are uneconomic.

The Japan-Arabian and Persian Gulf-Japan Conference has decided to exempt completely cashew kernel, cashew shell liquid in drums, coir ropes and coir fibres from the proposed increase of 12.5 per cent in freight. The new rates will be effective from July 1.

The State Trading Corporation has agreed to continue to give cash assistance for rayon fabrics exports (excepting those made of staple fibre) on the existing basis till the end of June. The cash support for staple fibre fabrics will also be continued but subject to the condition that any change made later in the rates of assistance would be retrospectively applied. No such conditions are attached in respect of assistance on rayon exports.

The Union Government has decided to license a car manufacturing plant in the private sector to produce 50,000 passenger cars per annum, in addition to the small car plant being planned in the public sector. This was announced in the Lok Sabha on May 31 by Mr Ghanshyam Oza, Minister of State for Industrial Development.

Indian Leaf Tobacco Development Company has entered into a four-year agreement with the Andhra Pradesh ILTD Company Workers Union, Guntur, by which the 23,000 workers would receive Rs 25 lakhs per year as higher emoluments. The union on its part has agreed to maintain higher productivity.

Fiji became on May 31 a member of the International Monetary Fund and the World Bank. Fiji's share in the Fund is \$13 million. Its subscription to the capital stock of the World Bank is 111 shares of a total par value of \$111 million.

In Parliament

The Minister of State for Finance, Mr K R Ganesh, introduced on June 1 in the Lok Sabha the Gold Control (Amendment) Bill 1971 which seeks to replace the Gold Control (Amendment) Ordinance of 1971.

The Bill replacing the Ordinance for the take-over of the management of general insurance was passed unanimously by the Lok Sabha on June 2.

The Rajya Sabha adopted on May 31 an official resolution approving the imposition of President's rule in Gujarat following the exit of the Hitendra Desai Ministry.

The Rajya Sabha passed on May 27 the Medical Termination of Pregnancy Bill which liberalises abortion.

Money easy

Conditions were unchanged in the Bombay short-term money market as of Tuesday. Demand for funds was maintained and there were borrowers over at the close. In the inter-bank call section, both renewals and fresh money were re-

ported at 4½ per cent. In Calcutta market also the rate ruled at 4½ per cent.

Price index steady

During the week ended May 15, 1971, the Index Number of Wholesale Prices recorded a marginal fall of 0.2 per cent to 181.7. At this level, the index was 1.6 per cent above its level a year ago.

Mr R P. Smith, Chairman of Burmah Oil Company and one of the principal architects of oil exploration in Assam, died in London on May 28.

PEOPLE

MR A. C. Shah has been elected President of the Federation of All-India Cloth Merchants' Associations for 1971.

Mr I. K. Puri has taken over as Executive Director of the Inventions Promotion Board.

Mr V. V. Mariwala has been elected President of the Pepper and Ginger Merchants' Association.

Mr B Bhagawati has been appointed Chairman of the Jute Corporation.

Mr H N Mookherjee, Mr Pritam Lal Chanchani and Mr S K. Saraogi have been elected Chairman, Vice-Chairman and Jr Vice-Chairman of the Indian Mining Federation.

Mr G N S Robertson has taken over as head of operations of Burmah Oil Group of Companies for India, Pakistan and Australia at the London Office.

Mr J G. Parikh has been re-elected President of the Textile Association (India), Bombay branch for 1971 and 72.

Mr S. N. Lal of EID-Parry has been elected Chairman of the Employers Federation of Southern India.

50 years ago

The depression in trade continues, and it is evident that we have a long and difficult row to hoe before better times emerge. The pessimist lacks not the opportunity of venting his despondency upon a cheerless world, for it is an evil time in which we live. Said Mr F A Govett at the recent Camp Bird meeting: "I return to find vanished the insanity of the boom; the financial world in ruins, with millions lost in every industry. It is not alone in silver that we suffer; it is all round no profits left on any side. Contrast the fortunes lost in coal and iron in rubber, in textiles, in ships laid up for want of freight and in general finance, and it is plain that our troubles are just part of the common lot. The only thing to do is

to face the facts and see it through... A rise in silver will save the situation." But the white metal, to which Mr Govett looks for salvation, is most obdurate, and the low range of values upon which it operates is evidently fixed for some time to come. We must under the circumstances expect pessimism at company meetings—vide the speech delivered by Lord Balfour of Burleigh at the Eastern Bank meeting, and that of Sir Montagu Cornish Turner to the shareholders of the Chartered Bank—and yet, notwithstanding the oppressive conditions that now prevail, the opinion is evidently gaining ground among the directors of our great industrial undertakings that the slump will not last much longer.

COMMERCE

P&D unity in diversity

P&D—a unique set-up in the fertilizer industry. A comprehensive and integrated approach to every facet of the industry under unified direction and control. Its achievements justify the advantage of such a multifunctional set-up—P&D.

A wide range of know-how and processes developed through research and pilot plant activities—relating to fertilizers and vital chemicals. Patents registered throughout the world. Embraces all disciplines necessary for setting up fertilizer plants. From test tube scale right on to finished commercial production—P&D.

All interacting fertilizer expertise under one roof. Research, development and pilot plants. Agronomy and fertilizer demonstrations. Project planning and economics. Process design and engineering in all aspects. Technical procurement, erection supervision and commissioning. Presently entrusted with 10 major projects involving over Rs. 4000 million—P&D.

Yet another outstanding achievement—development of a whole range of fertilizer catalysts. P&D catalysts fast replacing imported stock in plants throughout India. A substantial saving in foreign exchange. One of the few organisations in the world to possess this prized know-how—P&D.

Such impressive achievements in such a short time. The reason: integrated approach under unified control. And the spirit of self-development through self-reliance—P&D.

p&d *self-reliance in fertilizer technology*

FERTILIZER CORPORATION OF INDIA LIMITED

REPORT

THE NATION

From Our Own Correspondents

Disturbing freight hike

BOMBAY.

THERE are enough reasons for the Minister of Shipping, Mr. Raj Bahadur, to express concern over the unilateral decision of the India-Pakistan-UK-Continent (Karmahom) Conference to increase the freight rates on this important trade route by 15 per cent from June 1. A delegation of the conference had been here last April and discussed the question of freight rates with representatives both of Government and All-India Shippers Council. The discussions with the officials of the Ministries of Shipping and Transport and Foreign Trade were expected to be continued further in mid-June before a final decision about the freight rates was taken. Instead of waiting for the Government delegation to complete the negotiations in London, Karmahom has announced a freight hike of 15 per cent though it has promised to consider the problem of some of the sensitive commodities entering the export trade of this country.

What was also notable in the April discussions was that, unlike in the past, the All-India Shippers Council took a very reasonable attitude on the issue of freights. It did recognise that operational costs of the shipping companies had moved up and that they had to be compensated by an increase in freights. In fact, it agreed to accept a general increase in freight rates of 7.5 per cent to 10 per cent provided there was no further increase during the next two years, the proposed increase came into effect from August, commodities which were facing severe competition and new and promotional items of the country's exports were exempted from the freight increase, the London surcharge was abolished, the Suez surcharge was reduced to 7.5 per cent and the conference provided adequate shipping services. Most of these proposals were very reasonable and at least the Karmahom Conference should have ensured that there was no freight increase till August.

There is another important point involved in the whole issue. As the All-India Shippers Council has pointed out there was an agreement entered into between the Indian lines group and the British lines group of the conference prohibiting an overall increase in tariff rates within a period of two years from the last increase. This provision has been ignored by Karmahom, and it is to be expected that the three Indian members of Karmahom would take up this matter strongly with the conference. Mr. Raj Bahadur has said that the conference has agreed to give retrospective effect from June 1 to the decisions to be arrived at the forthcoming discussions in London by mid-June with the Government delegation. This is good as far as it goes, but this cannot make us overlook the fact that Karmahom has violated the understanding reached in the past with the Government, the Indian shipping interests and the Indian member lines.

It was natural that Parliament members should have been agitated over the

attitude of Karmahom. Mr. Raj Bahadur, however, did well to reject the suggestion that India should withdraw from this conference. His point was that the membership of the conference ensured some modicum of stability in regard to freight charges and regularity of services. He could also have pointed out that the withdrawal from the conference could be considered, if at all, only when we have adequate shipping tonnage. This is far from the case just now and, in fact, Indian shipping companies are finding it difficult to acquire new ships because of the current high prices and reluctance of foreign shipyards to extend deferred payment facilities. As if these are not enough

hurdles, Mr. Y. B. Chavan's Budget proposals envisage the withdrawal of development rebate by 1974 for ships. This will be a hard blow to the shipping industry and particularly to the Shipping Corporation of India which is our largest buyer of new ships. If Indian shipping has made progress in recent years it was because of two factors. First, there were the cheap loans from the Shipping Development Fund and, secondly, there was the development rebate of 40 per cent for new ships. The Government has already increased the interest on loans from the Shipping Development Fund from 3 per cent to 5 per cent. It now proposes to withdraw the development rebate. A big question mark will thus hang over the future progress of our shipping. Members of Parliament and the Minister for Shipping would do well to concentrate on this aspect. □

Burden of four million refugees

NEW DELHI.

WHILE the refugee problem is assuming unmanageable proportions—already over four million have crossed over into Indian territory from East Bengal—it is indeed odd that some members of Parliament should be agitated over the Rehabilitation Minister's announcement at a press conference in New Delhi that about 50,000 of them would be moved immediately from their improvised shelter in West Bengal to the more durable camp at Mana in Madhya Pradesh. Whether the shifting of the refugees from the border areas to other places in the country constituted a departure from the Government's policy and, if so, why Parliament was not told about it first are questions which perhaps might legitimately be raised in normal circumstances. But when an unprecedented human tragedy is being enacted in East Bengal and the brunt of it is being borne by India as is evident from the hundreds of thousands of helpless refugees pouring into this country, these types of issues are most irrelevant. In times like these one's thoughts should centre on what one can do to alleviate the sufferings of the brethren who have come from across the border and not one's privileges.

Anyhow, this has turned out to be a needless furore for the Government's basic policy, which is to keep the refugees in the eastern region as far as practicable in order to facilitate their return to their homes, remains unaltered. However, as the Minister for Parliamentary Affairs, Mr. Raj Bahadur, speaking on behalf of the Rehabilitation Minister, Mr. R. K. Khadilkar, who has gone abroad, pointed out in the Lok Sabha, when camps in the border areas are overfilled with refugees some of them had to be sent elsewhere in order to make room for the newcomers who would otherwise be left uncared for. And there has been a phenomenal increase in the flow of refugees during the past

few weeks. Between May 1 and the end of the month their number swelled from a little over 1.25 million to about four million. India, at the outset, did not anticipate an influx of more than 2.5 million which explains the need to shift some of the refugees from the border areas. On this basis the Rehabilitation Minister had estimated the refugees' expenditure at Rs 132 crores for six months. But as the influx grew and reached the staggering figure of 3.7 million the estimate was revised upwards to Rs 180 crores. Even this will be on the lower side now that the refugee population has reached four million.

So far they have been put up in over 400 improvised camps all along the borders of the four eastern States—West Bengal, Tripura, Assam and Meghalaya. However, in order to relieve the pressure of the refugee population on the border areas of these States the Government has decided to set up 20 large but compact camps in these States and elsewhere. Each camp will accommodate 40,000 to 50,000 refugees and will be directly administered by the Centre. The services of retired army officers will be utilised for running these camps.

International assistance for tackling the refugee problem is still coming in dribbles. The total aid promised so far amounts to Rs 11.5 crores of which only Rs 9.3 lakhs have been received. Mr. Khadilkar, however, was hopeful that more external assistance would start coming in shortly. The report of the UN team, which studied the refugee problem at first hand, was submitted to the UN headquarters a few days ago and it is learned that it has recommended generous assistance for refugee relief work. Mr. Khadilkar's expectation of increased inflow of aid very soon is apparently based on this.

But at the same time the Rehabilitation Minister uttered the warning that, if the world community failed to persuade the Pakistan military regime to create

conditions of security in East Bengal to enable the refugees to return to their homes, India should not be held responsible for any serious consequences that might follow. He declared that "we cannot ignore the possibility of the situation calling for drastic remedies". In the absence of any clarification of what he meant by drastic remedies one can only infer that India is getting restive over not only the continuing exodus of refugees from East Bengal but also the frequent forays of the Pakistan armed forces into her territory and is being compelled to renounce her forbearance and retaliate effectively, though short of armed intervention. Perhaps, in preparation for this, the Government is sending out its Foreign Minister, Mr Swaran Singh, to the major world capitals to explain the gravity of the situation in East Bengal and its repercussions on India. Mr Swaran Singh's ten-day itinerary, which begins next week, includes visits to Moscow, Paris, London and Washington. Two other Ministers are sent for similar missions, one to West Asia and the other to South-East Asian countries. □

KASHMIR

A push for farm mechanisation

SRINAGAR.

A BIG effort is being made in Kashmir to mechanise farming. The recently set up Agro-industries Corporation has built up a tractor unit with a fleet strength of 46 which is proposed to be raised to 125 by next year. These machines are being supplied to farmers, on a no-profit-no-loss basis, regardless of the size of their holdings. The areas bound to derive maximum benefit from this scheme are those which have remained fallow over the years or those which have had to be kept idle because of prolonged drought conditions during the past three years. Meanwhile, the Department of Agriculture is also importing 100 multi-purpose power tillers from Japan against a quota of 200 sanctioned by the Central Government.

Mechanisation of agriculture has a special importance for Kashmir in view of the valley's mono-crop economy. Efforts to change this pattern and to raise two crops a year have met with some success during last three years, inasmuch as, a summer variety as also a winter variety of wheat has been developed. The winter variety has had to be such that it could mature early enough to permit *kharif* operations such as transplantation of paddy seedlings by the middle of June.

While it has been possible for departmental experts in Kashmir to overcome the problem of evolving an early-maturing variety of winter wheat, it was still found that a gap of only about ten days was available for completing all the conventional preparations for paddy cultivation in *kharif*. The only alternative was to introduce mechanisation. This led to the introduction of a tractor hiring service to undertake all jobs, ranging from tilling to puddling and planting to harvesting, at a comparatively smaller cost and in much less time.

Meanwhile, there is an increasing awareness among departmental experts that rice cultivation is a comparatively uneconomic proposition, as it involves larger water resources, more labour and time, compared to other crops. It is pointed out that one cusec of water can irrigate 100 acres of maize-producing land or 200 acres of wheat-producing land

against only 40 acres of rice-producing land. This has led to a complete re-thinking on the pattern of agriculture in Kashmir. The irrigation authorities, frustrated by their failure in tapping underground water resources, have started advising farmers to use water available from small schemes for dry-crop cultivation only. □

THE first reactions of the leaders of political parties to the Budget proposals are on familiar lines. The inflationary pressure will intensify, savings will be more difficult, incentives to produce and save will be curtailed—these are the objections raised to the new taxation measures. There is a uniform concern for the proverbial common man. Such criticisms are self-defeating. It is always easy for the Government to point to inconsistencies in the positions taken up by responsible political parties. For instance, it is argued by these parties on the one hand that the Union Finance Minister has failed to avail of the opportunity for rationalising the tax structure. It has been pointed out that the ratio of indirect to direct taxes is of the order of 75:25 while in other countries the ratio is 50:50. At the same time, what little additions to personal taxations have been made are criticised on the ground that they will make savings more difficult. Thus even the reactions of the middle-of-the-road parties are contradictory and fail to provide a workable alternative. The opposition parties would do well to spell out the measures they would like the Union Finance Minister to adopt in order that the public exchequer may be in a position to meet its responsibilities. Such constructive alternatives alone would impress the public mind and help in correcting the mistakes, if any, in the approach of the Finance Minister. One great disadvantage of the massive majority enjoyed by one party in the Lok Sabha is that it acts as a damper to alternative policy formulations. The public soon loses interest in budget discussions in Parliament and only the pressure groups are seen frantically attempting to secure a modification here or there.

There is much in the economic and fiscal policies of the Government that could be discussed at the political level. But this would be possible only if the political parties are sincerely interested in raising public debates on vital policy matters. There is a tendency in our country to concentrate on those issues that are likely to yield quick political gains in terms of embarrassment to the ruling party. These are only short-term dividends and are likely to be dissipated before the parties go to the poll again for a mandate. They only help in providing diversion to the people. They have no educative value. All this needs to be changed. A worthwhile discussion could take place only if the parties make serious attempts at building necessary expertise and their high commands do necessary home work. It is easy to charge the bureaucracy advising the Government on economic and fiscal policies that it is living in an ivory tower and has no touch with reality

POLITICS TODAY

This criticism has been made while attacking the proposal for an excise on the *maida* and on ready-made garments. The alarms raised on these counts might prove exaggerated. If this happens the shoe will be on the other foot.

If the political parties fail in providing an effective democratic opposition, one would expect other interested groups to act as countervailing pressures. Here again, the situation is not quite satisfactory. The business community reacts as mechanically to important policy measures as the political parties. Every indirect tax is inflationary; every direct tax acts as a disincentive to production or saving. This approach cannot provide an alternative policy framework. Much deeper study and constructive reactions are necessary. Businessmen have now promised to co-operate with the Government in accelerating the economic growth. One of the channels of such co-operation would be co-operation in evolving a viable economic and fiscal policy. This will be possible only if they rise above their sectarian interests and view the scene from a commanding height. The question whether the Government would appreciate such a change in attitude is not relevant here. It is the question of educating the public so that people appreciate the constraints under which the fiscal policies are to be formulated, realise their contributions to these constraints and change their attitudes so as to be more co-operative in solving the difficult problems facing the country.

The trade unions do not seem even to realise that fiscal policies have a tremendous significance for the development of the economy, for generating larger employment and for holding down prices so as to preserve the real purchasing power of the wages. There is hardly any notable reaction from trade unions to the fiscal measures. When they express their opinion it is always in terms of certain ideological positions which might or might not have relevance to the subject matter of their criticism. The farm lobby is more effective in inhibiting the Government from taking certain desirable measures than in helping the Government to evolve rational, fiscal measures. Each one of these sectarian interests has a legitimate place in the debate on economic and fiscal policies. But they can occupy this position only if they are able to make an effective contribution to the evolution of these policies.

THE WORLD

From Our Own Correspondents

CHINA TRADE

Japanese dominate Canton fair

By A Special Correspondent

HONGKONG.

HUNDREDS of businessmen from all parts of the world recently took the train to Kowloon from Canton as the Trade Fair—China's 1971 Spring Export Commodities Fair to call it by its official title—closed down after month-long bargains and deals. Quite a few took the plane to Peking to continue their negotiations with appropriate Chinese officials.

Since 1957 when China held the first fair at Canton (in the Kwantung province in south China) the spring and autumn fairs lasting a month each have assumed increasing importance in China's foreign trade, now accounting for half the total trade of the country. For, although they are officially named as export commodities fairs, buying and selling both go hand in hand at the fairs. This year the fair attracted the largest attendance underlining the great advance made by China in developing its external diplomatic and economic relations and the increasing importance accorded to economic affairs over party and ideological matters, which, by no means, have taken a back seat.

China's external trade has been picking up since the beginning of 1969, after the decline in the two preceding years when economic activity was at a low ebb as a consequence of the disruption caused by the Cultural Revolution. In 1969, exports went up by 9 per cent over 1968 and two-way trade by 5 per cent, although the record set in 1960 was not exceeded.

China's external trade

(In US \$ million)

	1966	1967	1968	1969
Exports ..	2,170	1,915	1,890	2,060
Imports ..	2,035	1,845	1,820	1,825
Total trade ..	4,205	3,860	3,710	3,885

Eighty per cent of China's trade is with non-communist nations. Since the ideological and economic break with the USSR and its allies, trade with the former fraternal nations has been declining. In 1959, the communist partners accounted for 70 per cent of China's trade, nearly 50 per cent of the total being with the Soviet Union alone. Now the trade with Russia has shrunk to less than two per cent of China's total imports and exports. This also shows that China has been able to achieve a great degree of diversification in her foreign trade by mixing trade with politics or excluding politics altogether as suits her political and economic ends. Her principal suppliers in the past few years have been Japan, West Germany, the UK, Australia and Canada, in that order. Since wheat imports are now being cut, the dependence on Australia and, to some extent, Canada would be reduced. Foodgrains output has been going up in China for the last nine years running and wheat

imports in large quantities were resorted to, partly to enable the country to export rice which fetches a better price than the money spent on importing wheat. China's main imports, apart from wheat, have been iron and steel, chemicals and fertilisers, machinery and transport equipment, non-ferrous metals, natural rubber and diamonds.

China's exports go mainly to Hongkong and Macao, respectively ruled by Britain and Portugal but geographically adjoining China, Japan, Singapore, the UK, West Germany and France. (Incidentally, the close military ally that Pakistan is supposed to be is only 1.5 per cent important to China as a trading partner.) Foodgrains and food products are the largest single item of export from China. Other goods are crude materials, like raw silk and animal by-products, textiles and garments, light manufactured goods and ores.

Reliable figures for 1970 are not yet available but the trade last year is estimated to have increased by the same percentage as was achieved in 1969, if not more. Prospects for this year are considered even brighter, with a much larger number of countries willing to trade with Peking and a somewhat better availability of goods from China and her requirements remaining at the same level as last year, if not higher.

At the Canton fair, good business was reported in Chinese food products and crude materials. The offerings of tea, soyabean, groundnut and other oilseeds, hog casings and bristles were described as good. China also sold substantial quantities of handicrafts and light engineering goods as well as glassware. On the other hand sales of antimony, bismuth, tungsten and cadmium were not encouraging in the initial stages, partly for the reason that the Chinese wait until the end of the fair to see if they can get better prices from the buyers. There is an element of playing off one buyer against another, which only proves that heavy doses of Maoism cannot weaken the innate trading instincts of a community. On the other hand the businessmen were generally agreed that the Chinese communists have their own code of trade ethics which means a word given is always honoured.

There were some difficulties in the way of sale of steel and heavy industrial products to China as the fair opened but these, again, were not unusual because the Chinese buying organisations take time to make up their minds. Surprisingly even the pastmasters in the art of hard-sell and bargaining, the Japanese, were reported to be bitterly complaining that they were being outwitted by their West European rivals. Their main difficulty was in respect of credit as the Chinese are increasingly

insisting on deferred payments terms. This handicap was removed by Tokyo while the fair was still on and is believed to have made trading easier for the Japanese at Canton. Acting once more in close concert with business circles of the country, the Sato Government cancelled the so-called "Yoshida Letter" written in 1964 by the former Japanese Prime Minister (who had then ceased to be Prime Minister) by which the Taiwan Government was assured that Japan would not extend long-term credit to China. This should be interpreted as one more turn of the screw so far as China is concerned, having extracted a series of concessions from Japan for the facility of trading with her, and one more Japanese move to accommodate Peking short of diplomatic recognition.

The monetary crisis in Western Europe also hit the fair and a few major deals had to be put off because of the uncertainty over the parity of the mark and the Swiss franc in particular. However, this could not have been a formidable problem because the Chinese provide price quotations in their own currency, the Renminbi (RMB) and pounds sterling and insist on letters of credit being opened in RMB with the state-owned Bank of China which then settles payments. Besides the British pound, the mark and the Swiss franc are generally acceptable currencies and even dollars are now welcome. The Bank of China has now decided to give daily quotations of currencies so that prospective buyers and sellers would know where they stand regarding prices. (One RMB is roughly equivalent to US \$0.40.)

Indians were conspicuous by their absence at the Canton fair, although as stated earlier, there were some traders of Indian origin from Africa, Hongkong and other places. Indian passport holders have to first get an endorsement for a visit to China from the Government of India and then only can they apply for visas to visit China. A visit to the Canton fair could be an eye-opener to Indian businessmen because they can see the considerable scope that exists for Indian exports to China and for buying some of the Indian requirements at competitive prices.

At the moment, however, any such visit can only be of academic interest since goods of Chinese origin are still not officially welcome in India. A change of official attitude is needed and New Delhi has to show the same resilience that Peking has shown all along in separating trade from politics or mixing it up as and when it suits her national interests. China's deplorable attitude on Bangla Desh has soured the climate for a thaw in India-China relations once more, but it would be a mistake to take the present as the long-term policy and spurn the opportunities for normalising ties. Trade could be one way of achieving the objective. It is to be hoped that the Indian diplomats who visited the fair, from Peking and Hongkong, have made appropriate recommendations to South Block. Their visits should not be treated as mere routine observation trips. □

KEEPING A NATION ON THE MOVE

*a national trust
for economic prosperity*

As many as 20 airlines of international repute avail of INDIANOIL's expert refuelling service. In the growth of India's transport and communications, INDIANOIL has been playing a distinct role. But that is not to belittle its contribution to the nation's agriculture and industry. In a short span of a decade, INDIANOIL has emerged as the biggest oil refining and marketing organisation in India—meeting more than half of the nation's total requirements of petroleum products.

With a chain of refineries processing indigenous crude, a vast pipeline transportation system, and a countrywide storage and distribution network, INDIANOIL has ensured an uninterrupted flow of oil for India's defence and development.

As part of the nation's planned development INDIANOIL ceaselessly strives to take the country towards self-reliance and self-sufficiency in petroleum.

POWER

Punjab's chronic power anaemia

CHANDIGARH.

POWER generation in Punjab is in a critical condition. The Bhakra reservoir is fast losing its water-height. On present indications, the water-level in the reservoir (Govind Sagar) is expected to fall to 1,445 ft by May 21, which will reduce power-generation to the minimum. If the level goes below 1,442 ft, the turbines will start sucking air which will cause irreparable damage to them. Punjab is on the brink of a power famine.

The wheat crop worth Rs 300 crores is lying in the fields awaiting threshing and the State Government is not in a position to supply electricity for the massive threshing operations. There is a shortage of twenty-nine lakh units of electricity per day; the minimum demand is 75 lakh units per day and the supply from all sources is 46 lakh units only.

The prospects of an improvement in the situation appear to be bleak. There have been unexpected rain-showers which have lowered atmospheric temperature. This has slowed down the melting of snow in the Bhakra catchment area, which is bound to aggravate the power distress in Punjab and Haryana. A mild summer will make the situation "very hot" in terms of power and irrigation supplies.

But an interesting fact is that the Delhi Electric Supply Undertaking—a Government of India organisation—is making Rs 54,000 a day out of Bhakra's power distress. The DESU injects, at night, nine lakh units of electricity into the Bhakra grid. It takes almost the same supply during the day. The DESU pays at the rate of three paise per unit to the Bhakra Management Board (BMB). The thermal power which DESU gives to the Bhakra grid costs five paise per unit, according to Punjab experts. But DESU charges 11 paise per unit from the BMB.

Punjab's power distress is the result of unimaginative and unrealistic planning. The planners had placed all the "power-eggs" of Punjab in one basket—the hydel system, particularly the Bhakra power-complex. In dry years, the power system goes "dry" and the State runs into a power famine. The current year so far has been drier than the driest year on record. The inflow into the Govind Sagar has been low since October last. The inflow on May 5, in a dependable year should be 8,615 cusecs; it was only 4,949 cusecs on that day, this year.

Punjab has been suffering from power anaemia for the past many years. This has affected the health of its farms and factories. A cure for this affliction is nowhere in sight; it is not easy either, unless the Government of India agrees to the installation of a 400/600 megawatt nuclear power house in the State and the construc-

tion of the Thein Dam on the river Ravi to make use of the large quantities of water going waste to Pakistan.

The total available power is 166 mw, against the demand of 583 mw. Of the available power, the thermal system contributes only 7 mw. The future appears to be dark. According to conservative estimates, the power demand of the State in 1974-75 will be 1,195 mw against a maximum availability of 607 (assuming that all power generation plans will be implemented on schedule). The total power generation, on the present run of events, is not likely to go beyond 688 mw by 1978-79, but the minimum demand at that time is expected to rise to 2,281 mw.

In 1947, Punjab had a total installed capacity of 48 mw and a maximum demand of ten mw. Then came the mighty Bhakra. It raised the installed capacity to 605 mw and the total connected load to 308 mw. Panicked by this apparent glut of electricity, Punjab adopted a "grand clearance sale" formula and sold electricity at nominal price, even at below cost price in a particular case. The planners did not visualise that the State's own power demands would grow by leaps and bounds. Taking it for granted that the power demand would increase at a very slow pace, they did not install the transmission system which was needed as a cushion to absorb unexpected pressures. When faced with power shortage, the planners were so busy in increasing power generation capacity that they could spare neither the time nor the funds to remodel the transmission system. This led to the twin problems of low-voltage and frequent trippings.

Construction work is going on mainly on three power projects. First, in regard to the Upper Bari Doab Canal (UBDC) hydro-electric scheme which will have three power houses of 15 mw each, the first power house is scheduled to be commissioned next month and the second in 1972 and the third a year later. Secondly, the Bhatinda thermal plant is coming up fast. The first stage of this project which will yield 110 mw will be ready by October, 1972, and the second generation set of the same capacity will be commissioned a year after that. Thirdly, the Beas project which is under construction will provide 273 mw electricity when completed in 1975-76.

Besides, the State Government has submitted six more power-generation schemes to the Government of India for approval. These are: Thein Project with a total installed capacity of 172 mw; a nuclear power station of 400/600 mw capacity; Ropar hydro-electric scheme to add 35 mw to the State grid; Mukerian project to generate 60 mw; extension of Shanan power house to raise its installed capacity from 48 mw to 100 mw; and construction of an additional Nangal hydel

channel and power houses to add 37 mw of firm power at 60 per cent load-factor.

The State Electricity Board has initiated action to import diesel sets of a total capacity of 35.72 mw and buy 20 new and some second-hand sets locally, which will add 73 mw to the State grid from diesel generation by the end of the current year. Despite this chronic power anaemia, the consumption of electricity in Punjab per one thousand population and per sq. km is the highest in the country. The power tariffs are very attractive and only Jammu and Kashmir, Mysore and Himachal Pradesh offer cheaper industrial power. □

INDUSTRIAL RELATIONS

Inter-union rivalry the main hurdle

BANGALORE.

THE concern of employers at the lack of the right type of industrial relations and the deleterious impact of labour unrest on the country's economic activity was forcefully brought out at the 38th annual session of the All-India Organisation of Employers, held here recently. The main reasons for the economic and industrial progress in Japan, Malaysia and many European countries, it was pointed out, was the virtual absence of strikes. West Germany, which employed almost double the industrial labour force of India, lost only 50,000 man-days a year, while India touched the 19-million mark in 1969; in 1970 the loss was expected to far exceed the 1969 level. Such loss of working time and potential production was alarming for a developing economy.

Considered against this background, it was but natural that the main theme of the presidential address of Mr G. K. Devarajulu centred on industrial relations. Mr Devarajulu said that the experience of the last few years indicated that there was very little of industrial relations. As the law stood at present, just seven workers could raise an industrial dispute, scuttle a settlement or provoke an altogether new issue or dispute. Again, while the trade union law encouraged a multiplicity of unions and the consequent inter-union rivalry at the plant level, the Industrial Disputes Act provided an all-too-easy access to adjudication. In this context he referred to the frequent strikes by the Indian Airlines employees, the work-to-rule tactics in Air India and the banking and insurance companies, and the non-cooperative attitude of the unionised workers in the Durgapur steel plant, where only 200 workmen could dislocate the working of the entire plant.

Mr Devarajulu welcomed the statement by the President of India, Mr V. V. Giri, to the joint session of Parliament in March last that the Government proposed to consult leaders of trade unions and managements to evolve a sound industrial relations policy and to secure increased productivity consistent with a fair deal to

labour. He hoped the Government would not delay the amending legislation required to implement the agreed tripartite decision to improve the industrial relations machinery.

Commending the recommendations of the National Commission on Labour for the setting up of industrial relations commissions to function independently of the political administration, Mr Devarajulu said that for the maintenance of harmonious industrial relations what was important was that the parties responsible must seriously comply with the rules of the game. The trade union movement was heavily politically biased. The political rivalries, in fact, directly affected the trade union movement, and instead of uniting the workers tended to further divide them.

Mr Devarajulu said that the wage bill had been mounting without any corresponding or even near-corresponding increase in productivity. The broad guiding principles of a wage policy in a developing and populous country like India should be that wages must be commensurate with productivity and that the wage level in any sector must bear some relationship with wage levels in other sectors, such as agriculture, industry, transport, etc. He called for a clear and effective national wage policy based on the urgent need to correct the existing weaknesses in the economy, on the one hand, and the inflationary pressures, on the other. □

INDUSTRIAL UNITS

New impetus in Rajasthan

JAIPUR

THE Rajasthan Industrial and Mineral Development Corporation is expected to receive from the State Government Rs 45.67 lakhs during 1971-72 for boosting the industrial activity in the State. The amount will be utilised by the Corporation for the fluorite beneficiation plant.

Meanwhile, 16 districts have been notified as industrially backward in Rajasthan under a special scheme of the Centre to remove regional imbalances. Under the scheme, concessional finance will be made available in these districts to entrepreneurs from various institutional financing agencies. These districts are Jalore, Nagaur, Jodhpur, Churu, Sikar, Jhunjhunu, Tonk, Alwar, Sirohi, Udaipur, Banswara, Dungarpur, Bhilwara, Jhalwar, Barmer and Jaisalmer. The concessions to new entrepreneurs in these districts will be mainly in the form of easier terms of repayment and interest and participation in share capital by the Industrial Develop-

ment Bank and the Industrial Finance Corporation.

Of these 16 districts, two will be entitled to outright subsidy of 10 per cent up to an investment of Rs 50 lakhs in addition to the concessions. The selection of these two districts is still under the consideration of the Planning Commission.

The State has already made considerable progress on the industrial front. ECG paper, used in electrocardiogram, is now being manufactured in the State itself. Three vegetable ghee factories at Jaipur, Udaipur and Chittor will be set up shortly in the private sector. Efforts are also being made by the State Government to set up a scooter plant in the public sector, besides a tractor manufacturing plant. A Rs 82-lakh beet-cum-cane diffusion plant has already been established in the Ganganagar Sugar Mills, a State Government undertaking. According to present indications, about 12,000 quintals of beet sugar will be produced by this plant during the current financial year.

The expansion in the capacity of the sodium sulphate plant from 20 tons to 40 tons a day has been completed. Sodium sulphate worth about Rs 40 lakhs a year will be produced as a result of this. Rock phosphate prospecting in the Udaipur area is expected to be completed soon by the State Government. As soon as the reports of consultants about the beneficiation of the mineral are available, work will begin on a beneficiation plant. In a limited area near Udaipur, rock phosphate deposit of 170 crore tons has already been proved. The current extraction of 800 tons of rock phosphate ore a day is expected to touch the figure of 1,500 tons by the end of 1971. According to present estimates, the State hopes to earn Rs 2.5 crores from this mineral alone.

Huge pyrites deposits, found in the Saladipura area, have further brightened the prospects of a big fertiliser complex coming up in the State. A token provision for this has already been made in the Fourth Five-Year Plan. Likewise, limestone deposits have been found in various parts of the State. These are likely to give a fillip to cement industry in the State.

According to a new scheme recently finalised by the Government, about 800 mining lessees and 200 prospecting licensees covering 26 different minerals can now get their areas directly investigated by the State Mines and Geological Department. The scheme would benefit interested parties in regard to pre-investment surveys for systematic exploration of mineral wealth. It is also expected to give greater fillip to the prospecting activities. □

SILK

MP's neglected tribal industry

BHOPAL

A NEGLECTED tribal industry that has capacity for large-scale dollar earning is the tusser silk industry. It is an age-old cottage industry confined to the three districts of Bastar, Bilaspur and Raigarh in the backward tribal region of Chattisgarh in Madhya Pradesh. About 2,000 families are engaged in tusser reeling and weaving on handloom, while the process of cocoon-rearing and collection keeps another 4,500 tribal families engaged.

The noticeable preference of the western consumer for the exotic silks and draperies of India has helped to throw up new ideas about developing the tusser industry, not only as a means of Adivasi welfare, but also for export promotion. Nothing big was planned for the industry till the Third Plan, when only Rs 20 lakhs were earmarked for its development in consultation with the Central Silk Board. Six seed farms and markets were set up. Two reeling and spinning units were established at Seoni in Chhindwara district and Koni in Bilaspur. Training of about 300 persons, including officials, in silk-worm rearing and spinning was undertaken. They, in turn, gave demonstrations to rearers of silk-worms on Government seed farms. All this raised the production of cocoons from 26,000 kahans (one kahan is equal to 1,280 cocoons) to 30,000 in 1965; tusser yarn went up from 80,000 kg to 120,000 kg and tusser fabrics increased by 100,000 metres. But the drought years that followed brought progress practically to a standstill. In the next two years the production of cocoons went up by only 5,000 kahans, yarn increased to 140,000 and fabrics to 900,000 metres from 800,000.

Development plans for the next few years are also not very ambitious. A sum of Rs 40 lakhs has been earmarked. The plans this time emphasise popularisation of the silk products at all important industrial exhibitions in the country and abroad. Market studies have been made in Japan, France, West Germany, and also the United States. Efforts will be made to increase the food plants and research in improving the silk-worm varieties will be undertaken. New plantations, covering about 1,000 acres, will be got ready by 1975. These will provide food plants to about 1,000 more families of silk-worms. Block plantations in important tusser villages will also be encouraged. The number of seed farms will be increased from eight to 12. They will be able to meet the entire present demand for seed cocoons, and bring the cocoon production up to 50,000 kahans.

The two spinning units are being expanded and power-driven machinery is being installed to increase the yarn production. It is expected that the total turnover of tusser silk through all these plans will reach the value of Rs 1.5 crores. Of this, about Rs 50 lakhs worth of tusser silk is expected to be exported, more than doubling the present level of exports. □

Belapur Sugar and Allied Industries Limited

CHAIRMAN'S speech delivered at the Annual General Meeting of the shareholders of the Company held on Monday the 31st May, 1971 at 4-00 p.m. (S.T.)

LADIES AND GENTLEMEN,

It is with pleasure that I welcome you all here today at this Meeting of the merged Company Belapur Sugar and Allied Industries Ltd. Although the Company's name has been changed all of us are familiar with each other and we do hope to have happy and mutually beneficial relationships for very many years. Before coming to other matters I would once again like to say that each and every member of this merged Company should continue to have the same confidence and faith in the new Company as they had in The Belapur Co. Ltd, and the Board would try its best to ensure good progress and prosperity for the benefit of all concerned.

The Directors Report and Accounts of the merged Company have no doubt been studied carefully by you and while noting some of the features, generally you may have felt confidence in the efforts made in the operations of the Company.

As would have been noticed despite a slightly higher recovery the total sugar produced was less primarily due to the non-availability of sugarcane. Apart from that, your Company had to face several other obstacles and difficulties particularly in the matter of the price factor affecting the products of your Company. As a result of the slow releases of sugar greater burden of financing and stocking and storing this commodity devolved on the operations of this Company. This extra strain coupled with substantial lower prices in a depressed market added to the final reduced results as would be noticeable from the Accounts. It would not be out of place to refer also to the poor quality of sugarcane available for crushing and greater efforts were needed to ensure better recovery through other purchases from quality sugarcane growers.

Now that, though late as usual, the Government in its wisdom have realised the need of decontrolling sugar, your Company feels that through its efforts it will ensure better profitability for its higher grade sugar and results would in the coming Accounts be of a higher satisfactory nature. While not trying to be over optimistic your Board and the Management feel that when presenting the Accounts for the current operations soon after the close of the year 1971, a more heartening picture will be evidenced and appreciated by all of you.

The crushing season this year closed some time in the second week of May. Generally speaking the recovery was somewhat higher than last year and also the sugar produced was more compared to last year's production. Nevertheless, as mentioned earlier, the stocks of unsold sugar in our godowns are pretty heavy.

Your Management is keeping a strict watch of the price variations and would at the earliest opportunity avail of disposing some portions of this at most advantageous prices. Once again to mention about the heavy stock, I would say that the total stocks carried over are almost more by 40 per cent to 50 per cent as compared to the stocks held by your Company at this time last year.

A word about the frequent threat of nationalisation of sugar industry here would not be out of place. From time to time responsible authorities choose to make statements on this issue for peculiar reasons and not generally in the best interest of either the industry or the consumer. The demoralising effect of this is felt seriously and severely in the case of such units who need to have programmes of modernisation and/or expansion. Already the evil effect of taking over sugarcane plantations from certain units in some States as in Maharashtra have had bad consequences of a nature hurting the economy of sugar production of the nation and thus making this vital commodity less competitive in the international sphere. While other countries realising this have gradually reverted to the old system as in Indonesia, here in India for illogical unrealistic and ideological reasons from time to time the talk goes on from responsible quarters about nationalising this vital industry of our nation. Not being yet satisfied with the evil consequences felt by large investments through various State enterprises working as a drag in the economy of the country, it is most unfortunate that responsible and farsighted leaders of our nation are even giving the farthest thought to such unwarranted gimmicks as would under no circumstance ensure satisfaction to any class, leave alone even the farmers and of course not to the consumers. It is hoped in the not too distant future the bitter lessons learnt would lead to a quick corrective on other fronts and put a complete stop to discussions or talks of nationalisation as being a cure for all economic evils. However, such lessons have to be learnt in a hard way and at a great expense to the nation.

Your Management is continuously having programmes of renovation and modernisation and from time to time various essential improvements have been made. One would with confidence say that your factory is now an up-to-date modernised unit which could compare favourably with any other. The results from these farsighted efforts of the Management will have a vital bearing in the future of your Company. Along with that your Management have kept a keen eye on controlling the expenses as would be seen by you in the detailed operating cost statement. When the operating costs are moving up in comparable units it would be to your satisfaction to find that all efforts have been made to control this, operating cost which show a very small increase to the

joint operating costs of both Gangapur and Belapur as of last year.

Finally, I would like to mention something about the recent taxation measure. Undoubtedly corporate bodies like your Company will be called upon to pay a heavier tax bill in the coming year. Nevertheless you would have noted with satisfaction that on account of the great efforts and farsighted approach of your Board of Directors as well as all executives of your Company, through this amalgamation it is expected that the tax liability during the year under discussion at this meeting and perhaps even for the succeeding year, a good deal of saving would result.

Finally, I may once again crave your sincere co-operation and would welcome any constructive suggestions or criticisms. In that context I would implore you to bear with your Board of Directors for a little more time particularly in the matter of some comments in the Directors' Report. After I deal with your other comments I would like to explain generally that aspect and hope you would feel satisfied.

Lastly, I sincerely thank my colleagues on the Board and also other executives and staff members both at Head Office and the factory for carrying on the working of the factory smoothly during the year, and for having reached for the first time the production figure of 3 lakhs bags of sugar the maximum production in the history of our Company.

THE INDUSTRIAL COURT REPORTER

Started in January 1948, the *Industrial Court Reporter*, issued monthly, contains important orders and awards of the Industrial Court and Tribunals in Maharashtra State, as well as the selected decisions of the High Courts and the Supreme Court of India. The *Reporter* serves employers, employees, trade unions and lawyers in finding at one place the case law on industrial and labour matters.

MONSOON AND COMMODITY SURVEY

Getting ready for the new season

By Commerce Research Bureau

IN large parts of the country, the pre-monsoon drizzles this year have been heavier than normal. In parts of the country, the monsoon has already begun. Nevertheless, most of the monsoon with its proverbial vagaries lies ahead of us. A good part of the year to year changes in the Indian economy is still determined by the monsoon. Naturally, the whole nation looks forward to the ensuing monsoon with understandable suspense and trepidation.

During the recent years, Indian agriculture has done reasonably well. After reaching a low in 1966-67, the agricultural production has been rising very rapidly. Between 1966-67 and 1970-71 it has increased by 35 per cent implying an annual growth rate of 7.8 per cent. A good part of this growth represented only a recovery from the drastic fall during the disastrous years of 1965-66 and 1966-67. If in order to eliminate this element of recovery we take 1964-65 as the base year, the annual rate of growth between 1964-65 and 1970-71 works out to 1.8 per cent. *Prima facie*, this is certainly not a good performance. But a question is: How much of this performance was due to a succession of good monsoons in recent years and how much due to the innate improvement in Indian agriculture?

The so-called Green Revolution has been with us for only 5 years or so and this period is too short for undertaking any dependable assessment of it. Under such circumstances, the economic analysts are always keen to have 'one more' year's data to isolate better the underlying trend unclouded by the vagaries of weather. Thus, the performance of the Indian agriculture in the next year will certainly give us a better insight into the nature and extent of the Green Revolution.

In the first two years of the Fourth Five-Year Plan, the Indian agriculture has certainly done well and the Annual Plan targets in respect of agriculture were broadly fulfilled—a rare achievement. Even if two years out of the remaining three years of the Fourth Plan record similar achievements, the Fourth Plan would be a grand success. But would it be so? There is again the same old nagging question: How much of the performance of the first two years of the Plan period was due to weather—an undependable factor—and how much due to dependable innate strength of the Indian agriculture? The level of output of various commodities in the coming year—irrespective of whether the monsoon is good or bad—will give us some reasonably firm clues about the trend in the rate of growth of Indian agriculture. This will also give us some idea as to whether and how far we are going to fulfil the central target for agricultural production of the Fourth Plan. Once this is known many other things would be easier to foresee.

The next monsoon is being awaited with all the greater impatience in Bihar and Maharashtra, which have had two bad monsoons in succession. Thus, at 70 lakh tonnes, the foodgrains output of Bihar in 1970-71 was 21 per cent lower than the

level two years ago. Similarly, in Maharashtra at 55 lakh tonnes, the 1970-71 level of output was 23 per cent below the level two years ago. For the rest, throughout the country the New Agricultural Strategy will be put to test during one more season. The fate of the Indian agriculture and the future of Indian economy in turn still hangs in the balance. We still do not know whether the New Agricultural Strategy marks a real break-through or it is only a false hope. The next monsoon will not provide a complete answer to many of our questions but it will certainly bring us somewhat nearer to the correct picture.

The monsoon in 1970 was excellent throughout the country except in Bihar and Maharashtra. In Maharashtra, 21 districts out of 26 have been adversely affected on account of drought conditions. Barring these areas, in the country as a whole, the precipitation of rainfall during 1970 was well distributed and the damage to kharif foodgrains in the flood-belt of the country was insignificant.

As a result, hopes ran very high. At one stage, it was expected that during the agricultural year July 1970-June 1971, the country would harvest a bumper foodgrains crop (kharif plus rabi) of 106 million tonnes. But this expectation was not realised owing to the unseasonal rainfall in May 1971, which appears to have damaged about a million tonnes of foodgrains valued at about Rs 100 crores. This brings home forcefully the need of improving our post-harvest technology, particularly the tech-

nique of processing and storage of foodgrains.

Nevertheless, the production of foodgrains is expected to rise by 5 million tonnes to 104.5 million tonnes in 1970-71 (Table 1). Thus, against the target of the average annual increase of 5.5 per cent laid down under the Fourth Plan, the actual increase in foodgrains production in 1970-71 would be about 5 per cent. The increase in foodgrains output is spread over both the kharif and rabi seasons.

The production of kharif foodgrains is expected to increase from 69 million tonnes in 1969-70 to 73.50 million tonnes in 1970-71. Of this increase, the output of rice alone is expected to increase by 2 million tonnes. Though the winter rains were delayed, the output of rabi foodgrains was, at an earlier stage, expected to rise by 1.5 million tonnes. But the unseasonal rainfall in May has damaged a million tonnes of foodgrains. As a result, the output of rabi foodgrains is likely to register a modest rise of half a million tonnes to 31 million tonnes.

Turning to the production of commercial crops, the output of five major oilseeds is expected to increase from 75.38 lakh tonnes in 1969-70 to 87.65 lakh tonnes in 1970-71—a rise of 16 per cent. The production of groundnut (nuts-in-shell) is expected to touch an all-time record level of 64 lakh tonnes. Even this level of production is inadequate to meet the country's requirements. The Government has, therefore, had to augment the edible oil sup-

Table 1 : Commerce Research Bureau's estimates of agricultural production in India—1970-71

Commodity	Unit	Weights in the official index numbers	1969-70		1970-71		Percentage variation

* Trade estimates.

plies through the imports of soyabean oil from the US, sunflower seed oil from the USSR and rapeseed from Canada. During 1971-72, the Government plans to import about 1.50 lakh tonnes of soyabean oil from the US. Turning to fibres, the output of cotton, jute and mesta during 1970-71 was significantly lower than the preceding year. The sugarcane crop is expected to be only nominally lower than the record level of the preceding year. The output of tea increased from 395 million kg in 1969 to the record level of 419.7 million kg in 1970 or by 6.3 per cent. During 1970-71, the production of coffee at 1.10 lakh tonnes has increased sizably by about 75 per cent and established an all-time record.

In 1970-71, the overall agricultural production is expected to increase by 4.5 per cent, against an impressive rate of 6.5 per cent in the preceding year and 5 per cent per annum fixed for the Fourth Plan. Thus, the performance of agricultural production in 1970-71, though slightly below the target, should be regarded as satisfactory, particularly because this was on top of the excellent performance of the preceding year.

While waiting for the monsoon, considerable efforts are made by both farmers and Government agencies to raise the level of agricultural production in the agricultural year July 1971 to June 1972. Private investment in agriculture has increased significantly. Even the small farmers are investing sizable funds in agriculture by borrowing, among other sources, from the nationalised banks. The aggregate advances of public sector banks to agriculture stood at Rs 344 crores at the end of December 1970. A further surge can be expected in 1971.

For 1971-72, a number of agricultural development programmes have been undertaken. Firstly, the target for the coverage of high-yielding varieties programme has been fixed at 16.7 million hectares for 1971-72, against the actual achievement of more than 14 million hectares in 1970-71. Further developments for better varieties have occurred. A new wheat variety namely, HD-1941, a triple dwarf capable of good response to high doses of fertilisers, has recently been recommended for public release. There are also a number of high-yielding varieties of rice, namely, *Jaya*, *Padma*, *Hansa*, *Pankaj*, *Jagannath* and *Sabarmati*. Secondly, the target for the area under multiple cropping has been fixed at 10.30 million hectares for 1971-72, against the actual achievement of 9.40 million hectares in 1970-71. Thirdly, the consumption of chemical fertilisers is expected to be stepped up by about 15 per cent to 2.4 million tonnes of NPK in 1971-72, against the estimated consumption of 2.1 million tonnes in 1970-71 (Table 3). Fourthly, additional area is being brought under the irrigation facilities. At present, only one-fourth of the net sown area is under irrigation facilities. Since water is the crucial input, a number of State Governments are implementing major and minor irrigation schemes for increasing the agricultural production. Fifthly, during 1971-72, about 58 million hectares will be covered under the plant protection measures, against the actual achievement of 43 million hectares in 1970-71.

The Union Ministry of Agriculture has drawn up an ambitious Rs 4.8-crore programme for 1971-72 to achieve a breakthrough in the production of the commercial crops such as cotton, jute and oilseeds.

Besides, Rs 1.1 crores will be spent for research in this field. The Union Ministry of Agriculture has also formulated a scheme for setting up about 500 agro-service centres in rural areas on a pilot basis.

The Government has now turned its attention to dry farming. Areas with an annual rainfall ranging between 375 mm and 1,125 mm come under the operational scope of the programme. An intensive programme has been launched to develop and extend techniques and measures which are capable of benefiting dry farming regions. The development efforts under this programme involve the adoption of soil and moisture conservation practices, the cultivation of drought-resistant and short-duration crops and new techniques of fertiliser applications etc.

On the whole, the country is making reasonably good efforts to get ready for the new agricultural year. Given the normal monsoon, the foodgrains production may touch a level of 108 million tonnes in 1971-72, against the target of 115.6 million tonnes. If the monsoon turns out to be exceptionally good, the foodgrains production may rise to 110 million tonnes. In case the monsoon turns out to be subnormal, the foodgrains production may remain stagnant at around 105 million tonnes.

According to the Agricultural Prices Commission, in 1971, the offtake from the public distribution system is expected to fall to 8.5 million tonnes from 9 million tonnes in 1970. However, on account of the extra demand for foodgrains arising from the influx of refugees from Bangla Desh, the offtake of foodgrains from the public distribution system is expected to rise rather sharply during 1971. To meet this situation, the Government has decided to import about three million tonnes from the US under the PL 480 by the end of 1971. At the end of December 1970, the stocks of foodgrains with the Union and State Governments were 5.4 million tonnes.

A review of the performance of various States in respect of agriculture during 1964-65 to 1970-71 and the various measures they plan to undertake to increase the agricultural production in 1971-72 are given below:

Andhra Pradesh

During the years 1964-65 to 1970-71, the production of foodgrains in this State remained stagnant. In fact the production of foodgrains was much below the 1964-65 level in the years 1965-66 and 1967-68 to 1969-70 (Table 2). Telengana, an unirrigated low rainfall area, is the problem area of the State where possibilities of agrarian advancements are being explored on scientific lines. The total cultivated area in this region is 4.2 million hectares. Of this only 0.7 million hectares have irrigation facilities, mainly from non-reliable tanks. Hope in the drought-affected areas of Rayalaseema and Telengana now centres on the exploitation of ground water. Turning to the State as a whole, the State Government has programmed to bring about 10 lakh hectares under the high-yielding varieties during 1971-72, against about 8 lakh hectares in 1970-71. Given the normal monsoon together with the use of modern inputs, the production of foodgrains in the State is expected to increase by about 5 lakh tonnes to 83 lakh tonnes in 1971-72.

Assam

Annual compound rate of increase of foodgrains production between 1964-65 and 1970-71 was only 2.2 per cent, against the national average of 2.6 per cent. Thus, the performance of foodgrains production in the State was poor. The State Government has formulated various programmes to achieve a five per cent increase in the production of foodgrains during 1971-72. Besides, the production of cash crops, such as, jute, tea, sugarcane, potato and oilseeds will be increased during 1971-72 so as to secure a balanced development of agriculture. During 1970-71, the high-yielding varieties programme will cover an area of 15 lakh hectares, against the expected 13 lakh hectares in 1970-71. Plant protection measures are expected to cover an area of 13 lakh hectares in 1971-72, against 1.1 lakh hectares in 1970-71.

Bihar

Owing to the drought conditions in south Bihar during 1970-71, the production of foodgrains fell by 5 lakh tonnes to 70 lakh tonnes. Thus, the foodgrains production in 1970-71 is lower than the level achieved in 1964-65. As a result, between 1964-65 and 1970-71, the foodgrains production in the State showed a negative rate of growth. The State Government plans to increase the area under irrigation and has taken steps for the speedy execution of the Rs 578-crore Bagmati irrigation scheme. The scheme envisages assured irrigation facilities to 1.11 lakh hectares in Champaran and Muzaffarpur districts. During 1971-72, the area under high-yielding varieties is expected to be raised to about 8.5 lakh hectares, against about 7 lakh hectares in 1970-71.

Gujarat

The production of foodgrains in the State between 1964-65 and 1970-71 increased at the annual compound rate of 2.8 per cent, i.e. slightly above the country's rate of growth of 2.6 per cent. However, Gujarat farmers have specialised in the production of cash crops such as groundnut, castorseed, tobacco and cotton where they have raised the productivity of these crops significantly. If the production of non-food crops is taken into account, the overall performance of this State shows an impressive growth rate. During 1971-72, an area of 10 lakh hectares is expected to be covered under the high-yielding varieties, against an estimated coverage of 8 lakh hectares in 1970-71.

Haryana

Though the State has visibly achieved a break-through in the field of agriculture, the employment of improved technology on the farm has yet to attain desirable level. The green revolution in the State is evident in respect of wheat. The production of foodgrains in the State increased by a fantastic rate of 9.3 per cent per annum between 1964-65 and 1970-71. This is a remarkable achievement. The State is surplus in foodgrains.

During 1971-72, the State Government has programmed to bring about 10.4 lakh hectares under the high yielding varieties programme, against 8.8 lakh hectares in 1970-71. The consumption of fertilisers is proposed to increase from 104 kg per hectare in 1970-71 to 138 per hectare in 1971-72. However, the consumption of fertilisers

during the 1970 kharif was only 14 kg per hectare i.e. slightly above the national average of 12.2 kg per hectare. During 1968-69 and 1969-70, the net irrigated area in the State has increased at the rate of 7 per cent per annum. This rate of increase is expected to have continued in 1970-71. Thus, the State is making all efforts to bring more area under irrigation. The Jui Canal Project and Loharu Lift Irrigation Scheme are crucial landmarks in the history of irrigation in Haryana. The work on these schemes is in progress.

Himachal Pradesh

Between 1964-65 and 1970-71 the production of foodgrains in the State increased at a satisfactory rate of 5.2 per cent per annum, against 2.6 per cent for the country. The possibilities of increasing foodgrains production through extensive measures are rather limited in the State on account of difficult hilly terrain and stony small holdings. The high-yielding and multiple cropping programmes have been launched in the valley areas of the State. Further, mixed farming is in progress. Two projects with the collaboration of Federal Republic of Germany are in progress in Mandhi and Kangra districts for the purpose of integrated farming. During the 1970 kharif the consumption of fertilisers per hectare in the State was less than half of the national average. Recently, the State has made big strides in horticulture and has earned a name as a production of quality apples. The area under horticulture in the State is expected to increase from 39,274 hectares in 1969-70 to 42,530 hectares in 1970-71. In 1971-72, it is expected to increase further to 45,000 hectares.

Jammu and Kashmir

This State registered the highest annual compound rate of increase of 12.8 per cent in the production of foodgrains between 1964-65 and 1970-71. This is a remarkable achievement. Nevertheless, the State continues to be deficit in foodgrains. Still more efforts are needed to wipe out the foodgrains deficit. During 1971-72, about 50,000 hectares are expected to be covered under the high-yielding varieties, against 30,000 hectares in 1970-71. The consumption of fertilisers was 3,787 tonnes in the 1970 kharif. This is expected to increase to 4,500 tonnes in the 1971 kharif. If the monsoon in 1971 turns out to be good, the State is expected to increase its foodgrains production from 11.75 lakh tonnes in 1970-71 to about 13 lakh tonnes in 1971-72.

Kerala

Between 1964-65 and 1970-71, the annual compound rate of increase in State's foodgrains production was only 2.4 per cent that is slightly below the country's overall growth rate of 2.6 per cent. The State is still deficit in rice, the main staple food item of the people. The plantation crops dominate in the State. During 1971-72, about 5.50 lakh hectares will be covered under the high-yielding varieties, against the estimated coverage of 5 lakh hectares in 1970-71. The consumption of fertilisers is expected to increase from 34,900 tonnes in the 1970 kharif to about 45,000 tonnes in the 1971 kharif. The State is poised for increasing the production of rice from

1325 lakh tonnes in 1970-71 to about 15 lakh tonnes in 1971-72.

Madhya Pradesh

Between 1964-65 and 1970-71, the production of foodgrains in the State remained almost stagnant. In fact, the production of foodgrains in the State during 1965-66 to 1969-70 was below the level of 1964-65. During 1971-72, the high-yielding varieties programme is expected to cover an area of 450 lakh hectares, against the estimated achievement of 350 lakh hectares in 1970-71. The consumption of fertilisers was only 44,490 tonnes in the 1970 kharif season. This is expected to increase to about 75,000 tonnes in 1971-72.

Maharashtra

Owing to the drought conditions in 21 districts out of 26 districts during 1970-71, the production of foodgrains in the State, declined sharply from 69.14 lakh tonnes in 1969-70 to 55 million tonnes in 1970-71. Official estimates placed the total loss to crops at Rs 160 crores for 1970-71. For 1971-72, the State's Annual Plan provides Rs 38.79 crores for agriculture and allied programmes and Rs 33.27 crores for irrigation facilities. Currently, irrigation schemes involving a capital outlay of Rs 512 crores are in progress. The gross irrigated area increased in the State from 16.89 lakh hectares in 1969-70 to 18.70 lakh hectares during 1970-71. During 1970-71, the high-yielding varieties programme is expected to cover an area of 18 lakh hectares, against the estimated achievement of 15 lakh hectares in 1970-71. The consumption of fertilisers is also expected to increase from 1.03 lakh tonnes in the 1970 kharif to 1.25 lakh tonnes in the 1971 kharif. The Union Government has sanctioned three schemes under the Small Farmers' Development Agency for the districts of Ratnagiri-Satara, Thana-Nasik and Bhandara. Further, two schemes for the marginal farmers and agricultural labourers for Ratnagiri-Satara and Parbhani districts, have been sanctioned. The Union Government has approved special schemes for chronically drought-affected talukas in six districts during 1970-71.

Mysore

The annual compound rate of increase in the production of foodgrains between 1964-65 and 1970-71 was 4.2 per cent, against 2.6 per cent for the country. On the whole this is good performance. During 1970-71, about 5.50 lakh hectares will be brought under the high-yielding varieties programme, against the estimated achievement of 4.50 lakh hectares in 1970-71. The consumption of fertilisers is expected to increase from 97,500 tonnes in the 1970 kharif to 1,15,000 tonnes in the 1971 kharif. For 1971-72, Rs 12.50 crores have been earmarked for Centrally-sponsored schemes for agricultural development. About Rs 8 crores would also be provided by the Centre under special programmes for small farmers, marginal farmers and agricultural labourers as well as for special schemes to relieve rural unemployment. On February 2, 1971, a Rs 16-crore scheme under the Small Farmers' Development Agency was inaugurated in the North Kanara district.

Nagaland

During 1964-65 to 1970-71, the average production of foodgrains in the State was 52,000 tonnes. The only crop produced in

the State is paddy. The agriculture in the State is very backward on account of hilly terrain. For 1971-72, Annual Plan outlay has been fixed at Rs 7.86 crores. Top priority has been accorded to the construction of roads for which Rs 2 crores have been provided.

Orissa

The output of foodgrains in the State between 1964-65 and 1970-71 increased at an annual compound rate of only 1.4 per cent, against 2.6 per cent for the country. Thus, the overall performance of the foodgrains production in the State was rather bad. During 1971-72, high-yielding varieties will cover an area of 3.50 lakh hectares, against the estimated achievement of 2.60 lakh hectares in 1970-71. The consumption of fertilisers in the State is expected to rise from 13,300 tonnes in the 1970 kharif to 16,000 tonnes in the 1971 kharif. Owing to the good rainfall in May, more acreage has been brought under the jute crop. The production of jute is expected to be higher in 1971-72.

Punjab

Punjab is the granary of India. The green revolution is a reality in the State. Between 1964-65 and 1970-71, the production of foodgrains in the State increased at an annual compound rate of 9.6 per cent, against 2.6 per cent for the country. This spectacular breakthrough is due to the use of improved cropping techniques, high-yielding varieties, modern agricultural implements, judicious use of fertilisers and adoption of plant protection measures. For 1971-72, the production target for foodgrains has been fixed at 72.50 lakh tonnes. Of this, target for wheat is fixed at 49.75 lakh tonnes. For 1971-72 the production targets for cotton, sugarcane (gur) and oilseeds have been fixed at 9.20 lakh bales, 6.30 lakh tonnes and 3.60 lakh tonnes, respectively. The State Government has programmed to bring 19.29 lakh hectares under the high-yielding varieties during 1971-72. The State Government plans to distribute 13.94 lakh tonnes of fertilisers during 1971-72, against the estimated consumption of 10 lakh tonnes in 1970-71. During the 1970 kharif, the per hectare consumption of fertilisers in the State was 51 kg that is highest among all the States in the country. During 1971-72 about Rs 14.2 crores will be made available to about 20,000 farmers to sink tubewells. Further, the State Government has decided to establish a Small Farmers' Development Agency at Sangrur covering Sangrur and Patiala districts. A similar agency at Ferozepur covering Ferozepur and Amritsar districts will be established.

Rajasthan

During 1970-71, the production of foodgrains in the State at 76 lakh tonnes recorded an all-time high. As a result, the production of foodgrains in the State between 1964-65 and 1970-71 increased at an impressive rate of 6.1 per cent, against 2.6 per cent for the country. During 1971-72, the area under high-yielding varieties programme is expected to be 7.50 lakh hectares, against the estimated achievement of 6.50 lakh hectares in 1970-71. The consumption of fertiliser is expected to increase from 18,100 tonnes in the 1970 kharif to 25,000 tonnes in the 1971 kharif. In the Annual Plan outlay for 1971-72, priority has

been accorded to agriculture, irrigation and power projects. Given normal rainfall, the State is likely to register further progress in agricultural production.

Tamil Nadu

The output of foodgrains in the State rose at an annual compound rate of 4 per cent between 1964-65 and 1970-71. This rate of increase is slightly above the national average and reflects rather satisfactory performance of the State in respect of foodgrains production. The State Government plans to increase the area under high-yielding varieties of rice and millets from 18.2 lakh hectares and 1.6 lakh hectares in 1970-71 to 20.2 lakh hectares and 2.8 lakh hectares respectively in 1971-72. The Plan also calls for the introduction of high-yielding varieties of pulses on 0.8 lakh hectares. The State Government has sanctioned Rs 12.25 lakhs for the development of arecanut cultivation at the foot of Nilgiri hills. For 1971-72, the agricultural programmes in the State have been so designed as to step up the foodgrains production to 77 lakh tonnes from 72 lakh tonnes in 1970-71. Of this, the production of rice will alone be 60 lakh tonnes. Given fairly normal seasonal conditions in the 1971-72 agricultural year the target for foodgrains production will be achieved.

Uttar Pradesh

Uttar Pradesh accounts for about one-fifth of the total foodgrains production in the country. The annual compound rate of increase in the foodgrains production of the State was slightly higher at 2.8 per cent between 1964-65 and 1970-71 against 2.6 per cent for the country. During 1971-72 a target of 12 lakh hectares has been fixed for the high-yielding varieties against the estimated achievement of 10 lakh hectares in 1970-71. The consumption of fertilisers is expected to rise from 1.42 lakh tonnes in the 1970 kharif to 1.75 lakh tonnes in the 1971 kharif. The State has comparatively good irrigation facilities. The outlay for the 1971-72 Annual Plan has been fixed at Rs 209 crores. A significant portion of this amount is earmarked for the development of agriculture.

West Bengal

During 1970-71 the production of foodgrains in the State is expected to touch a record level of 78 lakh tonnes. Between 1964-65 and 1970-71, the output of foodgrains in the State rose at the annual compound rate of 3.7 per cent against 2.6 per cent for the country. During 1971-72, the high-yielding varieties programme will cover an area of about 10 lakh hectares, against the estimated achievement of 8 lakh hectares. The consumption of fertilisers is expected to increase from 30,892 tonnes in the 1970 kharif to about 45,000 tonnes in the 1971 kharif. With good rainfall in April-May 1971, the State has brought more area under the jute crop. During 1971-72, the State Government has planned to bring an additional area of 19,000 hectares under the special package programme of jute. Further the Union Government has introduced a special package programme for the improvement of jute cultivation. Under the scheme, about 810 hectares in Howrah district would be brought under the jute cultivation in addition to 3,240 hectares already marked for jute. This programme will cost Rs 1.25 lakhs and is expected to yield an additional Rs 30 lakhs worth of jute. □

EXPORT ANGLE

By Stevedore

Scrap exports

EXPORTS of rolling mill-scale scrap are looking up once again. During April-May this year, the Metal Scrap Trade Corporation (MSTC) exported over 24,000 tonnes of rolling mill scale scrap. According to Mr T V Rama Rao, Chairman of MSTC, exports of this category of scrap during 1971-72 will be at least 50 per cent higher than the 1970-71 figure of 34,593 tonnes. In view of the adequate availability of this scrap from the main steel plants, it would be possible for Metal Scrap Trade Corporation to export one lakh tonnes per year. The Rourkela steel plant alone can supply 40,000 tonnes every year. The only snag in the way of increasing exports is the high cost of transportation by railways and port charges. The present cash incentive on the exports at 5 per cent of the actual fob realisation is not adequate as the incentive per tonne works out to only Rs 3—the cost of transportation and port charges together coming to nearly Rs 40 per tonne. Mr Rao has, therefore, called for a realistic reassessment of assistance by the Government. □

Tea agreement

INDIA will participate in a conference to be held in Rome this September to explore possibilities of an international agreement on the export and sale of tea on a long-term basis, announced Mr B B Vohra, Chairman Indian Tea Board, in Darjeeling on May 27. Although India and Ceylon have a common approach in regard to tea exports, smaller tea producing countries also are now insisting on having an international arrangement on an experimental basis. According to Mr Vohra there has been a phenomenal increase in the tea-drinking habits in the US and the USSR. Consumption of tea in these countries went up by 7 per cent last year. □

Freight increase on ores

THE freight increase on low rated commodities proposed in the Railway Budget may have adverse impact on the export of minerals. Exemption has been provided only to exports of ores from Buladila and Kiriburu mines which constitute only 50 per cent of the total. The incidence of additional burden on Minerals and Metals Trading Corporation (MMTC) is expected to be of the order of Rs 120 crores—Rs 1 crore on iron ore and Rs 20 lakhs on manganese ore and coal as a result of the freight hikes proposed in the railway budget. □

Manganese ore

THE emphasis in the export of manganese ore is reportedly being shifted from high grade ore to medium and low grade ores. This is because of the limited resources of manganese ore, particularly the high grade ones, and the increasing demand for such ore by ferro-manganese industry following the creation of new steel-making capacity and the expansion of the existing

steel plants. Although the Minerals and Metals Trading Corporation, through which exports of manganese ore are channelised, achieved a record performance of 1.74 million tonnes during 1970-71 valued at Rs 1381 crores, official circles do not hold out any promise of a 'return to the old marketing position', enjoyed by the ore. The MMTC exported 13 million tonnes valued at Rs 1110 crores and 12 million tonnes valued at Rs 1152 crores in 1969-70 and 1968-69 respectively. □

Export promotion councils

SOME major changes are expected to be made in the set-up of export promotion councils in order to make them more effective in the promotion of exports. The Bhagwan Singh Committee which is presently examining the working of various export promotion councils is expected to submit a preliminary report very shortly. The final report of the Committee will, however, be presented only in August. □

What India can sell

THE Directorate of Commercial Publicity in the Ministry of Foreign Trade has issued a further list of global tenders. The purchasing authorities, the items required and the closing dates of these tenders are as follows:

Burma

The Managing Director, People's Pearl and Fishery Board Rangoon, Bucket elevator and GI wire, June 18, 1971.

The Director, Myanma Bawdwin Corporation, Rangoon, Miscellaneous stores, June 15, 1971.

The Chief Engineer, State Timber Board, Rangoon, Overhead gantry crane spares, June 19, 1971.

The Controller of Store, Inland Water Transport Board Rangoon, Electrical installation for river tug machine room axial flow fans, surface mounting distribution board, plugs and sockets, rocker dolly switch, plastic luminaries for incandescent lamps, Lights for main desk electric horn and oil pumps, June 26, 1971, Electrical installation for river push tug medium, River radar system, echo sounder system, radio transmission set, internal communication set and air conditioner plant, June 27, 1971.

Cambodia

The Sonexim, Phnom Penh, Pharmaceutical and chemical products, June 8, 1971.

Iraq

The Iraqi Ports Administration, Basrah, SSBHF radio transmitters and receivers, MF radio beacons, VHF direction finder and public address system equipment, July 18, 1971, Feeding conveyors for sulphur loading berth at Um Qasr, Fire fighting materials for ships, June 9, 1971.

The Administration of Distribution of Oil Products (Stores and Purchases Department), Baghdad, Cables and electrical materials, June 29, 1971.

The Secretary, Purchase and Tender Committee, Ministry of Municipalities, Baghdad, Lead detectors complete with cases and accessories, HT pin and disc insulators, June 12, 1971.

The Purchasing Department, The State Organisation for Construction Industries, Baghdad, Fibre bricks, June 8, 1971.

Morocco

The Director, Regional Office for the Agricultural Development of Gharb (Ormvag), Irrigation channels, buses, drainage collectors and various works, July 29, 1971.

Philippines

The National Irrigation Administration,

Quezon City, Billet steel bars for concrete reinforcement, June 25, 1971.

South Vietnam

The Central Logistics Agency, Saigon, Hyalide lamp detector and methyl bromure, June 8, 1971.

Sudan

The Government Printing Press, Ministry of Treasury, Khartoum, Eyeletting machines etc, Automatic knife grinding machine, Closing date not indicated.

Thailand

The Royal Irrigation Department, Bangkok, Triaxial shear test chamber and testing machine, June 14, 1971.

The Purchaser, Purchase & Stores Department, Metropolitan Electricity Authority, Bangkok, 115KV epoxy-glass crossarm, June 28, 1971, Battery and battery charger, July 5, 1971.

The Electricity Generating Authority of Thailand, Nonthaburi, Power circuit breaker, Closing date not indicated.

Tunisia

Societe Nationale D'exploitation Ft De Distribution Des Eaux, Tunis, Drinking water project, July 30, 1971.

Turkey

Turkiye Sut Endustrisi Kurumu (Turkish Dairy Industries Association), Ankara, Cheese production plant, June 21, 1971.

Turkiye Elektrik Kurumu (Turkish Electricity Authority) Ankara, Condenser tubes, July 1, 1971.

UAR

The Controller (Purchases and Stores), Egyptian Railways, Cairo, Roller-bearings, June 24, 1971.

Alexandria Passenger Transport Authority, Alexandria, Supply of 50 electric trains; Closing date not indicated.

Misr Beida Dyers, Alexandria; Supply of 4,500 metres cloth lapping woollen; Closing date not indicated.

Uruguay

The Uruguayan Electricity and Telephone Authority (UET), Underground cable and junction boxes; July 15, 1971.

Exporters may obtain the tender document from the purchasing authorities of the respective countries. Further details about these overseas contracts can be had from the Indian Export Service Bulletin dated May 22, 1971, issued by the Directorate of Commercial Publicity in the Ministry of Foreign Trade, Udyog Bhavan, New Delhi.

Statistics

PROFILE OF THE UNION BUDGET 1971-72

Development expenditure :

Development expenditure is being raised to
from

Rs 3,574 crores in 1971-72 (B.E.)
Rs 3,292 crores in 1970-71 (R.E.)

Marking an increase of

Rs 282 crores

Non-development expenditure :

Non-development expenditure will be lower at
from

Rs 2,409 crores in 1971-72 (B.E.)
Rs 2,434 crores in 1970-71 (R.E.)

Marking a decline of

Rs 25 crores

Total expenditure :

Total expenditure of Central Government
will rise to
from

Rs 5,983 crores in 1971-72 (B.E.)
Rs 5,726 crores in 1970-71 (R.E.)

Marking an increase of

Rs 257 crores

The gap :

Total expenditure

Rs 5,983 crores

Total receipts at existing rates of taxation ..

Rs 5,586 crores

Gap

Rs 397 crores

How it is being bridged :

The Central Government will raise through
deficit financing

Rs 220 crores

Additional taxation (Net of share of States) ..

Rs 177 crores

Total ..

Rs 397 crores

At Rs 220 crores, the deficit financing by the
Central Government will be lower than the cor-
responding figure of Rs 230* crores in 1970-71 (R.E.)
(*likely to be about Rs 300 crores)

Tax measures :

Additional revenue in the remaining months
of 1971-72 through various tax measures would be
as under :

Direct taxes (a+b+c)

Rs 34 crores

(a) Income tax

Rs 27 crores

(b) Wealth tax, etc.

Nil

(c) Others (Foreign travel)

Rs 7 crores

Indirect taxes (d+e)

Rs 186 crores

(d) Union excise duties

Rs 132 crores

(e) Customs duties

Rs 54 crores

Total ..

Rs 220 crores

Less share of States

Rs 43 crores

Net yield to the Centre

Rs 177 crores

In a full year :

Yield of new taxes

Rs 294 crores

Less share of States

Rs 57 crores

Net yield to the Centre

Rs 237 crores

THE UNION BUDGET 1971-72

No fair deal for big or small

By C. C. Chokshi

THE Budget for the year 1971-72 has been received with mixed feelings. The complaint is that the Budget is severe on the middle classes and it is not at all helpful to the common man. It is certainly anti-rich and anti-affluent classes but that cannot be a complaint in the present atmosphere of socialism prevalent in the country. It is not the intention of this writer to enter into any controversy or to criticise a political philosophy. The intention of an objective study of the Budget should be to look at the proposals and their likely impact on the economy in an impartial manner.

The Finance Minister has set out certain objectives before him in framing the Budget proposals. The broad principles upon which additional resources are raised are as follows:

- (1) Simplification and rationalisation of the tax structure in a manner aimed at reducing the burden of assessment and minimising the opportunities for evasion.
- (2) The distribution of the overall burden of tax in a manner that there is an appreciable scaling down of the concentration of economic power and reduction in inequalities in income and wealth.
- (3) To ensure that as far as possible fresh imposts do not disturb the general level of prices of essential goods.

Based upon these principles the conclusion that has been drawn is that the concentration of the additional tax effort should be on the direct taxes and more particularly on the affluent groups, as also on such categories of indirect taxes as affect luxury and near-luxury commodities. The need for additional resources has been considered inevitable in the context of the need to augment the Plan outlay to create additional employment opportunities and to offer succour to the evacuees from East Bengal.

It should be abundantly clear from the enunciation of the Budget policy by the Finance Minister that the following fundamental objectives which are the need of the hour are missing: (1) There is no attempt to encourage increase of production. (2) No positive steps are spelt out towards the creation of a climate for economic development that alone can increase employment.

In regard to the first fundamental objective, namely, increasing production, the Finance Minister has recognised in his speech that in the industrial sector lack of certain essential raw materials has hampered production in some areas and there is still under-utilisation of capacity in a

few other areas. It has further been recognised that the price rise in the economy has been sufficiently disquieting last year. One of the principal remedies for combating inflation is to achieve a rapid increase in production. There appears to be a total lack of any measures in the Budget proposals in this direction.

It is, no doubt, true that the Finance Minister has recognised the dangers of price instability. Faster economic growth and greater social justice, he observes, will be elusive goals unless pursued in a milieu of relative price stability. In framing the additional imposts the only attempt has been to see that there is no disturbance of the general level of prices of essential goods. There does not appear to be a deliberate thrust in the direction of controlling the disquieting tendency of prices. Subsequent press reports further confirm the general feeling that the Budget would result in certain price increases thereby adding to the malady rather than mitigating it.

To a large measure this inequilibrium of inflation can be traced to the factors recounted in the Budget speech. The revised estimates for the year 1970-71 pitch up the extent of deficit from Rs 230 crores to Rs 270 crores. Added to this is the strain on prices caused by various State overdrafts aggregating to Rs 260 crores. It has been recognised that such overdrafts assume additional gravity as they emerge even after the liberal special assistance granted to the States by the Centre. These two factors put together themselves account for an uncovered deficit of Rs 530 crores. The Finance Minister further confessed that Plan expenditure has encountered shortfalls in performance in 1970-71. If such expenditure had also been disbursed the magnitude of the overall deficit would indeed have been very staggering.

Essentially, it is because of these deficits which have become so to say, a way of life for the last 10 years that various adverse effects of inflation are witnessed on the economic front. To a large extent the climate of revival and economic stability witnessed in the last year or so can be attributed to the severe restriction of the deficit in the year 1969-70.

Achievements springing from the measure of financial discipline which had then been introduced are likely to be more than offset by the large deficits for the year 1970-71 and as budgeted for 1971-72. It should be recognised that the laws of economics cannot be artificially regulated and measures of external price control or price regulation can only have very limited utility, not to mention the attendant economic evils they give rise to.

Coming to the problem of unemployment, here again on one hand it has been fully recognised that the real stimulus to solving this problem can come only by increasing the tempo of economic activity all round. In the face of this statement, one is unable to appreciate the *ad hoc* allocations from Government revenues, either for the purpose of generating additional rural employment or for providing schemes to suit educated unemployed engineers and technicians. Unemployment being basically an economic phenomenon, it is the tempo of economic activity all-round which alone can meet this challenge. It is in the total absence of incentives in the direction of improving this tempo that one would consider the Budget depressing.

Apart from the Budget, not presenting any concrete proposals towards quickening the tempo of industrial development, it is observed that some of the salient incentive measures are being curtailed. A few years back Mr T. T. Krishnamachari, one of the ablest of Finance Ministers who has been responsible to a very large degree in the shaping of fiscal policy oriented towards rapid growth, observed that the primary need of the hour (1964) was to induce confidence in the corporate sector. The resources of the corporate sector have to be augmented from both within and without and it is therefore necessary to provide incentives for the existing companies to plough back a large share of their profits and also reduce disincentives for inter-corporate investment. In this process it appeared to Mr Krishnamachari necessary to make a distinction between capital-intensive industries and others. The need for basic industries to grow is recognised on all hands. Therefore selective support has to be given to these industries. As a background to the provision for withdrawal of development rebate by three years' notice, he had observed that he would like to confine development rebate on a graded basis to certain selected industries instead of general availability. In the field of personal taxation he reiterated that the motivating factor behind earned incomes should not be altogether ignored. Much of it is due to the incentive, the initiative and hard work of the earner himself and for keeping up this effort and to induce the earner to greater efforts it is necessary for him to have a feeling that at least some substantial portion of what he earns is left in his hands.

Fiscal policy is, therefore, not a matter which can be spelt out in a single Budget. It must evolve over a period of time consistent with the economic goals set before the nation. It is a matter of regret that some of these clearly initiated principles of long-range fiscal

Mr Chokshi is a leading taxation expert.

planning are sought to be ignored and negated in the present Budget.

Subsequent events have shown that the vision of the Finance Minister in 1964 when economic activity was at its lowest ebb was amply justified. From the wave of depression then prevalent, projects in sophisticated industries like aluminium and petrochemicals have been successfully implemented. The performance of these two industries in entering export markets in non-traditional spheres is also one to be recognised. However, the necessary development in these industries has not been fully achieved. The refineries which have been put up at Visakhapatnam, Koyali, Madras and Gauhati have a potential for the establishment of petrochemical complexes around them. In fact, in several of these centres, projects are in an advanced stage of formulation and are shortly to be taken up for implementation.

It is against this background that one should consider the various proposals having a bearing on economic activity. The first proposal which removes a very salient incentive relates to Section 80I of the Income Tax Act. Two changes are sought to be made. Firstly, the quantum of profits from a priority industry which are eligible to exemption is to be reduced

from 8 per cent to 5 per cent. Such a reduction may result in saving a few crores of rupees for the exchequer but in terms of retarding the growth of priority industries the damage would be far-reaching. This particular concession is a significant concession inasmuch as it does not operate only for a limited period like the tax holiday exemption. It was, in fact, designed as a lower rate of tax itself on such profits. The proposal to reduce this benefit, therefore, is ill-conceived.

Of greater consequence is the second amendment which curtails the list of industries eligible to the benefit. This is achieved by deleting certain items from the Sixth Schedule to the Income Tax Act. The industries which are proposed to be deleted are: Aluminium, motor trucks and buses, cement and refractories, soda ash, petrochemicals and automobile ancillaries.

While there is no justification set out for this measure in the memorandum explaining the provisions of the Bill, the speech of the Finance Minister states that the general economic conditions are now such that it is not necessary that these industries enjoy special benefits which were accruing to them hitherto. It is difficult to see how the level of general economic conditions has a bearing on

specific incentives to selective industries, recognised as being of special importance to the country. At a time when the objective should be to increase production to keep prices in check and to provide opportunities for better employment by quickening the tempo of economic activity, this is surely a retrograde step.

It may appear that these are all highly capital-intensive industries which are put up by larger industrial houses, but in reality this is not quite so. It is common knowledge that automobile ancillaries have essentially developed in the small- and medium-scale sectors. Similarly, in the field of petrochemicals a large number of units manufacturing end-products from basic raw materials are in the small- and medium-scale sectors. The manufacture of motor trucks caters to the demand of a very large number of self-employed operators engaged in the vital task of assisting industry through movement of goods. In the context of the determination of the Government to create employment-oriented schemes for the educated unemployed, the step aimed at denying incentives to important growth-oriented industries appears to be contradictory.

Similarly, notice has been served that after May 31, 1974, no development rebate

How could kulaks tax their own class?

By A Special Correspondent

AFTER presenting an assessment of the performance of the economy in 1970-71, the *Economic Survey* set out the tasks ahead of the country in search for economic growth with social justice. It admits that its list of these tasks adds up "to a formidable fare". Among its policy prescriptions are structural reforms along appropriate lines in agriculture. It then makes bold to make a statement that cannot but annoy the Ministers and bureaucrats wedded to the licensing restrictions: "Industrial output can be hampered by the often intricate procedures for regulation and controls." Some of its other suggestions merely contribute to "clouding the picture."

But on one major issue the voice of the *Economic Survey* is loud and clear. This is its emphasis on taxing the high and growing incomes of the rich farmers. The *Survey* goes on to declare that a large part of the country's fiscal problems "is linked (sic) with the fact that direct taxation in agriculture, more specifically on the affluent peasantry, has not made much headway". And yet Mr Chavan has shied away, while referring to the "imperatives of the situation" in the paragraph prefatory to his proposals to raise additional resources, from taxing the rich agriculturists. There is admittedly the tame proposal to tax agricultural tractors by charging a duty of 10 per cent *ad valorem*. But there is nothing to reduce income inequalities in the countryside.

Whether or not the *Economic Survey*, with its lack of a single unifying thread of economic analysis and argument, is the result of multiple authorship is a minor research assignment which can be left to the students

of Indian English. It is transparent, however, that if the voice in the *Economic Survey* is of an economist, the hand that drafted the Budget is of a politician. There is no other way in which it is possible to explain the unwarranted and unexpected softness with which the rich farming community has been left untouched.

The *Economic Survey* also spoke "of a price policy for agriculture which would reconcile the interests of the various sections of the community and at the same time promote the induction of new technology". Of this again, the Budget is innocent. This does not perhaps mean that the intentions were not there. Mr Chavan has talked of taxing products and equipment used in agricultural operations by the richer sections of the peasantry. This is preceded by the stern statement that Government cannot "be oblivious of growing inequalities in rural areas". And the basis of taxation has to be the size of income or wealth, irrespective of whether it is derived from agricultural or non-agricultural sources.

What is it that seems to have held the Government back at the last minute? Surely, it cannot be just the constitutional limitations on the powers of the Union Government to tax, real as they at present are. If it is the common responsibility of the Centre and the States to raise resources for economic development, three long months have been lost in not putting the heads together and arriving at agreed conclusions on how the Centre can get the States to tax agricultural incomes. Nor has the Centre so far discharged its "duty and obligation" to point out to the States the re-

sources which remain untapped merely because the Union Government is precluded by the constitutional provisions to impose a levy.

It is to be hoped that no time will now be lost in consulting the State Finance Ministers on the constitutional and fiscal issues relating to the taxation of agricultural incomes. Unless this is done, there is continuing scope not merely for wider income disparities but also for growing social unrest in the rural areas. The *Economic Survey* speaks of the need for broad social harmony between different sections of the community. Our inability to tax agricultural incomes is a major factor making for social disharmony and lawlessness in the countryside.

The Government cannot throw up its hands and seek an alibi in "the complexities of the economic and social system and the large number of pressure groups at work at various levels". These pressure groups work in every society. In many other countries, they are much better organised than in India. It is not so much the organised strength of the pressure groups by the *kulak* character of the party in power which prevents it from touching the agricultural incomes. The *Economic Survey* refers to the need for "tact and finesse" in handling this problem; not to speak of tact or finesse, there seems to be among those who have framed the Budget a total lack of will to move in the directions indicated by the *Survey*. They have unfortunately confined the tax gathering effort to the known and traditional paths where the laws of declining returns are in operation.

will be allowed. Such a measure denies the benefit in toto to all investments in plant and machinery after May 31, 1974. If one could point to a single piece of incentive in our tax laws which has made the maximum contribution to industrial activity, it would be the provision of development rebate. The development rebate has also been a very important factor in the modernisation and rehabilitation of the old and traditional industries. A large number of small-scale industries have been planned with limited financial resources and have come into existence because of the cash generation through the medium of development rebate. This cash flow has been responsible for enabling the State Financial Corporation to finance upto 75 per cent to 80 per cent of the capital cost of small-scale industries. When the need for economic growth and for schemes to relieve unemployment are recognised, it is difficult to reconcile these objectives with the view that development rebate in respect of new investment has had a full play.

The development rebate was also serving the purpose of compensating the additional cost of capital assets following inflationary conditions. The need for industries to have additional funds to meet the increased cost of rehabilitation and renovation had been recognised by Mr S Bhoothalingam in his report on "Rationalisation and Simplification of Tax Structure" submitted in 1968. Whilst it is true that Mr Bhoothalingam recommended the discontinuance of development rebate, he was, however, very forthright in making a recommendation that an ad hoc deduction of 20 per cent of the cost of capital assets should be allowed in the computation of total income. This was recommended primarily with a view to compensating the higher cost of replacement of capital assets.

Another measure which is proposed to be enacted through a notification is the change of the income tax rules relating to the benefit of tax holiday under Section 80 J of the Act. It has been considered an undue generosity on the part of the Government to have allowed 6 per cent of the total capital base, inclusive of debentures and specified categories of long-term borrowings, for the purposes of exemption. When the approach of lending institutions is being reoriented towards repayment capacity and soundness of the venture as opposed to personalities of borrowers, this measure will prove exceedingly harmful. In planning small-scale projects with limited resources it is essential to plan repayment through cash generation. A substantial part of the cash generation is accounted for by the exemption from tax on a portion of profits of new industrial undertakings. The measure of exemption was the sum of 6 per cent of the capital employed. It was rightly recognised that capital employed in any industrial project (including those set up by small-scale entrepreneurs) does not only mean the limited resources of the entrepreneurs or the risk capital, but also capital raised by the entrepreneur for the project. There was, therefore, no generosity, intended or otherwise, on the part of the Government whilst it gave this exemption. The tax holiday in India is restricted to a portion of profits whereas a really generous incentive measure would be a total tax exemption in initial years as granted in certain countries. In fact, financial institutions which

supply the balance requirements to augment the limited risk capital were the most vitally interested in such a measure of exemption as it ensured additional cash resources to be utilised for servicing as well as for re-payment of the loan. This measure also, therefore, appears to be opposed to the declared objectives of the Budget, as also the Government policy to broaden the industrial structure over a large class of new entrepreneurs.

So the Budget has withdrawn some of the salient tax incentive measures hitherto applicable. Another significant concession under the Wealth Tax Act is also proposed to be withdrawn. Initial issues of capital made by new industrial companies after June 1, 1971, will not hereafter qualify for wealth tax exemption under Section 5(i) (xx). It is true that from an individual investor's point of view no change has been made in the existing concession for share investments and other approved investments up to the limit of Rs 1,50,000. However, the present laws contain, in addition, a total exemption from wealth tax for a period of five years for shares of initial issues of new industrial companies. This exemption does not put any limit on the quantum of investment eligible for the concession. This was also a measure introduced with a view to re-establishing confidence in the corporate sector after 1964. Its existence has been responsible for drawing subscriptions to major long-gestation industrial projects such as fertilisers, alloy steels and polyester fibre. The other concession in the form of tax credit certificates expired as from the last year and the withdrawal of the wealth tax exemption for new issues after June 1, 1971, will further adversely affect the raising of capital for new industrial projects.

Another measure affecting the incidence of tax on industrial or commercial profits is the proposed ceiling on allowable remuneration to employees of business enterprises. This appears to be an attempt to bring about indirectly a ceiling on income. In principle, a measure of this nature may not be unwarranted. However, this measure imposes an additional burden on the employer. In the context of the existing high rates of taxation of business profits, measures such as these push up the effective tax rates. The suggestion of Mr Bhoothalingam was that the gap between assessable profits and business profits in a commercial sense should be narrowed down. The trend for introducing artificial disallowances like this, therefore, acts in the reverse direction. The Budget speech also indicates that the travel allowances for employees would be reduced. Such measures may or may not achieve the objectives of curtailing such expenditure but they further complicate, rather than rationalise, the tax structure.

Further, it has been stated that better organisation is still the major outstanding task for both industry and exports. From time to time it has been stated that the public sector does not attract the proper talent owing to the restrictions on the quantum of remuneration. If industrial enterprises are to build the proper organisation manned with people with proper expertise and, at the same time, if we are to prevent the drain of talent from the country which is so much in evidence in the last few years, such measures may be regarded as being hasty. At the same time

the possible repercussions by way of employees trying to find alternative methods of earning funds should not be overlooked. The moral fibre is already being put to extreme strain by the high rates of personal taxation, and further artificial measures such as these may cause an additional strain.

Similarly, in the field of personal taxation, it is proposed to increase the surcharge from 10 per cent to 15 per cent on incomes over Rs 15,000. This 5 per cent increase in surcharge has an effect of increasing the tax burden by 4.25 per cent at higher levels. As a consequence, the maximum marginal rate of tax on income beyond Rs 2 lakhs touches 97.75 per cent. Before the staggering maximum rate of 93.5 per cent imposed by the last Budget had operated even for a single year, we find this further burden being cast. In fact, on an income of over Rs 1 lakh the marginal rate would now be 92 per cent which is very nearly the maximum rate prescribed last year for incomes over Rs 2 lakhs. At the same time, this measure should be read in conjunction with the levy of wealth tax in chargeable cases even on the first Rs 1 lakh of chargeable wealth.

Such a measure would very severely hit the class of new entrepreneurs and small-scale self-employed men which is sought to be encouraged. The increase in the personal income tax at all levels over Rs 15,000 would affect the capacity of this class to have a decent living and at the same time meet the obligations for repayment of loans, etc. So also the basic wealth tax places such persons at a disadvantage as compared to others who may choose to make their investments in the exempted categories rather than deploying their resources for their own small-scale business.

When dispassionately referring to the impact of the Budget on economic growth one cannot fail to mention the radical rise of wealth tax on wealth over Rs 15 lakhs. This follows very closely the increases made last year which are yet to fully come into operation and make their effects felt. Quite apart from the socio-political objectives, the present measures would severely affect the personal motivation to which reference has been made earlier. The aim of the Budget while dispensing social justice should not be to kill incentive, initiative and hard work, which are the foundations of individual enterprise.

The general expectation this year was that the Government would come out with a budget that showed a totally bold approach to the problems of the nation, backed as the Government is by a massive mandate. The real problems which are the bane of the economic health of the nation and which have not been attacked in a frontal manner are: (1) The contribution to the revenues of the Government by the public sector, (2) the contribution to be made by the agricultural sector, and (3) the corrupting influence and attendant evils of tax evasion and black money.

With regard to the contribution by the public sector the nation has been waiting since the days of the Second Five-Year Plan when an impetus towards the establishment of a public sector was formulated. The public sector has embraced several fields and in quite a few fields it enjoys a

dominant monopoly position. Despite this, the contribution to the revenues has been strikingly dismal. Year after year, Finance Ministers have been stating that steps are being taken to improve the working of the public sector. Some time ago the public was asked to stee the criticism of the public sector on the ground that the test of profitability cannot necessarily be applied to the public sector. It is, however, a matter of some consolation that in his present Budget speech the Finance Minister has admitted that the public sector has necessarily to yield a sizable surplus since surplus is a key source for future growth. The nation must face the truth that, in planning and allocation of scarce resources, the utmost sense of discipline must be observed in all sectors and utilisation or appropriation of such resources must satisfy the ultimate economic test of performance.

It is to be hoped that in the foreseeable future efficient performance by the public sector would be a reality rather than a mirage. The disquieting feature is that not only are the commercial and industrial undertakings in the public sector not making an adequate contribution but even established contributors to Government revenues such as the Railways and Post and Telegraphs have become sources of drain. Before the success of the experiment of the public sector to which we are committed is demonstrated to the nation, another theory is now being canvassed. It is now said that the Government attaches considerable significance to the establishment of a joint sector. Time alone can predict the outcome of this new philosophy.

The second major problem which should be considered in Government budgeting is in regard to the contribution by the agricultural sector. The more or less crushing burden of direct taxes, with rates of income tax, wealth tax, gift tax and estate duty which border on expropriation, follow necessarily from such rates being applied to an infinitesimally small fraction of the population which is engaged in the non-agricultural sector. It has been estimated that during the year 1969-70 the national income was of the order of about Rs 31,000 crores. It could be safely assumed that over 50 per cent of this national income was accounted for by agriculture. In spite of this, there is practically no contribution from this sector to the direct tax revenues of the Central Government. Nor do the States, who receive substantial allocations out of the Central Government resources, make any significant attempt to collect and levy taxes on agricultural income. The total tax revenues of the Government are expected to cross Rs 3,600 crores. In a vast country with a low per capita rate and where agriculture escapes a significant burden of direct taxation, this represents a very formidable proportion of the gross national product.

It is, however, heartening to note that despite the obvious political pressures that would build up, the Finance Minister has made bold to state that ultimately the basis of tax has to be the size of income or wealth irrespective of whether it is derived from agricultural or non-agricultural sources. A promise has been held out that the question of taxation of the

agricultural sector would be taken on hand in consultation with the States so that there may be a more equitable distribution of the burden of taxation. It remains to be seen as to how far this promise is fulfilled in the years to come.

The third area which is by far the most important and which is responsible for the greatest evils in the social, economic and political fields is that of tax evasion. With the severely steep rates of taxation, tax evasion has become a very profitable proposition. It may be significant to note that as soon as income reaches the level of Rs 30,000, the rate of tax on all further income exceeds 50 per cent. According to the Budget proposals the rate on such excess would be 57.5 per cent rising steeply thereafter till the maximum rate of 97.5 per cent is reached. Tax evasion on a large scale has been attributed to this phenomenon whereby the State becomes more than a major sharer of additional income generation. Whatever may be the causes of tax evasion, a positive and concerted action should be taken by the Government to rid the nation and the society of this evil.

Instead of attacking the real evil of tax evasion, it is distressing to find platitudes such as that it is generally the well-to-do and the rich who evade taxes. The tendency to lump up avoidance and evasion shows the total apathy on the part of the Government to come to grips with the problem of evasion which is the real evil. It is further difficult to understand the basis of the generalisation that the rich and the well-to-do are the principal culprits in such matters.

The Government has been anxious for several years to make a significant impact on the glaring inequalities in income and wealth and to curb ostentatious consumption. It is time that the authorities realised that at the root of ostentatious consumption lies the rampant tax evasion. It is not the honest and law-abiding citizens who indulge in ostentatious consumption and in display of glaring inequalities in income and wealth. As a matter of fact, with the severe rates of taxation in force for the past several years, it is common knowledge that no honest tax-paying citizen can afford any ostentatious consumption. In fact, for a large number of such persons, it is extremely difficult to maintain even a decent standard of life. It is the evil of tax evasion which has a very corroding influence on society, not to mention the economic evils such as inflation which it also causes.

Newspaper reports have indicated that the high-powered committee appointed by the Government to go into this question of tax evasion had submitted an interim report a couple of days before the Budget. There is no reference in the Budget speech to the interim report. The nation looks up to the Government for the clean administration that has been promised and for a concerted effort towards attacking the evil of unaccounted money. It is in this direction alone that the solution to the problems of the country lies, and not in empty slogans of social justice, programmes for ushering in an equalitarian society or in dogmas of socialism. The eradication of tax evasion and unaccounted money by itself will bring in truly meaningful socialism.

Egalitarianism yes; growth no

By a Special Correspondent

ALTHOUGH the excitement about the Budget relates mainly to the tax proposals, the Budget is really an instrument for regulating the working of the economy and determining the course along which it should proceed. This it can do by the pattern and volume of its expenditure as well as by the magnitude and content of its resource mobilisation policy. The volume of expenditure proposed to be incurred by the Government determines significantly the level of activity. It can stimulate certain sectors or dampen activity in other sectors of the economy, directly as well as indirectly. It can affect the incomes of the sections of society it chooses. Through its tax proposals it can control the volume of resources available to other sectors and thus regulate their expenditure, both on consumption and investment. It can stimulate some sections and provide a disincentive to others. Thus, the Budget should be viewed as an instrument for the overall regulation of the economy and its direction towards desired goals rather than as a provider of thrills and shocks.

The *Economic Survey* is supposed to be a curtain-raiser to the Budget. It made the following points regarding the state of the economy: (i) Although the performance of the economy was satisfactory, sectors other than agriculture did not do as well as expected; there was need to increase progress in certain sectors of agriculture itself and in industry; (ii) The behaviour of prices gave cause for concern, although there was a degree of stability; (iii) Private industrial investment has been patchy, in spite of propitious conditions and excess capacity continues to exist in certain industries; and (iv) The balance of payments needs careful watch because imports have begun to increase. Hence the inference that the Budget would pay special attention to inducing overall growth and particularly growth in the industrial sector would have been justified; and that to ensure price stability, as much emphasis on greater production of agricultural raw materials and intermediates would be placed as on resource mobilisation and the restriction of consumer demand. In addition, of course, the social objectives of providing more employment and reducing inequality of income and concentration of wealth would be pursued.

Although these objectives are stated to be the goals which the Budget is seeking to achieve, a closer look at the Budget gives the impression that sufficient attention has not been paid to these aspects. The Plan outlay has been stepped up by Rs 155 crores from the interim budget of March 1971. Although this means an increase of Rs 172 crores from the Bud-

get figures of 1970-71, it is stated that the step-up would be in the neighbourhood of Rs 300 crores if account is taken of the likely actuals for 1970-71. It would be nice to believe that the step-up would be of this order, but there is no certainty that there would be no shortfall between the Budget provision and actuals in 1971-72. There is nothing in our record so far to show that we are going to suddenly turn a new leaf this year. If it is assumed that the extent of shortfall is of the same order, the increase in Plan outlay may not be much more than the increase between the two Budget figures. This is obviously not a sharp increase in terms of the requirements of the situation described in the *Survey*. Besides, if an allowance is made for the price increase so far, the increase in Plan outlay may be even less!

A breakdown of this outlay shows that the largest increases are in expenditures on agriculture and allied programmes and social services. Increases in outlay on power, industries and railways seem to be marginal. These are sectors in which outlay has to be substantially higher if capacity built up in the public sector for heavy engineering and heavy electrical manufacture is to be utilised fully. Also if the current power shortage that is affecting large parts of Northern India is taken into account, a step-up in the outlay on power would be essential for both agricultural and industrial growth.

The exclusive emphasis on agriculture and social services is somewhat odd. The *Survey* specifically states that "the demand emanating from agriculture currently calls for only a limited draft on existing industrial capacity". Is this an instance of the left hand of the Finance Ministry not knowing what the right hand does? It must be conceded that the employment potential of such expenditure is much greater. Has the Finance Minister been so overwhelmed by the problem of employment that he has overlooked the consequences of a faster rate of industrial growth for further investment and the balance of payments? A revival of industrial activity on a much larger scale would have helped to solve to a large extent the problem of unemployment among the educated, particularly the technically educated. The Thakkar Committee report, which has been accepted by the Government, has pointed out that some of the schemes proposed for employing engineers and technicians have not been attractive because they do not provide the satisfaction of using the particular skill and training acquired. A revival of industry would have been perhaps a better way of utilising the funds set aside for programmes for providing employment.

If the increase in Plan outlay is only around Rs 155 crores, the difference between this amount and the increase in total outlay of Rs 434 crores must be spent on non-Plan items. In view of the tightness of resource position and the need to invest as much as possible for future growth, non-essential expenditure should have been controlled firmly. Obviously this has not been possible. A small part of it is due to the sudden influx of refugees from East Bengal.

Let us now look at resource mobilisation. The proposals for taxation are said to have three objectives—greater equality in sharing the burdens, simplicity of administration with a view to minimising evasion and stability of the price level. It is surprising that the growth objective does not have any mention in the list of principles. No attention seems to have been paid to the need to encourage the saving habits of the population as also to ensure that a fair proportion of savings is deployed within the private sector itself. Instead of enunciating these principles we seem to have proceeded on the old basis of realising as much revenue as possible through taxation under a few heads.

It is difficult to see how the new surcharge levied on incomes above Rs 15,000 per annum can be looked upon as an egalitarian measure: it is a flat levy on all. It will probably affect most those who have salary incomes because the levies hardly matter to those who do not pay taxes; and this would also be the class of people who would be affected by the other proposals made in this Budget, particularly the one relating to the quantum of deduction on account of contributions to provident funds, life insurance premia etc. The much-abused civil servant and the business executive will be affected the most.

The proposals regarding wealth tax seem to reflect the current philosophy that there should be a ceiling on wealth. This can hardly be objected to since Mr Chavan repeatedly refers to the massive mandate his party has received from the electorate to usher in the socialist state. If he had paid some attention to its effect on individual savings, particularly when private investment is expected to thrive, he may not have been so drastic. Also while many loopholes for evasion have been plugged, there is a danger that new instruments of corruption and harassment may have been created.

There is no mention, however, of any direct taxation of the incomes of the affluent sections of rural society. The Finance Minister takes refuge behind the constitutional constraints on the powers of the Centre to tax items which legitimately belong to the States. As has been noted

*"Inequality is an evil, but I do not believe in
eradicating evil from the human breast
at the point of a bayonet. Violence is wrong
because it overlooks the fact that evil can never be
overcome by evil; it ceases only with good.
As the means, so the end."*

Mahatma Gandhi

MAHINDRA AND MAHINDRA LIMITED

Bombay • Calcutta • Delhi • Madras

by many, the massive mandate could have been used to remove this anomaly but perhaps political considerations have dictated otherwise. His softness for the rural rich can also be seen from the fact that while he has several proposals regarding the valuation of urban property, the same concern for a proper valuation of rural property is not shown.

The withdrawal of tax concessions to various industries seems to be a step in the right direction. Although this may bring a chorus of protest from the affected industries, there is no reason why society should have provided all the concessions to these industries in an over-protected market, on top of access to large amounts of capital on unduly favourable terms. The withdrawal of these concessions, it is to be hoped, will lead to more efficient working of the industries. The minimum change that has been made with regard to corporate taxation may have some beneficial effect on private investment.

Although a number of changes are being made in excise duties, the bulk of

the revenue comes from only two items, namely, cigarettes and motor spirit. In relying on cigarettes to provide so much revenue, the Finance Minister has followed the footsteps of his "non-socialist" predecessors with about the same degree of levity. It is difficult to say that a cigarette like Char Minar is a luxury item. To the extent that these and such other brands are consumed by the educated unemployed, white collar public sector employees and industrial workers, the Finance Minister is dipping into non-affluent pockets. Perhaps this is to be interpreted as a measure of "spreading the tax burden equitably on all sections of society."

Past experience has shown that taxation has not had much effect on the consumption of motor spirit. It is to be hoped that this massive increase in the duty on it will bring about such a curb on consumption. Here again it is necessary to be careful because there will be pressure by the individual car owners to shift the tax to the organisations which employ

them. A rash of staff cars can easily defeat this move. Secondly, will this not put up the cost of public transportation to a certain extent? Nor can it be argued that by levying a duty on one or two petroleum products, it is possible to conserve scarce foreign exchange to be paid for imported crude oil. Unless concerted action is taken to limit the consumption of the whole range of products that can be distilled out of crude petroleum, this objective will not be achieved.

In order to satisfy those ideologues who want the rural affluent to be taxed, the Finance Minister has made a gesture in the form of a duty of 10 per cent on agricultural tractors. Tractors are not bought every day by farmers, howsoever rich, and this is indeed a poor substitute for a tax on their income. One must however congratulate the Finance Minister on his courage in doing even this much.

All these import and excise levies may not do much to raise the price level. Essential commodities have been left out. Even if the prices of items like shampoos and hair oils do rise, they cannot do any great harm to the development effort. There is, however, the problem of a deficit of Rs 220 crores. Its effect on prices will depend upon the increase in money supply which will result from it. The increase in money supply during 1970-71 seems to have been of the order of Rs 600 crores, that is, an increase of 9.2 per cent over the previous year. If the deficits in the State Budgets are of the same magnitude as in 1970-71, it is possible that the increase in money supply in 1971-72 may not be much higher than last year. This will of course mean an increase of only about 8 per cent or so over the previous year. It should be possible for the economy to absorb this without any adverse effect on prices, provided the national income increases at about the same rate as in 1970-71. This is an important proviso. Agricultural growth was mainly responsible for the high rate of growth of national income last year. As the probability of a fifth good season does not appear to be high, the consequences of such a measure of deficit financing for price stability cannot be stated with any certainty.

The overall impression of the Budget is that the ruling party is still more pre-occupied with egalitarianism than growth. This is somewhat surprising because the Prime Minister in her address to trade union leaders a few days ago is reported to have stated categorically that rapid growth is probably the best solution to the problem of poverty. While attention should be paid to the reduction of inequality in order to provide an incentive to various sections of society to participate in the national effort for growth, our prime concern should be the process of growth. The Budget in its tax proposals has shown sufficient awareness of the former; but its expenditure proposals have hardly shown any awareness of the need for dynamism. This is because, one suspects, it is so much easier to cut down tall poppies than to grow new ones. The latter requires the absorption of modern management techniques, wholesale revamping of administrative structure and procedures, and a clearer understanding of the process of growth. These are difficult tasks; they call for knowledge, patience and perseverance. It is so much easier to shout, like the Red Queen, "Off with their heads."

In our little way...

we help India fight its war on all fronts

As India moves towards its goal of all-round development, we make our contribution. On the food front Union Carbide provides pesticides and polyethylene film which help the farmer reap a bigger, better harvest. On the home front we bring to you a variety of household articles ranging from batteries and flashlights to colourful containers made from our polyethylene. We supply raw materials and chemicals essential for the pharmaceuticals, paints,

textiles, iron and steel and rubber industries. On the export front Union Carbide combs the five continents for new markets and its products reach more than 80 countries including the U.S.A. These are but some of the seeds that Union Carbide India Limited has sown to raise the standards of living of the people of India. Yes, in our little way we help India fight its war on all fronts!

sowing the seeds of progress

TARGET: TOMORROW

**How IBM as a corporate citizen
is working towards
the country's hopes and aspirations.**

India is a country with great expectations, marching towards a future that offers more to more people.

Participating in this nation-building task is IBM. By making India's first computers, it is accelerating the nation's economy. Making optimum use of scarce resources and releasing locked-up capital for productive investment. IBM computers are helping Indian companies win foreign markets.

More.

Computers are opening up new careers, creating new techniques and skills. IBM is passing on its world-wide technological know-how to about 400 vendors in India to make computer-age components. IBM India-made equipment is also exported to 40 countries.

IBM is privileged to be involved in the challenge of building a new tomorrow.

An inflationary fiscal philosophy

By Narottam Shah

WHEN, after the two years of agricultural disaster—1965-66 and 1966-67—one assessed the record of India's economic growth since 1960-61, the picture that emerged was depressing. Between 1960-61 and 1966-67, the real national income increased by only 15 per cent. Almost all of this increase was, so to say, wiped out by the increase in population

aggregate and per capita real income worked out at 3.60 and 1.34 per cent, respectively. Broadly speaking, the pace of 1950s was maintained in 1960s also. So far so good.

But, this should not give us any ground for complacency. For, while the recent record of growth is reasonably good, we cannot take the continuance of this trend for granted. Particularly, the possibility of setbacks in the coming years wiping out the progress of the recent years cannot be ruled out entirely.

Ominous pointers

Let us begin with agriculture. If the recent growth record of India has been good, it has been mainly because of the good performance of agriculture. As one examines the relevant data, one has a nagging doubt that a good part of the recent performance of agriculture is attributable to good monsoons. If so, one or two bad monsoons in the coming years can make a big change in the economic situation of the country.

Particularly noteworthy in this connection is the disappointing performance of the industrial sector in recent years. Turning to the recent months, we should note that the seasonally adjusted Index of Industrial Production reached its peak in April 1970. This peak has not again been reached, let alone surpassed during the subsequent 12 months. With an average increase of only 2.3 per cent in industrial production, the fiscal year 1970-71 was a

year of near-stagnation for this vital sector. The causes of this stagnation are deep-seated; and putting the industrial sector back to the long-term growth rate of at least 7 per cent per annum is going to be a pretty tough job. The achievement of the Fourth Plan target rate of 10 per cent per annum appears to be out of question.

Finally, one more point in this context. If the performance of the economy during the late 1960s was reasonably good, it was, by and large, because of the tremendous developmental effort put in during the late 1950s and the early 1960s. Owing to the familiar gestation lag, what we sowed in previous years we reaped in the late 1960s. But it so happened that our sowing activity, i.e., our investment activity, suffered a serious setback in late 1960s. Thus, after reaching a peak level in 1965-66, the tempo of investment as well as Plan expenditure in real terms has been going down more or less steadily throughout the subsequent five years (see Table 2 and the chart alongside). If the sowing activity in late 1960s has been falling, one can imagine its impact on what we are going to reap in early 1970s. The emergence in recent months of shortages of steel, power and railway wagons is a clear warning that the limits of reaping the benefits of heavy investments in early 1960s are being reached. Even in respect of agriculture, it appears that the limits of the green revolution would be soon reached if further large investments are not made in irrigation works. So, unless fresh and

of the same order, with the result that the per capita real income in 1966-67 was about the same as it was in 1960-61 (see Table 1 and the chart alongside). It implied that these six years were years of economic stagnation. This was the time when some of the gloomiest forecasts relating to the Indian economy were made. Then came the years of rapid recovery and even some real advance. After 1966-67, the real national income started rising rapidly. The pace of growth was so good that even the per capita real income advanced at a brisk pace. The previous peak of per capita real income of 1964-65 was crossed for the first time in 1969-70. There was further increase in 1970-71. Thus, within four years after 1966-67, the per capita real income increased by 14 per cent—a commendable record by Indian standards. What was lost in the early 1960s was made up in the subsequent years. As a result, during the ten years ended 1970-71, the average annual rate of increase of

necessarily heavy investment is put in swiftly, particularly in the public sector, we might be in for prolonged shortages of various strategic items and other constraints with all their implications for the pace of economic growth.

It is in this context that one has to view the contribution that the Union Budget for 1971-72 might be expected to make to the growth process in the Indian economy.

Step-up in Plan outlay

Under these circumstances, it is generally agreed that there is a need to step up the Plan outlay sharply. In the course of his Budget speech the Union Finance Minister, Mr Y. B. Chavan, proposed an increase of Rs 155 crores in the Central Plan outlay over the budgeted level for the preceding year. He said "This represents an increase of more than Rs 300 crores over the likely actual level of

(Plan) expenditure in 1970-71". Against a provision of Rs 635 crores for Central assistance to the State plans in the Budget for 1970-71 he has proposed an allocation of Rs 700 crores for 1971-72. The next day the Finance Secretary gave a briefing to the press in the course of which some more details about the Annual Plan for 1971-72 were given. Firstly, the Annual Plan expenditure (Centre and States) for 1971-72 was placed at Rs 3,024 crores. No

than Rs 600 crores over the likely outlay in 1970-71. If we go by these figures, the Union Government seems to be promising about 25 per cent increase in the Annual Plan outlay this year. If this objective is fulfilled, it would undoubtedly be regarded as an achievement of the highest order.

In the process Mr Y. B. Chavan landed himself in a deficit of Rs 397 crores. Facing his task with a rare boldness, he imposed fresh taxes which in a full year

figure for the actual Annual Plan outlay in the preceding year was given. However, according to the press reports, the Finance Secretary said that at Rs 3,024 crores the proposed Annual Plan outlay for the current fiscal year represented a rise of more

would yield Rs 294 crores. However, during the remaining months of the current fiscal year, the new taxes would fetch Rs 220 crores, out of which Rs 177 crores would accrue to the Central exchequer and the remaining Rs 43 crores would be the share of the State Governments.

Col (2) Derived from column (1) by using the official estimates of GNP for the years upto 1969-70. For 1970-71 we have used our estimates of GNP at Rs. 36,950 crores.

Col (3) Derived by deflating column (1) with the help of index numbers of wholesale prices (Base 1961-62 = 100). It has been assumed that the average increase in prices in 1971-72 would be 5 per cent.

Our estimates.

In Table 3 is set forth the picture of the financing side of the Annual Plan for 1971-72 as it emerges from the Budget papers and the press briefing of the Finance Secretary. It will be seen that out of the total Annual Plan outlay of Rs 3,024 crores, Rs 1,440 crores or 48 per cent would be spent in the Central sector. The remaining Rs 1,584 crores or 52 per cent of the total would be spent by the States and Union Territories. The size of the State plans would be Rs 1,499 crores. This would be financed by the Central assistance for the State plans of the order of Rs 700 crores supplemented by further Central assistance of Rs 143 crores for those schemes which would be implemented by the States but would be sponsored and financed by the Central Government. The remaining 44 per cent—Rs 656 crores in absolute terms—would be financed by the States out of their own resources. It appears that the States have promised that they would raise the resources of this order for their plans.

On the face of it, the financial scheme looks quite good. Yet, all the heroic

FACT

efforts of Mr Y. B. Chavan notwithstanding, we are quite apprehensive that the story of shortfalls in Plan expenditure which has become quite familiar to us in recent years, is likely to be repeated this year also.

Let us take the experience of the first two years of the Fourth Plan. According to the Budget estimates, the Annual Plan outlay for 1969-70 was fixed at Rs 2,271 crores (*Economic Survey, 1969-70* February 1970, pp. 92-93). However, it now transpires that the actual expenditure may be lower at Rs 2,176 crores (*Economic Survey 1970-71*, May 1971, p. 108). There would thus be a shortfall of about Rs 100 crores. As for 1970-71, the latest *Economic Survey* puts the budgeted outlay on the Annual Plan for that year at Rs 2,822 crores. But if we go by the Finance Secretary's press briefing, the actual may be around Rs 2,400 crores implying a shortfall of about Rs 400 crores.

All this is of course in money terms, i.e., at current prices. Because of the steadily increasing prices, however, the real value of the actual Plan outlay is still lower. If we look at the data presented in column 3 of Table 2, it would appear that, evaluated in real terms, the Plan outlay during the last two years appears to have been about two-thirds of the real outlay in 1965-66. Even if we take into account the change in the coverage of the term of Plan outlay when one Plan ends and another Plan begins, the basic picture does not change very much.

In brief, while every year, at the time of the budget, the Indian Finance Ministers make a heroic effort to raise the Plan outlay, the actual step-up in real terms is nowhere near the promise held out at the time of the budget. Since this has been happening so frequently, it is worthwhile probing a little deeper into this awkward phenomenon.

Crisis of resources

Since the available data for 1970-71 relate to development expenditure—rather than the Plan outlay—of the Central Government only, we shall discuss the problem in these terms. (As is well-known, the record of the State Governments is much worse). We may begin by noting the fact that so far as the Central Government is concerned there was no shortfall in tax revenue in 1970-71. Against the Budget estimates of Rs 2,390 crores, the actual tax revenues were higher at Rs 2,442 crores (both the figures are exclusive of the share of the States). And yet, there was a shortfall of Rs 137 crores in the development expenditure of the Central Government. Against the Budget allocation of Rs 1,500 crores, the actual development expenditure was Rs 1,363 crores (R.E.). Why this shortfall? A study of the Budget data provides an interesting clue. It appears that the non-developmental expenditure was budgeted at Rs 2,424 crores; but actually it turned out to be Rs 2,569 crores (R.E.), i.e., higher by Rs 145 crores. It will not be fortuitous to argue that to a considerable extent the shortfall of Rs 137 crores in the developmental expenditure was due to the increase of Rs 145 crores in the non-developmental expenditure.

And why did the developmental expenditure rise? The most important

single factor here was the grant of an interim relief of Rs 107 crores to the Central Government employees in pursuance of the Third Pay Commission's recommendation. There were similar increases in some State Governments also, "resulting in substantial increases in the level of non-developmental expenditure" all around (*Economic Survey, 1970-71*, May 1971, p. 26).

This brings us to the heart of the crisis of resources. The requisite financial resources cannot be spared for developmental expenditure, because the non-developmental expenditure has been rising. And the non-developmental expenditure is rising more because of the increase in the prices of goods and services purchased for non-developmental purposes rather than the increase in the quantum of goods and services purchased. Even as regards the developmental expenditure, the Government is able to purchase less and less real goods and services for developmental purposes for the same amount of money spent because of rising prices. In short, the rise in prices is a major cause of the crisis of resources. Of course, to say this is not to deny the role of other factors also which play their part, in increasing the strain on resources.

But why are prices rising? While any extended analysis of this big question is outside the purview of the present discussion, it would be enough to note that excessive monetary expansion has a good deal to do with inflation of prices. The excessive monetary expansion, in turn, can be traced to excessive deficit financing by the Government and excessive bank credit extension to the private business sector.

Through deficit financing, the Finance Ministers are caught in a vicious circle. To begin with, whenever a well-meaning Finance Minister tries to increase the developmental Plan outlay, he has to face a larger deficit. This is an arithmetical inevitability and, one can even say, the necessary price of growth. While trying to find ways and means of filling the budgetary gap, all Finance Ministers are conscious that excessive deficit financing somehow leads to price inflation. For example, Mr Chavan himself declared in his Budget speech: "Let me remind Honourable Members, however, that the price rise in the economy has been sufficiently disquieting last year, and the budgetary deficit must therefore be kept within reasonable limits". Every Indian Finance Minister has, time and again, vowed that he would keep deficit financing within reasonable limits.

But, at this point every Finance Minister has also to take note of an important feature of parliamentary democracy, viz every rupee of deficit financing evokes much less of opposition uproar than a rupee of taxation effort. No wonder, therefore, that our Finance Ministers are generally under severe pressure to go beyond reasonable limits in respect of deficit financing. Thus it has come about that excessive deficit financing has become a cardinal element of the fiscal philosophy of the Indian Finance Ministers; and as a result, price inflation has become an integral element of the process of economic development in India.

So, following his predecessors, Mr Chavan has left a large budgetary deficit

uncovered. According to the incorrect definition adopted by the Ministry of Finance, the overall deficit would be of the order of Rs 220 crores. In terms of the more meaningful definition adopted by the Reserve Bank, the deficit would be larger.

Besides, there are many imponderable factors which may further widen the deficit. One such imponderable factor is the massive influx of refugees from Bangla

Desh. Mr Chavan has made a provision of Rs 60 crores in the Budget for this purpose. Obviously, this is a gross underestimate. For, only four days earlier, the Prime Minister himself said this in the course of a formal statement in the Lok Sabha: "On present estimates, the cost to the Central exchequer on relief alone may exceed Rs 180 crores for a period of six months" If so, for the current fiscal year, the cost may well be around Rs 360 crores, against Rs 60 crores provided by Mr Chavan. It is then clear that the actual deficit this year will be substantially larger than the budgeted figure of Rs 220 crores. To that extent, the impact of the Budget would be more inflationary.

To impose taxes with the annual yield of Rs 294 crores requires a rare courage. Mr Chavan has amply displayed that courage. However, we must add that he has nonetheless committed the fatal error of leaving a large deficit uncovered. The consequent increase in prices will wipe out the real value of a large part of the additional yield of his fresh taxes also. We

can, therefore, expect the familiar sequence to repeat also—rising prices, clamour for higher wages and prices, rising non-developmental expenditure, paucity of resources for developmental purposes and finally the same big gap in the budget. The endless vicious circle. In the process, the country would continue to have a little economic growth and a lot of inflation with all its ill-consequences. One does not need a prescience to predict that when, a year hence, Mr Chavan sets about framing the Budget for 1972-73, he will once again be bedevilled by a huge budgetary deficit.

To say all this is not to deny some of the solid contributions which the Central exchequer would be making to the national economy in the current fiscal year.

(1) In the context of a chorus of complaints from almost every State about the step-motherly treatment meted out to them by the Central Government, we may begin by noting that in the current year, the Central Government would be transferring Rs 1,868 crores to all the States. A sizable sum by all standards it would

finance about 40 per cent of the total expenditure of all the State Governments.

(ii) Large additional investments are expected to be made in 1971-72 on many projects of the Central Government. Some of the major projects are listed in Table 4. Thus, it is proposed to spend Rs 170 crores on the Bokaro steel project. Further, Rs 40 crores are proposed to be spent on several fertiliser projects undertaken by the Fertilisers Corporation of India. Another Rs 11 crores would be spent by way of assistance to Indian Farmers Fertilisers Co-operative Ltd. The National Mineral Development Corporation will get Rs 18 crores and Hindustan Copper Ltd will get another Rs 18 crores. The Bharat Aluminium Company will get Rs 13 crores. The nuclear power stations, now under construction at Kota (Rajasthan) and Kalpakam (Tamil Nadu), will get Rs 14 crores and Rs 10 crores, respectively. While one cannot but deplore the inexcusable corruption, inefficiency and waste which would most probably accompany the construction and operation of these projects, it would be hard to deny the crucial role which these and other similar projects play in the economic development of the country.

Mere exercise in resource-gathering

By Phiroze B. Medhora

THE Budget for 1971-72, in its efforts at gathering resources, promoting investment and bringing about equality, follows closely the fiscal policies and practices of Finance Ministers during the last 15 years, and more particularly the last five years. The Budget proposals make a bold attempt at raising a fairly substantial amount through taxation; they do nothing, beyond paying lip service, for the other objectives.

The total amount of new taxation levied is Rs 220 crores, since this is for the remainder of 1971-72, the imposition for the whole year is much larger, being Rs 285 crores.

Of the additional levy of Rs 220 crores, almost three-fourths is to be levied in the form of indirect taxes—excise duties and import levies—and one-fourth in direct taxes, mainly adjustments in personal income tax rates, in wealth tax and in corporate taxes.

This year's Budget will go down in fiscal history as the "cosmetics" budget: its greatest innovation is to tax toiletries and cosmetics like perfumed hair oil, lipsticks and other toiletries. The Finance Minister justifies the measure by describing these items as "appurtenances of high living". The yield from this tax on "high living" is expected to increase by Rs 24 lakhs—from Rs 4.14 crores (revised) in 1970-71 to Rs 4.38 crores (budget) in 1971-72 (vide item 26, Cosmetics, in Statement II, Explanatory Memorandum on the Budget).

Dr Medhora is Deputy General Manager of the Industrial Credit and Investment Corporation of India Ltd.

of the Central Government for 1971-72, Part II). However, this attempt at face-lifting apart, the main money-spinners of the Budget remain the traditional sources: taxes on tobacco and on petroleum products. The yield from cigarettes will go up by Rs 3320 crores, that from motor spirit by Rs 3630 crores, or about 5 per cent on total excise revenue from petroleum products.

There is some rationalisation upward in import duty rates. In the process two desirable changes have been brought about: some excluded capital goods items—dairy equipment and so on—have been brought within the tax net; and an attempt to tax agriculture indirectly, through import duty on tractors, has been made. This last is a short-term revenue-earner since imports of tractors will cease in two or three years, yet the principle of taxing agriculture and of levying a tax on labour-saving devices (as also in the case of tax on ready-made garments) is desirable.

In the field of direct taxes, the Budget has increased personal income taxes on incomes above Rs 15,000 per year. It is said that a fool and his money are easily parted: evidently if a person is foolish enough to have wealth of Rs 15 lakhs and not to consult a tax lawyer, he deserves to pay the 8 per cent wealth tax which the Budget has now imposed. In addition, to those who have wealth in the vicinity of Rs 1 lakh, the Budget has provided an incentive to consult tax lawyers—who incidentally manage to avoid income tax on such earnings.

In the field of company taxation, the Finance Minister has raised the rates of

surtax on companies, excluded some industries from priority status and reduced the priority tax differential, and given notice for abolition of development rebate.

The individual tax measures, and the total tax effort, have little relevance to the problems the economy faces. The reliance on excise duties has a slow inflationary impact on costs, as the experience of the last three years shows. Moreover, despite verbal protestations, the Government has not been able to introduce progressivism in excise duties according to class of consumers—as proportion of fabric prices, the excise duty rates on fine and superfine cotton cloth are not more progressive than in coarse cloth.

Is the over-all tax structure more progressive—and, therefore, socially more just? Apparently our budgets make the traditional obeisance to equality, often through punitive tax measures. Purely by the direct tax rate structure, India must sound the most equalitarian society.

Yet, given the degree of tax avoidance and evasion and possibilities of expenditure and income shifts, the real impact of such formal equalitarian tax system has been small. How many people pay wealth tax on wealth above Rs 15 lakhs? And how many people pay income tax on personal income above Rs 1 lakh per year?

Last year's Budget marked the beginning of two new programmes in the attack on poverty: provision of nutrition to children and an employment-creation programme. The provision of the programme for nutrition for children is being

increased from Rs 4 crores in 1970-71 to Rs 10 crores in 1971-72. And the programme for employment-creation is now being extended to educated unemployed, the total programme rising to Rs 75 crores.

Here again there is no indication provided of the actual measure of the real benefit from the programme. What is the quantity of goods distributed, and how many children—and determined by what criteria—obtained nutrition under the scheme? Even if there is no administrative leakage, the employment programme for Rs 75 crores would create, at a payment of Rs 1,000 per year, 7,50,000 jobs. But what is the extent of the administrative structure needed to support such programmes? And the employment programme would involve expenditure on implements and other items.

Progress towards economic equality is essentially symbolic. A bureaucratic programme acquires its own momentum and tends to grow. But, as the family planning programme shows, the cost of the bureaucratic system can swallow most of the allocations of a substantive programme. Moreover, the system itself—the amount of expenditure incurred, the administrative mechanism—becomes the criterion of the success of the programme. Nobody asks what the consequences of the family planning programme on population growth have been, or how many children got milk, or how many people (other than the bureaucrats) got work as a result of the various employment-creation programmes—or whether all the parts of the administrative mechanism are necessary for ensuring the substantive benefits.

One is then left with the general development programmes to measure the incentives for economic growth. The *Economic Survey* for this year had recognised that the *laissez faire* policy, followed during the last four years, had failed to accelerate the tempo of economic growth, and selected increases in public sector investment were needed if the rate of growth was to pick up.

Yet one fails to see this analysis followed through in the Budget proposals. The increase in the Central outlay for 1971-72 is hardly Rs 155 crores. Moreover, this outlay continues to include non-investment items like provision for food-grain buffer stocks. Of the remainder, the largest increase is in social welfare services: their impact on investment remains to be seen. The annual plan outlay has been increased from Rs 2,650 crores to Rs 3,024 crores, or by Rs 400 crores—which is smaller than the increase last year.

As is now customary, there have been serious shortfalls in various items of development expenditure. However, the Government machinery has its own official excuse to explain away its shortcomings. This is what the Budget papers say about the delay in the Government's aluminium project:

"Bharat Aluminium Company Ltd.—The revised estimates are placed at Rs 7.41 crores, against an original budget of Rs 12.40 crores. The saving is due to the postponement of expenditure on civil engineering, machinery and equipment, mining, etc., caused by non-availability in time of the required quantity of steel with consequent delay in fabrication of plant and equipment" (pp 59-60, Explanatory Memorandum, Part II).

In the field of investment in industry, the impact of the Budget proposals is likely to be adverse. After having had various target dates for self-sufficiency from the various Finance Ministers in the past, the present Budget envisages that India will have been optimally industrialised exactly by May 31, 1974, and that there is no need for investment incentives like development rebate beyond that date. While one may question whether the development rebate is the most efficacious inducement for growth in India's context, there is little doubt that the need to accelerate the rate of investment, and the need to provide incentives to that purpose, will remain for a long time to come.

So also one can question the kind of selectivity that has been introduced in the provision of tax incentives. Firstly, the general tax differential has been narrowed, so as to whittle down the inducement available for priority industries. At any stage of India's development she would always need to accelerate the growth of some industries at a rate far higher than the general run of industries, and effective incentives to this end would always be required. The list of industries eligible for such benefits would be subject to change over time as the needs of the economy change, but the extent of benefit provided needs to be maintained if the incentives are to be effective.

Secondly, while one may accept the need to prune the now-diffuse list of priorities, one may question the actual pruning carried out by the 1971-72 Budget. Perhaps deletion of petrochemicals and soda ash is justified on various grounds (highly capital-intensive or luxury character of the industries); but on what ground is the removal of aluminium or commercial vehicles justified? Aluminium, with iron and steel, was the basis of the Mahalanobis strategy of growth; commercial vehicles are the means of transport for the poorer sections of the people; both these industries need to grow much faster in the coming years. Yet the Budget ignores the logic of this development strategy.

Clearly the Budget proposals fail to serve the broader aspects of the economic philosophy of development. The Finance Minister implies that the Budget is not the only instrument of economic change and one year's budget cannot achieve everything: "It is hardly possible to claim that a new social and economic order can be ushered in through budgetary policy alone, much less through a single budget." However, the budget is at least one instrument for change, and a year's budget at least should seek to make a beginning for change. The 1971-72 Budget proposals fail to do either.

Maharashtra is b-o-o-m-i-n-g today batliboi is lending a helping hand...

More and more manufacturers are moving to the fast developing areas of this highly industrialised State.

Maharashtra is a wonderful State for any industry to be in. One of the most industrially advanced States in the

country, Maharashtra is bristling with industry.

It has been Batliboi's privilege to contribute to the growth of the State by supplying vital equipment wherever required. For instance: Foxboro Process Control Instruments at Aarey help make milk more hygienic for Bombay's millions. An HEC Radial Drilling Machine VR 10 drills Shell-end Covers of Steam Boilers at I.A.E.C. A remotely controlled INDEF Baby Electric Hoist at Bhabha

Atomic Research Centre is lifting furnace covers—so that India's scientists harness Atomic power for peaceful uses. Allroyd Worm Reduction Gear Boxes and Allen Rank Helical Gear Boxes at ACC are helping manufacture an iron ore pelletising plant for TISCO.

Batliboi today offer you a variety of over 500 dependable, quality products made by more than 125 reputed manufacturers. These include:

Machine Tools and Accessories

Lathes • Milling Machines • Die making machinery • Special purpose machine tools • Drilling Machines • Precision Grinding Machines • Gear Making Machinery • Chucks and other accessories

Workshop Machinery & Equipment

Metal Working Machinery • Portable Electric Tools • Small Tools • Special Steel • Electric Motors • Electrical Switchgear • Welding Machinery & Equipment • Material Handling Equipment

Specialised Machinery & Equipment

Hard times ahead for industry

By Our Market Correspondent

THOSE industrialists who believed that stability at the Centre would assure a growth-oriented industrial policy are beginning to have second thoughts. It is not the socialist content of the Budget which is worrying them, but more the negative character of the Budget that does not contain any incentive for the setting up of industries or for exports. Stock markets have in the past few days reflected this mood of industry and trade. After the initial positive response to the Budget proposals which were believed to have let off lightly the corporate sector, the equities have been drifting. What has been disturbing to the stock markets is that even the incentives given in the past for industrial development are being withdrawn one after another. If Mrs Indira Gandhi's Budget in 1970 made the stock markets leave behind their despondent mood, that of Mr Chavan last week has let in a mood of pessimism.

Industrial units were still busy this week assessing the possible impact on their working of the modifications proposed in the tax holiday concession, withdrawal of the development rebate from 1974, curtailment of the priority list and the reduction of special exemption to 5 per cent from 8 per cent of the profits, and other measures announced by the Finance Minister.

The Finance Minister has not given an estimate of the likely additional revenue from the increase in the rate of surtax on company profits from 25 per cent to 30 per cent in the case of chargeable profits in excess of 15 per cent of the capital. But it seems some of the bigger and well-established companies such as Philips India, Century Rayon and Gwalior Rayon will be affected by the increased levy. Further, the modifications of certain existing incentives to new industrial undertakings are likely to affect most their profitability. For example, in the case of new industrial undertakings, ships and approved hotels, debentures and long-term borrowings would now be excluded for calculating the amount of capital employed for determining the exemption of tax up to 6 per cent for the period of five years. Significantly, in the case of some of the important issues which came to the market recently or will come shortly, such as Bihar Alloy Steel, Swadeshi Polytex and Gujarat Polyamides, the long-term loans/debentures amount to nearly one and a half times of the paid-up capital. With the removal of long-term borrowings from the capital base, the element of profit entitled to tax exemption would considerably be reduced. This would tend to lessen the attraction of new issues. It would also tend to reduce the margin available for payment of dividends.

The changes proposed in the field of priority industries, will be mainly felt by the large corporate enterprises in the aluminium, motor trucks and buses, cement and refractories, soda ash and petrochemicals and automobile ancillaries industries which will stand to lose heavily because they will altogether lose the benefit of the exemption of 8 per cent of their profits. However, some of the enterprises have already embarked on plans of expansion and when these materialise, probably the reduction of cost may counter-balance the effect of the loss of this exemption to some extent.

Then there is the measure of fixing a ceiling of Rs 5,000 on salaries and Rs 1,000 in the case of perquisites. Any amount exceeding this would not be allowed to be deducted in the computation of taxable profits. This would affect the amount of net profits available for distribution and ploughing back into business. Companies, particularly the foreign-controlled enter-

prises, where the number of whole-time directors is very large and the quantum of remuneration is also much higher than the ceiling prescribed in the Budget would be particularly affected.

While this is the broad assessment made by industry of the Budget proposals, there is the large network of excise duties which is also going to affect the industry by increasing the cost of production. Electrical and engineering industries which depend on imported raw materials like steel and non-ferrous metals are facing the problem of escalation of manufacturing costs following the new budget levies. Imported copper costs currently Rs 10,000 per tonne. With the levy of a 30 per cent duty the landed cost will go up to Rs 13,000 per tonne. In addition, there will be a countervailing duty of Rs 1,500 which is collected even now. It is not yet known whether the price of the indigenous copper would be put up by the same percentage. Copper imports are currently of the order of nearly one lakh tonnes which cost about Rs 40 crores per annum to the country. With an import duty of 30 per cent of the value of imports is estimated to exceed Rs 50 crores. The Government has already taken measures to discourage use of copper by banning the use of the metal in the manufacture of household cables. To induce economy in its use the existing concession in duty on copper contents of certain types of electric wires and cables has been withdrawn.

The 40 per cent duty on lead and zinc is likely to push up the costs in the engineering industry where these items are

used in the form of alloy and separately too. Zinc is used extensively for galvanising and as a result the cost of galvanised sheets is expected to go up. Customs duty on items like rods, bars, and flats of alloy tool and special steel has been doubled. The duty has been raised from 27.5 per cent to 30 per cent and 40 per cent in the case of many other items. This is bound to affect the cost structure of the engineering industries.

Woollen industry would be contributing about Rs 10 crores to the exchequer as a result of the new levies. The import duty of 40 per cent on raw wool and wool tops, and the rise in the excise duty on different types of yarns as also the increase in excise duty on wool top from Rs 2.45 to Rs 3.55 per kg will increase the production costs of the industry. So far the excise on woollen yarns was on the basis of specific duties but now *ad valorem* basis has been introduced. Prior to the introduction of the *ad valorem* basis the specific duty on grey handknitting yarn was 80 paise which has gone up to Rs 1.28 per kg. According to industry circles, the import, as also the excise duties, will add to the costs by about Rs 5 per kg. The industry would have to pay about Rs 8 crores more as import duty in addition to the usual import bill. In the current phase of financial difficulties, as also the credit stringency, the units might find it hard to enter the export markets by reducing the costs. The industry has already approached the Government with a request to reconsider the budget levies.

Brokers in land and buildings property in Bombay do not expect any selling

wave as a result of the Finance Minister's measures to acquire properties at prices that correspond to what is recorded in the sale deed. The Government is also bringing legislation to discourage *benami* holding of property. The valuation cell in the tax administration for valuation of buildings is also being strengthened. The net effect of all these measures would be to bring down the demand. The turnover in high-value property is expected to come to a standstill. In any case, it is going to be reduced.

The *ad valorem* duty of 10 per cent on agricultural tractors is to fetch a revenue of Rs 3.40 crores. The entire burden is expected to be passed on to the consumer—the affluent section in agriculture. The demand for tractors is estimated to be about 80,000 per year while the current production is 20,000 per year. The indigenous manufacturers are happy that a levy of 30 per cent on import of foreign tractors is being imposed. The price differential between the indigenous tractors on the one hand and the US and the East German tractors would be narrowed down. Industry circles are however worried that the jack-up in the rate from 15 per cent to 30 per cent in the duty on agricultural machinery and implements, dairy and poultry farming appliances would increase the prices and may affect the demand. If the harvests suffer on account of adverse weather conditions the immediate impact is on the demand for these items. Steep increases in duties on such products therefore need to be avoided. In fact it is possible that farmers' lobby in

Parliament would take up the matter with the Finance Minister.

In the case of the ready-made garment industry, subjected to an excise levy of 10 per cent, there would be an escalation in costs. In the organised sector there are about 1,000 units with a strength of 28,000 workers. There is idle capacity in the industry to the extent of 40 per cent to 60 per cent as the demand for garments is not picking up to the extent the industry had expected. The ready-made garments are also subjected to sales tax in all the States at high rates and the new levy would make the garments costlier. The industry exports garments worth about Rs 8 crores. If the domestic base of the industry is weakened, it is feared, it would have an adverse impact on export performance.

The duty of 10 paise per kilo on maida produced by roller flour mills in the organised sector (yield Rs 7.5 crores) will hit the common man because of the rise in the price of bread. The Maharashtra Government is not happy either with the levy as the bread prices are going up. The view of the Finance Ministry officials that the bread is not consumed by the common man is not shared by the State Government. To more than 1.5 million industrial workers in Bombay city alone, bread has become as good as staple diet, with a full meal costing nothing less than Rs 2 per head. The State Government is, therefore, requesting the Union Government to withdraw the levy.

REACTION ROUND-UP

Burden on backward areas

By Our Correspondent

MR Y. B. Chavan has claimed that his first Budget presented last week has tried to meet the immediate and urgent requirements of the economy while furthering the accepted objective of a truly socialist society. Whatever be the merits of this claim, his feelings are not shared by trade or industry. Nor are the middle classes happy with the Budget which seeks to collect Rs 220 crores by additional taxation this year. What is still more significant is that Government leaders in some of the States have expressed their misgivings about the possible adverse impact of the Budget on the economy of their States.

Orissa's Chief Minister, Mr Biswanath Das, has made the bitter comment that "both price stabilisation and fall in prices are now bound to be a day-dream". His criticism of the Budget need not necessarily be dismissed as natural for one who heads a government of parties in opposition to the Ruling Congress. There is genuine fear in the State that because of the recently announced higher rail freights and the sharp rise in the excise duty on motor spirit, transport costs will go up making even salt costlier. The Adivasis in the jungle areas of Orissa already pay at least 30 paise per kg for their salt and it should be disturbing to them that they will have to pay still more for this daily necessity. In general, it is feared, the higher transport costs will affect the economy of the State inasmuch as iron ore and other minerals which are exported from Orissa will have to bear higher road freights.

Not only Orissa but Punjab and Himachal Pradesh, too, are worried over the taxation proposals that will affect the cost of transport and which have come on the top of the higher railway freights announced earlier. Punjab's Finance Minister, Mr Balwantsingh, has gone to the extent of saying that the proposed Central taxes would play havoc with the economy of the State. He may have been exaggerating the situation, but it is being pointed out that, first, with coal costing more because of the higher railway freight both the foundry and the brick industries in the region would be hit. If bricks become costlier it could discourage the construction of brick houses in villages and retard village development works such as pavement of streets and construction of drains. It is even being argued that duty on tractors, motor parts and imported farm implements would affect adversely "marginal farmers" who constitute more than 75 per cent of the

total population of farmers. Most of the farmers purchase tractors with loans from the land mortgage banks and the increase in the cost of tractors could well upset the programme of Punjab importing 8,000 tractors in the next two years. All this is sure to raise a demand that the price of foodgrains be increased. Government spokesmen in Punjab also apprehend that the tax on light engineering goods, motor parts and nuts and bolts will prove a burden to the large number of units manufacturing these items and which form the base of the industrial structure of the State.

In Himachal Pradesh the horticulturists, who form the backbone of the State's economy, are disturbed about the possible impact on their industry of the levy on agricultural machinery and implements, increased duty on petrol, increased rate of surcharge on income and enhanced postal rates coupled with increased railway freights. The delicious juicy apples grown in Himachal Pradesh are bound to be costlier outside the State where the main market lies. Whether this development would mean a setback for the industry remains to be seen. There is also the fear that the State's infant canning industry will be hit and that its growth will be retarded.

Even in the State of Jammu and Kashmir the increase in transport costs, it is widely felt, is bound to affect the economy since the State has to depend to a large extent on transportation of goods by road. Kashmir perhaps will be the worst hit by the proposed levy on maida since, unlike in other parts of the country, the average Kashmiri consumes only fine wheat flour in the form of a special bread prepared at numerous bakeries.

While these reactions highlight the peculiar problems of the States concerned, on a broader plane, industry and trade fear that the Budget will neither stimulate investment nor give a push to economic

growth. There is a marked concern over the absence of a strategy to contain prices, and, notwithstanding the claims made by the Finance Ministry spokesmen, industry and trade are sure that the uncovered deficit of Rs 220 crores would prove unhealthy to the economy. The additional Plan outlay of Rs 300 crores over the previous year would, to a certain extent, give fillip to investment in the public sector, which has been on the low side in recent years. Nevertheless, this by itself is not expected to stimulate investment to an extent which should have been possible when the economy was poised for a leap forward if only the necessary incentives had been provided for the private sector.

There is one proposal of the Finance Minister which, however, has been welcomed unreservedly. It is the announcement that the loopholes that make possible fictitious sale deeds of property will be plugged and that a study would be made to devise measures to avoid evasion of excise duty and the leakage of foreign exchange. The Government's efforts in these directions or in checking smuggling have been far from successful so far and the hope is being expressed that the administrative machinery would be more energetic in combating the economic offences.

Though such a State as Punjab might be unhappy over the imposition of duty on tractors, the industrial sector, by and large, remains disappointed that the Government is still shy of bringing the affluent agricultural sector within the ambit of taxation. Mr Chavan's contention that little can be done by the Centre in this field and that it is the States which will have to take the initiative is considered a lame excuse. The levy of an excise duty on tractors, it is forcefully argued, cannot be a substitute to a direct taxation of the higher income brackets in the agricultural sector.

The taxation proposals

Compiled by Commerce Research Bureau

THE Union Finance Minister, Mr Y B Chavan, presenting his maiden Budget for 1971-72 to the Lok Sabha on May 28, 1971, disclosed an overall deficit of Rs 397 crores. Rs. 75 crores on revenue account and Rs. 372 crores on capital account. Mr Chavan proposed to garner additional resources of the order of Rs 220 crores through fresh imposts. After the transference of Rs 43 crores to the States Rs 177 crores would accrue to the Centre. Thus, the overall uncovered deficit would be Rs 220 crores, should the Finance Minister's proposals for additional taxation of Rs 220 crores go through.

The following are the taxation proposals in the Budget for 1971-72 which will yield Rs 220 crores in the current year, but about Rs 250 crores in a full year. The changes in excise duties and customs are effective from Friday (May 28, 1971) midnight, whereas others only after the Finance Bill (1971) is passed by the Lok Sabha.

DIRECT TAXES

Income tax: In the case of individuals as well as Hindu undivided families the rate of surcharge on total income exceeding Rs 15,000 per annum has been raised from 10 to 15 per cent.

Additional revenue yield during 1971-72: Rs 12 crores

Additional yield in a full year: Rs 20 crores

Income tax payable in the case of an individual, Hindu undivided family, unregistered firm, association of persons etc., at the rates proposed in the Bill for computation of advance tax and deduction of tax at source from "Salaries" during the Financial Year 1971-72.

A. Basic income tax (i.e. exclusive of surcharge)

2,56,000	1,60,200	

such deduction has been raised from Rs 15,000 to Rs 20,000 in the case of individuals.

With the concessions in the standard deductions allowable for conveyance and long-term savings available now, an employee with an annual income of Rs 6,000 would be left with no income tax incidence whatsoever, provided he saves a minimum of Rs 400 in the approved form.

The structural changes proposed by the Finance Minister sizably affect the incidence of company taxation. While the rates of taxation on the ordinary income of companies have been left undisturbed, except for the rates on capital gains, the rate of surtax on company profits has been increased from 25 to 30 per cent in the case of chargeable profits in excess of 15 per cent of the capital.

It has been proposed not to allow any development rebate whatsoever on ships acquired and machinery or plant installed after May 31, 1974. The logic of this move seems to be to quicken the pace of in-

vestment in the remaining years of the Fourth Plan.

Hereafter, in the case of new industrial undertakings, ships and approved hotels, while calculating the exemption limit of 6 per cent profit on the capital employed, debentures and long-term borrowings will be excluded.

Additional revenue yield during 1971-72: Rs 10 crores.

Additional yield in a full year: Rs 14 crores.

Aluminium, motor trucks and buses, cement and refractories, soda ash, petrochemicals and automobile ancillaries have been excluded from the list of priority industries. Moreover, the special tax exemption limit for priority industries has been cut down to 5 per cent of their profit from the existing 8 per cent limit.

Additional revenue during 1971-72: About Rs 6 crores.

Additional yield in a full year: Rs 8 crores.

Foreign companies were hitherto entitled to a concessional rate of 14 per cent

tax on dividends received from a closely-held Indian company mainly engaged in a priority industry. This will, from now on, be discontinued. The foreign companies will be subjected to tax on such dividends at the uniform rate of 24.5 per cent.

The tax concessions for promoting development and export of technical know-how and technical services which have been available only to companies will, from now on, also apply to individuals, Hindu undivided families and partnership firms.

The entire business income of co-operative societies of workers or those engaged in fishing and allied activities will be exempted from tax.

Local authorities deriving income from the supply of water or electricity to villages outside their jurisdiction will be exempted from tax on such income.

The Housing and Urban Development Finance Corporation will be exempted from income tax for 10 years. The Deposit Insurance Corporation will also enjoy tax exemption for further five years.

**ITC
believes
that the
consumer
always
comes first**

Using the latest techniques of modern management—consumer and market research—India Tobacco Company Limited first ascertains the needs and preferences of the consumer at all price levels. Thereafter, by using technical research facilities, ITC continually creates quality products to provide the consumer with what he wants. Continuing research finally ensures that high product quality is maintained at all times.

Indeed, ITC's quest for quality has won it four medals at the Monde (World) Selection in Brussels this year—a Gold Medal (for the second time) for India Kings, Silver Medals for Windsor and Simla and a Bronze Medal for Lex. Truly, International quality—made in India.

ITC's distribution network, serving every corner of the whole country, ensures that consumers in the largest cities and in the remotest villages receive ITC products fresh from the factory and in prime condition.

AIR-INDIA

announces

a drastic reduction in fares!*

Air-India offers heavy reductions under our Affinity Group Travel Scheme. For many sectors, the reduction amounts to over Rs. 2000/-.

What is an affinity group?

It is an association that has been in existence for 6 months prior to travel with a common objective or activity other than travel. In case of travel to the Americas the association must be of at least two years standing.

Examples: Educational institutions like schools or colleges of Arts, Music, Science, Engineering, Medicine, Catering; professional groups like associations of lawyers, physicians, surgeons, pathologists, teachers, artists; clubs like Lions

and the Rotary Club, sports associations, gym-khanas, choirs, dramatic and musical groups etc.

Minimum requirements:

If you are a member of any of the above affinity groups for a minimum period of 6 months prior to travel you may be entitled to the reduction. You have to travel together throughout your journey and your group should not be smaller than 15 persons.

Besides the large reduction under our Affinity Group Scheme, Air-India gives you that extra something, if you haven't been abroad in the past 3 years.

Subject to approval of all Govts.

- Equal to, and in some respects, better than Portland cement.
- Possesses low heat of hydration, which renders it ideal for dams and other mass-concrete constructions.
 - Has better workability for obtaining good finish.
- Will give concrete of lower permeability.
- Successfully used for over a decade for building various types of durable structures.
- Manufactured under strict supervision for quality control at every stage of production.

Too heavy for our shoulders

WITH the spread of cholera among the refugees the problem of displaced persons has acquired a new dimension. At the moment it is not clear whether the epidemic is of the killer type. It is true that the high mortality and seizure rates are matters of concern. This could be attributed to the highly exhausted condition of the refugees and to the fact that there is a possibility of their catching the disease even before their entering the Indian territory. If they had to trek in fear across large distances even after catching the disease the mortality rate would be high whether or not the cholera is of a deadly kind. Anyway, this is a problem which has to be watched very closely by the competent authorities in order to take all the necessary steps to see that the epidemic does not spread in other parts of the country. Much will depend upon the availability of the medical supplies needed for the purpose. Fortunately there are signs of international bodies at last becoming aware of the enormity of the situation, and the help has begun to pour in. Some 3,000 tonnes of medical supplies are planned to be airlifted. Air-India is likely to transport the supplies free and there are possibilities of moving a Jumbo for this purpose. In the meantime, the capacity of the Central Research Institute at Kasauli to produce cholera vaccine has been raised to 400,000 to 500,000 doses per week. With these massive efforts it may be possible to contain the disease.

Cholera epidemic is, however, only one of the aspects of this problem. The influx has obviously surpassed the estimates of the Government and no adequate measures have been thought out in advance to deal with so massive an influx of refugees. The cry of distress by the West Bengal Government awakened the Government of India to the realisation of the need for shifting from the State as many refugees as possible. As a result of the Prime Minister's visit to Calcutta it has been decided to locate camps in Bihar, Madhya Pradesh and Orissa where the refugees could be dispersed. The real problem here is one of transport. The Railways are trying to figure out the logistic problems and there are indications that not more than 10,000 people can be dispersed per day even with the best efforts. If 900,000 refugees are to be taken out of West Bengal, this would take at least three months. If the 40 UNICEF vehicles and 30 WHO vehicles are also pressed into service, that might expedite the work of transport. A more substantial help could be given by the transport planes which the US is contemplating to lead to India if the trial flights proved successful.

Obviously the tremendous resources needed for the shifting of the refugees and maintenance of refugee camps are beyond the capacity of India. In the Budget the Union Finance Minister has tentatively made a provision of Rs 60 crores for providing relief to the evacuees from East Bengal and has taken credit on the revenue

side to the extent of Rs 20 crores expected by way of external assistance for this purpose. These amounts are by no means sufficient to finance the relief measures. At the popular level efforts are being made in other countries to collect resources for the East Bengal refugees, but at the Government level the approach is still halting and is of an *ad hoc* nature. It is true, the UN High Commissioner for Refugees has announced that to date the contributions pledged through the world body has totalled Rs 23.4 crores. Much more, however, would be required, and it is not known at the moment whether the member countries of the UN would be prepared to underwrite all the resources needed.

Of still greater importance is the question of the future of these refugees. The Government of India has made it clear that the ultimate aim of its refugee policy would be to send them back to East Bengal. The Prime Minister has appealed to Governments the world over to intervene and help in creating a situation in which the refugees would be willing to go back to their homes. But this does not seem to have elicited any constructive response. It is doubtful if all the refugees would consent to go back. Certain sections of the East Bengal population had specially come under the notice of the military now operating in East Bengal. Those who have escaped the attempt at decimation would not readily consent to go back. It is quite likely that India will have to absorb at least some of the refugees who are now taking shelter here. If they have not to permanently migrate to our country something more than mere normalisation of the situation in East Bengal will be necessary. Only adequate pressure from the big powers on Islamabad could help create a favourable atmosphere for the return of all the refugees to East Bengal, which is the aim of the Government of India's refugee policy.

The Prime Minister has advised the country not to get panicky and to face the situation forced upon it with courage. So far the people have risen to the occasion. Unofficial efforts are being made to collect resources to help the refugees and there is tremendous sympathy for these victims of brutal terrorisation. At the same time, the possibilities of social tensions developing in the areas where the refugees are camped cannot be ignored. There are already reports of uneasiness in the tribal areas of Meghalaya at the arrival of the refugees there. Shillong recently observed a 12-hour hartal to protest against the presence of refugees in the region. These incidents might spread. One should sincerely hope that as a result of international pressure some solution will be found whereby the refugees will be taken off our shoulders. If this is found not possible India might be forced to protect herself against the health hazards, the continuous draft on her resources and threats to law and order in the country.

Power in the seventies

THE 10-year Power Plan drawn up by the Ministry of Irrigation and Power, envisaging an installed capacity of 52 million kw by 1980-81 against 16.4 million kw at the beginning of the decade, can by no means be considered ambitious in terms of our needs. Its basis is the growth rate of demand during the past decade which was of the order of 12.5 per cent. This period, as the plan itself points out, was one during which the economy moved at a slow pace. Unless, therefore, we are planning for stagnation in the economy we must accept the assessment of the Ministry that we should achieve an installed capacity of 52 million kw in order to ensure that no bottlenecks on account of power shortage are created in the progress of industry and agriculture. The Ministry's exercise would have been more meaningful if the planners had also worked out in detail the financial implications. The Ministry's attitude might possibly be that whatever resources are involved must be found even if this means curtailing of outlays on some other sectors. This need not be an unreasonable proposition since power constitutes a strategic force for the development of industry and agriculture. But past experience and pragmatism should have indicated to the Ministry that it cannot hope to carry with it the Planning

Commission or the Government if the demand made on the resources looks staggering. If the financial picture were available there would, at least, have been an opportunity to judge, on the basis of past records, whether the Ministry and the State electricity boards will be in a position to utilise the funds asked for.

Shortfalls in power targets in the past cannot all be traced to shortage of resources. There have been incredible delays in commissioning projects according to schedule because of lags either in civil works or in the supply of machinery and essential raw materials or even because preliminary investigations were not completed in time. The plan itself concedes this and has proposed several measures to ensure smooth implementation of the power schemes on the anvil. It calls for detailed investigations of potential hydel schemes, launching of preliminary works such as construction of access roads where schemes have been already investigated, finalisation of the designs for power plans and placing of orders with manufacturing units as early as possible to carry out their timely delivery and firm arrangements for the transportation of coal from fields to the power stations. But the mere identification of hurdles is not enough. Concrete plans have to be drawn up to overcome them and put them into effect. The failure on this count is reflected in the shortfall during 1969-70 and 1970-71 in capacity installation against the target of an additional 2 million kw and 1.6 million kw. A capacity of only 1.2 million kw and 1 million kw respectively was achieved during these two years. One cannot yet be sure that during the three remaining years of the Fourth Plan the balance of 7 million kw will be installed to achieve the target of 23.1 million kw. Mere exhortations to indigenous suppliers to deliver equipment on schedule and to the project authorities to ensure the completion of civil works in time are not going to help. It is our inability in the past to implement even moderate programmes that makes it a stupendous task to add during this decade a generating capacity equivalent to twice that installed so far.

The challenge has, however, to be met. The plan itself has attempted to facilitate the implementation by including most of the hydel schemes which have already been investigated and proposing additions to thermal plants mostly on sites already developed or under development. It has got over the controversy whether we should or should not develop nuclear power in this country by firmly coming in favour of an additional nuclear capacity of 3,000 mw. It has also another feature to commend in that the share of hydro power in the total supply will be increased as recommended by experts who have drawn attention to the cheaper cost of electricity from this source. The proportion of 22.3 million kw of hydro power, 23.9 million kw of thermal power and 4.2 million kw of nuclear power in a total capacity of 50.4 million kw of utilities may not be the ideal one. But this would take us at least nearer the share of 60 per cent for hydro power recommended by the Energy Survey Committee and other bodies. One cannot overlook that we have to pay as much attention to the cost of power as to its adequate supply.

The right mix of hydro and thermal power, therefore, has to have the highest priority in power planning. Simultaneously we must make the optimum use of the power generated, which would imply that we must push through with greater vigour the construction of inter-State and inter-regional transmission links. That the Ministry of Power and the State electricity boards have yet to draw up a time table indicating the target dates for completion of the various links planned for the Fourth Plan would suggest that the desired emphasis is still not placed on a vital segment of our power programme. This is perhaps not surprising considering that the State electricity boards are not yet fully seized of the importance of improving their financial performance. None of them, even in 1970-71, was anywhere near the target of 11 per cent return recommended by the Venkataraman Committee as far back as 1964. If these agencies for power supply do not set their financial houses in order, it would be futile to expect such organisations to carry through the programme, however desirable and essential it may be. (See page 1093—Power development plan: 1971-81.)

WHY did Sheikh Abdullah do this? In publicly supporting Yahya Khan's genocide Sheikh Abdullah has forfeited the sympathy of even those who had a hope that one can do business with this erratic Kashmiri leader. Radio Pakistan recently broadcast an interview of Sheikh Abdullah with an Indian newspaper *Rehnuma-i-Deccan* in which he justified the unprecedented carnage of Bengali Muslims by Punjabi Muslims. Sheikh Abdullah who still dreams of an independent Kashmir particularly objected to the demand of Sheikh Mujibur Rahman for making foreign trade a regional subject in Pakistan. He said that no Government had ever accepted such a demand. He also added that no Government in the world would tolerate a move that may lead to the disintegration of the country. Sheikh Abdullah, who has himself decided to side with the suppressor of the right of self-determination of the people of Pakistan, has accused the Indian Government of having one norm for Pakistan and another for Kashmir. Sheikh Abdullah wants the right of self-determination only for Kashmir. As far as Pakistan is concerned he would not like to apply the same norm to the military junta of Islamabad. He would like to dismember India, but he would condone the unprecedented carnage in recent human history on the ground that the integrity of Pakistan was threatened. So Sheikh Abdullah is nearer to the Punjabi generals of Pakistan than to the suppressed Muslim masses of East Bengal. He is thus more pro-Pakistani than Pakistanis themselves. So the logical step for him is to go to the country of his choice and assist the military junta of Pakistan in carrying out more efficiently their campaign of exterminating Bengali Muslims. The least that the Government of India can do is to ask Sheikh Abdullah to migrate to the country of his concern. We can perhaps bear the burden of four million refugees, but not that of a traitor to basic human rights.

★

Although Governments of Muslim countries have failed to react publicly to the incredible tragedy of Bengali Muslims, a large section of the press in the Muslim world has stood by Bangla Desh. The following editorial comments would indicate the agony of the thinking segment of the Islamic world:

Since the birth of Pakistan, the East has been complaining against exploitation and cheating by the West. In this connection, the following facts and figures are witness to it: 90 per cent of the army officers and soldiers are from West Pakistan. 85 per cent of the civil service is composed of Westerners. 70 per cent of the country's income is spent on the West. 80 per cent of the hard currency earned from exports is spent on the West and 20 per cent on the East—*El-Sahafa* (April 5), Sudan.

What we have clearly observed is that East Pakistan is, in fact, not part of an independent country, but a mere colony of West Pakistan—*Utusan Malaysia* (March 30), Malaysia.

Mujib is the true representative of the East Pakistani people and had secured 98 per cent of their votes. His opinion is to be respected as the representative of true democracy. There should have been a middle course solution, may be full autonomy, federation or anything else. Mujibur

EDITOR'S NOTEBOOK

Rahman is not a revolutionary or extreme leftist. He believed in liberal democracy. The Ayub regime which was similar to the discredited Government of Abboud in Sudan did not allow this Article by Foreign Editor of *El-Sahafa* (April 15), Sudan.

The fact that the Central Pakistani authorities began to implement what they had threatened to do, i.e. to reimpose military rule, because of the failure of political parties to agree on the wording of the constitution which would organise political life in Pakistan, indicates that the Pakistani military authorities were not serious about giving up their rule. *Al Thawra* (March 27), Syria.

The fact remains that what Sheikh Mujibur Rahman wanted through constitutional and democratic means, Yahya Khan has destroyed with his army. Both Yahya Khan and Mujibur will be no more, but coming generations will not forgive those who are responsible for killings of brother by brother and killing, with that, all the values for which Pakistan came into being. —*Akhbar Al Kuwait* (April 10), Kuwait.

At first glance, it may seem that West Pakistan may suppress the East by its guns and cannons. But sooner or later East Pakistan will obtain its rights.—*Gumhuriyet* (May 29), Turkey.

★

In Hongkong I met a rather energetic business man from Beirut who complained: "Why should you Indians worry about export markets? You have a continental market". This was, of course, sarcasm as he was on his way to the Canton Fair held by a country which had a larger continental market than ours. I asked him what goods he wanted to buy from India. His reply was immediate: "Watch bands, pocket knives, buttons, toys, plastic goods, handkerchiefs and fountain pens". I asked him about his specific difficulty. He said: "When the bulk order was given Indian exporters invariably developed cold feet in respect of delivery dates". And then pointing his hand towards China which is only a few miles away from Hongkong he said: "With China you can do business with delight. They are extremely competitive. They will give you handkerchiefs of 16"×16" at 4sh 6d (about Rs 4) a dozen c.i.f Beirut. You may accuse them of imitating Americans in the manufacture of fountain pens. Their Hiro fountain pens are as good as Sheaffers. You get these excellent pens at the rate of only 32sh (about Rs 29) a dozen c.i.f Beirut. But the most attractive aspect of the Chinese exports is not this throw-away prices but their scrupulous concern for delivery dates". China is normalising her relations with the outside world at breakneck speed. The economic implications of this normalisation to countries such as India are considerable. Unless we are able to create exportable surpluses in a big way in each industrial unit the race with China on the export front might be lost before it begins. It is to this fundamental aspect and not to the surface social-

ism that the Central Government should direct all its energies.

★

Could you believe that the local telephone call bills of some of our Central Ministers amount to Rs 3,000 per month? According to Mr H. N. Bahuguna, Minister of Communications, this is a fact. The country should be grateful to Mr S. A. Khaja Mohideen MP who asked the Minister of Communications to state the amount paid for local and trunk calls of each of the Central Ministers, from 1st December 1970 to 31st March 1971 in respect of telephones provided at their residences. Mr Bahuguna gave a detailed reply in the Rajya Sabha on May 27 which is an eye-opener to all those who still hope that our leaders will practise what they preach. The Prime Minister who has seven telephones paid Rs 5,845.80 for her local calls. But some other Ministers who had fewer telephones spent more than the Prime Minister on their local telephone calls.

The following is the list of Ministers who spent more than the Prime Minister on local telephone calls during December 1970-March 1971: (I have not referred to trunk call bills which are also quite high.)

	Rs
Mr Karan Singh ...	12,198.00
Mr K. K. Shah ...	12,089.40
Mr L. N. Mishra ...	11,967.00
Mr Y. B. Chavan ...	9,263.20
Mr B. R. Bhagat ...	8,149.40
Mr Mohd Safi Quereshi ...	7,592.40
Mr R. N. Mirdha ...	7,356.20
Mr Jagjivan Ram ...	6,916.00
Mr G. L. Nanda ...	6,737.40
Mr J. N. Pahadia ...	6,066.15

It is interesting that the average of Rs 3,000 per month comes in the case of Mr Karan Singh and Mr K. K. Shah and Rs 2,300 in the case of Mr Chavan. As against this, Mr K. L. Rao spent only Rs 125 per month during this period. This means, if there is the will the local telephone calls expenditure of the Ministers could be brought under control. Three observations should be made about this rotten state of affairs. First, some of our socialist Ministers have been spending on local telephone calls every month as much as the monthly salary of a senior executive in public or private sector. Secondly, the Ministers' nominal salaries have no relation to their actual expenditure of public funds. And thirdly, there does not seem to be any budgetary control or voluntary ceiling or a sense of shame in squandering public money like water. I wish some enterprising lawyer files a suit in the Supreme Court for getting justice against discrimination in taxation on perquisites of ordinary citizens on the one hand and Ministers on the other. If legal redress or constitutional means are not available to put an end to this nauseating state of affairs, the society should prepare itself for violent upheaval. In such a situation even violence is preferable to our helplessness in preventing the reckless extravagance of the new ruling class.

MARKET GOSSIP

Market borrowings

WITH the rise in the Bank rate this year there are expectations in the market that the interest rate on Government loans to be floated in the first week of July will go up. The 4.5 per cent loan 1971 with an outstanding balance of Rs 332.10 crores will mature on July 1. The Budget estimates for the current year take credit for Rs 500 crores on account of new market loans to be floated. The net receipts under the market loans are estimated at Rs 167.90 crores. Last year the Government had floated two loans—5.5 per cent loan 2,000 and 4.5 per cent loan 1977. The central borrowing programme was in two stages in April and October and the Government collected Rs 427.59 crores. With repayments at Rs 291.30 crores, net receipts from the market loans last year were estimated at Rs 136.29 crores. Though this year the loans may be offered at par, the interest rate is expected to go up by 0.25 per cent on the 30-year loan as also the seven-year loan to be floated. There are expectations that a medium-dated loan may be floated. In contrast to the practice for some years past, the entire borrowing programme of the Centre may be completed in one stage itself. This should not be surprising as the flow of funds in the banks is somewhat better than last year. □

For whose benefit?

AT least three banks have already announced the launching of the insurance-linked savings bank deposit scheme. The benefit of this scheme will be available to depositors who keep at all times a minimum balance of Rs 500 in the rural areas and Rs 1,000 in urban areas. The maximum life insurance cover will be Rs 10,000 for those in the age group of 18 and 40 and Rs 5,000 for those between 41 and 49. In the event of death of the account-holder, his nominee would get in addition to the deposited amount a sum equivalent to twice the average amount of the deposit in the half-yearly accounting period preceding the date of death if the account-holder was aged up to 40 years, or a sum equivalent to the average amount of deposit if the account-holder was aged between 41 and 49 at the time of death.

Whether this scheme will be a success or not remains to be seen. But some interesting questions about the scheme itself have been raised in some quarters. Did it not require the clearance of Reserve Bank and, if so, has it been given? The scheme is expected to cost the banks 1.25 per cent of the deposit per annum. In other words, this will be the additional inducement which the banks will be giving to the savings account-holders. Is this not a violation of the Reserve Bank directive about the maximum interest rates that banks can pay to depositors? To this, a reply given is that such deposits of Rs 1,000 and Rs 500 will in effect be fixed deposits with the banks on which they would have had to pay a rate of interest of 6 per cent. Even if it is granted that the cost of these deposits is 5.25 per cent, it is still less than the 6 per cent which could be paid under

the Reserve Bank directive for one year deposits. There is, therefore, no violation of the directive and no clearance from the Reserve Bank was needed.

The other question is if the banks can bear a burden of 5.25 per cent on such deposits, why restrict the benefit to only a restricted category of depositors? As it is, the depositor himself does not benefit. It is only his dependants who stand to gain something. Could you not have a scheme by which all savings account-holders who are willing to keep a balance throughout of Rs 1,000 and Rs 500 be paid an interest of 5 per cent or so since many feel that the saver is not rewarded adequately. That could result in a gain to the banks in the form of more deposits instead of the benefit going to the LIC. Here again, there could be the other argument that those savings account-holders who can keep the minimum balance could as well convert it into fixed deposits and earn even 6 per cent on them. In any case, the scheme has raised an interesting controversy and there are those who argue that the banks themselves could take up insurance work since they would find that the cost is smaller than the 1.25 per cent which they have to bear now. The Reserve Bank should come out with an unambiguous guideline. □

Bonus issue guidelines

SOME further clarification is now available of the modifications of the guidelines on bonus issues which were announced by the Controller of Capital Issues recently. As a result of the revised guidelines, companies proposing to issue bonus shares are required to retain residual reserves of the order of 33½ per cent of the increased capital. The original limit was 20 per cent. The rationale behind this amendment is that the shareholders also should get some money, and part of the reserves should be available for future distribution. Though development rebate will be taken into account in computing the residual reserve, it will not be available for distribution unless it is secured that is after a period of eight years. It will also be included in the profit before tax for the purpose of calculating 8 per cent return on the expanded capital base. □

Nervous garment industry

READY-MADE garment manufacturers are passing through some anxious times. The 10 per cent excise levy imposed in the Budget is said to have led to cancellations of numerous orders placed earlier. The Clothing Manufacturers of India, representing 285 units, fears that 10,000 of the 25,000 workers employed in the industry might have to be laid off or retrenched if the present state of uncertainty continues. A shrinkage of the domestic base of the industry, the Association also fears, could deal a big blow to the industry's export efforts. Currently, these exports are of the order of about Rs 11 crores.

The industry finds it difficult to agree with the Finance Minister's statement that

only a few units will be affected by the excise levy. On the contrary, according to industry sources, even the small units which constitute nearly 90 per cent of the manufacturers will be hit because they use power and sell their products under registered brands to stand competition from the bigger manufacturers. The total duty payable on a shirt costing Rs 16 would be Rs 5.15 including Central sales tax, State sales tax and local taxes. In the case of a Terylene shirt costing Rs 35, the total taxes payable are Rs 18.68. The industry argues that it would be difficult to pass all the burden to the consumer with the result that the profitability of the industry, which is already low, would be cut further. It still hopes that the Finance Minister would reconsider his decision. □

Drift in sugar

THE consumer had expected that after the decontrol of sugar on May 25 he would have to pay less for this daily necessity than during the control period. The first two weeks after the decontrol have proved him right. In the Bombay market, there has been a substantial fall of Rs 12 per quintal during this period. In Delhi, the fall has been even bigger and at Rs 185 to Rs 189 per quintal this week the decline recorded was of Rs 20 to Rs 24. Similarly, Kanpur and Patna markets have registered a fall of Rs 16 per quintal. Even in the Madras market where sugar prices were ruling at the lower level of Rs 180 to Rs 182 before the decontrol there has been a fall of Rs 3. What is significant is that there has been a reversal of the uptrend in sugar prices that had been noticed before the announcement of sugar decontrol.

However, this does not necessarily mean that households are spending less on sugar. Before the decontrol, in such rationed areas as Bombay, cardholders were getting sugar at Rs 1.62 per kg. Now, there is no sugar to be obtained from ration shops, and the entire needs have to be met from the open market. It is still not clear as to what happened to the sugar stocks which were bought by the Government at the levy prices to be distributed through the ration shops. The behaviour of the sugar market has also had its impact on the prices of *khandsari*. In Delhi, they showed a decline of Rs 20 at Rs 155 to Rs 170 and in Muzaffarnagar of Rs 8 at Rs 130 to Rs 170 per quintal. □

Daring silver purchases

DESPITE all the vigilance exercised by customs and other authorities it is known that silver continues to be smuggled out of the country. So, reports that the smugglers are active and are buying large quantities of silver in our markets need not surprise anyone. But what has reportedly taken aback even the trade is that now purchases are being made of full bars of 30 kg, and not of 1 kg as in the past. Transport of heavy bars seems to be no longer a problem with smugglers. Have they become bolder or has the government machinery slackened, the trade would seem to wonder. □

Are you a heavyweight champ in boxing freight?

When you think you're getting off cheap by sending goods by ship you are entering the heavyweight class in transportation. Because heavy handling on long voyages requires enormous crates which cost money and add to useless, unprofitable tare weight. Makes deliveries distant and uncertain, increases customer impatience.

Better speed cargo by air in lightweight packaging because handling is gentler and prompt and goods reach their destination in one clean, swift arc. Cost much less in comparison. It's a faster, cleaner,

trouble-free operation. And profitable, too.

If you can't make a complete switch to air exporting start now with BOAC's Air/Sea Mix Plan. Send the bulk by sea but use air as often as possible and always in emergencies by building an allowance into your costing system. This extra cost is offset by spreading it over every unit you send out.

Ask BOAC or your Cargo Agent. They'll tell how you can benefit. Lighten your cargo and heighten your profits.

BOAC
CARGO

No? then Air Cargo is the answer!

SURVEY

STATUS QUO IN INSURANCE

IT is doubtful whether the rising expectations of the common man are going to be satisfied soon in his new role as a policy-holder of government-managed insurance companies. Though complete nationalisation is going to take a long time, taking over of the management by the Government should make some difference. To all appearances, the first step towards nationalisation has made no change either to the employee or to the insured.

The custodians have been asked to maintain the *status quo* as far as possible. Any initiative on their part is not welcome and any queries by them take a long time to result into a satisfactory reply. The guidelines given to them are vague and few and are negative in character. No new investments, no promotions, no sale of property, no change in the terms of service are now anticipated even if these had been routine matters in the past. While custodians are asked to run their set-ups economically, we get the curious situations where expatriate staff continue to get fabulous salaries and perquisites which they are not going to get in their own countries and for some of these there are no sanctions from their respective head offices.

The man in the street is certainly going to ask whether he should not anticipate a reduction in the premiums now. If some of the companies were not very well run and if some of the expenses were not properly incurred in the past, as alleged by critics of the private sector, there must be some saving now which should ultimately result in better service or lower premiums. Obviously, any rush to get economies of large scale by forced amalgamations of units is bound to result in less efficiency, increased confusion and dissatisfaction and more expensive insurance to the common man. It will be best to let the existing units function as before and make them more specialised in the long run. The various companies might be made complementary in the mofussil centres and competitive in the large centres.

There appear to be some second thoughts on the concept of four corporations with four headquarters in different centres of India. Bombay, being the insurance capital of this country, would justify two corporations writing business direct and a third one for reinsurance business. The idea is that the existing expertise and organisation which have won international praise should not be dissipated by seeking to arrive at the lowest common denominator. There is some justification for the companies in the public sector having their headquarters in New Delhi; this should cover the general insurance department of the LIC and the Indian Guarantee.

General insurance has been nationalised in the United Arab Republic, but the existing units continue to compete and

keep up their independent contacts abroad for reinsurance. Similarly reinsurance has also been nationalised but direct writing companies compete with the reinsurance company in matters of reinsurance also. This would be a good example to follow if quick service to the policy-holder is the ideal. From this point of view, the least painful part would be to treat the nationalised insurance companies on the same basis as the nationalised banks. The recent spate of banking frauds is a good indication of the shape of things to come. Control at all levels is possible only if there is a separate full-time and active custodian for each company as is the case with the banks. It takes years to build up a good organisation and it is easy to let it slide down if the custodian is too busy, too conservative or just too old. □

MORE NON-PROJECT AID ?

INDIA has asked the Aid-India Consortium for assistance to the tune of Rs 825 crores to Rs 900 crores for the current financial year. It is not enough that the pledges the members of the consortium are expected to make at their meeting in Paris next week should equal India's requirements. It is equally essential that they fulfil their commitments. Aid disbursements during the past three years had fallen short of the pledges. For instance, total aid receipts in 1970-71 were Rs 614 crores, although the consortium had assured India of a larger volume of assistance. The shortfall was particularly large in regard to non-project aid which amounted to Rs 356 crores as against the target of Rs 525 crores.

An idea of the extent of decline in the level of aid can be had from the fact that while the Fourth Plan has assumed assistance of the order of Rs 3,750 crores (excluding food aid), the total aid received during the first two years of the Plan was about Rs 1,240 crores leaving a gap of over Rs 2,500 crores. In other words the leeway can be made up only if the inflow of aid is stepped up to around Rs 830 crores annually during the remaining years of the Plan. It is true that the actual contribution of external assistance to the financing of development activity has been steadily going down. During the Fourth Plan it is estimated that the net inflow of external resources will meet only 8 per cent of the aggregate investment expenditure in the economy against 20 per cent in the Second and Third Plan periods and 13 per cent in 1969-70.

If so, it could be asked why India should seek a higher level of aid disbursements during this year. First, the steady decline in the share of net external financing investment is largely the result of India's reduced dependence on food aid, thanks to the marked improvement in the agricultural situation. Secondly, as investments increase, even a smaller proportion of 8 per cent of aid will necessarily be higher in absolute terms. Thirdly, during the current year debt service charges will

reach the peak level of Rs 458 crores and for many years to come these charges may be only marginally lower than this figure. Fourthly, the liberalisation of imports of steel, maintenance equipment and essential raw materials in order to stimulate industrial production will push up India's import bill. Her imports which went up from Rs 1,582 crores in 1969-70 to Rs 1,628 crores in 1970-71 (a rise of about 5 per cent) are expected to increase by a further 5 per cent in the current year. Finally, since aid commitments in the past few years had lagged behind even the declining levels of aid utilisation, assistance in the pipeline has been shrinking. During 1970-71 it came down from Rs 1,872 crores to Rs 1,715 crores. India's case for more aid than in the previous years, therefore, rests on firm grounds. □

SMOOTH & REGULAR FLIGHTS?

IT would be premature to conclude from the settlement arrived at by the Indian Airlines management and the Air Corporation Employees Union last week that henceforth all would be well with air travel in this country. The accord covers 8,000 employees leaving 6,000 with whom negotiations on their demands have yet to be concluded. They include the pilots, engineers and technicians. Unless agreement is reached with each of these groups of employees, it would be hoping in vain that the inconvenience and harassment caused to passengers by frequent work stoppages and go-slow would be things of the past. It is, however, to be hoped that the good sense that the Air Corporation Employees Union has shown in signing an accord with the management will not be transitory and its example will be followed by the other unions. The accord has been made possible by the generous terms offered by the management. Employees drawing a basic salary up to Rs 149 per month will get a minimum increase of Rs 60 by way of special allowance and those drawing Rs 150 and above a minimum of Rs 80. The transport allowance has been raised to Rs 30 in the case of those earning up to Rs 229 and Rs 35 for those drawing more. For its part, the Union has agreed to forgo overtime allowance and not to claim off time in lieu of work put in by the employees on special holidays.

But what is more important is that it has agreed to eschew the agitational approach and adopt constitutional methods to secure its demands. Further, it has accepted the need for rationalisation and consequently conceded the management's right to introduce measures to improve productivity, reduce costs and increase the overall efficiency of the organisation. The agreement will have retrospective effect from April 1, 1969, and will be in force until the end of March 1973. If given a fair trial it may well be the precursor to a new phase of harmonious industrial relations in the Indian Airlines. □

THE ELUSIVE MERGER

It has happened again. There were optimistic statements by Mr George Fernandes, General Secretary of the SSP, and Mr Prem Bhasin, the PSP General Secretary, regarding the prospects of the merger of the two parties. Mr Fernandes announced in Bangalore that the draft for the merger had already been finalised and it was expected to be signed by representatives of the two parties in New Delhi in the next few days. He further stated that the two parties had been able to come to an understanding over language, caste and price policies and there was a complete identity of views on all issues. Mr Prem Bhasin corroborated this. He stated that negotiating teams of the two parties had worked out an agreement on the political line and policies regarding caste, language and backward classes and all that now remained was for the spokesmen of the two parties to sign the agreement. He made it clear that the PSP leaders would be willing to initial the document as soon as their counterparts in the SSP were ready for it.

This gave the impression that the line was now clear for the merger. But soon discordant notes were heard from Mr Raj Narain and Mr Karpoori Thakur. Mr Raj Narain stated publicly that there could be no merger unless the PSP subscribed to his party's political line of anti-Congressism. He questioned the credentials of the team headed by Mr Fernandes which conducted the negotiations on behalf of the SSP. Mr Karpoori Thakur also stated in Patna that the PSP leaders should withdraw their support to the ruling united fronts in Bihar, West Bengal and Kerala to facilitate the merger of the two parties at the earliest. Mr Prem Bhasin has expressed surprise at what he calls to be the new conditions for merger announced by the SSP leader, Mr Raj Narain.

These confusing statements have brought to the forefront once again the obstacles on the path of the merger. The PSP and SSP leaders have not yet acquired sufficient self-confidence to launch a party on a distinctive programme and policy of its own. Because of historical reasons the two sides are obsessed with the question of the attitude to be adopted towards the Congress (R) by the new party. There are practical difficulties also. The PSP is a party to the Congress (R)-backed coalitions in West Bengal and Kerala and has supported the Congress (R) in toppling the SSP-led Bihar ministry. In a number of States the PSP and the SSP are on the opposite side of the dividing line. Before or after the merger the new party would be faced with the question of choosing the side in these States. It is therefore much better that these points are cleared before the merger takes place. The other course would be to get out of all united fronts and act independently in the legislatures. This might help in attracting other like-minded persons to the flag of the new party, and in course of time it might become a sizable force. If this is the line to be adopted that also should be made clear before the merger takes place. Otherwise, there will be continuous re-creation within the new party and the public would remain as confused as ever regarding what these parties want. □

- The figures indicate percentage change during the current calendar year upto the month indicated as compared to corresponding period in the preceding calendar year.

THE WEEK

THE Union Finance Minister, Mr Y. B. Chavan, announced in the Lok Sabha on June 10 the withdrawal of the levy on maida and of additional excise on coarse cloth, which he had proposed in the Budget. He, however, refused to reduce or withdraw the increased excise on motor spirit, adding that he would rather prefer to give a rise in fare to taxis and autorickshaws. The concessions will cost the exchequer Rs 7.4 crores and raise the uncovered deficit during the current year to Rs 227.4 crores. The 10 paise levy on maida per kg was meant to finance the Government's health and nutrition programme for children. Mr Chavan made it clear that this programme would not be curtailed. The relief granted to coarse cloth will restore the level of excise duty to 3.4 paise per metre from 4 paise.

In its report to the Aid India Consortium, the World Bank has recommended a total aid of \$1,250 million (Rs 937.50 crores) for 1971-72. Of the total aid, the Bank has suggested \$500 million as project aid, \$650 million as non-project aid and \$100 million as food aid. The Consortium is meeting in Paris on June 17 and 18 when this report will be considered.

The Union Cabinet is reported to have cleared on June 9 the Rs 40-crore fertiliser project of Dharamsi Morarji and Co in the Konkan region of Maharashtra. Apart from ammonia, the firm will also be allowed to import its requirements of sulphur and raw phosphate. The firm was given a letter of intent two years ago and its validity period was extended more than once owing to the delay in finalisation of the prices of ammonia to be imported as feed stock.

The Oil and Natural Gas Commission has decided to undertake exploratory drilling in the Kutch region of Gujarat. Drilling in three locations is expected to start in the later part of this year. This is the first time exploration drilling for oil and gas is being undertaken in Kutch. So far, drilling in Gujarat has been confined to the Cambay basin.

The first nylon tyre cord unit of India commenced production in Bombay on June 5. The plant has been set up by Nirlon Synthetic Fibres and Chemicals Ltd. (See also *Business Report*).

The strike by the employees of Andhra Pradesh Government was called off after 56 days on June 6 following an agreement between the Government and the employees. Accordingly, all discharged employees will be reinstated. The employees will not get wages for the period of strike. But the Government will grant an advance equivalent to one month's salary.

Mr S. Chakravarty, Director of the Delhi School of Economics, and Dr B. S. Minhas of the Indian Statistical Institute of Calcutta, have been reportedly chosen as Members of the Planning Commission. No official announcement has yet been made.

A full bench of the Kerala High Court held by a majority of two to one parts of the Kerala Land Reforms (Amendment) Act unconstitutional. The parts which were held unconstitutional were those that con-

ferred tenancy rights on certain types of mortgaged lands.

The Union Government is reported to have decided to disperse 900,000 refugees of Bangla Desh from West Bengal to neighbouring States. Meanwhile, cholera has broken out in epidemic proportions among the refugees, causing over 1,500 deaths, according to official sources. The refugee influx till the week-end is placed at 5.5 million (See also *editorial*).

The CPM bagged two of the three West Bengal Assembly seats for which by-elections were held on June 6. One seat went to the Congress (R).

The Bangla Congress split on June 6 following a walk-out by Mr Sushil Dhara, General Secretary, and his 10 supporters from the executive meeting in Calcutta. The Dhara group has constituted a new State committee with Mr Purnendu Khan as President.

Pakistan demonetised Rs 500 and Rs 100 notes on June 7. According to an ordinance issued by the Chief Martial Law Administration, currency notes bearing the inscriptions "Jai Bangla", "Bangla Desh" or "Dacca" have also been demonetised. The Reserve Bank of India subsequently ordered commercial banks in the eastern region to stop accepting the demonetised Rs 100 and Rs 500 notes from East Bengal refugees.

Argentina devalued the peso on June 7 changing its parity from 4.12 pesos to 4.20 pesos to a US dollar.

Britain and six Common Market countries reached an agreement on the pound sterling on June 7, the Six accepting as "satisfactory" the British declaration of intent on the future role of sterling.

The United States virtually scrapped on June 10 the 21-year-old embargo on trade with China. A broad range of American products, including automobiles, some industrial equipment, fertiliser, selected chemicals and most consumer goods, can now be sold to China.

The Soviet Union launched Soyuz-11 on June 6 for another link-up with the Salyut space station. The three astronauts

on board transhipped themselves to the unmanned space station on June 7 marking a major breakthrough in space travel.

In Parliament

The Rajya Sabha passed the General Insurance (Emergency Provisions) Bill on June 7. Earlier, the Lok Sabha had also passed this Bill replacing the Presidential Ordinance.

The Finance Minister, Mr Y. B. Chavan, told the Rajya Sabha on June 8 that the leakage of foreign exchange due to over-invoicing and under-invoicing of imports and exports was estimated at Rs 50 to Rs 70 crores a year.

Mr R. N. Mirdha, Minister of State for Home Affairs, stated in the Rajya Sabha on June 9 that a bill for setting up the institution of Lokpal and Lokayuktas will be reintroduced shortly in the Lok Sabha.

Money steady

Conditions were unchanged in the Bombay short-term money market as of Wednesday. Demand for funds was maintained but the supply of credit was short of requirements and there were borrowers over at the close. In the inter-bank call section, both renewals and fresh money were reported at 4½ per cent. In the Calcutta market, the rate ruled at 4½ per cent. In view of the strike by the Reserve Bank clerks in protest against the bank's promotion policy, clearing house operations in Madras were suspended as of Wednesday.

Price index steady

During the week ended May 22, 1971, the Index Number of Wholesale Prices recorded a marginal rise of 0.2 per cent to 182.0. At this level, the index was 1.2 per cent above its level a year ago.

PEOPLE

MR Tej Kumar Sethi has been elected Chairman of the Indian Cotton Mills' Federation for 1971-72.

Mr Lala Bansi Dhar has been elected President of the Indian Sugar Mills' Association for 1971-72.

Mr J. Stevens has been elected President of the Indian Paint Association for 1971.

50 years ago

The "anti-diamond conference" held by ladies in Bombay, is a sign of the times. We live in an age of agitation and of political propaganda; each community, small or large, is bent upon airing its own peculiar fads and fancies; most individuals have suddenly discovered that they have an axe to grind; the world has been galvanised by the war into a condition of excitability, of turbulence, restlessness and impatience; in Russia they call it Bolshevism; in India Gandhism; various descriptions and reasons are assigned to it in other lands; but we shall probably not be wide of the mark if we describe it as a world-wide phenomenon, a passing paroxysm common

to almost every part of the universe, the effects of a protracted, devastating war upon the nervous susceptibilities of the people. Add to which there is, of course, that altruistic aspiration towards better things, another aftermath of the war, the achievements of which have, so far, been most disappointing, thus aggravating the general sense of unrest and of discontent. The action of the Bombay ladies is interesting in respect—it indicates that Oriental women, unaccustomed though they be to public life, and fettered as most of them are by old-time traditions, even they have come within the influence of the modern craze for innovation.

COMMERCE

June 11, 1921

We love all businessmen!

Anywhere in the world that business might find you, you'll find a Pan Am office ready to help. We fly to 122 cities, 82 lands. And any one of these offices can make a tremendous difference in helping your business go better. We'll plan your entire itinerary before you leave. And help you with information about the countries you plan to visit. For example, we will tell you what time banks close in Bangkok.

And all along your business tour we'll help set up conferences, book hotels, arrange guided tours, cars, audio-visual equipment, multilingual secretaries, the works. We will even undertake to introduce you to new business prospects. Talk to your Pan Am Travel Agent or call us. After all our only reason for flying is YOU.

World's most experienced airline

REPORT

THE NATION

From Our Own Correspondents

BANGLA DESH REFUGEES

SOS from West Bengal

NEW DELHI.

THE Central Government is left with no alternative but to move a large number of Bangla Desh refugees from West Bengal to other States. Panicked by the unending influx of refugees—the bulk of the 4.5 million who have so far trekked their way to the safety of the Indian border areas have come to West Bengal—the State Government sent an SOS to the Centre to relieve it of the burden of running the evacuee camps. Apart from the enormity of this task the explosive situation created by the refugees spreading out to other parts of the State had specially unnerved it. A human wave is threatening to engulf Calcutta and its environs which might lead to a grave law and order situation.

To cap this all, cholera is taking a heavy toll of refugee lives. The West Bengal Health Minister has put the number of deaths at over 3,200 but unofficial estimates place it at around 5,000. The disease has been carried by the refugees from their homes or contracted on their way to India for there is enough evidence that a cholera epidemic is raging in East Bengal. Pestilence and famine are stalking that land. As more of the stricken refugees are reaching the border daily the Indian authorities have been compelled to seal off the area between Karimpur and Shikarpur in the Nadia district of West Bengal where the influx has been the heaviest. Both from the point of view of maintaining law and order and preventing the spread of cholera to other parts of West Bengal it has become necessary to isolate the refugees as well as send them out to other States.

In response to the distress call from the West Bengal Government, the Prime Minister went to Calcutta last Saturday and agreed to its demand for dispersing the refugees. However, in regard to those who will be kept in West Bengal, the State Government has been asked to set up its own machinery for running the refugee camps which might be taken over by the Centre later.

Following the decision to move as many of the refugees as possible to other States—and quite a number of them will also be shifted from Tripura, Assam and Meghalaya—the Centre is putting up the machinery or undertaking this massive operation. Six States—Bihar, Orissa, Madhya Pradesh, Andhra Pradesh, UP and Maharashtra—have agreed to accommodate some of the refugees, and officials of the Home and Rehabilitation Ministries and the Railway Board are busy working out the logistics of the refugee movement. No decision has so far been taken on the actual number to be moved out of the eastern States but so far as West Bengal is concerned the plan appears to be to despatch about 5,000 by train daily and more if the

huge C130 aircraft which the US is willing to place at India's disposal can be pressed into service. One of these aircraft has already arrived in the country for proving operations. If the technical feasibility of employing these planes for refugee airlift is proved, they will be used first for moving the refugees from Tripura and then from other places.

Meanwhile, the international community has bestirred itself into helping India to fight the cholera epidemic and provide succour to the helpless refugees. Plane loads of medical supplies especially cholera vaccine and saline water, baby food, mess kit for food distribution and tents have begun arriving in the country. This will relieve to some extent the heavy burden imposed on India by the influx of refugees and the outbreak of epidemics among them. But ultimately the solution to the gigantic problems she is facing lies in the return of the refugees to their homes in Bangla Desh. It is not enough that conditions of

security are created there with the help of international agencies. Even then the refugees will refuse to go.

The international community will be deluding itself if it believes that if Yahya Khan can be forced into reaching some kind of a political settlement in Bangla Desh, the return of the refugees will be facilitated. In fact, the Western powers are using the lever of aid to force his hands. But so far as the people of Bangla Desh are concerned a political settlement can come only after a total withdrawal of the West Pakistani armed forces. Then only the refugees can be encouraged to return to their homes. The alienation of East Bengal from West Pakistan is so complete that it would be naive on the part of the international community to believe that anything short of autonomy for Bangla Desh can form the basis of a settlement. Mr Swaran Singh's mission to some of the important world capitals is to awaken the major powers to the realities of the situation in Bangla Desh and their repercussions on India. If he succeeds in putting them wise and persuading them to act according to their best lights the sub-continent will be spared much turmoil. □

Costlier houses for the needy

BOMBAY.

CO-OPERATIVE housing was never a cheap affair. But if it did catch the imagination particularly of the middle class in Bombay and other urban centres it was because of the acute shortage of accommodation and the consequent high rents (and in many cases the payment of *pugree*). The growth of co-operative housing societies was also stated by those in authority to be an important social objective of the Government to help the middle class and the Maharashtra Government created the agency of the Maharashtra Co-operative Housing Finance Society to provide to the co-operative societies finance for the construction of tenements. It was the possibility of getting loans to the extent of 50 per cent of the cost of tenement from the housing finance society that was the great inducement for joining a co-operative society to those in need of accommodation. This they did even when calculations would show that in the end a flat of say Rs 30,000 would cost Rs 40,000 and even more because of the interest to be paid on the loan borrowed from the finance society. And this interest rate will now go up, thanks to the decision of the Life Insurance Corporation that it must get a higher return on the money it advances to the housing finance societies.

In November last year the LIC sanctioned a sum of Rs 5 crores to the Maharashtra Co-operative Housing Finance Society but raised its rate of interest from 6-1/4 per cent to 7-1/4 per cent per annum.

The Finance Society objected since its borrowings are guaranteed by the State Government and the Reserve Bank has

stipulated that loans carrying State Government guarantees should not bear an interest of more than 7 per cent. The LIC relented somewhat and released Rs 2 crores on an interest of 7 per cent, but made it clear that it would not release the balance of Rs 3 crores unless the issue of the rate of interest was resolved. Apparently, the matter went to the Finance Ministry in New Delhi and the LIC has now agreed to advance the loans to the Housing Finance Society at 7 per cent but subject to the condition that the loanee society members go in for group life insurance.

Dependent as the Housing Finance Society is on the LIC for its funds, it had little choice before it and has had to accept the LIC's stipulation but in the process loans for the co-operative housing societies have become costlier. They have been informed by the Housing Finance Society that they will be charged an interest of 9 per cent per annum with half per cent rebate for prompt and punctual repayment. This includes a rate of one per cent to cover the expenditure on account of the premiums to be paid for the group life insurance scheme.

The LIC may be right in pointing out that in the UK too group insurance is insisted upon so as to obviate the need of recovering the loan from a bereaved family in the event of death of a borrower. Insurance has this benefit. It is also possible that the Housing Finance Society has followed the rule of the thumb in fixing an interest of one per cent and that if the actual cost on account of premiums is taken into account, the rise in the inte-

rest should have been of the order of only 0.5 per cent to 0.75 per cent. But in the absence of detailed statistics about the age groups of the various loanee-societies, it is difficult to come to the conclusion that the Housing Finance Society is charging more than what it should. But all this cannot bring comfort to the middle class members of the co-operative housing societies

who over the years have been harassed by the rising costs of living and will have to pay something extra on so many necessities after the recent Budget. The Bombay Co-operative Housing Federation is justifiably agitated that the LIC should be seeking to make costlier a scheme intended for the benefit of moderate income groups.

Starting with the peak demand of 11.3 million kw as recorded in 1970-71 and allowing for the future growth of 12.5 per cent per annum, the ten-year plan envisages a peak demand of 36.7 million kw in 1980-81. The regional break-up is presented in Table 2.

Table 2: Region-wise peak demand 1970-71 and 1980-81

Region	1970-71 (actual)	1980-81 (projections)	Average annual rate of increase between 1970-71 and 1980-81
Utilities only*			
Northern ..	2.810	10.450	14.0
Western ..	2.670	8.300	12.0
Southern ..	2.900	9.000	12.0
Eastern ..	1.880	7.000	14.0
North-eastern ..	0.086	0.550	20.4
Total ..	10.346	35.300	13.1
Total including non-utilities ..	11.258	38.700	12.5

* Utilities—Generating capacity used for selling power to all outsiders.

Non-utilities—Generating capacity used for self-use only.

The annual rate of growth of demand in various regions is somewhat different from the national average. It has been assumed that as in the past decade, the rate of growth of demand in the Northern Region would continue to be slightly higher than the national average. As regards the Eastern Region (which includes not only West Bengal but some less-developed States like Bihar and Orissa), the per capita consumption is considerably lower than the national average. The Ministry has, therefore, rightly assumed that deliberate measures would be taken to remove the imbalance by initiating a relatively faster development in this region. The same reasoning applies still more forcefully to the North-eastern Region (Assam).

The target figure of 36.7 million kw mention in Table 2 relates to the peak load demand. In order to satisfy this, the installed capacity would have to be of the order of 48 million kw. Adding up the region-wise figures, the Ministry got a slightly higher all-India total of 50.4 million kw for utilities and 52 million kw inclusive of non-utilities.

The next step was to add up the capacities of all the existing electricity generating stations and add further the capacities of all the power schemes which are under construction. Deducting the total of these two from the target figure of 50.4 million kw, the Ministry has derived the estimate of 24.6 million kw for the additional capacity to be provided by the new schemes to be taken up hereafter. The region-wise estimates and other details are presented in Table 3.

Of the total capacity of 50.4 million kw (utilities only) 22.3 million kw would be hydro-power, 23.9 million kw would be thermal power and 4.2 million kw nuclear power. In the ten-year plan, there are proposals for the expansion of all the three nuclear power stations which are operating now (Tarapur) or are under construction (Rana Pratap Sagar and Kalpakkam). Besides, there are proposals for three new

Power development plan: 1971-81

By Commerce Research Bureau

THE absolute increase in electricity generation and consumption in India since independence has undoubtedly been very impressive. From 6.6 billion kw in 1950-51, electricity generation reached 51.7 billion kw in 1968-69—just before the launching of the Fourth Five-Year Plan. This implies more than seven-fold increase in electricity generation within only 18 years. The average annual rate of increase works out at 12.1 per cent.

Starting with the initial installed generating capacity of 14.3 million kw at the beginning of the Fourth Plan and with the target of 23.1 million kw by the end of the Fourth Plan (after taking into account the retirement of old and obsolete generating units to the extent of about 0.4 million kw), the addition to generating capacity envisaged for the Fourth Plan is of the order of 9.2 million kw. This target implies that the addition to the generating capacity of the country should be of the order of 1.8 million kw every year. Specifically, the target for the first year of the Fourth Plan was fixed at 2 million kw and that for the second year at 1.6 million kw. The actual additions have, however, been much lower at 1.2 million kw and 1.0 million kw respectively. Thus, against the target of 3.6 million kw, the addition to the power capacity during the first two years of the Fourth Plan has been only 2.2 million kw. The achievement is less than two-thirds of the target.

Why this shortfall? A recent analysis of the causes of shortfalls undertaken in the Union Ministry of Irrigation and Power highlights, among others, the following causal factors: (i) Delay in the completion of civil works; (ii) Delay in supply and delivery of the key equipment from indigenous and foreign sources and (iii) Shortage of steel. As a result, power shortages have developed in Punjab, Haryana, Uttar Pradesh, DVC region and Gujarat. According to the assessment of the Ministry, in most of the regions the power shortage is likely to continue during 1971-72 also. A short-term remedy is to goad the State Governments, the State Electricity Boards, suppliers of indigenous equipment and some concerned Union Ministries to take measures to avoid the delays in erection and commissioning of various power projects. This the Union Ministry of Irrigation and Power has been doing with limited success.

At the same time, it is also necessary to keep before the nation a clear picture of the long-term prospects and problems in respect of power. The Ministry has recently tried to do this through an import-

ant document *Power Plan (Generation) for the Decade 1971-81*. The document starts by noting that in 1970-71 India's per capita consumption of electricity worked out at around 90 kw. Although this represents a more than seven-fold increase since independence, this level is very low compared to the levels prevailing in some of the other countries (Table 1).

Table 1: Per capita power consumption in some selected countries—1969

Country	kwh
USA ..	7,013
UK ..	3,700
USSR ..	2,628
France ..	2,408
Yugoslavia ..	1,006
India ..	90*

* Relates to 1970-71.

It is thus obvious that India has yet a long way to go.

Speaking about the future efforts in the field of power, the document rightly stresses: "Power generation schemes involve long gestation periods requiring for completion about five to eight years of active construction—and unless decisions in respect of their implementation are taken well in advance, it would not be possible to commission them according to the needs, and resulting power shortages cannot be removed by any means." Hence, a ten-year perspective is absolutely necessary for planning even current work on power development. The Ministry has, therefore, rendered a signal service to the nation by preparing a ten-year plan and spelling out clearly the implications of the plan with regard to immediate action.

During the decade 1960-61 to 1970-71, the aggregate real national income increased at the average annual rate of 3.6 per cent. On per capita basis, the corresponding figure was only 1.3 per cent. There is a general consensus in this country that this performance should be regarded as disappointing. But even for achieving this modest growth rate, the consumption of power had to be increased at the rate of 12.5 per cent per annum. It follows that even if we decide to eschew any acceleration of our disappointing overall growth rate and merely maintain the tempo of development of the last decade, the generating capacity would have to be increased in the coming years at the rate of at least 12.5 per cent per annum. This is the assumption which the Ministry of Irrigation and power has made for its exercise for the period 1971-81. No one would call it an ambitious programme.

Table 3 : Estimation of the required addition in installed capacity (utilities only)

(Million kw)					
Region	Installed capacity in 1970-71	Additional capacity expected from schemes under construction	Total (1+2)	Installed capacity required by 1980-81	Balance capacity to be added during the decade 1970-71—1980-81 through new schemes (4-3)
	1	2	3	4	5
Northern	3.7	4.1	7.8	14.4	6.6
Western	3.8	1.9	5.7	12.0	6.3
Southern	4.1	3.1	7.2	13.0	5.8
Eastern	3.3	1.4	4.7	10.0	5.3
North-eastern	0.2	0.24	0.44	1.0	0.56
Total	15.1	10.74	25.84	50.4	24.56

nuclear power stations—one each in Northern Region, Western Region and Southern Region. Nuclear power development has been proposed only in those regions which are far away from coalfields and also deficient in hydro-power resources.

On the basis of suggestions from the State Governments, the Ministry has identified a number of projects for inclusion in the ten-year plan and in respect of which detailed designs should therefore be prepared by the State Governments and other organisations. Advance action in many other directions has also been proposed. Needless to add, action along the suggested lines should be taken at the earliest. For, already we are heading towards a power crisis. □

THE WORLD

From Our Own Correspondents

The era of flexible exchange rates?

BONN

THE international conference of American Bankers' Association at Munich turned out to be an informal meeting of the "Group of Ten" within the IMF. The American stand on the currency crisis which is still dogging the West European exchange markets was for the first time spelled out by the US Secretary of Treasury, Mr John Connally. The blunt attitude of Mr Connally towards the West European complaints about massive US payments deficits surprised many of the bankers attending the conference. The American insistence on the revaluation of the currencies of the countries flooded with excess dollars was not something new. What was, however, not expected was the fury of the American representatives at the way in which the Germans had floated the mark.

The conference which was convened to discuss the dollar crisis and its future role as a reserve currency was attended by the central bank governors from several countries as well as officials of the international monetary bodies. It provided an opportunity for some pretty hard talking which, no doubt, will give a new impetus to the IMF study of flexibility.

Mr Connally's attack was a clear indication that the Atlanticist era was over and

that basic rethinking on the world monetary problems was inevitable. Mr Connally forcefully contended that the basic US deficit was more than accounted for by overseas defence spending. He made it clear that if it so wished the US could balance its payments without creating domestic unemployment and affecting the growth of foreign trade. However, he was candid in telling the participants that "American people will no longer permit it to become engaged in international actions whose *de facto* long-term interests are not as clearly defined as those of nations with which we are trading". He emphasised that "considerations of friendship, need or capacity will no longer justify that the US carries such a heavy share of the common load". He reminded the West Europeans of the burden shouldered by America in respect of defence of the Western world as well as trade liberalisation by stressing the link between the US balance of payments and its huge overseas spending on defence and development.

According to him, "the disturbances on the surface of the exchange markets were symptomatic of deeper issues of national and international economic policies and that it would be unrealistic to anticipate workable monetary controls for

essentially non-monetary problems". He did not mince words in telling the conference that the question of the US deficit and the Euro-dollar market were not "uniquely American problems".

Mr Paul McCrackan, President Nixon's Chief Economic Adviser, however, sought to assuage the feelings of the 250 participants by emphasising that the US authorities were not showing negligence in regard to other countries' interests. The Nixon Administration was using both fiscal and monetary measures to check inflationary pressures. He also recognised the fact that despite a moderate upswing in the US economic growth and a slowing down of price increases the steps so far taken by Washington had failed to solve the problem of cost inflation.

As far as the criticism from European experts of the US refusal to adjust domestic interest rates to bring them in line with the European rates structure was concerned, Mr McCrackan pointed out that co-ordination of economic policies on both sides of the Atlantic required more than technical decisions on interest rates. While he favoured such co-ordination he felt that it raised complex issues and required a flexible mix of fiscal and monetary policies. He defended the system of parities arguing that it had served as a base for a considerable expansion of world trade in the post-war years.

The US criticism of the floating of the Deutsche mark mainly stemmed from the apprehension that the Germans were using the exchange rate more for domestic reasons than for achieving external stability.

The conference was presented with a strange spectacle of the Germans having taken over from the French the main opposition to the dollar standard. The Vice-President of the Bundesbank, Dr Otmär Emminger, compared the impact of changing US monetary policy on Europe with "being with an elephant in a boat". This invited retaliation from the US Treasury

is sold at bookstalls and
COMMERCE news-stands in 59 important
cities throughout the country.

Under-Secretary, Mr Paul Volcker, who said, "you see the elephant out there in the jungle doing the work with all the other animals barking at its heels and goading it"

The Germans argued that there was nothing unneighbourly in a country floating the exchange rate to prevent its internal money supply from being threatened by unwanted inflows. In the same strain, Mr Wilhelm Hankel, the West German Under-Secretary of the State in the Economics and Finance Ministry, made a plea for measures to reform the present world monetary system. He suggested that the world monetary authorities should take advantage of the respite provided by the floating of the Deutsche mark to evolve "a new order in world payments". Referring to the basic changes in the world monetary system since the 1944 Bretton Woods conference, he pointed out that from a gold-dollar system, there had been a switch to a dollar-dollar system and that the development of the uncontrolled Euro-dollar market estimated at more than \$50,000 million was a mere extension of the dollar-dollar system.

Mr Hankel, however, suggested two possible courses of action. First, a collective floating of European currencies in regard to the dollar as proposed by Mr Karl Schiller, the West German Economics and Finance Minister, which will have the added advantage of helping the move towards a monetary union in the European Economic Community. Secondly, the substitution by SDRs of dollars in the reserves held by the central banks, which would relieve the US of the burden as a world banker, while at the same time releasing the European countries from their present obligation to support the dollar.

Apart from this clash between the Americans and Germans, the conference provided a forum for monetary pressure on the Japanese to revalue the yen and to liberalise trade. Although Mr Kashiwagi, of Japan, argued that the efforts to stabilise the Japanese economy, which began at the end of 1969, had just begun yielding results, the Americans seemed to be keen on persuading the Japanese to revalue the yen. The deliberations at the conference made it clear that the US hopes that a Japanese revaluation would make it much more difficult for the Germans to return to their old party reducing the possibility of any future sterling devaluation and offer the US its best chance of shifting the structure of exchange rates in favour of the dollar. Assurances of Sir Douglas Allen, of the British Treasury, that the British balance of payments position was solid did not carry much conviction since even he did not rule out the danger that the stability of the pound sterling might be jeopardised through inflation. There seemed to be a widespread feeling at the conference that the flexible exchange rates had already arrived and that the real need was for a code of conduct to prevent them being abused. The fear that in the face of a recessionary trend countries with floating rates would be tempted to depreciate their currencies to provide a stimulus to their sagging economies was very real. The heyday of Euro-dollar market is over. Whether it marks a return to the old "beggar-my-neighbour" policy remains to be seen. □

NEW deluxe CEILING FAN

- Modern streamlined deluxe appearance.
- Totally diecast and lighter in weight
- Improved quality and trouble-free performance ensured by latest production techniques.
- Easier to dismantle, easier to assemble.

WITH NEW REGULATOR

- Latest in design with modern look.
- Ideally suited for concealed wiring
- Novel rotary switch suitable for operation in both directions.
- Choke coil unit for cooler operation.

Guaranteed for two years

The expensive small car

NEW DELHI.

FOR one so new to the treasury benches as Mr Ghanshyam Oza, the ministerial habit of making big promises and exuding undue optimism about their implementation has come surprisingly too soon. While replying to a half hour discussion on the automobile industry in the Lok Sabha last week he said that the Government would license the production of 50,000 cars annually in the private sector "as early as possible" in addition to the public sector small car project with an initial capacity of 50,000 in regard to which a decision about the foreign collaborator would be taken "soon". He shrugged off the acute and persistent shortage of cars as a "transitory difficulty" and was confident that "before 1973-74 we shall be in an easier position". If the experience of the past is any guide, all this is make-believe.

It is gathered that the capacity for producing an additional 50,000 cars in the private sector will be created not by allowing expansion of the existing car manufacturing plants but by licensing a new unit, if not two. The Government's reluctance to permit those already in the field to increase their capacity is understandable for the cars they are producing are becoming dearer while deteriorating in quality year after year. But how can one hope that the cars turned out by the new unit or units will be any different? Everything that has happened so far points to this happening.

Last September letters of intent were issued to Mr Sanjay Gandhi and Mr Madan Mohan Rao for setting up a unit each for manufacturing a car wholly out of indigenous material. Mr Gandhi's letter of intent is for 50,000 cars each priced at Rs 6,693, while that of Mr Rao is for 25,000 each costing about Rs 8,000. The latter appears to be dragging his feet, and therefore, the Government is pinning its hope on the project of Mr Gandhi. Mr Oza apparently thinks that the time is now ripe for issuing a regular licence to him.

But Mr Gandhi himself has sought extension of the period of validity of the letter of intent given to him from six to eighteen months, which shows that he needs more time than he thought was

necessary for doing the groundwork. The extension has been granted and Mr Rao has also been shown the same consideration without his seeking it. Further, Mr Gandhi has sought and obtained the assurance from the Government that in the event of the basic raw materials needed for automobile production being in short supply he would be allowed to import them. He has also indicated to the Government that the price he has quoted will have to be revised upwards.

An important reason for the poor quality of the existing models is that the indigenous components and accessories that go into it are sub-standard. It can, therefore, be easily imagined what the quality of a car produced wholly from indigenous materials will be like. Basic raw materials like steel, whether imported or not, make little difference to the quality of a car. As regards price, Mr Gandhi already feels he has erred on the side of the minimum and in view of the new levies imposed by Mr Chavan on auto parts and other materials that go into car production he is sure to find that any revised cost that he might have worked out before the Budget is also on the low side. By the time his first car rolls out of the assembly lines its cost will certainly go up further.

So far as the public sector small car scheme is concerned, the less store is set by it the better. This decade-old project has a knack of coming into life after spells of oblivion. It has now once again come

to the fore, but as in the past the deadline set for selecting the foreign collaborator has already been extended thrice. A decision on this matter was to have been taken by the Government before the end of last year. The time limit was first extended by a month and then till the end of March this year. Even though two more months have since elapsed, the four foreign models—Ford, Fiat, Mazda and Renault—from which a selection is to be made, are still being tested. In the face of all this, Mr Oza's talk of early decisions and a comfortable car supply position in the next two or three years is naive.

Both Mr Sanjay Gandhi's car and the public sector small car are largely intended for those in the middle income group. But since the prices of these cars are bound to be much more than initially estimated by the sponsors, and their maintenance has been made very expensive by Mr Chavan's unconscionably high taxes on petrol and spare parts, these cars have been placed beyond the reach of this group. So far as the well-to-do are concerned, they would prefer the medium sized cars currently in production. Therefore, is it necessary to have two small car projects each with a capacity of 50,000? The Government having virtually taxed many car owners out of existence, a single project with facilities for expansion should suffice. The resources thus saved can be profitably used for improving the urban transport system which will do more to reduce the hardship of commuters than an abundance of small cars which they cannot afford. Nor would our roads in their present conditions be able to take this heavy traffic of cars. □

ALUMINIUM

Benefits of economies of scale

BOMBAY.

IT is something to be said for the vitality of the aluminium industry that the leading producer in the country, Hindustan Aluminium Corporation (Hindalco), is not discouraged by the Budget proposal to remove the aluminium industry from the priority list. This decision would mean that Hindalco and other aluminium manufacturers would be deprived of the advantage of concessional taxation of profits under which an amount equivalent to 8 per cent of the profits could be deducted from the taxable income. The first reaction to this Budget proposal was that it would hamper the growth of the aluminium industry but at the annual meeting of Hindalco this week, Mr A. V. Birla, who presided in the absence of Mr G. D. Birla, was not prepared to consider that the future of the industry was bleak and, in fact, he described it as "bright". He expected the domestic demand to show a steady increase in the coming years and also drew attention to the export opportunities.

Hindalco, of course, is in the advantageous position that an expansion programme has already been launched which would take the capacity of its plant to 120,000 tonnes by the end of 1973. There are difficulties in the execution of this programme in the form of delay in decisions by the Government of Uttar Pradesh in regard to power supply and transfer of land. Also, Mr Birla complained about the delay at the Central Government level in finalising the foreign exchange financing arrangement for the Company's expansion. But the expansion, if completed according to the schedule, would at least ensure that the company would not be deprived of the development rebate which is to be withdrawn on machinery installed after May 1974. This may not be the case with other companies or new ones that are to come up. Hindalco would appear to reap the benefits of the economies of scale on which it set its eye quite early.

What worried Mr Birla, however, is the decision which the Government took

Hindusthan General Insurance

In the Commerce Research Bureau's study entitled "General Insurance Take-over: Background and Implications" published in *Commerce* dated May 22, 1971, Hindusthan General Insurance Society Ltd was inadvertently omitted in Table 2. Based on 1968 data, the company ranked eighth with net premium income of Rs 1.68 crores accounting for 1.5 per cent of the total for 129 companies. The total assets of this company at the end of 1968 stood at Rs 2.09 crores or 1.1 per cent of the total.

a few weeks before the Budget of fixing the aluminium prices at "grossly uneconomic levels". But he has also pointed out that the Government had fixed the prices of aluminium on the basis of prices of some raw materials prevailing as on April 10, 1970 and had announced that the aluminium prices would be adjusted if there was a rise in those of such raw materials as aluminium fluoride and cryolite. Further, the Government had also shown its willingness to consider an increase in prices if there was any increase in the effective rate of power charged by State electricity boards. Mr Birla's point was that increases in the prices of the two inputs had already taken place and that the new levy of excise duty on indigenous calcined petroleum coke at the rate of 20 per cent *ad valorem* and the increase, from 27.5 per cent to 40 per cent, in the import duty on practically all the raw materials would substantially affect the cost of production. A revision in prices of aluminium would, therefore, be fully justified.

It would be interesting to watch the reactions of the other three producers. The Indian Aluminium Company could, like Hindalco, benefit from its expansion programme but the position is not clear about the two other smaller producers. Even in fixing the prices of aluminium the Government had agreed to allow for these two producers an excise rebate of 7.5 per cent of the prices fixed for commercial quality ingots. This is equal to Rs 290 per tonne. It is to be hoped that these two producers would be encouraged and allowed to expand the activity to a reasonable level so that the price differential would not affect the efficiency in the long-run and they, too, would be in a position to take advantage of economies of scale. □

AVIATION

Air-India: Tighten your belts

BOMBAY.

AIR-INDIA'S house journal, *The Magic Carpet*, in its May issue carried a message from the General Manager to the employees: Tighten your belts. Air Marshal M. S. Chaturvedi is disturbed by the steep decline in profitability of the corporation which, according to him, would show a profit of under a crore of rupees during 1970-71, which is much less than in the previous years. The major factor responsible for this state of affairs was the rising spiral of costs. While conceding that certain areas were beyond the control of the corporation and its employees, the General Manager pointed out that there still remained large areas where determined and definite control could be effective. And, the Air Marshal gave a call to the employees to help in effecting economies.

It is doubtful if, with all these economies, Air-India will be able to maintain its past record if the Government does not do something about the 20 per cent tax it has proposed to levy on foreign travel. When the corporation went in for the 350-seater jumbos it knew that it was bargaining for hard times ahead. The growth in

Development rebate for shipping

MRS Sumati Morarjee, President, Indian National Shipowners' Association, Bombay, says that shipowners are greatly perturbed by the budget proposal to withdraw development rebate on purchase of ships after May 31, 1974. Majority of ships are built in foreign yards and as the yards are heavily booked for next three years deliveries of ships already ordered will be made only after 1974. Discontinuance of development rebate will retard expansion programme of Indian shipping companies and would thus affect foreign exchange earnings considerably. Also, the proposal to levy 20 per cent tax on foreign travel will be injurious to shipping companies as they have often to send full complements of crews and officers to foreign countries for taking over ships and for replacement of absent crews. This being an essential part of the operation of shipping companies, the Government should atleast exempt the shipping companies from the levy on foreign travel.

Power-shedding in Calcutta

The Indian Jute Mills Association, Calcutta, says that the jute industry in the city is facing a grave crisis as a result of the drastic power-shedding enforced by the Calcutta Electric Supply Corporation. The frequent power cuts and load-shedding for about a year and a half now has caused a lot of discontent among the workers who have to be laid off for the period of suspension of production. The industry, while having to pay heavy lay-off compensation without production, is helplessly witnessing a steady deterioration in labour management relations. The IJMA has, therefore, suggested that Government of India and West Bengal Government should immediately convene a conference at the highest level with representatives of the electricity generating and distributing agencies and also the jute industry to devise some short-term practical steps on an emergency footing.

The Bengal Millowners' Association, Calcutta, says that the frequent breakdown in power supply has affected seriously the working of cotton textile mills in West Bengal. Of the 34 cotton mills in the State as many as 22 have been closed down for various reasons. Working of the remaining mills has not been smooth for the last few months as a result of disruption in power supply. Suspension of power supply without prior intimation has also caused serious damage to machinery and motors in the mills.

The Indian Chamber of Commerce, Calcutta, says that the continued dislocation in the supply of industrial power is affecting a large sector of the industry and causing great damage to the economy of West Bengal in terms of production losses. As a result of the recent dislocation in power supply, a number of industrial units had to close down tending to aggravate the unemployment situation in the State. Unless the Government initiates immediate preventive steps the power supply dislocation would

BUSINESS OPINION

cause irreparable damage to the State's economy.

Bolts, nuts and screws

Mr Jagat Singh, President, Ludhiana Motor Parts Manufacturers' Association, says, that the 10 per cent excise duty on bolts, nuts and screws will have a disastrous effect on the small-scale units in Punjab. Majority of manufacturers of these items are "illiterate" according to Mr Singh, and it would not be possible for them to maintain the necessary records and go through all the formalities. There is no fixed production, or fixed prices or any permanent customers and the manufacturers have to depend on job works from outside.

Duty on raw wool

Mr Prem Nath, Chairman, Indian Woollen Mills' Federation, says that the proposed 40 per cent import duty on raw wool and the enhancement of excise duty on yarns and wool tops will result in "complete closure of the woollen industry". The industry is already facing a serious crisis because of under-utilisation of capacity, financial stringency and tardy progress of the modernisation programme. Mr Prem Nath says that the Finance Minister should reconsider the proposed levies to avoid a crisis in the industry.

Garment industry

The Madhya Pradesh Readymade Garment Dealers Association says that the 10 per cent tax on readymade garments proposed in the new Budget would seriously affect the readymade clothes industry and would render a large number of workers unemployed.

West Bengal's woes

The Indian Chamber of Commerce, Calcutta, says that the general reluctance on the part of the financial institutions to invest more funds in West Bengal and the continuing labour trouble are impeding the speedy revival of the State's economy. In a memorandum submitted to the State Chief Minister, Mr Ajoy Kumar Mukerjee, the chamber says that the public sector will have to come forward with large investments for the State's economic revival. The problem facing the industry in the State is shortage of finance. While efforts are being made to reopen the closed factories, more closures are taking place owing to growing indiscipline of workers and inter-union rivalry. Power shortage is also costing the industry crores of rupees annually as a result of cuts and dislocation of supply. On the one hand, West Bengal's price advantages in basic raw materials such as steel have been completely neutralised by the equalisation of steel price in the country, while on the other the State does not derive similar advantages in respect of other raw materials like cotton.

air traffic had slowed down recently while the capacity in the industry had increased tremendously with already 120 jumbos delivered to airlines and at least another 85 on order. Air-India's problem was how to find passengers to fill in the jumbos, but it was hoping that with the introduction of reduced fares and other promotional measures it would be in a position to tide over the situation. What it had, however, not bargained for was that the Government itself would move in to make air travel costlier and, therefore, less attractive.

The Chairman, Mr J. R. D. Tata, has said that the effect of the 20 per cent levy on Air-India would be "catastrophic". It would lose this year nearly Rs 8.5 crores and more in a full year. That made little sense to him since the Government itself did not expect to collect more than Rs 7 crores from this tax on those travelling by air or sea and paying in rupees for their tickets. Its only result would be that Air-India would go into the red—one more public sector project operating at a heavy loss.

Mr Tata and his colleagues in Air-India have placed alternatives before the Government in case it is unwilling to totally withdraw the levy. The Government, they have suggested, could impose the levy only on first class passengers leaving the economy class tax-free. Additionally, New Delhi must also withdraw the "P" Form. In fairness, the announcement of the proposal to levy a tax on foreign travel should have been accompanied by an announcement of the withdrawal of the P form. That has not been the case. And it is not yet clear how far the Finance Minister would respond to Air-India's plea though there are some reports that he might reduce the burden of the tax. □

JAPANESE ECONOMY

Keeping the yen away from foreign attacks

TOKYO

THE Japanese have been caught in their own talk of yen revaluation. The talk originated in Japan some three years ago. Many Japanese then thought that it would add prestige to Japan's newly gained economic status. Perhaps, unwittingly, they were showing a sense of pride to have a rich man's disease. But now, when the first signs of the disease are apparent, the Japanese are obviously panicked and are out to resist this drastic treatment which may not really be needed for another few years. Yet, with foreign reserves growing at the rate of half a billion dollars a month (they were over six and a half billion at the time of writing) and no signs of exports declining or imports increasing, all sorts of promises are being made to lead a regulated economic life.

This has led to a sharp decision of opinion. Mr Tadashi Sasaki, Governor of the Bank of Japan, is in favour of reducing the conspicuously ugly corpulence the Japanese economy has acquired over the years. Mr Sasaki had been in Basle at the time the Deutsche mark was freed to float, and several European currencies were revalued. He took the opportunity to convince his European colleagues, who had

gathered for the meeting of the Bank for International Settlements, about Japan's firm decision not to revalue or float the yen. On his return home he told a Diet (parliament) committee that there was absolutely no commotion in Europe about the Japanese decision not to revalue or free the yen from its dollar parity. He denied that there was any outside clamour for yen revaluation and said his statement at Basle had no adverse reaction.

He suggested an end to all talk of revaluation, and as this alone would not be effective for a series of preventive measures to keep payments surpluses and exchange reserves under control. He wanted certain basic corrections to be made in Japanese industries to reduce their present excessive export-orientation and immediate steps to stimulate the economy and domestic consumption in order to restrain exports and encourage imports. He also touched on the problem of slow recovery from the current recession. His central theme was that more money should now be made available for social overheads and production should be oriented towards raising the standard of life and culture to the Western level.

But some of his suggestions have been questioned by the Economic Planning Ministry and the Finance Ministry. The Planning Minister, Mr Ichiro Sato, and the Finance Minister, Mr Takeo Fukuda, agree that the yen must not be revalued. But they have rejected Mr Sasaki's suggestion that the Government must spend, even at the risk of indulging in deficit financing, to stimulate domestic economy and expand home consumption. Their idea is that the effective way to avoid any future pressure on the yen is to liberalise imports as far as possible and to increase investment overseas. This means that the official policy is to retain all the present drastic measures to keep the yen away from the reach of any foreign attack and not to be alarmed at the present rate of growth of reserves. The Government's action will be mainly confined to dispersing its reserves in the form of heavy investment overseas as any over-spending at home might lead to inflation which exists even now. □

INDUSTRIAL YARNS

India's first nylon tyre cord plant

BOMBAY.

INDIA'S first nylon tyre cord plant was inaugurated in Bombay last week by Maharashtra's Chief Minister, Mr V. P. Naik. This wholly Indian-built plant with a capacity of 1,500 tonnes of nylon tyre cord per annum has been set up by the leading manufacturer of nylon and polyester filament yarn, Nirlon Synthetic Fibres and Chemicals.

In his inaugural speech, Mr Naik understandably shared the enthusiasm of the Chairman of the company, Mr Jaykrishna Harivallabhdas, and the Managing Director, Mr Pramod Jhaveri, over India's entry into the field of nylon tyre cord manufacture. If we look into the consumption of nylon tyre cord only in the making of automobile tyres—not to speak of the other uses of this vital raw material, such as in defence

equipment including aircraft—the fact that all the requirement of 1,500 tonnes of cord had to be imported emphasises the importance of the new plant. This year the estimated consumption is around 2,400 tonnes, of which only 700 tonnes is expected to be indigenous.

It is obvious that when Nirlon's tyre cord plant manufactures the rated 1,500 tonnes, it will still fall short of the requirement, even with the present pattern of consumption of various types of tyre cord. One more 1,000-tonne capacity plant has been licensed, that of JK Synthetics which is expected to be in production in the near future, while at least two, namely, DCM and National Rayon, out of the four units to which letters of intent were issued by the Government of India are likely to be on stream within the next two years. Overall, it would appear that the official thinking is that during the next few years these capacities should be sufficient to reach a total production of around 10,000 tonnes of nylon tyre yarn. This would mean that nylon would constitute about 35 per cent of the total consumption of various types of tyre cord for automobile tyre manufacture.

This view is more or less shared in the report of the seminar committee on man-made fibres organised by the Association of the Manmade Fibre Industry last year. In fact, the seminar committee appears to have been more cautious than the Government, in that it would aim at the achievement of the Planning Commission's Fourth Plan target of 13,000 tonnes of nylon-polyester filament in terms of rayon equivalent (8,125 tonnes of nylon tyre yarn) only by the end of the Fifth Plan. This is based on the assumption that even by 1978-79 rayon tyre cord would be used to the extent of 60 per cent of the total requirement.

Recent trends in advanced countries have, of course, been in favour of increasing use of nylon tyre cord as against rayon. And nylon enthusiasts make it a point to refer to the example of the US where in the past couple of years nylon tyre cord accounted for as much as 60 per cent of the total consumption. At the same time, technically speaking the relative advantages of rayon and nylon over each other have given room to the opinion that rayon and nylon would remain for some time the two leading parallel fibres. As it is, with the raw material for both rayon and nylon tyre cord being imported, even economic considerations including the availability of yarn would appear to even out the advantages of both.

But there is the likelihood, as Mr Virendra Sagar, Executive Director of Nirlon Synthetic Fibres and Chemicals, puts it, that when caprolactum, which is the raw material for nylon tyre cord, becomes indigenously available from the Gujarat Fertilizer Corporation and the Gujarat Petrochemicals complex, nylon will have an edge over rayon. Although it may not be earlier than another three years that caprolactum will flow out of these units, the prospects of rayon grade pulp becoming available in large quantities from indigenous sources are considered remote. It is in this context that the Government, which has not made a secret of its preference for nylon tyre cord, is understood to be in favour of freezing the rayon tyre cord capacity at the current level of 18,000 tonnes per annum. □

REPORT OF THE AUDITORS

SYNDICATE BANK

To

THE PRESIDENT OF INDIA

1. We have an audit of the attached Balance Sheet of Syndicate Bank as at 31st December 1970 and the attached Profit and Loss Account of the Bank for the year ended 31st December 1970 in which are incorporated the returns of 144 Branches audited by us. Branches audited by other auditors, and the un-audited returns in respect of 263 Branches not visited by us for the exclusion of which branches from audit concurrence of the Reserve Bank of India was obtained.

2. The Balance Sheet and the Profit and Loss Account have been drawn up in forms 'A' and 'B' respectively of the Third Schedule of the Banking Regulation Act 1949. Accordingly they disclose such matters as were required to be disclosed in the case of Banking Companies prior to nationalisation by virtue of the provisions of the said Act as read with the relative provisions of the Companies Act 1956. Subject to the limitations of such disclosure and on the basis of the audit indicated in the first paragraph we report that:

(a) In our opinion and to the best of our information and the explanations given to us and as shown by the books of the Bank

(i) the Balance Sheet read with the notes thereon is a full and fair Balance Sheet containing the necessary particulars and it is properly drawn up so as to exhibit a true and fair view of the affairs of the Bank as at 31st December 1970

(ii) the Profit and Loss Account read with the notes thereon shows a true balance of Profit at the year ended on that date

(b) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory

(c) the transactions of the Bank which have come to our notice have been within the powers of the Bank and

(d) the returns received from the offices and branches of the Bank have been found adequate for the purposes of our audit

UNION BUDGET 1971-72

Savings, taxation and growth

Hurdles for savings and investment

By P. R. Brahmananda

FISCAL POLICY, in the context of the background situation in the Indian economy during 1971, must have the goal of a sharp rise in the ratio of net investment to national income. This goal can be achieved only by devising measures such as to cause a rise in the ratio of net savings to national income. The fiscal authorities have decided that a sharp rise in the ratio of Plan outlays to national income is the chief instrument for obtaining a high rate of growth. It follows that the goal of the budgetary policy for 1971-72 must be to cause a rise in the ratio of savings to national income and to bring about such a scale of transfer of command over resources that the contemplated rise in the ratio of Plan outlays to national income is achieved. Three possibilities are open: (1) The ratio of savings to national income may not go up, or may even go down, though the rise in the ratio of Plan outlays to national income may be partly achieved. (2) The savings ratio may go up but the ratio of Plan outlays may not go up. (3) The savings ratio may go up and the ratio of Plan outlays too may go up.

Let us examine the possible effects upon the savings ratio. This ratio should have possibly ruled at around 7.5 per cent to 8 per cent of the national income around 1970-71. It has gone down as compared to 1964-65. Since 1964-65, there has been an increase in national income at constant prices by about 19 per cent; but the savings ratio has gone down from around 10.7 per cent to about 7.5 per cent or so, that is by nearly 30 per cent. Of course, the *per capita* income at constant prices has risen possibly only by about 5 per cent to 7 per cent. But it has risen, and why should the savings ratio go down? According to available data, there has been a steep fall in the ratio of Government savings to national income and some, though not so great, a fall in the ratio of household savings to national income. Latest company finance statistics show some, again not so great, fall in the corporate savings ratio.

Why has the Government savings ratio fallen so steeply? It has fallen from around 27 per cent of the national income in 1964-65 to possibly less than 1 per cent in 1970-71. The Government savings ratio can go up if (a) substantial surpluses on revenue account are obtained and these

are used for financing of capital development, and (b) surpluses are earned in the public sector concerns and these are ploughed back into capital development. Revenue surpluses as a ratio of capital disbursements formed 16 per cent in 1964-65; in 1970-71 (revised) they formed probably less than 9 per cent. Again Plan outlays formed about 33 per cent of all Government outlays, in 1964-65, they formed around 30 per cent of such outlays in 1970-71. It is well known that surpluses from the public sector enterprises are meagre and there is no prospect of any substantial rise in their share in the near future.

The key question which the fiscal and Plan authorities should ask themselves is whether any substantial step up in real development efforts is possible when (a) there is a tendency to transfer towards the public sector a rising share of the aggregate capital assets, and (b) the assets so transferred or otherwise built do not contribute their due share to national savings.

To the extent that the public sector enterprises can get a rise in the ratio of their profits on capital and this rise in the ratio is not eaten up by a rise in wages and salaries, the Government savings ratio can go up. A rise in the ratio of profits is conditional upon a higher degree of utilisation of the capacity of these enterprises, and this itself is conditional upon a rise in the scale of demand for the products of the enterprises. The public sector enterprises in India mostly grow out of the Mahalanobis-Feldman strategy of development, applied to India. The products of these enterprises contribute to expansion in investment but in a similar pattern. With the virtual stoppage of fresh project-imports since 1965-66, fresh investment in these lines has not taken place.

The heavy-industry structure is not self-reliant within to real-finance such an expansion. Imports of portions of equipment are necessary and as installed machinery is specific, investments in only certain lines can create a demand for the products of the heavy-industry sector. This is the reason for the crisis in this sector: most of the enterprises in which happen to be in the public sector itself. A demand-boost for their products is conditional upon project-imports and of the furtherance of the Mahalanobis-Feldman strategy. As an alternative we have tried to export some of the products but the export demand is not sufficient to absorb the surplus capacity. Again the steep rise in manufacturing prices and in the prices of metallic

intermediate goods is bound to come in the way of the expansion of export demand.

Those who argue that the profits of the public sector enterprises can be raised by a rise in the prices of these commodities do not realise that the major purchasers of these commodities are the public sector units themselves. Further, a host of export industries will be adversely affected. A rise in the prices of these commodities results in a larger scale of Government loans to them.

We can, therefore, rule out any major scope for a rise in the Government savings ratio other than through revenue surpluses obtained by traditional tax sources. An important non-tax source which the Government can exploit is through a substantial hike in interest rates on loans from Government-aided and other financial institutions. Unfortunately, the present Finance Minister who appears to be influenced by the point of view of the fund-owners such as the co-operatives etc., cannot be expected to be sympathetic to proposals for steep hikes in interest rates. But then there is no other way out.

If the Finance Minister wants to really step up the savings and investment efforts he has to obtain higher tax revenues in a climate of constant prices. In other words he has to eschew both deficit financing and credit expansion. What is happening is that the taxes are raised and at the same time money incomes too are raised. No substantial increment transfer of command over real resources is accruing to the public sector. The tragedy of the thinking behind the *Economic Survey* and of the speech by the Finance Minister is the non-realisation of the grave nature of the economic crisis affecting the heavy sector. How on earth the fiscal policy outlined by the Finance

BUDGET 1971-72

Minister can help arrest the stagnation in savings and investments is anybody's guess. Unfortunately the Finance Minister too has started thinking that project-imports are not needed. How one wishes that the top authorities studied deeply the origins of the crisis in the Indian economy. Because of their lack of understanding of the problems in depth, no Finance Minister has been able to put the Indian economy on a viable, long-sustaining, mass-consumption and investment-oriented growth path.

Obviously the only course which the authorities have been adopting is to cause a sizable budgetary deficit each year and to seek to get a transfer of command over real resources by causing a rise in the level of prices. But despite a rise in the price-level of nearly 48 per cent since 1964-65, the Plan outlays at current prices have gone up between 1964-65 and 1970-71 by less than 25 per cent. If we take employment in the Central Government sector, there has been a rise of about 6 per cent at the end of 1969-70 as compared to the position at the end of 1964-65. If we take both the Central and State Governments, there has been a rise of just about 9 per cent or so.

What is most distressing is the stagnation since 1965-66 in the volume of employment in the organised part of the private sector. The volume of employment was about 68 lakhs at the end of 1965-66; it has gone down to about 67.8 lakhs by the end of 1969-70. Even granting the provisional nature of the figures for 1969-70, it appears that since 1965-66 employment in both the sectors in the organised areas has gone up only from about 162 lakhs to 171 lakhs i.e. by just about 5 per cent.

It follows from all this that since 1965-66, the progress of net investment in the private sector has slowed down drastically. Figures regarding machinery imports, steel and cement consumption point to a steep fall in the ratio of gross investment to national income since 1965-66. These indicators are borne out by the trends in the savings ratio. Aggregate machinery imports in 1970-71 would be slightly less than those in 1969-70 and 14 per cent less than those in 1967-68. As compared to 1965, the index of capital goods production was less by about 18 per cent in 1970; there was only a 2 per cent rise in this index during 1970 over the previous year. Even cement output was only 3 per cent higher over the previous year. The output of finished steel would be perhaps 15 per cent less in 1970-71 as compared to 1969-70. The rise in steel imports during 1970-71 may just compensate for the fall in production so as to leave the aggregate steel consumption at the same level as in 1969-70.

All these indicators point at best to a constant (or a marginally higher) real level of gross investment in 1970-71 as compared to that in 1969-70. As the depreciation provision has to be greater during 1970-71 than in 1969-70, the crucial conclusion is that the level of net investment in 1970-71 may either be the same as in 1969-70 or possibly slightly lower. The *Economic Survey's* data regarding capital issues are partial and not conclusive. Nor is the trend of borrowing from financial

institutions any pointer, as there has been a trend towards a rise in the ratio of external funds to the total use of funds.

The Finance Minister has outlined a number of tax proposals whose net effect would not operate in favour of incentives for higher savings. The concessions regarding provident funds benefit to the low and middle income classes, but these are the very classes who would be hard hit by the rise in prices caused by the excises and by deficit financing. The special concession for conveyance is more than lost by the increase in the cost of fuel and petrol. The taxes on necessities such as maida, soap, glass, plastic products, etc., are bound to be reflected in a rise in the cost of living index, which of course will be compensated by a rise in gross wages and salaries for the workers in the organised sector. The taxes on intermediate products such as petroleum products, metal products, import duties on machinery, etc., are bound to be reflected in a rise in the cost of these products. Such items as metal products and petroleum products enter as inputs in many industries. The cost-push on the score of a rise in their prices is bound to affect the degree of utilisation of the industries using engineering and automobile products. Exports also may be adversely affected. Even the enhanced scale of wealth taxes is bound to be reflected in a rise in explicit or implicit gross rents. Such a rise may not be reflected in increase visible incomes. The housing situation in urban areas may be worsened. However the Finance Minister has cared to see that a discriminatory treatment is ac-

corded to co-operatives. But this would only increase the extent of borrowing from Government financial institutions.

Incentives apart, the Budget does not allow larger funds to be left with those groups who would be in a position to save and to invest more. Thus the source of savings, too, would tend to be adversely affected.

All the above observations cast a doubt on the possibility of any beneficial impact of the Budget upon savings and investments. As implied earlier the prospect of a price-rise of a minimum of 5 per cent in 1971-72 will dampen the possibility of any substantial rise in Central and State Plan outlays. The prospects for a revival of the savings-investment process in the private sector is remote; there is nothing in the Budget to help this process. We are, therefore, left with the inequity of the excises on the poor and of the inequity to the whole economy of the continued rise in prices of essential goods due to deficit financing and credit expansion.

Unless we assume that substantial expansions are taking place in employment in the unorganised sector, the current drift in the fiscal policy cannot be said to have any macro effect on employment. If a budget does not benefit the poor, if it does not cause savings and investment to go up, and if it plans for just a price-rise with discriminatory taxes on the necessities of the poor, how can any economist, more so in a poor country, commend it?

A poverty-oriented Budget

By N. A. Palkhivala

THE pride of place in the parliamentary calendar still belongs to the annual ritual of the budget. The fiscal measures adopted by a government constitute perhaps the most significant aspect of its economic policy; and the economic policy pursued by a government is the single most important factor in the economic development of a nation. Abundance or scarcity of natural resources, the rate of population growth, the level of education, and geographical conditions have a strong impact on the economic environment; but more crucial than them all is economic policy.

The Government of India, with its tremendous political mandate, had a golden opportunity of bringing in a nutritive budget which could have harnessed to great national purposes the immeasurable reservoir of the people's faith and response, energy and enterprise. But instead, it has introduced a Budget which will sap the nation's strength, blight confidence and strangle enterprise. Whereas the Budget

could have given the patient 547 millions the chance of a brighter tomorrow, it only aims at ushering in a socialist springtime of dead flowers.

The first Indian Budget in modern form, containing the first levy of income tax, was presented to the Legislative Council on February 18, 1860, by the first Indian Finance Member, James Wilson, who said in his Financial Statement of that year: "The normal state of Indian finance may be said to be deficiency of income and addition to debt." In that Budget the rate of income tax was 2 per cent upon incomes between Rs 200 and Rs 500 a year, and 4 per cent on incomes above Rs 500. The maximum rate of 4 per cent was reduced in 1863 to 3 per cent, and in 1869 to 1 per cent. The wheel has now turned full circle. Instead of the assessee paying 2 per cent tax and keeping 98 per cent of his income, he has now to pay 98 per cent tax and keep 2 per cent of his income.

More than any other Budget during the last 111 years, this year's Budget is in its conception ideology-oriented, and in effect will prove poverty-oriented. The

Mr Palkhivala is a distinguished constitutional and taxation expert.

philosophy underlying the Budget rests on the following inarticulate major premises:

(1) It is enough, and a lot easier, to impoverish the rich instead of enriching the poor "Amrī hatao" at Budget time is an excellent political substitute for "Garibi hatao" at election time, and the public mind may be trusted to be sufficiently muddled to see no distinction between the two.

(2) The laws of human nature should be treated as impliedly and effectively repealed by the laws of Parliament.

(3) A citizen of integrity and intellect, industry and enterprise, does not deserve to keep even a reasonable part of the fruits of his own labours. It is politically expedient to have a ceiling on income, although in practice it merely amounts to a ceiling on honesty.

(4) The private corporate sector needs no incentives. It should find its deepest satisfaction in the fact that while, as a result of manifold restrictions on initiation and expansion of industry, it is permitted to contribute only 8 per cent of the total national income (as against 70 per cent in developed countries), it contributes no less than 60 per cent of the direct and indirect taxes collected by the Central Government.

(5) The agricultural sector is politically too important to be taxed even reasonably, mounting savage taxation should be discreetly reserved for urban citizens who have no political lobby worth the name.

Impoverishing talent and enterprise is a political gimmick: eradication of poverty would be an economic achievement. You do not really need the very expensive outfit of a vast Finance Ministry to manage the former, an intelligent schoolboy can think up the simple expedient of imposing staggering rates of income tax and wealth tax. On the other hand, eradication of poverty demands wisdom and knowledge, character and dedication, of the highest order, and only the finest of governments achieve it, though all political parties adopt it as their slogan.

The Budget will, no doubt, have the effect of reducing the disparity between the honest rich and the poor. But this object will be achieved at the cost of vastly increasing the number of black-marketeers, tax-evaders and licence-peddlers. We may continue to dream of a higher standard of living for the masses, but will never manage to underwrite our dream in terms of output. Neither the gross national product nor the per capita income will increase. But by constricting growth and aggravating inflation, the Budget will definitely increase poverty. There will be a sharp rise in the army of the unemployed who already number 20 million on a reasonable estimate. With this year's Budget one can confidently predict that the estimate of 28 million desperate job-seekers at the end of the Fourth Plan will be substantially exceeded by the actual figures. Any Budget which on ideological grounds prevents the full development of job potential constitutes a crime against the nation.

The problem of conquering poverty is not insoluble. When the World Bank appointed the Lester Pearson Commission to study the achievements of developing countries, and the role that foreign aid could play, it came to the striking conclusion that of the 69 developing countries whose growth-performance was assessed,

as many as 32 scored during the first seven years of the 1960s an annual growth rate of over 5 per cent, and 19 of these 32 countries scored an annual growth rate of over 6 per cent. Regrettably, during the same period, India's growth rate hovered around 3.2 per cent. In fact, India was in the same boat as Burma, Congo, Haiti, Mali and Somalia. It is true that in the last 3 years, there has been a heartening improvement in the performance of agriculture but even after taking this into account the annual average growth rate for the decade as a whole is no more than 3.6 per cent, which set against the annual population growth rate of 2.45 per cent leaves a negligible increase per capita. It is an irony worth contemplating that the two richest countries of Asia, viz Japan and Singapore, are also countries without any natural resources. Here with all our wealth of natural resources we struggle with an annual per capita income of \$90 against \$800 of Singapore and \$2,100 of Japan.

It is a truism which will bear repetition that in economics there are no miracles: there are only consequences. The only way of eradicating poverty—of translating "Garibi hatao" into action—is to work more, save more, invest more. But this year's Budget offers the strongest possible disincentives to work, to save or to invest. The most expensive hobby of Indians is work. Capital formation is at the miserably low rate of 12 per cent of the national income, and the Budget will ensure that the 15 per cent rate of saving targeted in the Fourth Plan will not be achieved. The powerful disincentives to saving are the steady erosion in the value of the rupee and the vertiginous levels of wealth tax and income tax.

When the basic instincts of human nature and the deep-grained motivations of human conduct come into sharp conflict with man-made laws, it is the laws which are invariably defeated and brought into contempt. Yet in the Budget speech year after year our Government gives expression to the juvenile delusion that new laws and more laws are all that is needed to make men work mainly—and at a certain level, wholly—for the benefit of the exchequer.

It is a sad reflection on human nature, but a fact of life which we ignore only at our peril, that a man will work for himself and for his family as he will work for no one else. Our laws fight a losing battle with the acquisitive instinct of man. In Russia and other communist countries, taxi drivers will surreptitiously ask for foreign exchange from complete strangers, although the death penalty is the punishment for such an act. Wise governments reasonably regulate these normal human instincts and ensure that they create open wealth for the nation. Foolish governments permit these instincts to create black-markets and black money.

The proposal for levying income tax at rates going up to 97.75 per cent and wealth tax at rates going up to 8 per cent (plus 7 per cent in the case of urban property) virtually amounts to annual confiscation of income and wealth. These proposals make it clear that the Government is determined to let public morality die in India. Let the citizens observe only the Eleventh Commandment: "Thou shalt not be found out."

The implication of 97.75 per cent income tax is that it is more profitable for

BUDGET 1971-72

a citizen at a certain level of income to evade tax on Rs. 30 than to earn honestly Rs. 1,000. If an individual with an income of Rs. 60,000 a year increases it to Rs. 6,00,000 a year by dint of sheer hard work, the net additional income in his hands after income tax would be only Rs. 23,650. In some democratic countries, such rates of income tax and wealth tax may be struck down by the court as being unconstitutional and as amounting to confiscation of property.

The remark that the tax rates in India cannot be reduced because of widespread evasion is on a par with the observation that you should not go into water till you have learnt to swim.

It is well recognised that a high level of taxation is not disinflationary but positively inflationary because if the solution to the problem of inflation is more production, then a high level of taxation which reduces the margin of saving and the amount available for investment, is a potential inflationary force. Further, it destroys all cost consciousness as it destroys all ethics consciousness: a company has as little incentive to economise when 70 per cent of its expenses are met by the Government as a citizen has to be honest when there is virtually a ceiling on the income he can earn by his own labours. As W. Arthur Lewis, the well-known Democratic Socialist has observed in *The Theory of Economic Growth*:

The distribution of income raises peculiarly difficult problems for the less developed countries in so far as they wish to combine equality with incentives, and with a high level of savings. Economic growth demands that there shall be adequate differentials for skill, for hard work, for education, for risk bearing and for willingness to take responsibility.

"The less developed countries have awakened into a century where everybody wishes to ride two horses simultaneously, the horse of economic equality and the horse of economic development. The USSR has found that these two horses will not go in the same direction, and has therefore abandoned one of them. Other less developed countries will have to make their own compromise."

In other words income tax rates should be kept reasonably low so as not to interfere with functional inequalities.

Mr. T. T. Krishnamachari expressed the same view in his Budget speech of 1957.

"I have come to the conclusion that our existing rates of direct tax at top levels deprive the tax structure of all flexibility. It is said that they tend to diminish the incentive for work but I am aware that they encourage large-scale evasion. It is now recognised that the very high rates of direct taxation in the top income brackets in many countries of the world in practice are tolerated or tolerable only because of considerable evasion that takes place. In other words, the high rates tend to be applied to a corroded tax base."

Again in his Budget Speech of 1964, Mr. T. T. Krishnamachari stated:

"It is worthwhile mentioning that the motivating factor behind earned in-

BUDGET 1971-72

comes should not be ignored. Much of it is due to the incentive, the initiative and hard work of the earner himself, and for keeping up this effort and to enthruse the earner to greater efforts, it is necessary for him to have a feeling that at least some substantial portion of what he earns is left in his hands."

Prof Kaldor, a confirmed socialist, recommended the lowering of the maximum marginal rate of taxation on personal income to 45 per cent, and observed:

"As it is, these confiscatory tax rates truly apply only to a small minority of people who cannot avoid their incidence, and their long-run effect is bound to be wholly pernicious, both in penalising the prospects of certain careers which are vital from the national point of view, and in undermining public morality."

The middle classes will be the worst hit by the Budget. Every citizen with wealth exceeding Rs 1 lakh will now have to pay tax on his entire wealth without the exclusion of the first slab of Rs 1 lakh which prevailed till this year. The effective rate of capital gains tax has been jacked up by nearly 50 per cent in a large number of cases of middle-class investors. There will be no exemption from wealth tax in respect of equity shares issued after May 31, 1971. The five-year tax holiday to newly-established industrial undertakings and hotels takes the form of exemption of profits up to 6 per cent of the capital employed in the company; and a similar exemption is available to shareholders in respect of dividends declared out of such profits. This year it is proposed to exclude debentures and long-term borrowings from the definition of "capital employed". The result will be that for all practical purposes the income tax relief to companies and their shareholders will be reduced to 2.5 per cent of the real capital employed instead of 6 per cent, since the ratio of long-term debts to equity is generally 4:3 in such cases. All this is bound to affect the investment market very adversely and create road blocks in the way of talented young entrepreneurs entering the industrial field, getting financial support from the public, and developing their ventures with due regard to economies of scale.

The Government's hope that tax evasion resulting from confiscatory taxation will be checked by new laws, will prove to be a will-o'-the-wisp. It is a scandalous state of affairs that flats should be sold for half the price in black money. But can you make houses available to the needy at the openly-disposed prices, merely by enacting new laws? The proposed legislation for acquisition of flats by the Government at the price stipulated in the sale deed may prove to be a remedy worse than the disease. It will give tremendous scope for corruption, since only some of the flats would be so acquired in the discretion of the Government officials. Secondly, it would check building activity and aggravate the housing shortage, as the vigorous enforcement of the Bombay Land Requisition Act, 1948, did years ago.

The proposal to have a law barring suits by tax-evaders against benamidars to recover properties which had not been disclosed in the tax returns, shows how com-

pletely divorced governmental thinking is from the realities of the situation. Practical experience shows that not even one in a thousand benami transactions results in such a suit being filed; because even under the existing law if such a suit were filed by the true owner, he would probably have to pay more in back taxes and penalties than the value of the property itself.

The only effective way of dealing with black money and benami transactions is to end planning for shortages, to reduce taxation to reasonable levels, and to enforce rigorously the existing laws which are quite adequate to deal with the situation.

A comparison with the other countries of the world proves beyond doubt that we are the highest taxed nation, as far as direct taxes on the individual are concerned. The tendency in all progressive countries is to reduce rates of direct taxation so as to stimulate greater effort and greater production. In the United States the rate of personal taxation has been drastically cut, and the maximum marginal rate applicable to earned income after 1971 will be only 50 per cent. In the United Kingdom, the income tax rates were reduced all along the line in this year's budget and the top rate was reduced from 91.25 per cent to 75 per cent. An assessee with three children and a widowed mother and paying the usual insurance premium would pay tax at the average rate of 5.5 per cent on an income of £1,500. The same income under the same conditions in India would attract 18.3 per cent income tax.

In Ceylon Mrs Bandaranaike's Government has reconstructed the tax system on pronounced socialistic lines, but the highest rate of income tax there is 65 per cent. There is also a compulsory savings scheme which requires deposits to be made with the Government, carrying interest at 5 per cent. But the maximum rate of compulsory savings is 20 per cent of the income. Thus the maximum marginal tax along with the maximum compulsory savings comes to 85 per cent of the income. As regards wealth tax, Ceylon, again, is in a much more favourable position. The first Rs 1 lakh is wholly exempt from wealth tax and the rate starting with 0.5 per cent goes up to a maximum of only 2 per cent on wealth above Rs 18 lakhs. Recently, Ceylon did have a capital levy, the maximum marginal rate of which went up to 25 per cent, but this capital levy was once for all, as against our maximum annual per cent and in the remaining three no 15 per cent in the case of urban immovable property.

Of the 18 important developing countries of the world, six have a maximum income tax rate ranging no higher than 50 per cent; in another six, the rate is no higher than 70 per cent; in two others 80 per cent, and in the remaining three no higher than 90 per cent. Those three are: Puerto Rico (83 per cent), UAR (90 per cent), and Zambia (90 per cent). India takes the palm with its rate of 97.75 per cent.

The Budget hits hard the corporate sector. At a time when all other developing and under-developed countries of any importance offer incentives for the growth and expansion of corporate enterprises, India alone goes in the opposite direction and takes away existing inducements. The excellent book *Direct Taxes: An International Comparison*, brought out by the

Federation of Indian Chambers of Commerce and Industry, contains cogent data proving that all developing countries which have any pretence to economic growth are giving, and continue to give, as generous incentives to the corporate sector as India; in fact in many cases the incentives are more generous than what our companies enjoy.

The Government has given notice that development rebate would be abolished in respect of plant and machinery installed after May 31, 1974 and has expressed the hope that this would result in accelerating the establishment of new industries before that date. The threatened abolition of development rebate by May 1974 is a current deterrent to economic growth and not only a future deterrent. Three thousand applications for licences are pending with the Central Government. The Licensing Committee which meets usually once a fortnight would have to face the impossible task of disposing of 125 applications at every meeting, if it is to deal with all the applications within one year so as to enable the installation of plant and machinery in new industries to be completed before May 1974. The annual accretion to development rebate reserves amounts to Rs 50 crores and would constitute roughly 20 per cent of the net capital formation in the corporate sector. The unwise abolition of development rebate will increase substantially the tax burden on the corporate sector, drive companies to obtain assistance from financial institutions instead of financing development from self-generated resources, and leave companies free to distribute dividends out of moneys which would otherwise have been ploughed back compulsorily as development rebate reserve. Barely 5 per cent has been the actual rate of growth in industrial production during the last year, as against the 8 per cent to 9 per cent targeted in the Fourth Plan. If development rebate is abolished, the rate of industrial growth will be definitely retarded.

The exclusion of cement, trucks, aluminium, soda ash, petrochemicals and automobile ancillaries from the list of priority industries will result in their tax burden being increased from 50.6 per cent to 55 per cent. These are high technology-intensive industries requiring substantial doses of capital and a long gestation period and they have a whole chain of beneficial multiplier effects. There is not the slightest justification for their exclusion from the list of priority industries. Every truck manufactured gives employment to 13 persons and 42 per cent of its cost to the transport operator goes by way of taxes to the Central and State Governments. Petrochemicals, aluminium and soda ash provide the raw material base for thousands of small-scale industries.

As regards industries which continue to remain as priority industries, the effective rate of tax has been increased from 50.6 per cent to 52.25 per cent.

The sizably lower relief available to newly established industrial undertakings and hotels has already been referred to earlier. Foreign companies receiving dividends from Indian closely held companies in priority industries will now be taxed at the effective rate of 24.5 per cent instead of 14 per cent. At the same time, foreign companies reinvesting in approved investments the capital gains made by

them on sale of their old investments, will no longer be entitled to exemption from capital gains tax. For good measure, the exemption which companies used to enjoy in respect of dividend income up to Rs 3,000, is also now taken away.

There is not a single redeeming feature in the entire Budget to compensate for the drastic abridgment of incentives for the corporate sector.

Further, companies will not be allowed a deduction in respect of salaries in excess of Rs 5,000 and perquisites in excess of Rs 1,000 per month given to Directors and executives, even if their contracts of service have been duly approved by the Government of India. Thus in several cases the executives will pay income tax at the rate of 90 per cent or more and the companies will again virtually pay tax (as a result of the disallowance) on the same amount at the rate of 55 per cent or more.

When a government, which is so unfair and unjust, complains of tax evasion, it should remember that just as every nation gets the government it deserves, every government gets the tax-payers it deserves.

The incentives for corporate development have been removed, on top of retention of the heavy rates of income tax and increase in the rate of surtax. Our companies are charged to income tax and surtax, which, in the case of some of the most efficient units, impose a burden exceeding 60 per cent of the company's profits.

Out of the 141 countries whose rates of corporate taxation are available, 131 have the maximum rate of 50 per cent or less in the corporate sector; and, again, 92 out of the 131 have corporate rates not exceeding 40 per cent. Six countries levy corporate tax at rates between 51 per cent and 55 per cent. The only countries whose corporate tax rates exceed 55 per cent are: Austria (57.6 per cent), Sudan (62 per cent), Faroe Islands (87.6 per cent), and Burma (99 per cent). In none of these four countries is there any corporate industrial activity worth the name. Faroe Islands (to the north of Scotland) have a total population of 38,000, i.e. less than that of a small township in India; and in Burma corporate taxation represents more a practical joke than serious economic thinking, since there is no business, no industry and virtually no private corporate sector. Thus, India cries aloud for recognition as the country with the highest burden of corporate taxation.

There is the story of the monks who belonged to a religious order which prohibited them from complaining. One evening, sitting at dinner, a monk found a small mouse in his tankard of beer. Mindful of the rule against complaints, he turned to the superior and meekly said, pointing to the monk next to him, "There is no mouse in my brother's beer". When one points out that there is no mouse in the agriculturist's beer, one is only pointing out the iniquity of subjecting the urban sector to a staggering burden of direct taxation when for political reasons agriculture is almost wholly spared.

The annual national income from agriculture is about Rs 16,000 crores, while the total income of the non-agricultural sector is roughly the same. Agricultural income tax levied by the States totals only Rs 13 crores, while direct taxes on the non-agricultural sector aggregate to Rs 857

crores. Thus, though agricultural income is half of the national income, its share of the direct taxes collected is only 1.5 per cent. Land revenue collected throughout India comes to Rs 113 crores; and therefore even treating land revenue as a part of direct taxation on agriculture, agriculture bears only 13 per cent of the total burden of direct taxes.

Since 1961-62 prices of agricultural commodities have risen by 101 per cent, while the prices of industrial products have risen by only 50 per cent. Further, a substantial part of the increase of 50 per cent in the prices of industrial products is itself due to the sharp rise of over 100 per cent in the prices of agricultural commodities. This is because Indian industries, unlike American and German industries, are heavily dependent on agriculture for their basic raw materials. For example, the price of cotton has increased by 47 per cent in the last three years alone. Again, the sharp increase in food prices dominates the consumer price index to which wages are linked in many industries. Thus, higher food prices result in an increased cost of living index and that leads to increased wages and increased cost of industrial products. In short, the facts are that agriculture is mainly responsible for the inflationary spiral, and the agricultural sector is permitted to increase prices without any control from the Government and without bearing any income tax burden. This shows how completely divorced from facts and realities is the myth propagated by wily politicians year after year that business and industry are "gently spared" in India.

Instead of the unprecedented additional tax burden of Rs 220 crores, there are four ways in which the estimated deficit of Rs 397 crores would have been met.

First, India should pursue the modern fiscal policy adopted by all progressive countries, which is to make revenues grow, not by increasing tax rates but by making incomes grow and the gross national product grow. In other words, tax revenues must be made self-generating and buoyant

BUDGET 1971-72

by expanding the industrial and agricultural base.

Secondly, the Government should teach by example the virtue of economy. There is ample room for saving, without sacrificing efficiency, in the defence expenditure of Rs 1,240 crores, and the mounting civil expenditure.

Thirdly, the investment of Rs 3,902 crores in the 85 enterprises in the public sector is expected to yield a profit of only Rs 51 crores in 1970-71, i.e. a profit of 1.3 per cent. It is imperative that the public sector should be energised and invigorated into yielding a reasonable return.

Fourthly, although agricultural income tax is not a subject within the competence of the Union, there is a constitutional way in which the Union can effectively induce the States to levy agricultural income tax, so that the burden of direct taxation may be shared alike by citizens in the same income brackets in the urban and rural areas. There are various grants and allocations which are in the discretion of the Central Government under the Constitution, and the discretion should be so exercised as to favour those States which raise revenues from the agricultural sector.

The founding fathers of our Republic conceived India as the dwelling of the spirit of liberty, where social justice would prevail and the nation would be enriched by the enterprise and labour of its citizens. It is the cardinal principle of social justice that labour and enterprise should be fairly rewarded. But our fiscal policies make this country fit only for black-marketeers, tax-evaders and politicians to live in.

If this year's Budget is any indication of the future pattern of the policy of the Government, its invisible social cost is sure to be a further debasement of the nation's character, debased as it is even now; and a nation without character is a nation without a future.

Instrument for reducing disparities

By Manubhai Shah

THE new Budget contains several measures which promote the cause of socialism and help reduce the disparities in incomes and wealth. There is not a single proposal in the Budget which can be called anti-socialist. The steep rise in the wealth tax will ensure that, in the next ten years, there would not be any individual whose personal wealth will re-

main even half or one-fourth of its present magnitude. While it is possible to hide incomes and thus continue to remain affluent through black money, the new wealth tax proposals will make it impossible to permit individuals to amass personal wealth and fortunes.

I do hope that household jewellery will include diamonds, precious stones, gold and other ornaments so that the inclusion of household jewellery, so far exempt from the wealth tax, in the new definition of wealth, will not permit any evasion on that account.

A former Union Minister of International Trade, Mr Manubhai Shah, is now a Congress (R) member of the Rajya Sabha.

BUDGET 1971-72

The other proposal of a 5 per cent increase in the surcharge on income tax on incomes over Rs 15,000 per year would now put up personal taxation to such a level that nobody would be left with a personal income of more than Rs 5,000 per month. Added to this, there is a clear mention in the Budget of subjecting the incomes to a ceiling of Rs 5,000 per month plus Rs 1,000 per month as perquisites.

As the prongs of economic democracy tighten their hold on the assessors, I do hope that the magnitude of the present evasion will substantially go down. Of course recovery of taxes is easier with the salaried class than with the non-salaried class. But for the non-salaried class with the estate duty, death duty, gift tax, income tax and various types of corporate taxes which would be deducted at the source, the chance of evasion is considerably reduced.

Now the main problem that remains to be tackled is regarding money changing hands, under the table, namely, black money. To this, there is no easy solution except developing a sense of integrity and honesty at the national level, and rigorously punishing the culprits wherever corruption and black-marketing are detected. These measures should be vigorously enforced.

No amount of demonetisation and devaluation of currency can stop the creation and manipulation of black money. Black money has become a real evil throughout the world, more so in poor countries where corruption and graft corrode public life by putting a premium on those who indulge in black marketing. A ceiling on incomes would not create a disincentive because nobody, unless too extravagant, would need more than Rs. 6,000 per month as permitted by the law. The best spending power of an individual cannot normally surpass this limit. Added to this ceiling is the vast amount of patronage and power that control and management of enterprises and business enable the rich people to exercise in a manner that can be taken as an adequate incentive. Here again, a sense of dedication to the nation's welfare and importance of integrity in personal life can alone be the effective safeguards.

Neither the steep rise in wealth tax nor the heavy personal income tax will have any adverse effect on savings. Corporate savings, that is, the undistributed profits after tax, remain totally unaffected by these measures. The incentives offered in this year's Budget and the previous Budgets for directing savings to be invested in the corporate productive sectors are bound to develop healthy trends towards better investment planning and personal and corporate savings.

Regarding personal savings, unless inflationary pressures and rise in prices are checked, they will never get the much required boost. It is in this direction that much remains to be done by increasing production and raising productivity and thus keeping prices and inflation under control. Thus alone can enable people to save.

No amount of structural change is needed in our budgets to further help raising production because the budgets since

independence have had a bagful of incentives for increasing production. After all these years, some incentives like development rebate have got to be reduced or withdrawn. There is enough provision for depreciation in our tax laws. The need of the hour is better management of the economy and improving Government administration. All the infrastructure required for increasing production in the farms and the factories is already there. Human development is the best achievement of our post-independence era in India. Skills, science and technology, management and professions have greatly advanced in our country. What is lacking is a much improved administration that shows efficiency, competence and integrity of a high order. Leadership and competence with integrity at all levels—among ministers, secretaries, heads of public sector corporations—and a revolutionary change in the ethics of private business and industry are the crying need in India today. Unless the private sector and public administration show dynamism and improve appreciably, neither social justice nor growth nor socialism can be accomplished.

The indirect taxes proposed in the Budget will certainly raise prices and there will be a chain reaction. But its impact will be nominal and, if attention is properly paid to increasing production, inflation can be halted. Thus the extent of price rise will be determined by what we achieve in production and productivity.

Unfortunately, the influx of refugees from Bangla Desh is a big problem and it may make 1971 a difficult year for us in spite of the good Budget presented by the Finance Minister. Also unemployment is staggering. These problems can only be tackled with determination and strong will. Performance and performance alone should qualify for top posts. Weeding out of inefficient and corrupt people from all positions of importance and appointment of competent and honest people with high integrity can put the country on the road to prosperity.

As far as the problem of raising resources is concerned, the Budget proposals are in the right direction. Perhaps a few taxes here or there could have been avoided, but when in an inflationary economy such as India's resource mobilisation has to be attempted, nobody can be too selective. The tax on maida and bread should be removed and the tax on petrol should be reduced because these two taxes will impose a burden on the common man.

In my view, the most potential source of tax raising is tobacco and cigarettes. If we can nationalise the tobacco trade and nationalise the cigarette industry and make the tobacco industry and trade a State monopoly as in Japan, we can easily raise an additional revenue of Rs 500 crores to Rs 1,000 crores a year over a period of time by a steep marking up of prices of different varieties of chewing and smoking tobaccos, including *biris* and cigarettes.

There is always a controversy when it comes to taxing agricultural income. I personally believe that, while agricultural income tax may be considered a good measure, real mopping up of the rising incomes from agricultural crops can be only through commodity taxation. Agricultural income tax brings small revenues and involves too much administration and consequent harassment to the peasants. In the case of agricultural crops, excepting food-grains, where the productivity of the land has gone up, it is better for the State to take its share of the increased production through commodity taxation in the form of excise duty on cotton, vegetable oils and fats, monopoly trading in tobacco, higher excise duty on sugar and various other similar commodity taxes.

The deficit left uncovered in the Budget is causing anxiety to many economic thinkers. But in my view, if greater attention is paid to raising production, a budgetary deficit of about Rs 300 crores can be contained in the expansion of our economy without causing a price spurt because the increased production of wage-goods and services would have a strong disinflationary tendency.

Three essential questions

By M. R. Masani

PERHAPS the best yardstick by which to test and assess the soundness of the current Union Budget within the limited space available would be to put three questions concerning the Union Budget and to endeavour, with an open mind, to answer them. First, will the Budget ensure stable prices? Secondly, will it provide a better income to various sections of the people? Thirdly, will it provide more jobs and more employment which are so badly needed?

Mr Masani is former Chairman of the Swatantra Party.

On the first point, there is virtual unanimity in the country that it is an inflationary budget. No argument is needed to prove that prices will rise. Prices have already risen over a wide range of articles, and the proof of the pudding is in the eating.

The answer to the question why this should be so is twofold. The first, of course, is the deficit finance built into this Budget. When Mr Chavan confesses that he is going to place Rs 220 crores of depreciated currency notes into our hands, he is guilty of a gross understatement. The figure is based on the altogether ridiculous estimate of

Rs. 60 crores that it is estimated that the East Bengal refugees are going to cost this country. Why this figure has been put into this Budget it is difficult to guess except perhaps to conceal a much larger dose of disbursement.

Another reason why prices must rise and the cost of living go up is the burden of excise duties on several needs of the common people. Not only will the prices of those particular commodities which are taxed rise but prices of other commodities will also go up in sympathy. The rise in the price of petrol and the increased railway freight will raise the cost of thousands of commodities which are carried by road or rail.

The inflationary character of this Budget will have several disastrous consequences for the economy in the coming months. To start with, they will impose greater hardships on the fixed income groups and in particular the urban middle class which will find its real income, already low, further reduced. A second consequence will be the adverse effect on the process of saving and investment which the absence of a stable currency inevitably produces and therefore on the growth of the economy.

The second question, namely, whether the Budget will increase prosperity or reduce poverty depends on the view one takes of the effects of the additional direct taxation and the use to which Rs 220 crores of additional tax revenues will be put.

The increased incidence of income tax on incomes over Rs 15,000 and of wealth tax and the withdrawal of facilities given to corporate enterprises in the past years such as the development rebate and the concessions to priority industries will adversely affect industry and business, the professional and managerial classes and the entire middle classes in a very direct manner. It may be argued that this will not be very tragic since the tax revenues so realised are to be used for the benefit of the mass of poor people. But that is precisely the rub. Is there any basis for such a supposition? On the contrary, it is now possible to demonstrate that the increases in taxation over the last decade and more have done nothing to enrich the life of the poor or help to reduce the burden of their poverty.

To start with, 67 per cent or two-thirds of the total tax revenues of the Union Government are spent on unproductive, non-developmental expenditure, that is, on the civil and defence services of the Government. The quantum of this expenditure has been going up by leaps and bounds and at a pace which Professor Parkinson was obviously unable to envisage when he enunciated his well-known Law. This non-developmental expenditure of the Government brings no return to the living standards of the people and does nothing to reduce poverty in the country.

The sad thing is that the result of the so-called productive or developmental expenditure is not much more fruitful. The miserable performance of what is inaccurately called the "public sector" but should really be called the Governmental sector is well known. A recent survey made by the Delhi University of Government enterprises in the country came to the following general conclusion: "The

public sector undertakings are overstaffed and managements are slow in taking decisions. . . . In these circumstances, it is hardly surprising that the public sector is not doing well."

Year after year and Plan after Plan, Government enterprises have either made colossal losses or yielded miserable returns and yet in one Five-Year Plan after another these laggards of the economy have been rewarded with larger outlays while free enterprise, which has generally exceeded its targets, has been punished by being denied the wherewithal to expand. This process the current Budget now continues by needlessly trying to push up Plan expenditure which the experience of the past years shows the Government is not equipped to expend effectively. Private savings are in effect being distorted into public consumption.

It is obvious, therefore, that not only will the Budget do nothing to lessen poverty but that, by providing disincentives to growth both by reason of inflation and by diverting scarce resources from more productive to less productive uses through additional taxation, it will add to the poverty of the country. The Finance Minister could not have struck a more sinister blow at the Prime Minister's campaign to remove poverty even if he had deliberately meant to do so.

There remains the third question about the impact of these Budget proposals on the creation of employment. The latest census figures indicate that all the efforts at controlling population have failed to make a dent on the growth in population. There has been a net rise of 24.7 per cent in the past decade. The drop in the birth rate has been imperceptible.

The massive unemployment with which we are faced partly because of the burgeoning population and partly as a result of the disastrous policies followed by the Government during the past two decades after Independence can only be met by an overall increase in the production of goods and services. There is no other way of creating jobs. Socialists and communists act, however, as if by giving people doles for unproductive work they create employment, and the Budget acts on that assumption.

A good example of this kind of "employment" was brought to one's notice when one went to prison during the struggle for Independence against the British. I remember more than one occasion when, on being sentenced to "rigorous imprisonment," I was given some coir rope and asked to make coir out of it. When the little pieces of rope were picked apart by us, the process was reversed and we were asked to make rope out of the same coir!

Mr B. K. Nehru, Governor of Assam, in a notable address he delivered at Jorhat early last year, contributed some valuable thinking on this subject:

"It is demonstrable that there are a much larger number of people on the pay roll, particularly in Government offices and in our larger industrial establishments, irrespective of ownership, than required for efficient working of the office or factory. These additional people are not employed. They are receiving unemployment relief at a very high rate at the cost either

BUDGET 1971-72

of the tax payer or of the consumer. A person is employed only when he is utilising the factors of production available in his particular environment in the most effective fashion and thereby producing goods or services additional to what would be produced if he were not working. Employment in short means productive employment....

"It follows therefore that there is no such thing as an employment policy taken by itself. A policy which increases the production of goods and services at the maximum possible rate is the policy which leads to the maximum employment."

Unfortunately, it would appear as if New Delhi has not yet got the message.

The woollen manufacturers have already announced that, if this Budget is proceeded with, several woollen mills will have to close down and no doubt several thousand woollen mill workers will become unemployed. But this is only a flea-bite when compared with the employment that would have otherwise materialised but is frustrated by this Budget.

By reason of additional direct taxation and measures like the abolition of development rebate, the shortening of the list of priority industries and the lowering of incentives to such industries, this Budget will prevent a large number of industrial units from coming into existence.

Because it is an inflationary, anti-growth and poverty-oriented Budget, it will create more unemployment in this country. When prices go up, normally people buy less, the demand for and the sale of things goes down. When sales go down, the number of jobs shrinks. This is only too likely to be a process that this Budget will set in train.

When a factory is closed down, a board is put up: "Factory closed". When there are no more vacancies in an existing factory, a board goes up: "No more vacancies". But when a factory that should have come into existence is prevented from doing so, nobody puts up a board outside the non-existent factory: "Sorry, no factory is going up here". But this is exactly what is going to happen under cover during the coming twelve months throughout the country.

It is not as if the Finance Minister could not have allocated funds for projects where employment could have been rapidly created. Instead of increasing the duty on petrol, why did it not strike the authors of this Budget to set aside the revenues obtained from the levy on petrol and diesel oil for the building of roads so that lakhs of jobs could have been created this year? The Reserve Bank of India Bulletin of November 1970 points out that the same investment which would create 18 jobs in the Railways would result in 100 jobs on road building, and that for every crore of rupees invested in roads 10,435 jobs are created. Road building and road transport are the most labour-intensive activity that this country can show. Against over 10,000 jobs per crore of rupees provided by roads,

forestry comes next with 8,000 per crore of rupees, irrigation with 7,000, agriculture and housing with 5,000, while various kinds of industry, big and small, generate less than 2,000 jobs per crore of rupees invested. Thus, for the same level of investment, employment in roads and road transportation can provide five and a half times the number of jobs created on the Railways and slightly more than six times in industry. One wonders whether the Finance Minister and the officials in the Finance Ministry bother to read the Reserve Bank of India Bulletin?

If the answers to the three questions by which it was proposed to test the utility of this Budget are all in the negative, the question arises why there should be persistence in such pointless policies and proposals. That question must be troubling many minds these days. There are certain glaring and significant omissions in the Budget proposals which may perhaps give a clue.

The first of these is the Finance Minister's complete neglect of any measure of economy or any attempt to cut down the massive waste of the taxpayers' money.

Then there is the refusal to accept the truth of the axiom that Mr Macmillan, Chief Secretary to the Treasury in the United Kingdom, enunciated in the House of Commons on May 12 this year when he said: "You cannot successfully milk a starving cow." The current year's Budget proposals in regard to direct taxation show a perverse refusal to agree that there is such a thing as a law of diminishing returns and that it came into operation in India in regard to direct taxation many years back.

Another example of such perverse blindness is to be found in the refusal to understand that, when taxation is carried on beyond a point, the incentive to tax evasion, smuggling and blackmarketing becomes correspondingly strong. Professor Parkinson's book *The Law and the Profits* has evidently taught the authors of this Budget nothing.

Finally, the imposing of an unrealistic ceiling on the salaries and emoluments of industrial and business managers while conveniently forgetting, à la Jagjivan Ram, to impose a corresponding ceiling on the emoluments and perquisites of ministers which, as Mr Dandekar and I established during the last Parliament, amount to Rs 37,000 per month, can hardly be regarded as yet another accident.

One is faced with something of a dilemma. Is it profound ignorance of the laws of economics among those who frame these Budget proposals that makes them so innocent of the realities which are clear to any student of economics? Or is it that the knowledge is there but the concern to remove poverty and increase employment and prosperity is not there and that those who determine these policies place their love of power and their own political careers above the interests of the people? One wonders. It would be difficult, however, to acquit the framers of this year's Budget of both these charges at the same time.

Harsh on employers and employees

By S. Srinivasan

UNLESS otherwise stated the amendments to the Direct Tax Acts by The Finance (No 2) Bill 1971, will come into operation from April 1, 1972 only. There are certain amendments with retrospective effect. They will be pointed out at the relevant places.

Although the restrictions on allowance of (a) remuneration benefit and amenity to directors, to persons holding 20 per cent of voting power in the company, and to relatives of either of the above, and (b) salaries and perquisites to employees, affect the employer, such amendments will have a direct impact on the service conditions of employees. These provisions are discussed here.

In computing the taxable profits of an employer, a limit is imposed on allowance of expenditure incurred on payment of salary to an employee. The limit is Rs 5,000 for each month or part thereof comprised for employment in India. Gratuities are also includible in the limit of Rs 5,000 per month. Similarly compensation paid by an employer in connection with the termination of employment or modifications of the terms and conditions of the employment, is also includible in the limit of Rs 5,000 per month. This is a very harsh amendment. These amendments are not in line with the objective of socialistic pattern of society. Government gratuities are not equally hit by this provision because the Government is not taxable on its income. Only Government corporations are taxable. The bureaucracy has surreptitiously created a wedge between employees of the Government and of Government corporations. Gratuity is a retirement benefit. Contractual obligations for gratuity entered into years ago are all hit, all of a sudden, with the result, that a grave injustice will be done to the employer. The tendency of the employers in future will be to curtail the retirement benefit of gratuity to employees on the ground that the same is disallowed by the income-tax department.

The existing provisions of restricting in the hands of the employer the allowance in respect of perquisites, benefit or amenity to employees continues. Such value of perquisites, benefit or amenity will be allowed up to one-fifth of the salary payable to the employee or an amount calculated at the rate of Rs 1,000 per month, whichever is less. Employees having income taxable as salary up to Rs 7,500 per annum are not affected. Hereafter, payments by an employer through a provident fund other than a recognised provident fund or an approved superannuation fund, to effect an insurance on the life of the employee

or to effect a contract for an annuity, will also be taken into account in the limit of Rs 1,000.

Hitherto discretion is left to the income-tax officer without any ceiling limit to allow deductions in the hands of a company for expenditure incurred by it on the provision of any remuneration or benefit or amenity to (a) a director, or (b) a person who holds 20 per cent or more of voting power in the company, or (c) to a relative of a director or of such substantially interested person, if he considers it neither excessive nor unreasonable, having regard to the legitimate business needs of the company and the benefit derived by or accrued to it from the expenditure. In the same way expenditure or allowance in respect of any assets of the company used by any of these three categories of persons, either wholly or partly for their own purposes or benefit, is also allowed by the income-tax officer if in his opinion it is neither excessive nor unreasonable. It is now proposed to amend this provision by fettering the power of the income-tax officer to an overall ceiling limit of Rs 72,000 in a year in respect of any person falling in the above three categories.

It may be mentioned here that this limit of Rs 72,000 includes company's contribution to provident fund, or an approved gratuity fund, medical expenses, travel concessions or passage moneys or the value of any free or concessional passage, etc. In other words, the position of allowable remuneration to these three categories is worse than the position of employees. A doubt arises whether the word "person" in the expression "to a person who has a substantial interest in the company", refers to a living individual only or includes a juridical person also such as a company. If the connotation of the word "person" in that context includes juridical persons also, then it would include even a limited company which has 20 per cent or more of the voting power in the paying company; and any payment to that shareholding company in the form of a selling agency commission or other fees for services will be hit by the ceiling of Rs 72,000.

The reference to a "relative of such person" in that section indicates that there can be a "relative" to an individual only and, therefore, the word "person" should mean individuals only and not all juridical persons. In that view of the matter, it appears that a limited company holding 20 per cent of the voting power in another company and receiving selling agency commission or fees for acting as selling agent or consultant of the latter company and may not be hit by this ceiling of Rs 72,000. However the matter is not free from doubt.

The surcharge is increased from 10 to 15 per cent in all cases where the total income exceeds of Rs 15,000. Where the total income is Rs 15,000 or less the rates of taxes remain unchanged. Even in the case of co-operative societies, registered firms and local authorities, the rate of surcharge is increased from 10 per cent to 15 per cent. Deduction of tax from salaries and payment of advance tax should be at these new rates. This has to be borne in mind while computing advance tax.

The increase of surcharge from 10 per cent to 15 per cent raises the marginal rate of personal taxation from 93.5 per cent to 97.75 per cent on every rupee of income above Rs 2 lakhs.

Mr Srinivasan is a leading Chartered Accountant.

The following is the comparative table of deductions available from the total income for such long-term savings.

	1971-72 asst. deduction allowable	1972-73 asst. deduction allowable
For long-term savings		
Up to Rs. 1,000 ..	60%	100%
Between Rs. 1,001 and Rs. 5,000 ..	60%	50%
Between Rs. 5,001 and Rs. 15,000 ..	50%	40%

The monetary limit of Rs 30,000 for long-term savings in respect of Hindu undivided family remains unchanged.

The income derived from certain specified financial assets which is exempt from tax up to an aggregate amount of Rs 3,000 is now restricted to individuals and Hindu undivided family only. The list of such financial assets is, however, enlarged to include deposits with any co-operative society made by a member of the society.

The allowance of conveyance expenditure for employment is increased from Rs 35 to Rs 50 per month to those who do not own any vehicle and, Rs 60 to Rs 75 per month to those owning a motor-cycle, scooter or motor.

Higher capital gains tax is payable in future. Out of the excess over the basic limit of Rs 5,000 65 per cent of long-term capital gains relating to lands and buildings will hereafter be included in the total income, instead of 55 per cent hitherto. In the same way, the proportion of long-term capital gains relating to other capital assets, includible in the total income is increased from 35 per cent to 50 per cent.

At present, where the net wealth is more than Rs 1 lakh for individuals and Rs 2 lakhs for Hindu undivided families, no rate of tax is fixed for the first slab of Rs 1 lakh for individuals and Rs 2 lakhs for Hindu undivided family. Hereafter, that initial exemption is taken away. This has the effect of subjecting every rupee of net wealth to tax provided the taxable net wealth is more than Rs 1 lakh in the case of an individual and more than Rs 2 lakhs in the case of a Hindu undivided family. This has the effect of increasing the wealth tax ranging from Rs 1 to Rs 900 up to the net wealth of Rs 5 lakhs. Beyond that, the increase in tax is Rs 980 up to Rs 10 lakhs. Beyond Rs 10 lakhs the increase in tax is Rs 970 up to a net wealth of Rs 15 lakhs. Assessee having net wealth in excess of Rs 15 lakhs have to pay hereafter wealth tax on the excess over Rs 15 lakhs at the rate of 8 per cent instead of (a) 4 per cent up to the limit of Rs 20 lakhs and (b) 5 per cent in excess of Rs 20 lakhs (which were the slab rates applicable hitherto). This is in addition to the additional wealth tax of Rs 970 payable on the portion of Rs 15 lakhs net wealth. For those whose net wealth is in excess of Rs 15 lakhs the annual burden of wealth tax has gone up substantially.

In addition, an assessee whose net wealth includes urban assets, should pay extra wealth tax of 5 per cent to 7 per cent on such urban assets depending upon whether the value of the urban assets is between Rs 5 lakhs and Rs 10 lakhs or above Rs 10 lakhs. The marginal rate of wealth tax thus works out to 15 per cent on urban assets. Over a period of six years, these assessee either have to borrow an amount equal to the value of the urban assets to

pay the wealth tax or should gift the urban assets to the Government. If the property is not an urban asset then over a period of 12 years, the asset has to be gifted away to the Government or the assessee has to borrow amounts equal to the value of the asset to pay the wealth tax. One wonders why the Government should torture assessee who are having wealth of this order by slow degrees. The Government can as well impose a wealth tax of 100 per cent above a limit of Rs 15 lakhs so that the assessee can once for all make up their minds and donate their wealth to the Government.

Up to the 1971-72 assessment an assessee can gift properties to his spouse and minor children and shed his wealth tax liability thereon. Of course on such gifts whatever gift tax is payable was required to be paid. Hereafter if he makes such gifts the assessee carries the liability of the wealth tax in addition to the gift tax on this gift. The reason given for this in the Explanatory Memorandum to the Finance Bill is absolutely unconvincing. To say that in the 1964-65 assessment the gift tax rates were heavy and hence when an assessee gifted property to the spouse and/or minor children, the gift tax incidence was heavy thereon and the Government did not desire to burden the assessee with wealth tax on such transferred assets also in view of high incidence of gift tax but that the said situation has been changed since gift tax rates have been brought down and hence the Government desires to switch back to the original pre-1964 scheme, is hardly convincing.

Even now the incidence of gift tax is very heavy. If it is the opinion of the Government that a payment of 50 per cent of the gift tax will enable an assessee to shed the wealth tax burden on the asset transferred to the spouse and minor children, then should not option be given to assessee to choose that alternative. It is therefore desirable that such an alternative should be provided in the Act.

Consistent with the amendment made in the provisions of section 64 of the Income-tax Act for treating the share of the spouse and minor children (other than the married daughters) in the converted property as the property of the transferor in a case where an individual being a member of Hindu undivided family impresses his self-acquired property with the character of joint family property, the provisions of the Wealth Tax Act are also amended now. In all cases where an individual has impressed after December 31, 1969, his self-acquired property with the character of joint family property, the proportionate share of his spouse and the minor children other than married daughters in the converted property will be aggregated with the net wealth of the transferor for the purposes of wealth tax assessment.

It is now legally provided that in a co-operative housing society, the members of the society to whom a building or part thereof is allotted will be regarded as owner of that building or part for the purpose of wealth tax irrespective of whether the flats belong to the members or to the society. While determining the value of such building or part for inclusion in the net wealth the value of any outstanding instalment of the amount payable by the member to the society towards

BUDGET 1971-72

cost will be deducted as a debt owed by him.

Accordingly, the net value of the flat viz, the difference between the market value and the discounted value of the outstanding instalment towards cost of the building will be treated as value of the flat for inclusion in his net wealth and if it is used as a residential house by him he can claim exemption thereof up to Rs 1 lakh in the computation of net wealth. It is also clarified that if deposits are standing to the credit in the books of the co-operative society as his share in the cost of construction of the flat, this deposit will not again be included in his net wealth since the net value of the house or flat is already included.

With retrospective effect from April 1, 1963, it is now proposed to take away exemption from tax on jewellery held by an assessee for the personal or household use. The decision of the Supreme Court in the case of Arundhati Balakrishna is now nullified by this amendment. While taking away exemption for jewellery, the Government does not wish to give exemption up to Rs 25,000 in value for jewellery which existed up to the 1962-63 assessment. To deny even this basic exemption will hit very hard the lady assessee. After all it is a custom in our country for ladies to use jewellery as ornaments of daily use. This social custom should be recognised and a basic exemption up to Rs 25,000 which existed till the 1962-63 assessment should be continued.

Under section 35 of the Wealth Tax Act the AAC or the commissioner or the tribunal has to rectify the orders passed by them if their orders are not four years old, withdrawing the exemption given by them for jewellery kept by an assessee for the personal or household use. In the same way, the WTO has to withdraw the exemption given by him in any order of assessment for such jewellery, if such order in which the exemption was given is not more than four years old.

This is on the basis of the decision of the Supreme Court in the case of Venkatachalam vs Bombay Dyeing, reported in vol. 34 ITR, page 143. In that case the Supreme Court held that if a subsequent legislation comes with express retrospective effect, what is a mistake in the light of such retrospective legislation may be rectified as a mistake apparent from the record. The Court's argument was that applying the well-established principle that full effect must be given to a statutory fiction and that it should be carried to its logical conclusion, it is the amended law which must be held to have been in force at the time when the order sought to be rectified was passed. The WTO has also power under section 17(1) (b) to reopen the wealth tax assessment within the four-year time limit from the end of the concerned assessment year to withdraw this exemption of jewellery.

From the 1972-73 assessment onwards an enlarged meaning is given to the term "jewellery" so as to include (1) ornaments made of gold, silver, platinum or any other precious metal or any alloy containing one or more of such precious metals whether or not containing any precious or

semi-precious stones and whether or not worked or sewn into any wearing apparel and (2) precious or semi-precious stones whether or not set in any furniture, utensils or other article or worked or sewn into any wearing apparel

Thus "wearing apparel" in which any ornaments made of precious metals or any precious or semi-precious stones are worked or sewn will have to be split up in value between the ornaments and precious stones value, on the one side, and apparel value on the other side, and the ornaments value has to be included in the net wealth. Further, furniture, utensils or other articles which are either made of precious metals or which contain, either by way of embedding or covering, or otherwise and any precious metals or alloy containing one or more precious metals will cease to be considered as articles held for personal or household use and consequently their whole value will be liable to be included in the net wealth of the assessee. This also comes into force from the 1972-73 assessment

Motor cars and other mechanically propelled vehicles or aircraft and boats kept for personal or household use will hereafter be exempt upto the aggregate value of Rs 25,000 only under the Wealth Tax Act. This is also effective from the 1972-73 assessment

Exemption from wealth tax is hitherto available without any limit to the value of shares held in any company established with the object of carrying on an industrial undertaking in India where such shares form part of the initial issue of equity share capital after March 31, 1964. The exemption is available for a period of five years commencing with the assessment year next following the date on which such company commenced the operations for which it is established. This exemption is now not available to the initial issue of equity share capital made after May 31, 1971 (Such non-exempt shares will however be includible in the limit of Rs 1,50,000 up to which certain financial assets are exempted from wealth tax). It may be clarified that those initial issues of equity share capital made before May 31, 1971, will continue to enjoy the exemption as at present without any limit for the period of five years mentioned above

The list of financial assets whose aggregate value not exceeding Rs 1,50,000 is exempted from wealth tax is enlarged. In future the list will include shares in a co-operative society and deposits made by members of a co-operative society with the society. These are apart from the deposits with co-operative housing society by a member made for a building or part thereof allotted to him.

Hereafter the discretionary trusts are not eligible to the exemption of Rs 15 lakhs for investment in financial assets. It may be clarified that in all other cases the exemption up to Rs 15 lakhs in aggregate for the investments in certain approved financial assets will continue. Of course even amongst the discretionary trusts (a) the testamentary trusts, (b) non-testamentary trusts created before March, 1970 bona fide for the benefit of the relatives of the settlor, and (c) provident, gratuity, superannuation and pension funds continue to enjoy exemption up to Rs 1.5 lakhs investment in financial assets.

BUDGET REACTIONS

Setback to industrial sector

From Our Correspondents

THE apprehension entertained by business and industry that the current year's Budget withdrawing certain incentives enjoyed by industry would retard the growth of the economy has now been given concrete expression to by the two central organisations, the Federation of Indian Chambers of Commerce and Industry and the All-India Manufacturers' Organization.

The Committee of the FICCI has expressed the view that the Budget proposals would defeat the very objectives of speedier economic growth and creation of larger employment opportunities. The Working Committee of the AIMO has expressed the hope that the Government could yet review the proposals which are not growth-oriented

The following is the text of the press statement issued by the FICCI

The Committee discussed the budget proposals against the background of the climate that existed in the country for speedier economic growth, of the need to provide larger employment opportunities and to contain prices and improve efficiency. The Committee felt that the massive support which the Government received from the people in the last general elections was a mandate for rapid economic growth matched by increased social justice which could be brought about by augmenting opportunities for jobs and work for every one. It was the considered opinion of the Committee that the budget proposals would fall far short of achieving any of these desirable objectives. In particular they felt that most of the proposals will have the effect of retarding the rate of growth specially in the industrial sector. This will in fact slow down employment generation and make it difficult for new entrepreneurs to set up industries both in the large and small sectors. Price levels will generally rise

The Committee noted that the Finance Minister was faced with a formidable problem of finding resources for larger plan outlay, providing jobs for the increasing number of unemployed people and to meet the situation created by the influx of refugees from East Bengal. He has, therefore, made a massive effort at raising taxes, both direct and indirect, which will yield Rs 286 crores in a full year. Even with this unprecedented tax effort the net revenue surplus will be less than in the previous year which shows that no attempt has been made to economise on non-developmental expenditure. It is only reasonable to expect that when the people are taxed so heavily Government should spare no efforts to exercise economies in their consumption expenditure. States continue to indulge in over drafts. Public sector enterprises, which, by and large, are not making their due contribution to the Exchequer, should be enabled to generate

adequate savings so that such a heavy burden is not placed on the tax-payer year after year.

The Committee feared that the various proposals to step up the incidence of direct taxes by way of increasing the surcharge on income tax from 10 to 15 per cent and steep rise in the wealth tax will drastically reduce savings in the hands of the people and act as a serious deterrent to further investment. While the Finance Minister has emphasised the need for accelerating the tempo of economic activity, instead of providing some tax reliefs which would have made this possible, he has taken away some of the well tried incentives which have stood the test of time and helped the growth of industries. In this connection mention may be made of the reduction in the tax relief for new industrial undertakings and priority industries and also abridging the list of the latter. It is difficult to understand the rationale of removing certain industries, namely, aluminium, motor trucks and buses, cement and refractories, soda ash, petro-chemicals and automobile ancillaries from the priority list. In the case of the remaining priority industries the special tax exemption has been reduced from 8 to 5 per cent of their profits.

Hitherto profits up to 6 per cent of the capital employed in a new industrial undertaking were entitled to tax exemption for a period of five years and capital employed included debentures and long-term borrowings. These are now proposed to be excluded. This relief to new industrial undertakings was intended to make them viable during the initial gestation period. These measures, apart from raising the effective rate of corporation tax, will also have the effect of up setting the repayment of loan liabilities by these companies. The consequences can be quite serious in many cases.

The Committee apprehended that the notice for withdrawal of developmental rebate from May 1974 will have the immediate effect of checking the pace of industrial development. The projects which may be planned now, under the existing conditions, will easily take three to four years, if not more, before they can be actually set up. The notice, therefore, in effect means that development rebate will no longer be available to industrial schemes which may be under contemplation now. Development rebate has been a very salutary measure and has helped substantially industrial development of the country. It took care at least partly, of appreciation in the cost of plant and machinery for the purposes of replacement, rehabilitation and modernisation. This feature of development rebate was highlighted when it was introduced in 1955.

The Committee felt that the country has yet to go a long way on the road to industrialisation and the withdrawal of development rebate, which indeed is a part of the tax structure of most of the countries in one form or another, will give a serious set back to our industrial growth. The whittling down of the tax incentives mentioned above will affect small and large-scale industries alike and also act as disincentives to foreign investors.

The rates of personal income tax and wealth tax have been made expropriatory even at low levels of income and wealth. Apart from taking away the incentive to

work, save and invest, it will also affect the tax payer compliance. It is unfortunate that the experiment of enhancing the revenues by reducing the rates of tax and giving a fillip to the economy has not been tried.

The proposal for a ceiling on deductible remuneration of employees will further add to the tax burden of companies. It has not been appreciated that managerial talent cannot grow unless adequately remunerated, commensurate with the responsibility. The burden of all disallowances in the companies in the computation of income ultimately falls on the large class of small shareholders. Besides, the virtual ceiling on remuneration may start a new process of brain drain.

The rationalisation of the structure of import duties has to be viewed in the context of its effect on costs. The imposition of levies on copper, zinc and lead are instances in point. The impact of sharp increase in import duty on staple fibre from 25 per cent to 100 per cent *ad valorem* does not seem to be well conceived. It was only recently that Government allowed imports of sizeable quantities of viscose staple fibre to meet the acute shortage of cotton in the country. It should be noted that staple fibre is being used in our country as a substitute for cotton, the production of which has fallen substantially in the current year. Similarly the imposition of high import duty on raw wool, coupled with an increase in the incidence of excise duty on wool tops, will affect the woollen industry. As for excise duties, the Committee hope that the levy on maida and motor spirit which would affect all classes of people will be substantially reduced.

The following is the press statement issued by the AIMO:

The Working Committee of the AIMO discussed the budget proposals in the light of the ruling party manifesto and the climate that existed in the country for industrialisation and a speedy economic growth. As the budget is an important instrument to pursue economic policies it was expected that the budget will be growth, production and savings oriented (as it was last year) and will create substantial additional opportunities for employment and there will not be such tax measures as are inflationary. The AIMO hopes that the proposals which are not growth oriented will be reviewed by the Government.

The AIMO fully realises that the Finance Minister had a difficult task to find out resources to meet the unexpected expenditure due to the influx of refugees from the East Bengal and to ensure growth of the economy through larger production and employment opportunities. The Finance Minister has proposed measures to levy additional taxes to yield Rs 286 crores in a full year. This level of additional taxation in one fiscal year will be much larger than the levy in any one of the previous years.

The AIMO feels that along with the new tax proposals there should also be adequate effort for economising in the non-plan expenditure and to improve the efficiency of public sector projects so that they can generate resources for financing their development and also can provide savings to the exchequer, thereby reducing the need of additional tax measures. In 1970-71 bud-

get proposals the dividends etc. received from commercial and other undertakings are budgeted at only Rs 21 crores on a capital investment of Rs 3,613 crores.

The AIMO also feels that the Government should consider ways and means to finance larger percentage of the capital outlay from non-tax measures by raising the additional loans and increasing Governmental savings.

The increase in the plan outlay by Rs 300 crores over the actuals of 1970-71 and provision of Rs 25 crores for providing employment to the educated unemployed are the steps in the right direction but unless the growth in the private sector is also encouraged, the rate of growth of the economy is difficult to be accelerated.

The budget proposal has changed the definition of capital for the purpose of calculation of 6 per cent profit exempt from tax in the first five years for new industrial undertakings. Now, it is proposed to exclude long-term borrowings and the debentures from the capital base. As the equity capital plus preference capital normally account to one-third of the capital employed in new projects, the proposal will be tantamount to reducing the tax incentives for new enterprises to one-third. This will greatly hamper the growth of new industries and will also discourage new entrepreneurs. Further with the standard rate of corporate tax remaining unchanged with the effective rate of tax going up, the repaying capacity of industries of loan taken from the financial institutions will go down and it will be very difficult for most of the concerns to repay within a period of 10 to 12 years—the period which is generally insisted upon by the long-term lending institutions.

The Finance Minister has also given a notice that the development rebate reserves will be withdrawn from 31st May 1974. It is contended by the Finance Minister that the withdrawal of the development rebate reserve after May 1974 will "quicken the pace of investment in the remaining years of the Fourth Plan". However, it appears that this withdrawal will have immediate adverse effect on the growth of new industries.

The investment decision taken up now for new projects normally will take more than three years before plant and machinery can be installed as it often takes unduly long time in procuring industrial licence, finalising financial arrangements and getting import licences for plant and machinery. Therefore, it is very unlikely that on the basis of investment decision taken now, industries can take the advantage of development rebate reserves.

Therefore, the AIMO urges the Government to reconsider the proposal of withdrawing development rebate reserves. It is in the interest of the country that the development rebate reserve should be continued beyond May 1974. The development rebate is available in many countries for modernization, expansion and giving relief to industries due to rise in replacement cost in different form of investment allowances, outright capital grants and/or free depreciation allowances.

The AIMO fears that the proposals to step up the rate of surcharge in case of individuals from 10 per cent to 15 per cent

BUDGET 1971-72

at the level of income of Rs 15,000 will create greater hardships to the middle income group persons, would adversely affect their savings capacity and discourage foreign technicians coming to India. With the continuous rise in the prices, the income of Rs 15,000 is rather too small to be taxed heavily and the additional surcharge, if at all to be levied, should be at the level of income of Rs 40,000. The income group between Rs 15,000 and Rs 40,000 is really the emerging class of investors and entrepreneurs who instead of being penalised should be encouraged in the genuine interest of dispersal of ownership of industries.

The fixation of a virtual ceiling of Rs 5,000 for salary including that of directors and Rs 1,000 for perquisites will discourage the process of professionalisation and it is likely that exodus of talented personnel—technical and managerial from India will accelerate. This is particularly so as even in the developing countries of Africa and Asia the net salary limits are much higher than those in India.

The AIMO is deeply concerned that the import duties in almost all cases have been revised upwards in the guise of rationalisation. The imposition of import duty of 30 per cent to 40 per cent on non-ferrous metals and increase in the rates of import duty on other raw materials will raise the cost of production of a large number of products. The sharp increase in the import duty on staple fibre (excluding yarn) from 25 per cent to 100 per cent also seems unwarranted when the staple fibre is being used as a substitute for and in blend with the cotton, which is in short supply.

The increase in excise duties on a large number of consumer items and semi-manufactures and manufactured products will have an inflationary effect and needs review. The industries whose prices are controlled will be hard hit.

OTHERS

Mr Bhasker Mitter, President, Associated Chambers of Commerce and Industry of India: As part of the aim of promoting social justice, the steps which Mr Chavan outlined to combat tax evasion and generally tighten tax administration merit full support. But the main taxation proposals are most disappointing in that they not only fail to encourage rapid economic growth but serve in a large measure as a hindrance to it.

Mr Harish Mahindra, President, Indian Merchants' Chamber: The stepping up of the rates of capital gains tax and surtax on profits of companies, the reduction in the list of priority industries and the discontinuance of development rebate after 1974 will work as disincentives for further growth and expansion.

Mr Rasiklal M. Mehta, President of the Andhra Chamber of Commerce: Though the Budget is a balanced one in the socialist context the economy and the common man will be affected by the increase in excise duties and prices will be pushed up.

BUDGET 1971-72

The corporate tax measures might retard corporate activity and capital formation.

Dr B. N. Ghosh, President, Bengal National Chamber of Commerce and Industry: The Budget contains hardly any surprises. While the increase in taxes was anticipated, its volume could have been reduced if the Government had effected economy in non-productive expenditure and increased efficiency in administration and public sector undertakings.

Mr R. P. Goenka, President, Indian Chamber of Commerce: It is a progressive Budget and is good for the common man.

Mr M. L. Apte, President, Maharashtra Chamber of Commerce: The surtax on corporate sector has been raised when the economy is showing signs of recovery. This is not a growth-oriented Budget. The list of priority industries has been surprisingly curtailed to a great extent. The step to tax foreign travel will be a disincentive to export.

Mysore Chamber of Commerce and Industry: The new excise levies are bound to affect the cost of living and lead to demands for higher wages. The enhancement of surcharge on incomes and increase in import duties would act as disincentives for increasing the production and creation of employment opportunities.

Mr Ramesh Chandra Lahot, Vice-President, Federation of Andhra Pradesh Chambers of Commerce and Industry: Contrary to expectations the Budget is neither employment-oriented nor development-oriented. It is highly inflationary.

Mr A. M. Ramaswamy, President, Southern India Chamber of Commerce: The ceiling on company executives' salary, coupled with the steep increase in wealth tax, may affect the country getting the best professional and managerial skills.

Mr R. K. Sawhney, President, Kashmir Chamber of Commerce and Industry: The Budget will hit very hard the middle income group, which is already out of pocket at the present level of prices. It offers no incentive to the fixed income group to save nor does it offer any incentives to industrialists to generate capital.

Mr G. C. Patnaik, President of Orissa Chamber of Commerce and Industry: The Budget proposals, though they affect mainly the middle and upper and middle class and well-to-do people, will not provide any benefit for the poor or weaker sections of the community. Nor would they help economic growth or employment.

Mr Bhaskar Kakatkar, Secretary-General, the Indian Cotton Mills Federation: The imposts on cotton textiles were unexpected in view of the already heavy burden placed on the industry. It is not clear if the industry will be in a position to absorb the additional levies. The consumer may have to pay "slightly more."

Mr S. R. Damani, Chairman, Millowners' Association, Bombay: The Budget proposals are in keeping with the spirit of

the ten-point programme adopted by the Congress. It is, however, doubtful whether the proposals, taken as a whole, would act as an incentive to production and investment. The increase in additional excise duty on cloth will add to the burden of the common man.

Mr Jayantilal Bhikhabhai, President, the Ahmedabad Millowners' Association: The increased surcharge on profits will be tantamount to penalising efficiency. This is not a production-oriented budget.

STOCK EXCHANGES

Mr Laldas Jamnadas, President, Bombay Stock Exchange: It is a matter of regret that many good steps such as wealth tax exemptions in respect of shares of new companies and investment in industrial securities upto Rs 1.5 lakhs have been withdrawn. The steep increase in capital gains tax and wealth tax and the enhanced surcharge on income tax would act as disincentives to savings vitally required for capital formation.

Mr Mahendra Chandulal, President, Ahmedabad Stock Exchange: There is nothing in the Budget that can provide incentive to the capital market. It will not help in increasing the production of industrial units in the country.

Mr A. V. Sheth, President, Calcutta Stock Exchange: The proposals could have been more harsh in view of the large estimated deficit of Rs 397 crores against Rs 240 crores in the interim Budget. Although fresh taxes proposed are heavy, the adverse impact has been largely softened through a prudent distribution between direct and indirect taxation.

Mr M. Sankaran, President, Madras Stock Exchange: In raising as much as Rs 132 crores as indirect taxes, Mr Chavan has only added to the inflationary factors.

Mr L. S. Venkaji Rao, President, Bangalore Stock Exchange: The Union Finance Minister has made sincere efforts at speeding up economic development of the nation. It is a welcome feature that he did not choose to cover the whole deficit of Rs 397 crores by levy of fresh imposts. The Budget is definitely employment-oriented. Since excise duties are mostly on luxury items, the common man is not much affected. The withdrawal of development rebate after 1974 is likely to speed up industrial development since industrialists would hasten to take advantage of it before its withdrawal. Increases in wealth tax rates, capital gains and additional surcharge on personal incomes above Rs 15,000 and the imposition of ceilings on executives' perquisites would go a long way in ushering in a socialist pattern of society.

TRADE ASSOCIATIONS

Mr Gulabchand G. Siraj, President, All India Exporters' Chamber: This is a cleverly balanced budget. Exporters should have been exempted from 20 per cent tax on foreign travel. The machinery imported for export-oriented industries should have been exempted from import duty.

Mr P. K. Badiani, Chairman, Silk and Art Silk Mills' Association: The 100 per cent increase in duty on staple fibre will greatly affect the poor weavers and consumers of cheaper varieties of fabrics. It

is difficult to understand why staple fibre has been singled out for such an increase.

Mr R. C. Shah, President, All India Importers Association: The new imposts on textiles and toilet requisites would hit the middle class hard. The transport industry will be affected by the levy on petroleum spirits.

SMALL AND MEDIUM INDUSTRIES

Mr Shriram C. Chokhani, Chairman, Engineering Association of India (Western Region): The Finance Minister could have provided more incentives in the Budget to accelerate the process of growth. The removal of certain industries like aluminium, motor trucks, buses, refractories, automobiles and parts from the priority list will affect the growth of these engineering industries.

Mr H. A. Vora, Vice-President, Federations of Associations of Small Industries of India (Western Region): The Budget proposals have failed to satisfy the aspirations of the small-scale industries. Despite the Federation's plea for differential taxation in favour of modern mechanised small-scale industries, the Government has ignored this just and fair demand.

Mr Chandrakant S. Desai, President, National Alliance of Young Entrepreneurs: On the whole the Finance Minister has handled a very difficult task with caution and restraint. The corporate sector by and large has been left alone, though the withdrawal of development rebate after 1974 may raise several difficult questions.

POLITICAL PARTIES

Mr Morarji Desai (Congress-O): There will be more deficit in the Budget than it has been shown.

Mr K. Manoharan (DMK): The determination to reach the destination of socialism is reflected in the Budget.

Mr Hiren Mukerjee (CPI): It is a petty accountant's Budget rather than a truly radical one.

Mr Atal Behari Vajpayee (JS): There is a massive burden on the common man. The Budget has gone against election promises of "garibi hatao." The uncovered gap will lead to a further price rise.

Mr Jyotirmoy Basu (CPM): On the whole the incidence of Budget levies will go to the common man. The Budget is another gimmick.

Mr M. K. Mohta (Swatantra): The Budget is not conducive to production in the country. Inflation will not be curbed. Withdrawal of development rebate is a step in the wrong direction.

Mr Gaurey Murhari (SSP): The Budget is most disappointing. All the promises of progressive approach have been belied.

Mr M. R. Dandavate (PSP): Though the Budget is trying to be socialist, its guiding spirit has been just welfarism.

Mr Charan Singh (BKD): Deficit financing in the Union Budget, necessitated by the greater non-productive expenditure, is bound to result in an upward swing in prices.

EXPORT ANGLE

By Stevedore

Optimistic council

THE Chairman of the Chemicals and Allied Products Export Promotion Council is optimistic that his organisation will be able to show exports of Rs 412 crores during the current financial year. This, despite the fact, that Mr L. M. Jamnadas recognises that certain factors have emerged which are raising hurdles in the way of export effort. The latest is the sharp increase in excise duty on solvent oil which has been raised in the last Budget from Rs 45 to Rs 845 per kilo litre. Mr Jamnadas fears that this is going to affect seriously the exports of a wide range of manufactured products.

Whether in the field of chemicals or elsewhere, the most serious problem facing exporters is the steady and continuous increase in the prices of raw materials. Mr Jamnadas himself has pointed out that prices of raw rubber, cotton cord and fabrics have increased substantially and this development could hit the export of rubber manufactured products, unless the Government does something to bring down the prices of these raw materials to reasonable levels. Also, the exports of paper products, including printed materials and books, has been seriously affected by rising prices of paper and board. The plywood industry, too, is handicapped because of the non-availability of timber, both commercial and decorative, in adequate quantities and at reasonable prices. Mr Jamnadas has done well to point out that the inadequate production capacity is another serious constraint on the exports. Refractories, paper, and glass hollow-ware are among items that do not have adequate exportable surpluses after meeting the domestic demand.

There are other difficulties, too, for exporters. Mr Jamnadas has complained about the delay in fixation of drawback rates and higher prices that the exporters have to pay for items canalised through the STC and MMTC. He is also worried about the delay in receiving supplies from STC and MMTC. The chemical industry like other industries is worried also over the continuous rise in shipping freights which means an additional burden for exports.

However, two favourable developments are emerging. First, is the shift in the developed countries to highly sophisticated and capital-oriented industries because of the sharply rising labour costs. Mr Jamnadas justifiably feels that India could exploit this situation to its advantage by meeting the requirements of developed markets for labour-intensive items. The second possible factor is the emergence of the principle of generalised system of preferences. Such countries as the United States, the UK, Japan, Australia and the member-countries of the EEC have agreed in principle to eliminate or reduce the tariff barriers and other concessional tariff rates on imports of certain selected products from the developing areas. Some of the countries have taken legislative measures for implementation of the tariff preferences. Mr Jamnadas is

convinced that if we could develop a large production base capable of meeting both domestic and export needs and keep our costs of production under control through higher productivity and supply of raw materials at reasonable prices, there will not be any difficulty for selling our products in the overseas countries.

Exports of chemicals and allied products totalled only Rs 148 crores in 1963-64. They went up to Rs 338 crores in 1969-70 showing an average annual growth rate of 21.4 per cent. In 1970-71 a figure of Rs 36.6 crores was reached and it is this encouraging performance which has made the council fix a target of Rs 412 crores for 1971-72. □

Recognition for exporters

AS part of its efforts to promote exports, the Chemicals and Allied Products Export Promotion Council has introduced export awards and badges. The winners of 1969 were honoured at a function last week. Bengal Paper Mills Company and Swastik Rubber Products received special awards for outstanding export performance. Two others, Jintan Clinical Thermometer Company and Madras Rubber Factory, were recipients of awards for outstanding activities in the field of market research and export publicity. Thirteen others—All India Glass Works, Anil Hardboards, Bata Shoe Co, Dr Beck and Co, Greaves Cotton, Hindusthan Pilkington, Hindusthan Safety Glass Works, Jg Glass Industries, Jintan Clinical Thermometer Co, Motilal Banarsidas, Swastik Rubber Products, Vakul and Sons and West Coast Paper Mills—were awarded export badges. These are given to manufacturer-cum-exporters whose export performance is equivalent to at least 10 per cent of their production and who have a minimum export performance of Rs 2.5 lakhs during a particular year. Higher stipulations have been laid down for merchant exporters and export houses. For special awards only those firms which have minimum export performance of Rs 15 lakhs during a particular year and whose export sales have recorded a minimum increase of 25 per cent per annum during the preceding three years are considered. □

Textile machinery inspection

THE Textiles Committee's inspection regulations for textile machinery equipment (components and accessories) for export come into force on August 1, 1971. Eighteen items of equipment will be covered by these regulations. Export of these items without the Textiles Committee's certificate is prohibited.

India is perhaps the only country in the world to frame such regulations to ensure that only quality material leaves its shores. The items covered by the regulations are: Aprons for drafting systems; cots for drafting systems; inserts for spindles of ring spinning and doubling frames; rings for spinning and doubling frames; spindles for ring spinning and doubling frames; paper tubes for ring

spinning and doubling frames; steel travellers for ring spinning and doubling frames; metallic card clothing wire for cylinder, doffer and licker-in; wooden flyer bobbins for speed frames, direct and rewound weft pirns for use in shuttles for looms; picking sticks for underpick looms and overpick looms, wooden cones for winding machines; shuttles for looms, paper cones/cheeses for winding machines, flat steel healds for looms; twin wire healds/inset mail wire healds for looms; pitch bound wire reeds/all metal reeds for looms; pickers for looms.

The Textiles Committee is a statutory body set up by Parliament in 1964 to ensure the quality of textiles and textile machinery produced in the country and to promote research and development activities in the textile industry. The Committee inspects mill-made cotton cloth, yarn, cotton, handlooms like bleeding Madras, Etawah striped bedspreads, and towels, under its compulsory pre-shipment inspection regulations. Voluntary inspection schemes exist in respect of other cotton handloom textiles, rayon and synthetic fabrics, yarn and hosiery, mixed fabrics, ready-made garments and woollen and mixed woollen fabrics, hosiery and garments. □

Export duties

SOME idea about Government's expectations of exports during the current year of traditional items can be had from its estimates of collection of export duties. The Budget estimates for 1970-71 had placed this figure at Rs 55.40 crores but in the revised estimates it was raised to Rs 56.65 crores. The revenue from export duties for 1971-72 is estimated at Rs 58.79 crores. This would suggest that at least in certain items New Delhi expects the exports to go up. A closer analysis would show that almost the whole increase is anticipated from the levy on lumpy iron ore for which the estimates during the current year are Rs 2.20 crores more at Rs 15.40 crores. This is according to the planned targets which provide for a steady rise in iron ore exports during the whole of the Fourth Plan period. Interestingly, the Government expects the revenue from the export duty on manganese ore to decline to Rs 1.63 crores from Rs 2 crores, but there is no clear indication as to whether this estimate is based on lesser volume of exports or change in the quality-pattern of exports. As regards jute manufactures, raw cotton, cotton waste, coffee, black pepper, groundnut oilcake, unmanufactured tobacco, hides skin leather, coir and coir manufactures and mica, the estimates of export duty show no change from the revised figures for 1970-71. But in the case of tea, collections from export duty are expected to come down in 1971-72 to Rs 7 lakhs from Rs 15 lakhs in the revised estimates for 1970-71. □

Indian Sugar Mills Association

President, Shri S. K. Somaiya's Speech

PROBLEMS AND PROSPECTS OF SUGAR INDUSTRY

EXTRACTS of Presidential address of Shri S. K. Somaiya delivered at the 28th Annual General Meeting of Indian Sugar Mills Association held at New Delhi on 9th June, 1971:

Over the years no other industry on the food front has attracted as much public attention as sugar, leading to a very close and often over-cautious administrative attention. A series of regulatory measures have thus emerged. But there have been frequent changes in policies, however, well-conceived adding to the uncertainties in the working of this seasonal industry.

Sugar has been the most rigidly controlled industry even in periods of decontrol or partial decontrol. No flexibility has been left to the Industry so essential to meet over changing situations.

Background

In the mid-fifties when the industry was free from controls, North Indian factories showed remarkable progress and expansion. When controls were imposed in the North around 1958, and the South was left relatively free, the major growth impulse was witnessed in the latter area whereas the North stagnated. In fact, the control price structure was so rigid that the finance of most of the North Indian units suffered a severe set-back.

A fair price structure is essential for the vitality and growth of this or any other industry. In fact, Government accepted this premises, and rightly so, in the resolution adopting the 1959 Tariff Commission Report which, *inter alia*, stated that the cost of production derived from the schedule and the return on employed capital should be allowed so as to "provide sufficient funds for each unit to meet the commitment under bonus and gratuity, interest on borrowed capital and debentures, dividends on preference shares, managing agents' commission, and income tax and finally leave a residue to a large majority of units in all the regions to declare reasonable dividends."

Despite the well enunciated Government policy the industry was denied a fair return persistently over a period eroding substantially the financial base of many companies.

Further, in the past decontrol was followed in the wake of increased production and satisfactory stock position, with the result that prices generally ruled around or below the fair levels resulting in losses. When, however, prices tended to harden, even by 5 to 10 per cent above the fair price level, controls were hastily reimposed, denying the Industry the opportunity to recoup losses.

Enquiry commissions

The cost schedules evolved by Tariff Commission and other expert bodies in the past left the industry with inadequate funds for servicing the capital, apart from

rehabilitation and modernisation. In addition, 1969 Tariff Commission proceeded on an erroneous assumption and artificially froze the gross block of the industry at 1966-67 level for computing depreciation on "written down value method", ignoring completely the substantial investment which had taken place since at considerably higher costs. Consequently the depreciation provided for in the current schedule was in fact only about half of what it should have been, following well accepted accounting principles. The Tariff Commission, as a package deal also allowed Rs 2 per quintal as rehabilitation allowance. However, the Government accepted the recommendation of the Tariff Commission only in respect of depreciation and ignored the one relating to rehabilitation allowance. Thus, industry suffered on both the counts. Moreover the implementation of the schedules too left much to be desired to the serious detriment of the industry.

Zonal pricing

The price structure thus evolved for many zones cannot possibly be economic as established by empirical evidence and as such majority of units have not been even able to cover their costs and have consequently found themselves in the red. To remedy the situation there should be a built-in element of cost which would make the price reasonable for a large majority of units.

Current scheme

Government makes two price revisions during the year; one at the beginning of the season based on estimate of recovery and duration and the second after the crushing season based on actuals. Unlike previous years, in the 1969-70 season Government did not even announce the final prices taking into account the actual working results and the cost escalations. The entire production was released at the highly uneconomic provisional prices, announced earlier in the season.

A still more distressing situation came to prevail during the current season 1970-71 as the Government did not even determine the provisional rates based on the latest available estimates of sugar recovery for various zones and duration of the season which was expected to be shorter. Besides, the basic costs too had gone up due to various statutory provisions like the implementation of the Second Wage Board Award, higher rates of depreciation under the Income Tax Rules, increased cane freight charges etc.

In certain States, even the local levies had gone up. Debt servicing charges also registered a steep increase due to larger stocks that the industry had to carry for unduly long periods. Prices of consumable stocks and cost of packing too witnessed significant increase.

Government merely continued the provisional rates of the last season 1969-70 during the current season as well and fac-

tories were obliged to deliver sugar only on the basis of notional provisional rates regardless of actual costs.

Lower free sugar realisations

On free sugar, realisations were even lower than levy sugar in most regions during the major part of last year. Discriminatory higher excise duty of 37.5 per cent on free sugar, as against 25 per cent on levy sugar was also a contributory factor as for the same selling price it meant lower realisations of at least Rs 15 per quintal on free sugar. Further, the distress was aggravated due to marked disparities in the stock levels in different regions to the serious detriment of units in the high cost zones.

Stocks and credit

The industry was further faced with the problem of finance. Against its estimated peak stocks worth Rs 450 crores, the industry secured an advance of only about Rs 260 crores leaving a resource gap of Rs 190 crores, with the result that during the months of peak stocks, cane payments could not be maintained despite best efforts. The position was further aggravated due to the imposition of stiffer margins by banks which were later relaxed.

Government spokesmen from time to time indicated that creation of 'Buffer Stocks' as a policy was accepted and details were being worked out. Later Government shelved the idea and the anticipated relief did not materialise.

While facts are so obvious, the industry is almost continuously subjected to uniformed criticism on various counts. The arrears of cane dues has often been cited as an instance, and the case of UP and Bihar is often mentioned. While this is a genuine problem, the position is more or less similar in other States as well. The Units managed by Government or those in the co-operative sector are even worst placed. This under-scores the point that a mere mode of management or ownership does not provide a solution.

Mention may also be made here of the impact of the controls on the general well-being of the industry. Rigorous controls hitherto applied to North Indian factories have since been extended to other States as well. This has adversely affected the performance of the factories in the Southern States, particularly in Tamil Nadu. In this State, the factories had a disastrous season in 1969-70. Almost every unit incurred a loss.

In this context, the appointment of the Sugar Enquiry Commission which has probably the widest terms of reference ever drawn up for any Commission for the industry, under the distinguished Chairmanship of the Ex-Chief Justice of Calcutta High Court, Shri D. N. Sinha is indeed a welcome step. It is hoped that this Commission will deliberate in depth on the fundamental issues responsible for the present health of the industry and put forth highly objective and pragmatic recommendations which could put the industry on an enduring basis and thus impart the much-needed vitality which it so badly needs.

Sugar decontrol

Government's recent decision to decontrol sugar, apparently as an alternative to price increase, came, somewhat, as a

surprise to the industry because the sugar policy is announced at the beginning of the season. The industry is not averse to decontrol. In fact with its abiding faith in the market mechanism it cannot but think in terms of freedom from controls.

Now that decontrol is a reality, the industry is anxious that it should not turn out to be a short-term expediency, and that it would be pursued as a long-term policy. For, any policy at best can prove efficacious over a period of time and only a long-term stable policy can be in the ultimate interest of all concerned.

Price variations

Price variations are a normal feature in a free economy. This should not be viewed critically. The efficacy of the policy of decontrol should not be judged on price variations of minor nature. Market forces should be permitted sufficient time to correct the imbalances.

As for the immediate situation, with sudden change in the pattern of distribution and the large stocks that we have, it is not unlikely that there may be some frequent price fluctuations, as markets will take some time to adjust to the new situation.

To impart the much-needed stability to the country's sugar economy on a long-term basis, it will be necessary for the Government to initiate necessary follow-up measures.

Follow-up measures

(1) Monthly Releases:—This leverage could be effectively employed for maintaining prices at the desired level. The correct criteria for determining the monthly quantum of releases would be the actual off-take during the previous months, with suitable adjustments for festival demands and slack months.

(2) Bank Credit:—After decontrol banks have imposed higher margins of 30 per cent and are valuing sugar at notional rates lower than the market prices. It is necessary that banks revert to the margin of 14 per cent which is the weighted average rate of levy and free sugar as was applicable before decontrol and also value sugar at market rates.

(3) Excise Rebate:—It is essential that suitable incentives are announced well in advance to compensate the factories fully for higher costs on working during the early and latter part of the season during 1971-72. During the current season, some factories are still working at very low recoveries thereby incurring considerable additional costs and they too should be fully compensated through announcement of suitable reliefs.

(4) Cane Freight:—There have been sharp increases in freight rates during the last two years, 35 per cent and 6 per cent respectively. This would render crushing of rail cane uneconomic and thereby affect production. Necessary remedial measures are called for.

(5) Gur Prices:—For ensuring a steady rising trend in sugar production, it is also necessary to stabilise gur prices at an economic level. It is only by maintaining gur prices at an economic level through price support that it will be possible to avoid wide variations in the cane acreage which in turn would ensure a steadily rising trend in production of both gur and sugar.

(6) Cane Prices:—With the decontrol of sugar suitable adjustments in the basis for fixation of minimum cane prices will become imperative to protect the interests of low recovery zones. Further for calculation of individual factories' cane prices, the average recovery for the entire season should be taken into account and the normal statistical method of rounding off should be followed.

(7) Reversal to Specific Duty:—With decontrol of sugar, Government may examine the feasibility of reverting to a specific rate of duty as a measure of simplification and stability and for avoiding any speculative tendency in this regard.

(8) Licensing of Traders:—In view of decontrol licensing of wholesale dealers has lost its original purpose and therefore should be done away with.

New capacity

During the Fourth Plan period, Government have provided for a production target of 47 lakh tonnes and have licensed a capacity of 49.65 lakh tonnes. Government have further relaxed the licensing provisions under which no licence would be required so long as the capital investment did not exceed Rs 1 crore. While such relaxations are generally welcome, it is feared that in the case of sugar, they may tend to distort the planned growth and development of the industry as envisaged by the planners. Government have already excluded half a dozen industries like cotton textiles etc., from the aforesaid

relaxation and sugar should also be included therein.

Sugar exports

With an export of 3.18 lakh tonnes and a foreign exchange earning of over Rs 25 crores, 1970 was a fruitful year in the export field. During the current year too, it has been decided to export the full quantity available under the ISA and the preferential arrangements. Thus the total exports estimated this year are about 4 lakh tonnes, with expected foreign exchange earnings of about Rs 38 crores.

Sugarcane development

Sugarcane is the life-blood of the Sugar Industry. It is only by accelerating cane development work that lasting stability in the industry can be achieved. In the Northern region, the cane productivity is comparatively low and thus the development potential there is the largest, but the progress has been rather slow. The main reason for this has been the lack of an effective organisation to channelise cane development activities. Cane development work in Maharashtra as also in the Southern region has made rapid strides because of the sugar factories' direct involvement in cane development. To improve matters, a certain percentage of the area in the factory zone should be earmarked for the purpose of cane development which should be available to such factories who want to undertake cane development work.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

RONEO VICKERS INDIA LIMITED

(INCORPORATED AS A PUBLIC LIMITED COMPANY ON 28TH APRIL, 1967 WITH THE REGISTRAR OF COMPANIES, DELHI)

Registered Office: 184, JOR BAGH, NEW DELHI-3

Announcement Regarding the issue of 2,07,390 Equity Shares of Rs. 10 Each

Persons interested in full details may obtain copies of Prospectus and Application Forms from the Company's Registered Office and Underwriters, Brokers and Bankers to the Issue mentioned below.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON MONDAY 21st JUNE, 1971 AND CLOSE AT THE CLOSE OF BANKING HOURS ON THURSDAY, 1st JULY, 1971, OR EARLIER AT THE DISCRETION OF THE BOARD OF DIRECTORS OF THE COMPANY BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON WEDNESDAY 23rd JUNE, 1971.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY :

The Company was incorporated in 1967 to manufacture and market duplicating machines, franking machines, addressing machines various other types of office machines, systems, furniture, partitioning and other allied equipment. The Company has already set up a manufacturing unit in Faridabad near Delhi and necessary steps are being taken to expand the current manufacturing facilities.

Roneo Limited, U.K. are the holding Company of this Company and have been engaged in the manufacture and marketing of a large variety of business machines, systems and furniture etc. for over fifty years and have a long and distinguished record of developing and marketing its products in India and its business reputation is well known throughout the country.

Roneo Limited, U.K. will provide such technical know-how as may be required by the Company from time to time free of any cost.

The Company presently manufactures and markets a wide range of business systems, postal/insurance franking machines, steel cupboards, shelving and a few other furniture items. The Company proposes to expand the production of the existing range of franking machines, business systems and furniture and has plans to undertake the manufacture of the latest "Roneo-Vickers" duplicators, photo-copiers, addressing machines and mail room equipments etc.

At present the Company is a wholly-owned subsidiary of Roneo Limited, U.K. This issue is being made with the object of inviting the Indian public to participate in the equity of the Company to the extent of 40 per cent of its capital. For the year ending 30th November, 1970, the Company has declared a dividend of 10 per cent on its Equity Share capital.

Specialised business machines and systems are absolutely necessary for any progressive business or industry. At the moment their use is mostly limited to large industrial and commercial undertakings. The latest type of world-renowned "Roneo-Vickers" business machines and systems — when manufactured in India on a large scale — would in quality and performance be at par with the imported products and yet their cost to the consumer would be less than what the imported ones would cost him. This will enable even the smaller units to install the latest "time and labour" saving machines and systems — thus considerably improving their efficiency and productivity. The Company will be geared to meet the anticipated growing demand through the expansion of its present manufacturing facilities and the setting up of a vast network of its own sales offices, depots, distributors and stockists etc.

The Company has already established branches in Calcutta, Bombay, New Delhi, Hyderabad and Bangalore and anticipates no difficulty in marketing its products.

TERMS OF PAYMENT :

On Application Rs. 2.50 per share.

The balance of Rs. 7.50 per share shall be payable in two or
more equal instalments on calls which may be made within a
period of one year or more from the date of allotment as per dis-
cretion of the Board of Directors with a minimum interval of two
months between two successive calls.

Failure to pay the amount due on any call will render the
shares including the amount already paid thereon liable to for-
feiture in accordance with the Company's Article of Association.

APPLICATION FOR SHARES :

Copies of the Prospectus and Application Forms on the basis
of which alone the shares will be issued may be obtained from the
Underwriters, Bankers and Brokers to the Issue named herein or
from the main offices and branches of the Bankers to the Issue
mentioned at the above named places and from the Company's
Registered Office.

Applications may be made only by residents in India and
must be for a minimum of fifty Equity Shares or multiples thereof.
Application forms properly completed must be delivered before
the close of the subscription list together with the full amount
payable on the application to any of the Banks or at their branches
at the places mentioned on the application forms.

BALANCE SHEETS

DIVIDEND UP

Hindustan Aluminium's good results

THERE was an all-round improvement in the working of Hindustan Aluminium Corporation Ltd (Chairman: Mr G. D. Birla, Bombay) during the year ended December 31, 1970. Sales spurted to Rs 50.6 crores from Rs 41.3 crores in the earlier year. The gross profit increased to Rs 11.1 crores from Rs 10.3 crores. The net profit was higher at Rs 7.3 crores (Rs 6.5 crores). In view of the better performance, the directors have stepped up the ordinary dividend by 2½ per cent to 12½ per cent.

The company's gross profit margin works out to 22 per cent against 24.9 per cent. The ratio of net profit to net worth comes to 19.4 per cent (21.9 per cent).

In the year under review, production of alumina increased to Rs 1.69 lakh tonnes from 1.53 lakh tonnes in the previous year. Production of primary aluminium was 78,191 tonnes (72,231 tonnes) and that of properzi rods was 23,264 tonnes (20,868 tonnes). Production of rolled products amounted to 15,922 tonnes (11,162 tonnes) and that of extrusions 4,041 tonnes (2,980 tonnes).

The company has developed good export markets and during 1968 and 1969, 23,956 tonnes of metal was exported, earning Rs 9.35 crores of foreign exchange. However, exports were banned in 1970 and thus only 2,499 tonnes of metal could be exported against prior commitments.

The expansion of production capacity up to 1.2 lakh tonnes was cleared last year and now the first stage of this expansion programme, which will raise the

production capacity to 1 lakh tonnes by the middle of 1972 has already been taken up. As far as possible indigenous machinery and equipment are being ordered or even developed by the company to keep the import content to the minimum.

The second phase of expansion to 1.2 lakh tonnes is scheduled to be completed

(in lakhs of rupees)

	For the year ended 31st December

by the end of 1973. Application for Industrial licence for expansion of fabricated items by 23,000 tonnes has been submitted

to the Government and it is being processed. The company has made a contribution of Rs 20 lakhs during the year under review to Birla Institute of Technology and Science, Pilani. From time to time technical problems faced by the company are referred to the Institute. □

Amar Dye-Chem

A MAR Dye-Chem Ltd (Chairman: Mr A. K. Doshi, Bombay) had an excellent performance in the year ended December 31, 1970. Sales rose to Rs 10.1 crores from Rs 6.7 crores in the previous year. The gross profit was Rs 2.3 crores (Rs 1.3 crores). The net profit, after depreciation and taxation, amounted to Rs 84 lakhs (Rs 45 lakhs). The ordinary dividend has been stepped up by 4 per cent to 14 per cent payable on the increased capital. During the year under review, the ordinary subscribed capital of the company was raised from Rs 1.32 crores to Rs 1.45 crores by the issue of bonus shares in the ratio of one for ten.

The company's gross profit margin works out to 22.6 per cent against 20.1 per cent. The ratio of net profit to net worth comes to 26.7 per cent (17.2 per cent).

In the year under review K.C.A. Private Ltd has become a subsidiary of the company and it would be wholly owned by Amar Dye-Chem. The company

constructed a new plant for the manufacture of reactive dyes which has already been commissioned. The plant for dianilidine and ortho-tolidine has gone into production, but the company is having process troubles for which it is in touch with the collaborators. Regarding vat dyes the development work of all the products have been finalised in the research laboratory. The plant is being designed and the building work will start shortly.

In the year under review a letter of intent has been issued to the company by the Government of India for the manufacture of 3,850 tonnes of rubber chemicals and 2,100 tonnes of intermediates per annum and the necessary licence will be issued on its finalising arrangements for technical collaboration etc for which the company has already started negotiations. As a result of research activities, some more new products have been developed and added to the reactive dyes series. Complete range of dyestuffs for acrylic fibres has also been finalised. □

Atul Products

THE Atul Products Ltd (Chairman: Mr Kasturbhai Lalbhai, Ahmedabad) has increased its sales for the year ended December 31, 1970 to Rs 13.6 crores from Rs 11.5 crores in the previous year. The gross profit rose to Rs 2.6 crores from Rs 2.0 crores. The net profit, after depreciation and taxation, amounted to Rs 127 lakhs (Rs 94 lakhs). The ordinary dividend has been maintained at 14 per cent.

The company's gross profit margin works out to 19.3 per cent against 17.5 per cent. The ratio of net profit to net worth comes to 18.3 per cent (20 per cent).

The extension of the naphthalene intermediates plant was completed and commissioned during the year. The phosgene plant was also commissioned during the year but the production from this plant was only utilised for captive consumption. The company has obtained the licence for the import of phosgene cylinders and after receipt of these cylinders which is expect-

ed shortly, the sales to outside parties will commence.

Production and sales of dyestuffs, dyes intermediates, pharmaceutical products, caustic-chlorine and other chemicals have considerably improved. The exports of the company's products for the year were Rs 51.86 lakhs (Rs 16.44 lakhs). The company has applied for licences for the manufacture of nylon filament yarn, beta-naphthol and for the extension of its intermediates plants. The decision of the Government on these applications is awaited.

The anthraquinone plant of Atic Industries Ltd was commissioned already. The licence for the manufacture of anthraquinone disperse dyes, for which Atic has

made an application, is expected to be received soon. Atic's various plants are running well.

Cibatul's working improved considerably during the year. This company was able to make a profit of Rs 51.42 lakhs and thus wipe out a considerable part of the accumulated losses. The balance is expected to be set off against the profits of 1971. The Government has registered Cibatul's application for installation of a formaldehyde plant. This plant is expected to go on stream by the end of 1972. The Government of India's loan of Rs 3 crores is being repaid regularly and the balance outstanding as on March 31, 1971 was Rs 62.91 lakhs. □

Andhra Bank

INTEREST and discount earned by the Andhra Bank Ltd (Chairman: Mr K. Gopal Rao, Machilipatnam) for the year ended December 31, 1970 increased to Rs 4.2 crores from Rs 3.2 crores in the previous year. The net profit was Rs 9.10 lakhs (Rs 6.02 lakhs). The dividend was stepped up by one per cent to 7 per cent. Reserve and other funds got Rs 5.13 lakhs (Rs 2.22 lakhs).

Deposits of the bank expanded to Rs 65 crores from Rs 52.3 crores. Advances rose to Rs 48.3 crores from Rs 35.4 crores. Investments were higher at Rs 20.1 crores (Rs 15.6 crores). The ratio of advances to deposits was higher at 71.1 per cent

ARE THE VERITABLE 'FIRE-EATERS' IN CHEMICAL TECHNOLOGY

We have the capacity for taking on challenges in the manufacture of Process Chemicals for Industries.

AHURA is a research-oriented organisation. Its forte lies in its recognition of updating its research facilities to the immediate and future needs of industries and thus be in a position to serve them in keeping with their requirements.

The name "AHURA" has become synonymous with the manufacture of Process Chemicals and today serves many industries, chiefly among them the Textile Industry.

AHURA are regarded as pioneers in the manufacture of Process Chemicals for Textiles and their facilities are increasingly used by the many branches of the Textile Industry throughout the country.

the remaining two districts are under finalisation. Survey of Guntur district will be taken up jointly with Indian Bank shortly. The bank would also be participating actively in the "small farmers development agency scheme" of the Government of India in Srikakulam district. The bank is participating in the scheme of financing primary agricultural credit societies. In the year under review, 65 new branches were opened, of which 43 were in rural areas with a population of 10,000 and below. □

Standard and Chartered Banking

Standard and Chartered Banking Group Ltd recommends a final dividend of 7 per cent taxable for 15 months ended March 31, 1971, making the total dividend of 15 per cent for that period which is one per cent more than the rate forecast for the first accounting period of the new company in accordance with the terms of merger. Net profits of the group (Standard Bank and Chartered Bank) available for dividend, after providing for taxation, transfers to inner reserves and minority interests, were £11.95 million. Transfers to contingency and reserve funds were £4.07 million. Balance of profit brought forward was £10.74 million. The register of mem-

bers will be closed on June 28, 1971 and the annual general meeting is scheduled to be held on August 3, 1971

Sankey Wheels

Sales of Sankey Wheels Ltd, Durgapur, for the 52 weeks ended January 2, 1971 have increased to Rs 257 crore, from Rs 229 crores for the 53 weeks ended January 3, 1970. The net profit after providing Rs 12.54 lakhs (Rs 13.98 lakhs) for depreciation, amounted to Rs 5.90 lakhs (Rs 5.55 lakhs). With this profit, the company has reduced its accumulated losses from Rs 36.64 lakhs to Rs 30.74 lakhs. The disturbed labour situation in West Bengal, particularly in the Durgapur area and the chronic shortages of certain items of matching steel, had contributed to the unsatisfactory level of production and turnover in 1970. A new production incentive was introduced in that year. By the latter months of the year its effect was felt and the productivity has improved. The company submitted an application to the Government of India in May 1969 for a small

increase in the licensed capacity to 3.8 lakh wheels per year. No additional foreign exchange for plant has been sought.

Jyoti Electric Motors

Sales of Jyoti Electric Motors Ltd, Mogar, Taluq Anand, Dist Kaira, for the year ended December 31, 1970 have slightly increased to Rs 62.78 lakhs from Rs 62.07 lakhs in the previous year. The net profit, after providing Rs 1.48 lakhs (Rs 1.48 lakhs) for depreciation, amounted to Rs 5.08 lakhs (Rs 78.483). A maiden dividend of 5 per cent has been declared for the year. The general reserve got Rs 1.23 lakhs (nil). During the year under review, production increased by 15 per cent over the previous year.

Azam Jahi Mills

Total sales of the Azam Jahi Mills Ltd, Hyderabad, for the year ended September 30, 1970 have slightly increased to Rs 336 crores from Rs 325 crores in the previous year. The company has suffered a loss of Rs 48.12 lakhs against a loss of

Rs 49.97 lakhs. Due to losses incurred, no depreciation and the development rebate reserve could be provided. The financial assistance received during this year from the Government of Andhra Pradesh amounted to Rs 91 lakhs both by way of cash and loan of securities. In the year under review, the total cloth production increased by 33 lakh metres. The weaving efficiency increased from 65.92 per cent of the previous year to 68.74 per cent. The loom utilisation was increased from an average of 624 per day of the last year to 686 this year.

Simon-Carves India

Income from completed contracts of Simon-Carves India Ltd, Calcutta, for the year ended December 31, 1970 has increased to Rs 460 crores from Rs 421 crores in the previous year. The net profit, after providing Rs 5.45 lakhs (Rs 4.13 lakhs) for depreciation and Rs 11.73 lakhs (Rs 6.55 lakhs) for taxation, amounted to Rs 16.11 lakhs (Rs 4.55 lakhs). The dividend has been stepped up to 15 per cent from 8 per cent. The general reserve absorbed Rs 15.94 lakhs (Rs 91,110). The value of contracts obtained during the year under review was Rs 53 crores, of which orders to the value of about Rs 465 crores are for design, engineering and construction. The most important contract secured during the year was Calico Polyester Fibre project for which the company will be undertaking all the detailed engineering and design work.

Warner-Hindustan

Warner-Hindustan Ltd, Hyderabad, has improved its sales for the year ended December 31, 1970 by 60 per cent to Rs 452 crores from Rs 283 crores in the previous year. The net profit, after providing Rs 24.89 lakhs (Rs 17.53 lakhs) for depreciation and Rs 48.86 lakhs (Rs 2.90 lakhs) for taxation, amounted to Rs 43.92 lakhs (Rs 51.61 lakhs). The ordinary dividend has been maintained at 9 per cent. Amount set aside for the development rebate was Rs 64,000 (Rs 26.26 lakhs). The general reserve absorbed Rs 9.97 lakhs (Rs 15.52 lakhs). The company proposes to issue, subject to necessary approvals, bonus shares in the ratio of two new ordinary shares for every five shares held. During the year the formulations and chemicals plants worked at a high level. To improve production, certain extensions of the formulations plant are on hand. Exports for the year amounted to Rs 202 lakhs (Rs 0.08 lakh).

Preliminaries

Synthetics and Chemicals

Total sales (exclusive of excise duty) of Synthetics and Chemicals Ltd, Bombay, for the year ended December 31, 1970 have slightly declined to Rs 13.14 crores from Rs 13.92 crores in the previous year. The profit, after providing Rs 1.31 crores (Rs 1.26 crores) for depreciation amounted to Rs 2.04 crores, (Rs 2.17 crores). The ordinary dividend has been doubled to 15 per cent from 6 per cent. Amount set aside for the development rebate was Rs 2.01 crores (Rs 0.38 crore). Production for the year was 30,339 tonnes (24,594 tonnes) and sales were 27,749 tonnes (26,170 tonnes).

*A dream
today,
a reality
tomorrow*

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

TATA CHEMICALS LIMITED

EQUITIES

THE WEEK'S PRICE RANGE

Listless conditions

BOMBAY, June 10

TRADING on the stock exchange remained listless during the week. Although there was no heavy selling the market lacked fresh support. Price movements were rather narrow and the volume of business was small. The final list showed small variations from the previous levels. It was thought that the near-term outlook was good if only because of low budla charges and some scrips attracting backwardation. The performance of the market, however, indicated no justification for the thought.

Investors and operators both fell frustrated with the unhelpful factors of the Budget. The stepping up of capital gains tax and the increase in the wealth tax on slabs above Rs 15 lakhs, it was being repeated, would act as a drag on the investment market while, thanks to the increase in excise levies, prices of several consumer items have already gone up.

The early onset of the monsoon has caused no small satisfaction, for a good harvest influences the market bullishy although it is too early in the season to talk of crop prospects. However, the ultimate cost to India of East Bengal refugees will have a big say in the trend of the market.

The directors of Kohinoor Mills took the market by surprise, a pleasant one though, by proposing a final dividend of Rs 12 for 1970 which with the special platinum jubilee payment of Rs 5 takes the total to Rs 17 against Rs 12 of last year. In view of its lower profitability of the company, it was thought, it would just maintain the total payment. The shares were a bit shaded at Rs 225.

Another leading textile unit, Lakshmi-Vishnu, has only been able to maintain its gross profit despite larger sales but one does not know whether these two results are indicative of the general pattern for the textile industry—profits not being commensurate with sales owing probably to higher costs. Standard was well-maintained at Rs 668.50.

The market registered its disappointment with the antagonism between the Kapadia and Chinai groups and it is unlikely that investors would support the scrip in a big way until they resolved their differences. Century Enka was firm but Gwalior Rayon declined following reports that the Mavoor plant might close down for want of raw materials.

Steels were dull and subdued with Tata at Rs 103.50. Among engineering, Voltas was better but Telco was about steady. Hindustan Aluminium impressed the market with the chairman, Mr Aditya V. Birla, assuring the shareholders that the outlook for the company was good and that it was going ahead with its expansion programme, first from 80,000 tonnes to 100,000 tonnes by mid-1972 and further to 120,000 tonnes by the end of 1973.

COMMODITIES

Spot cotton subdued

BOMBAY, June 9

Subdued trading conditions prevailed in the spot cotton market during the last week. Although transactions picked up to some extent, the price trend in general remained practically unaffected in most cases. Exceptions were provided by a few varieties like Manavadar CO2 which declined markedly and Berar L 147 which gained as much as Rs 150 per candy. Reports about the progress of the monsoon were generally encouraging. From some of the terminal centres there were indications about the farmers having undertaken preliminary preparations for sowing. It would take at least another fortnight before something definite is known about the actual pace of sowing in different cotton growing tracts.

In the large majority of cases, the spinners continued to be plagued by credit curbs which tended to inhibit their normal turnover at this time of the season. The growers too were having uneasy moments with the steady accumulation of unsold stocks.

The following has been the trend of prices of some of the leading varieties:

(Rs per candy)

	For the week ended June 9	For the week ended June 2
Khandesh ..	2,300	2,300
Berar AK ..	2,200	2,200
Digvijay Dabhoi ..	3,175	3,201
Berar L 147 ..	2,750	2,600
Manavadar CO 2 ..	2,750	2,875

In the foreign section interest was mainly confined to stray lots of American and African growths. The importers too were handicapped by the paucity of funds to take delivery of the cotton that had already arrived at the docks and hence very few "pucca" deals were reported. Although the actual import of cotton as on May 22, as compiled from Customs documents, was only 2,47,141 bales, private sources indicate that imports through all the ports, as at the end of April, were as high as 4,89,193 bales, which certainly compare well with 5,58,165 bales. On the export front, business in Bengal Deshi has considerably slackened of late with inquiries for even choice varieties trickling down to negligible lots.

Meanwhile, Deshi cotton pressings as at the end of May, according to the Northern India Cotton Association, Bhatinda, are placed at 4,67,831 bales against 4,63,849 bales. Pressing of Punjab American is placed at 7,36,945 bales against 6,61,725 bales. The unsold stocks are put at 24,678 bales for Bengal Deshi and 74,850 bales for Punjab American against 20,362 bales and 17,838 bales, respectively.

YARNS IMPROVE

BOMBAY, June 9

An improvement in the prices of yarns characterised trading in the yarns market during the week under review. Art silk yarns gained further ground due to slack arrivals in the wake of improved upcountry demand. The supplies from the mills are expected to improve in the near future. Staple fibre yarns also moved up on better demand. Cotton yarns were steady to firm.

In the art silk yarns section, 150D National Rayon improved by 37 paise to Rs 18.06. 120D put on 66 paise to Rs 19.60. 150D Bright Century put on 44 paise to Rs 17.94. 120D gained 38 paise to Rs 19.60. 100D Bright South India was fully maintained at last week's level of Rs 23.02. Staple fibre yarns (2 x 34 nF) spot Kiran spurted by 33 paise to Rs 11.57.

JUTE GOODS MOVE UP

CALCUTTA, June 9

With the setting in of the monsoon the prospects of an earlier and bumper crop have become bright. Consequently, raw jute prices eased. However, prices of goods recorded gains. The overseas buyers had limited their operations in the Calcutta market to covering their immediate requirements. Jute goods firmed up following increased demand. The declining production also imparted strength.

Shippers, who could not meet their commitments against Pakistani bookings, showed considerable interest in Calcutta goods. In fact, this had reflected in April despatches of mills against exports, which at 50,000 tonnes, had risen by 9,400 tonnes. Carpet backing cloth increased by 1,300 tonnes, sackings by 1,500 tonnes, hessian by 5,200 tonnes, and others by 1,400 tonnes. The offtake against internal consumption also rose by 3,900 tonnes to 35,000 tonnes. Following the absence of any budgetary change,

local shippers rushed to cover against their recent sales to countries including the US and the USSR. Considerable interest was also shown against local consumption, both by industry and by farms products distributing agencies. Following this, B twills improved from Rs 264 to Rs 270 and hessian 40" 10 oz from Rs 97 to Rs 99.

With the commencement of the monsoon, the trading in new crop began and quotations for the same were at a discount of Re 1 as compared to the old crop. Arrivals of the old crop in the past week were about 20,000 maunds per day, with Assam bottoms falling from Rs 61 to Rs 60.

GROUNDNUT BEARISH

BOMBAY, June 9

The early onset of the monsoon and satisfactory supplies of the summer crop has given a bearish slant to groundnuts. Demand from vanaspathi interests is slack and with arrivals of soyabean oil fairly well assured there is every likelihood of prices seeking lower levels.

Groundnut extractions were dull. Reliable reports indicated that snags had arisen in respect of sales to Japan. It was said the sales were to be made on 1 p.m. aflatoxin basis but some exporters sold better quality thereby harming the prospects of others.

Castor was quiet despite reports of a sizable decline in Brazilian output. Brazilian castor oil to Rotterdam has firmed from 310 dollars to 334 dollars and in the UK the price is even higher. But for freight disadvantage, Indian prices would have been competitive. Linseeds were well held although soap manufacturers were reported to have withdrawn their support to linseed oil.

Comparative prices in rupees were:

Item	2-6-1971	9-8-1971
Castor June ..	131.00	129.75
Castor September ..	132.12	130.00
Linseeds July ..	161.50	160.75
Linseeds September ..	..	160.75
G. Nuts Khandesh ..	193.00	193.00
G. Nut oil ..	41.40	40.80
Castor Madras Small ..	130.00	130.50
Castor Comm. oil ..	28.25	27.75
Castor B.S.S. oil ..	31.00	30.25
Linseeds Bold ..	158.00	158.00
Linseed oil ..	35.50	35.50

LOWER PRICES FOR TEA

CALCUTTA, June 8

Tea arrivals have begun to gain momentum in the past week. Shippers who had been waiting in the hope of some fiscal concession in the budget, are now busy in meeting their commitments, as Union Budget did not contain any relief. Increased arrivals are not a surprise since the output is surpassing last year's level. Up to May 15, North East India output totalled 22.5 million kg or 2.29 million kg higher as compared to the corresponding previous period. The tea industry is thus poised to do even better than last year when the all-India output was 425 million kg, compared to 394 million kg in 1969, and exports increased from 189 million kg to 197 million kg. The demand for space for palletised tea is on the increase, and the liners are hard pressed to meet this demand. The absence of uniform pallet chests is becoming a problem to the liners.

As sale No. 9 held on May 31, leaf on offer totalled 31,713 chests including 2,607 chests from the last season's manufacture. Demand was generally good, but prices were, however, lower. CTCs eased, with fannings showing the largest decline; the few selected bright liquorings were sold well. Whole leaf grades also eased. The orthodox broken were readily absorbed, but fannings were off the mark. The quotations in rupees per kg. inclusive of excise duty were: medium Assam BOP 7 to 7.80, clean plain pekoe 7 to 7.50, good Assam CTC BP 6.70 to 7.40, medium CTC BP 6.30 to 6.50, low Assam BOP 6.50 to 7, good Assam CTC fannings 6.60 to 7.20, plain CTC BP 6 to 6.30, Doocars orthodox BOP 6.20 to 6.80, medium Assam OF 6 to 6.20, plain CTC fannings 5.30 to 5.90, medium CTC fannings 5.50 to 5.80 and low Assam OF 5.80 to 6.00. Other grades were unquoted.

At sale No. "C" held on June 3, offerings totalled 59,850 packages, which were all readily absorbed. Wholeleaf grades were strong and orthodox broken and fannings were fully steady. Plain CTC broken were firm but all others in CTCs eased. The quotations in rupees per kg inclusive of excise duty were: clean plain pekoe 7.20 to 7.70, low Assam BOP 6 to

FOODGRAINS DECLINE

BOMBAY, June 8

After rising in the preceding two weeks, the prices of foodgrains in the local market declined during the past week. In the cereals section, the prices of wheat (Pissi) at Rs 85-90 per quintal showed a fall of Rs 3 on account of good arrivals. The demand for wheat was lower than the previous week. The city stock was around 8,000 bags. In coarse grains, the prices of *bajra* (superior variety) also declined by about Rs 3 to Rs 70-75 per quintal, due to increased arrivals. The demand was generally good. The stock of *bajra* in the city market was poor around 10,000 bags. On the other hand, maize at Rs 73 per quintal recorded a rise of Rs 3 on account of poor inflow of new maize crop.

In pulses, the prices of gram (Punjab) at Rs 87-88 per quintal showed a nominal decline of a rupee. The daily arrivals of gram from the producing centres were satisfactory but the demand was slack. Further, the upcountry advices were steady. However, the city stocks were meagre at 8,000 bags. Tur (Berar white new) declined by Rs 5 to Rs 124-125 per quintal on account of larger daily arrivals of about 800 bags per day. But the demand from millers was slack. Urad (Khandesh) and *moong* (Chinal) continued to rule steady at the previous week-end levels of Rs 155-160 and Rs 250-300 per quintal, respectively.

SUGAR PRICES

BOMBAY, June 8

After declining in the post-decontrol period, the prices of sugar (C-30), for the first time, at Rs 191-192 per quintal recorded an increase of Rs 3. This was attributed to higher ex-mill rates and good offtake. The daily arrivals were about 3,000 bags and the offtake was also around that level. Today about 80,000 bags were sold by the co-operative sugar factories in the State at higher ex-mill rates of Rs 182-183 for "C" grade and Rs 179-181 for "D" grade.

METALS STRONG

CALCUTTA, June 8

Prices of non-ferrous metal scrap were fully firm in the past week at around last levels. It would take some time before prices are made up as a result of the steep revision to import duty tariff. An interesting feature to be noted in this connection is that the customs duty on copper is now far higher than the excise duty of Rs 2,000 per tonne on strips and 10 per cent *ad valorem* on pipes and tubes. Since both the latter tariffs allow set-off of customs duty, it is easily seen that no excise duty would now actually be payable if products are manufactured from copper cleared from port's mouth after May 28. Since the price of copper in the exporting markets are expected to maintain the current level, no useful purpose would be served by maintaining the excise duty on strips and pipes and tubes. Similarly, the customs duty at 40 per cent on zinc far exceeds the excise duty on zinc sheets. In view of this, it would save much irritation if the excise duty on copper and copper alloy semi-manufactures and zinc sheets are done away with forthwith.

Since the raised customs duty is to yet to merge in prices, offers for selling scrap were limited. Industrial consumers were also not keen to go "abegging" for offers, since they were sure of regular supplies of the virgin metals from the Minerals and Metals Trading Corporation. However, small-scale industries showed keen interest in meeting their daily needs. But for electric load-shedding, the demand would have shown even a more rising trend. The frequency with which load-shedding is resorted to by the distributor to make good the existing power shortage on account of the marked fall in supplies from government generating plants, has affected the big and small units in the engineering industry. For these reasons, prices registered an irregular pattern. Thus, while honey quality brass scrap eased from Rs 1,000 to Rs 990 per 100 kg, clean copper wire scrap rose from Rs 1,420 to Rs 1,430, and utensil copper scrap from Rs 1,340 to Rs 1,360. Virgin lead

was two points higher at Rs 460 but electrolytic zinc was unchanged at Rs 475 as did tin at Rs 4800. Aluminium ingots were nominally quoted at Rs 600.

KIPS DULL

MADRAS, June 7

Due to Whitsun holidays business from the importing end was dull and tanners here were not keen to reduce their level of prices for export. In addition to the stiff prices in the raw centres, tanners are faced with the proposed levy in the new budget duty on tanning materials which have been free from levy hitherto. Inquiries were selective with more emphasis on cow-skin, during the week under review.

Demand for goat skins was dull. Only sheep skins suitable for suede selection were keenly sought after and higher prices were registered. US importers evinced good interest in tanned bull hights.

BULLION FIRM

BOMBAY, June 9

A firm trend prevailed in the bullion market during the past week. Silver improved during the week due to slack arrivals in the wake of improved demand. The floating stocks in the city was stated to be dwindling. Gold remained steady to firm due to good demand from the south. The arrivals are expected to improve soon. Sovereign was fully steady.

Silver (996 fineness) began the week a rupee lower at Rs 587 and improved in the following session. It gained further ground in the subsequent sessions and wound up the week at Rs 592.50 today, with a net gain of Rs 4.50 over the week. The weekly delivery was mentioned at between Rs 588 and Rs 587. The Weekly arrivals and off-take of silver aggregated 47 bars and 25 bars respectively.

Primary gold in the unofficial trading commenced at last week's closing level of Rs 188

and slightly declined but improved later. It closed the week at Rs 190 today, gaining Rs 2 over the week. Standard gold in official trading began at last week's closing of Rs 197 and slightly receded in the following sessions. It wound up the week at Rs 199 today, the net gain over the week being Rs 2. Sovereign was fully steady at Rs 174.

CALL RATE STEADY

BOMBAY, June 9

There was no change in the conditions in Bombay's short-term money market in the past week. The call rate was 4½ per cent. In Calcutta, all transactions were done at 4½ per cent.

Ninety one days' Government of India treasury bills sold from May 31 to June 5 amounted to Rs 42.11 crores against Rs 5.56 crores in the previous week.

During the week ended May 28, there was a decline of Rs 2.27 crores at Rs 376.97 crores in the foreign exchange reserves of the Reserve Bank of India. While foreign securities were constant at Rs 303.42 crores, balances held abroad came down to Rs 73.55 crores from Rs 75.82 crores. Notes in circulation dropped by Rs 28.20 crores to Rs 4,369.66 crores. Deposits of scheduled commercial banks with the Reserve Bank of India increased to Rs 214.41 crores from Rs 208.44 crores.

Week ended May 28 marked a decline of Rs 17.25 crores at Rs 4,687.52 crores in the total credit made available by scheduled commercial banks. Aggregate deposits rose by Rs 28.16 crores to Rs 6,079.61 crores. Borrowings from Reserve Bank were higher at Rs 131.31 crores (Rs 125.49 crores).

TOMORROW'S HORIZONS:

—TODAY'S CHALLENGE

TATA ELECTRIC COMPANIES—

Pioneers of power generation in Maharashtra for over 50 years. They meet the needs of Bombay and the surrounding areas for a reliable power supply with some of the latest in generating, transmitting and monitoring equipment.

TATA CONSULTING ENGINEERS—

Engineering consultants who meet the evergrowing demand in India and abroad for sophisticated and expert engineering services in industrial and associated fields.

**They are today's contribution for
a planned and prosperous tomorrow.**

- THE TATA HYDRO-ELECTRIC POWER SUPPLY CO. LTD.
 - THE ANDHRA VALLEY POWER SUPPLY CO. LTD.
 - THE TATA POWER CO. LTD.
 - TATA CONSULTING ENGINEERS
- Bombay House, Bruce Street, Fort, Bombay 1

LABOUR GAZETTE

Started in 1921, the *Labour Gazette*, issued monthly, is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. It contains statistical and other information on consumer price index numbers for working class, industrial disputes, absenteeism, trade unions, industrial relations, cases under labour laws, glimpses of industrial awards, labour legislation, etc. Special articles on matters connected with labour and industrial relations are published from time to time.

- *Annual Subscription* (September-August): Rs. 12.
- *Back Copies*: If available, supplied at Rs. 15 per set.
- *Advertisement Rates* can be had on request.

All correspondence and remittances should be addressed to:

**THE COMMISSIONER OF
LABOUR AND DIRECTOR OF
EMPLOYMENT,**

V.I.P.'S stop here so very often !

Because we care for their moods, and beaches, and whims.
And we know they like red carpets - which is exactly
what they get.

And, of course, they go for that elusive something called
atmosphere - which is everywhere in Rajdoot.

And, before they are gone, we like them to taste the
wonderful Indian and Western cuisines, the variety
programmes in the EL DORADO and STARLIT Restaurants
or an open air session at SAMBLE Connaught Place.

We have a telephone in each room, and its own
charismatic control.

What's more, we don't cross them in come-and-go
gaps - but like real kings guests!

AIR-INDIA

announces

a drastic reduction in fares!

Air-India offers heavy reductions under our Affinity Group Travel Scheme. For many sectors, the reduction amounts to over Rs. 2000/-.

What is an affinity group?

It is an association that has been in existence for 6 months prior to travel with a common objective or activity other than travel. In case of travel to the Americas the association must be of at least two years standing.

Examples: Educational institutions like schools or colleges of Arts, Music, Science, Engineering, Medicine, Catering; professional groups like associations of lawyers, physicians, surgeons, pathologists, teachers, artists; clubs like Lions

and the Rotary Club, sports associations, gym-khanas, choirs, dramatic and musical groups etc.

Minimum requirements:

If you are a member of any of the above affinity groups for a minimum period of 6 months prior to travel you may be entitled to the reduction. You have to travel together throughout your journey and your group should not be smaller than 15 persons.

Besides the large reduction under our Affinity Group Scheme, Air-India gives you that extra something, if you haven't been abroad in the past 3 years.

Subject to approval of all Govts.

This giant ship was completed in record time - thanks to the engineers, technicians - and IOL.

That's right, IOL.

IOL electrodes and arc welding equipment were the natural choice for the welding of this ship's hull. Natural because they have been the pioneers in India in these and many other allied fields. Manufacture of automatic arc welding consumables, for instance. Or installation of entire pipeline systems for supply of gases. Or oxygen for high altitudes. Or, nitrogen for malleablising and annealing furnaces. Or, but one has to stop somewhere.

Today, new frontiers are being opened. IOL have already launched on manufacture of air separation plant and associated cryogenic equipment. Plans are being drawn up for further diversification into new areas and for improving the existing range of products.

By constantly innovating, IOL have always kept abreast of the latest technology. And with their products and technical services, help the nation's defence forces, steel mills, fertilizer and chemical plants and the engineering industry.*

Their international association has enabled IOL to bring the latest advances and research abroad to the service of Indian industry.

Indian Industry needs Indian Oxygen.

More steel but at a higher price?

IT is possible that steel supplies will improve this year not entirely on account of larger imports but also because of higher domestic production. Not that one can be sure of a better performance by our steel industry, which essentially means by Hindustan Steel whose three plants account for a rated capacity of 5.9 million tonnes out of a total of 8.9 million tonnes in terms of steel ingots. During 1970-71 HSL's contribution to production was only 3.6 million tonnes and with Indian Iron also working much below its capacity, the total output was no more than 5.95 million tonnes. This meant a decline in output from 1968-69, when it was of the order of 6.3 million tonnes, instead of there being an upswing in production. Even if we go by the rate of production during the first quarter of the current year, the chances are that we might just cross the six million-tonne mark. These figures do raise serious doubts about the HSL giving to the country an additional million tonnes of saleable steel during 1971-72 which the Union Steel Ministry promised earlier this year. Nevertheless, one should hope with the Steel Ministry that the efforts being currently made to increase the capacity utilisation of the HSL would bring some results. That there is enough scope for this is evident from the fact that even in 1970-71 Durgapur was still working at 39

per cent of the capacity in terms of steel ingots, Rourkela at 57 per cent and Bhilai at 77 per cent. As against this Tata Steel could work to over 85 per cent of the capacity which should be considered satisfactory.

Official spokesmen have repeatedly stated that the failure of the HSL to make reasonable use of the facilities available to it was partly on account of operational difficulties and partly because of disturbed industrial relations. Fortunately, there are signs that the workers are in a mood to respond better to the needs of the situation faced by the country. As the Steel Minister, Mr S. Molan Kumaramangalam, has said, the recent wage agreement for the steel industry, reached through bipartite negotiations has created an atmosphere conducive to better employer-employee relations. The negotiating committee is to continue to function with a major objective of supporting every effort to increase productivity. The Government has also been encouraged to propose that two representatives of the workers should sit on the Board of the HSL, and this proposal, according to the Steel Minister, has been given a warm welcome by the workers' representatives. If all these measures indeed lead to the hoped for healthy industrial relations, one major obstacle to the

expansion of steel output will have been overcome. It is when one turns to the operational difficulties that one gets doubts about the progress being made. The spokesmen of neither the Steel Ministry nor the HSL have clearly spelled out the steps being taken so that the Government steel plants do not continue to be plagued by technical and operational difficulties. Reports have it that the HSL is inclined to look upon Durgapur as a permanent liability; if true, this is most disturbing. If Roukela could be set on the right path after experiencing problems of the same dimensions as faced by Durgapur, there is no reason why anyone should be pessimistic about the latter making its optimum contribution to the efficient functioning of steel industry and in the process showing profits. In any case, the challenge will have to be faced. If drastic remedial measures are to be undertaken, they will have to be enforced.

So long as the HSL does not set its house in order, its plea that the costs of production are rising and that it should be compensated for the same by higher retention prices, even if justified, is likely to be dismissed as an attempt to cover its inefficiency. Presumably, the Chairman of the HSL, Mr K. T. Chandy, is aware of this. This is why in his recent statement he has talked of a 10 per cent rise in the cost of production, at the same time saying that the HSL will not demand a price rise at this stage but would try to offset part of the higher cost by higher production. But Mr Chandy is not alone in drawing attention to the escalation in the costs of producing steel. The private sector steel units have already made a representation to the Government for higher prices.

Their case is that the element of Rs 9 provided in last year's increase of Rs 75 in steel prices on account of the wage settlement has been most inadequate. Moreover, the costs of some of the raw materials and refractories have moved up and the recent railway budget will inflate the cost of transport of coal and other goods. Tata Steel could also argue that with its current satisfactory utilisation of capacity there are limitations to further improvement. If the costs of production could be brought down through technical and other innovations, this would need funds. The company's Rs 106-crore programme for replacements and modernisation is not having a smooth passage because of the difficulties in raising resources. The planned debenture issue of Rs 20 crores is still not sanctioned because of the dispute that has developed over the question of giving Government financial institutions the right to convert their loaned amounts into equity. If the Government is not going to budge from its policy on the conversion right it must at least indicate the way resources can be raised for the modernisation programme which could help in bringing down the cost of production. Otherwise, Tisco will have to generate enough internal resources to be ploughed back for financing the programme. This can result only from higher prices for steel. In that eventuality it may be wiser for the Government to reduce the excise levy of Rs 150 per tonne so that the consumer does not have to pay more for his steel. Higher steel prices would only set in motion a chain reaction that would add to the inflationary forces.

Boundaries of savings

THE replies of the Union Finance Minister, Mr Y. B. Chavan, to the debates on the Union Budget in the two Houses of Parliament are significant in that they seek to spell out the principles on which his fiscal policy as embodied in this year's Budget was based. This aspect of the question was generally ignored by the Members of Parliament who participated in the debate. Their main criticism has been that the Budget is antithetical to socialism and that it is devoid of a strategy to promote growth. The arguments were on familiar lines. It was contended that the indirect taxes would push up prices because the producers would be in a position to pass on the burden to the consumer. This would affect the cost of living which is already at an unconscionably high level. The direct taxes would discourage savings and investment and would give a further fillip to tax evasion. All this would result in a deceleration in economic growth and in the rate of expansion of employment opportunities.

It was not difficult for Mr Chavan to reply to these arguments. Once the need for extra tax effort was recognised, any imposition of fresh taxation would necessarily mean imposition of some burden somewhere. It is quite logical to argue that if the burden falls on the producers economic growth would suffer and if it falls on consumers the cost of living would rise. This time the members did not emphasise the need for reducing non-Plan expenditure. This could be partly due to the fact that all that could be said on the subject has already been said. There was also the realisation that with the influx of refugees from East Bengal it was difficult for the Union Government to economise on non-Plan expenditure. Mr Chavan in his reply argued that most of the non-Plan expenditure was on such items as defence, police, debt servicing, food subsidy and relief for East Bengal refugees. He referred to the interim relief given to Central Government employees which would cost the exchequer Rs 106 crores. These are the constraints under which the Finance Minister had to formulate his Budget proposals.

This being the situation, Mr Chavan confined himself to just two concessions. He agreed to withdraw the levy of 10 paise per kg on *maida* processed by roller flour mills in the organised sector. This would deny him a prospective revenue of Rs 7.4 crores. His other concession is the dropping of the proposal to increase the excise duty on coarse cloth. This is a symbolic gesture. The total revenue expected in the whole year on this count would not have amounted to more than Rs 16 lakhs and this would have been distributed among the States.

Greater attention, therefore, must be focussed on that part of Mr Chavan's replies where he throws some light on the principles underlying his fiscal proposals. Two of the principles should be of particular interest. One is that the policy of the Union Government henceforward would be to increase the proportion of direct taxation in the total tax revenue. The other is that not only was the Finance Minister anxious to impose a virtual ceiling on income but he was also opposed to the policy of encouraging savings beyond a level where it led to accumulation of wealth. It is under this principle, according to Mr Chavan, that the incentive for saving in excess of Rs 5,000 per annum has been diluted.

There is a school of thought in the country which believes that the contribution of direct taxation in our total tax effort is not adequate. In an ideal tax system the ratio between direct and indirect taxes should be 50 : 50. Without going into the arguments for and against this point of view, it needs to be pointed out that the direct taxes cover a very narrow section of the population. The co-efficient of buoyancy is of the order of 0.77 only. This means that the yield from income tax rises less than proportionately with the rise in the national income. There seems to be some ground thus for stepping up the yield from direct taxation. The best way to do this, at the moment, is to bring agricultural incomes within the ambit of taxable incomes. It is here that the co-operation of the States is desirable but is not forthcoming. Assuming that the Centre fails to induce the States to co-operate, the correction of the ratio between direct and indirect taxes will have a serious impact on the growth of the private sector. A countervailing policy, therefore, would be to develop the public sector at a rate faster than what prevails today. It is doubtful whether the Union Government has resources in terms of finance and personnel to achieve such a higher rate.

The decision to curb savings beyond a particular level so as to discourage accumulation of wealth cannot but lead to disincentive as far as savings and investment in the economy are concerned. It would be much better if straightforward ceilings on income and wealth are imposed. This will lead to gaps in the economic activity of the more affluent sections of our people at a time when the growth impulse is disturbingly weak. This is the hazard which we will have to face. The Union Government would do well to examine all the aspects of its policies before attempting to implement them piecemeal.

ALTHOUGH the Government is in business in a big way the *Babus* in the Finance Ministry have not yet grasped this elementary fact. Had it not been so, some of the top executives of our public sector undertakings would not be given a measly allowance of £10 to £12 per day while on tours abroad. Some may be given a little extra. But can anyone expect these executives to do on equal terms big business abroad, such as selling our goods to give a boost to exports, striking a big steel deal to import this badly needed raw material for our engineering industry, or buying ships and power equipment and other machinery costing millions of pounds? Businessmen abroad enjoy large expense accounts and they expect our official businessmen also to extend hospitality on the same scale as they do. How can you do this even on an allowance of £15 per day when your host may book a suite for you in a decent hotel thinking that the chairman of a large corporation would require this facility to receive suppliers or agents or collaborators? Many public sector executives have gone through embarrassing moments when they found that their daily hotel bills were much more than the daily foreign exchange allowance granted to them. In such a situation they would either change the hotel after a day or two or throw a hint to their foreign suppliers to look after them. The economy that is being practised in granting foreign exchange allowances to executives of our public and private sectors is an economy conceived by a clerk without imagination. Eventually this does not turn out to be economy because those who look after our executives abroad get an upper hand in negotiations at a fantastically cheap price. It is better to sanction £50 a day to our public sector executives than to overpay thousands of pounds in business deals. I understand that a former Governor of the Reserve Bank of India was also exercised over this absurd situation which harms the national interest in every way. He even made an attempt to persuade the Finance Ministry to be liberal, but the bureaucracy of the Ministry did not budge. I am against any extravagant use of public funds, but here is an issue where a liberal and sensible attitude would eventually prove more economical.

★

I am not surprised that the Soviet quisling Dr Husak's Government in Prague has declared India out of bounds for Czech tourists. Dr Husak's Government is reported to have circulated a note that Czech tourists are not to be allowed to go to India which has been bracketed with Yugoslavia and the UAR as a capitalist country. This is particularly surprising because New Delhi kept servile silence at the time of the Russian invasion of Czechoslovakia in August 1968. Incidentally, this also should be an eye-opener to the so-called spineless neutral powers who hold laughable summits in Cairo or Belgrade. However, even when New Delhi, Cairo and Belgrade tilt towards the Soviet Union, they will never be accepted as equals. In the final analysis those who are out of the Soviet empire are candidates for eventual liquidation. Whatever may be one's views about China, it ought to be recorded that at the time of the Russian invasion of Czechoslovakia, China was the only major country which publicly condemned the military onslaught of the Soviet

EDITOR'S NOTEBOOK

Union on her small and helpless ally, China had her own reasons for condemning the Soviet Union. But the fact that she did do so was more important than the indifference of the then Johnson Administration in the United States. In fact, President Johnson was angry with the Czechs because they spoiled his chances of going to Moscow for a summit with the Kremlin bosses. The American attitude at the time of the Czechoslovak invasion strengthened the Chinese charge that the world was ruled by the concealed alliance of the two super-powers. Having said this one should concede the fact that Czechoslovakia is not a free country and the designation of India as capitalist or otherwise by the Czech viceroys of Moscow is irrelevant to the friendship between the free people of India and the temporarily subjugated people of Czechoslovakia.

★

What we have been preaching all the time the Jesuits of Mexico have decided to practise. We are complaining that all our academic talents are concentrated in urban areas and that the rural areas are starved of even tolerable educational facilities. But our public school mentality does not permit us to look beyond a few cities. This is why I was thrilled to learn that the Jesuits of Mexico have proposed to close down one of Mexico's best schools in order that these Roman Catholic educationists could devote their time to the cause of the rural poor. The Jesuits have more than 30 years of experience in providing Mexico's ruling elite and professional classes with education of the highest standard. But now they have decided to turn their back on the cloistered school in order to tackle the education of the rural masses. The only comparable instance that comes to my mind of such a case is that of the late Nanabhai Bhatt, the great Gandhian educationist of Gujarat, who all of a sudden closed down his institution, Dakshinamoorti in Bhavnagar, and went to the rural areas and established Gram Dakshinamoorti.

What weighed with the Jesuits is the imperative need for a reorientation of the Mexican educational system. According to them, this system does not at present bring light and learning to the under-privileged classes. Nor does it help improve the general level of education in a country where, according to the UNESCO figures, the illiterate number 10 million in a population of 48 million. What has appalled the Jesuits is the fact that, in the age-group 15 to 19, only 4 per cent of the children of the Mexican poor can afford to attend school. The parents of the 2,500 pupils in the school have received an 18-month notice during which the Jesuits will wind up their institution and the parents transfer the children to other schools. When dispersed in different parts of the Mexican countryside, the Jesuits will endeavour, as they have declared, "to inculcate attitudes of service and

not reproduce the competitive and possessive mentality" of present-day upper-class education.

★

Recently Dr Gisela Bonn, the famous German TV writer and journalist, interviewed the Prime Minister, Mrs Indira Gandhi, for the German TV network, Dr. Bonn asked the Prime Minister numerous questions. Quite a few of them related to the growth of Mrs Gandhi's personality. The whole interview is an exhilarating document on one woman talking to another. I would like to record the Prime Minister's reply to the following question:

Q. : *Madame Prime Minister, what has been your most intense experience? And who are the people who have influenced you most?*

A. : *I have led a life of such excitement and such intense involvement with the happenings around me, that it is difficult to isolate any happening. But the first thing I remember for instance is when we burnt our foreign clothes, and it made a deep impact, because I was practically a baby then. Then of course there were all the experiences of the hardship of the freedom struggle. Our house was constantly being raided, our things being removed, people were being arrested, and all my life I was interviewing people, whether my relatives or others, in prison. Then I organised my own children's organisation, so we had a lot of excitement, people being shot, we having to turn nurse, doctor, everything at different stages. And of course all this time there was very much the influence of my grandfather, my parents, and of course Mahatma Gandhi who was like an elder figure all the time with the family.*

Then I had the great good fortune to go to Tagore's University. It was an entirely different world, so peaceful, "Shantiniketan", with the whole art, music, which I had never known at all before. It opened up an entirely new dimension in my life. Even in my house, you know, my father's friendships were with artists, writers, scientists, so that one did meet those people. I would say that although I have met a lot of the great people of the world—I have met Einstein and many people like that—I think that the influence is more that of the many smaller people one meets because it is more subtle. I think when you meet a great man there is a certain amount of resistance to be influenced, but it's the smaller people, the principals of the schools and colleges I have been to, and I would say my children have influenced me also. It seems strange because sometimes you think it's more the other way round. It's a process. It is not that you are influenced and—fullstop. But it is a process all the time. The people you meet and experiences you have, they change you all the time. That is the only way you can stay alive, because if you stop that process then you are not really alive.

MARKET GOSSIP

Dearer loans

THE Union Government has announced the first phase of its borrowing programme for the current year. Through three cash cum conversion loans short, medium and long-dated the Government proposes to raise Rs. 275 crores or 75 per cent of the aggregate gross borrowings of Rs. 500 crores, provided for in the Budget. All the three loans—47½ per cent 1978-5.25 per cent 1986 and 5.75 per cent 2001—are to be issued at par. Subscriptions will be received from July 1 to 3 and the securities of the 4.5 per cent 1971 loan will be accepted for conversion at par.

The interest rates are higher by 0.25 per cent as compared to those on loans for comparable periods floated last year. This is in line with the expectations in the market that Government borrowings will reflect the higher cost of raising money. There has been a departure from last year's policy of issuing only one loan of 30 years maturity in the first phase. Presumably the issue of medium- and short-term loans at this stage is to tap the banking funds. These institutions, usually prefer to invest their funds in the short-term loans. But they have now been offered a wider choice with the issue of short- and medium-dated loans. The subscription to the 5.75 per cent 2001 loan will mainly come from the Life Insurance Corporation whose investments are expected to be about Rs. 50 crores.

The bulk of the 4.5 per cent 1971 loan which matures on July 1 and will be accepted for conversion is held by the Reserve Bank. The outstandings total Rs. 332.10 crores. With the Government reserving the right to retain subscription up to 10 per cent in excess of the notified amount, the gross borrowings in the first phase could be as high as Rs. 413.5 crores. The net borrowings would therefore, vary between Rs. 42.90 crores and Rs. 81.40 crores. This in turn will mean that in the second phase, possibly in September, the Government will have to mobilise additional net borrowings of Rs. 55 crores to Rs. 85 crores since the Budget takes into account net borrowings of Rs. 136.29 crores. The borrowings figure will be fixed accordingly. In all probability, the Government may not have to come out with a floatation of more than Rs. 75 crores since the borrowings in July are expected to prove a success. Conditions in the money market are easy and the inter-bank call money rate is 4.5 per cent. This is an indication, along with other data, of the easy position of the banks. The Government can also depend on good support from provident funds and other institutional investors. Only the individual investor may not take much interest. □

Banks and proxy wars

WHETHER the private sector likes it or not, it is inviting government financial institutions to take greater interest in the management of the corporate sector. This is the direct result of the proxy wars that have been witnessed in three major

companies. The attitude of banks was the crucial factor that decided last year the fate of the management of the Indian Iron and Steel Company. The same may be the case with the National Rayon Corporation and Synthetics and Chemicals whose annual meetings are slated to be held in the next few weeks. Here besides the banks the LIC will also be in the picture more in the case of Synthetics and Chemicals. In fact, the LIC is putting up one of its senior officials, Mr. J. T. Rana-diva as a candidate for the Board of Directors of Synthetics and Chemicals.

The in-fighting in the NRC has already resulted in the intervention of the Company Law Board and the possibility of two government directors being nominated is there. The contest in this company is between the Chinais and Kapadias with the latter seeking to have the dominant voice in the management. The Kapadias and their friends claim that in a straight contest with Chinais they will have their nominees for the Board of Directors elected on the strength of their holdings and proxies. But they also know that it is the banks which will have a decisive say in the results. These institutions are holding nearly one-sixth or 80,000 out of 4.95 lakh shares of the company. In respect of shares pledged with them by the borrowers the banks can exercise the voting right. Rather, it is the Reserve Bank of India which will direct the commercial banks as to what they should do at the annual meeting—whether they should abstain or whether they should vote for the candidates of Chinais or those of Kapadias or whether they should vote on the individual merits of different candidates. The LIC's holdings in the NRC are very small.

The annual general meeting of Synthetics and Chemicals is due to be held on June 29 and it will see a trial of strength between the Kilachand Group, which currently controls the management, and the Firestone Tyre and Rubber Company who are their foreign collaborators. Firestone for two years now has not been seeing eye to eye with Kilachands and saw to it that last year Kilachand Devchand Pvt. Ltd. lost its sole-selling agency of Synthetics and Chemicals. This year the Firestone representative, Mr. F. J. Reighley, is contesting the election to the Board of Directors. Firestone, which holds 25 per cent of the paid-up capital of the company, has also announced that it would support Dr. J. D. Bannerjee, Mr. J. N. Heredia and Mr. Karl Keshawala who will be opposing Mr. S. L. Kuloskar, Mr. Pravin-chandra V. Gandhi and Dr. R. C. Cooper who, according to Mr. Reighley, invariably support Kilachands. In this company the LIC and its subsidiaries together hold 63,000 shares and the banks 50,000 shares. These institutions, therefore, can tilt the balance according to their attitude. □

Beating the speculator

THIS week a conference was scheduled to meet in Mexico City to devise measures to ensure that the price of silver reflected its scarcity. The Mexico Government is obviously worried that prices of silver should have fallen when there is an acknowledged shortage of silver in the sense that new production has for the past few years been smaller than the annual demand for the white metal. During the current year, the deficit would be of the order of 150 million ounces against an estimated consumption of 400 million ounces. And yet, a Mexico Government spokesman has pointed out that the price of silver has dropped from \$2.48 per ounce in June 1968 to \$1.60.

Why has this happened? Mexico has traced the cause to the shrewd policy of the Silver Users' Association, the main consumer bloc on the New York market, which led to a panic among speculators and hoarders who began dumping silver as fast as possible around the turn of the year. The Mexico Government feels that speculation has to be curbed as a first measure in restoring silver prices to their true level. Hence this conference of Mexico, Peru, Canada and Australia which between them account for 78 per cent of the world silver production, with the US and other interests. It will be some time before results of the conference are known but they should be of interest to this country. Lot of silver is smuggled out of India and the organisers of the conference are not overlooking the fact that the world's largest stockpile of silver is in India though in the form of silverware and other articles which they estimate at between 2,000 million and 7,000 million ounces. In any plan drawn Mexico would like to ensure the co-operation of India to make its implementation a success. □

Worry over sugar

WHATEVER the sugar industry might feel about the recent rise in prices, say in Maharashtra, the Chief Minister, Mr. V. P. Naik, is obviously worried. He has said that the State Cabinet had decided to urge the Centre to release more sugar for sale to arrest the rising prices. The Government also proposes to ask the sugar industry to give some quantity of sugar to the Government for distribution through fair price shops.

Mr. Naik does not believe that the recent rise in price, which has taken the level to about Rs. 2 per kg, is the result of de-control. Rather he feels that an artificial scarcity is being created. This view, in fact, reflects the misgivings created among sugar trade circles about the efficacy of the mechanism of monthly releases. The trade has been complaining that of late factories in the co-operative and joint stock sectors have been turning down its tenders on the plea that the prices offered are not adequate. The sugar industry would do well not to ignore the plea of Mr. Naik and the trade. Otherwise it is likely to invite the wrath of the public. (See also Survey.) □

OUR JUMBO HAS BEEN FLYING SINCE 1966

EARNING OVER Rs.3 CRORES IN FOREIGN EXCHANGE

Yes, the little CAFI elephant has made Jumbo strides in exports.

He has captivated highly competitive markets in Europe, USA, Africa, Australia, the Middle East and the Far East, with 'Terene'® fabrics and garments for men, women and children.

CAFI has been exporting since 1966, a variety of 'Terene' fabrics, including pure 'Terene' and 'Terene' blended with Indian Raw Silk, Cotton, Jute and Camel Hair.

Sometimes hand-printed, sometimes embroidered, our fabrics and garments have charmed buyers everywhere.

CAFI's fabulous export products are developed exclusively by the CAFI Technical Service Laboratory. They are then converted into export merchandise at over 25 mills and garment factories, under the close scrutiny of CAFI's Quality Controllers.

This accent on research and quality accounts for the ultimate popularity of our fabrics and ready-to-wears abroad.

Indeed CAFI's little Jumbo is today a symbol of dependability.

CAFI Exports are handled by Imkemex India Ltd.

SURVEY

IMPEDIMENTS FOR PLASTICS

IF the investment and employment figures are to be taken as yardsticks, the plastics industry in the country is already an important sector of our industrial structure. Already, over Rs 100 crores have been invested in this industry which provides employment for nearly 100,000 people. But even then the industry cannot be said to have come of age since the lines of development are comparatively small in number. All over the world extensive use is being made of plastics in construction, engineering, packaging, electronics, power distribution and many other industries. Engineering plastics in particular are fast developing as substitutes for metals in the construction industry. In our own country, which depends heavily on imports of non-ferrous metals, the growth of engineering plastics should indeed be an important objective of the industry and the Government. But such a development is impossible to visualise unless plastic products are made competitive cost-wise in relation to conventional materials. It is the inability of the plastic products to stand this test which is preventing them from making inroads into fields they should. And it looks as though the Government is not going to be helpful in bringing down the costs.

The petrochemicals are admittedly the cheapest source of raw materials for plastics. But with the recent changes in tax holiday allowance, abridging the list of priority industries and increases in the price of naphtha, the cost of production in this industry is moving up. Mr Arvind N. Mafatlal, Chairman of the National Organic Chemical Industries Ltd (Nocil), has estimated that in the two years 1971 and 1972 the company would lose the tax benefit that there would have been on Rs 3.17 crores if the tax holiday scheme were not disturbed. Additionally, the higher price of naphtha and the rise in excise duty on certain items would put a burden of Rs 1 crore during a full year. And he added, the company would have to consider to what extent all this additional burden could be passed on to the consumers who include plastics manufacturers. The Polyolefins Industries, with which also Mr Mafatlal is associated, will be paying for ethylene Rs 70 per tonne more because of the rise of Rs 30 per tonne in the price of naphtha, and the cost of production of its products would thus go up. This is apart from the loss of tax benefits of a priority industry and the deprivation of a benefit to the extent of Rs 65 lakhs in the current year and next because of the change in the scheme of tax holiday. Not that Mr Mafatlal was pessimistic about the growth of the two companies; on the contrary, he struck an optimistic note. But what is true of Nocil and PIL in regard to cost of production should also hold good for other petrochemical complexes and plastic product manufacturers. In other words, we can look forward to a rise in prices of plastics, which would mean that there will be greater impediments in their way of proving competitive in relation to conven-

tional materials. Further, if higher prices lead to a slowing down of the growth in demand for plastics, it would be the small-scale sector which would be particularly affected. Of the 4,500 plastic processing units, no less than 4,000 are in this sector. □

WHAT PRICE SUGAR ?

THE decontrol of sugar was not entirely of the industry's seeking. It would probably have been more satisfied for the present with a higher levy price, the abolition of the differential excise duties on levy sugar and free sale sugar and the building up of a buffer stock. But now that the industry is decontrolled, there is an obligation on it to ensure the success of the policy in order that both the industry and the consumer reap its benefits. This was presumably what was in the mind of the Union Agriculture Minister, Mr Fakhruddin Ali Ahmed, in sounding the warning that the Government would not hesitate to regulate again the prices and distribution of sugar if it found that the industry or trade was not playing fair. The sugar industry, whether in the joint stock or the co-operative sector, should not overlook that the consumer expects the new policy not to result in additional burden on him, if not working in his favour. Even if the free market prices had stabilised at the pre-decontrolled levels, it would have still meant that a household in urban and other areas where there was public distribution of sugar would have been paying more for its sugar since the cheaper levy sugar would not have been available and it would have had to depend entirely on the free sugar market for its needs.

During the current week sugar prices have been looking up even after the monthly release of four lakh tonnes. Doubts are already being expressed whether the mechanism of monthly releases would lead to a stabilisation of prices since several factories are reportedly turning down tenders from the traders on the ground that the prices offered are not adequate. The industry must prove these doubting Thomases wrong if it is really keen that the Government should pursue decontrol as a long-term policy. The argument of Mr S. K. Somaiya at the annual general meeting of the Indian Sugar Mills Association that price variations are a normal feature in a free economy will not carry conviction with the public if the "normal feature" means the paying of unduly high prices for sugar. Even a price of Rs 2 per kilo is not to the consumer's liking.

Obviously, the Government is keen that the industry should strengthen its hands in making decontrol a success. Mr Ahmed has conceded that the lowering of bank margin and a higher level of credit to the industry had become important in view of the large sugar stocks of 2.1 million tonnes with the industry at the close of last season and the anticipated production of 3.8 million tonnes this year. He has promised to take up the question of margin with the Reserve Bank and the nationalised commercial banks. Mr Somaiya

has, in addition, suggested that, among other follow-up measures, suitable adjustments be made in the fixation of minimum cane prices to protect the interest of low recovery zones. His contention is that it is unfair that while the sugar mills should be called on to pay higher prices, where the base sucrose recovery is more than 9.4 per cent, there is no lowering of prices when recovery falls below the minimum. He has proposed that provision should be made for discount in cane prices for decline in recovery below the base level at the rate of 6.6 paise for every 0.1 per cent decrease, subject to a floor recovery of 8 per cent. Whatever the attitude of the Government on this demand, the basic fact remains that in large parts of the country, particularly in the northern region, the yield and quality of cane need to be improved if the sugar industry is to be put on a stable footing. Mr Somaiya's suggestion that encouragement should be given, particularly to the factories in the northern region, to get directly involved in cane development has much force in this context. This could be achieved by earmarking a certain percentage of areas in the factory zones for cane development by mills. This type of experiment in Maharashtra and in the southern region has paid good dividend, and there is no reason why similar results cannot be obtained in Bihar and Uttar Pradesh. □

THE KING TAKES A HAND

THE prospect of India and Nepal concluding a new trade and transit treaty has improved as a result of the visit of the King of Nepal to New Delhi last week. The talks he and his aides had with Mrs Indira Gandhi and some of the Central Ministers and officials have helped to narrow down the differences between the two Governments on the form and content of the new treaty. The negotiations had been deadlocked since November last year mainly over three issues: (a) whether there should be an overall agreement covering both trade and transit or a treaty for each, (b) Nepal's demand for an alternative land route for the movement of goods via Radhikapur on the West Bengal border and thence through East Bengal, and (c) the deflection of Nepalese goods like stainless steel, utensils and man-made fibres into India. Even after the expiry of the old trade and transit treaty, India as a gesture of goodwill to Nepal unilaterally decided to continue the facilities for the movement of goods to and from that country until new arrangements were worked out.

One of the obstacles to the conclusion of a new treaty, namely, Nepal's insistence on a trade exit route to East Bengal through Radhikapur, has been automatically removed because of the unfortunate developments in that wing of Pakistan. Radhikapur has now lost its significance for Nepal. Nevertheless, India would be willing to provide increased facilities for

Nepal's trade. Nepal, on her part, would appear to have resiled from her stand that there should be two separate treaties as she probably now realises that a combined trade and transit treaty will serve her national interests better. Similarly, it seems the realisation has dawned on her that the deflection into the Indian market of Nepalese goods based on imported materials benefited individual entrepreneurs and traders rather than the country as a whole. Now that the deadlock has been broken, thanks to the King himself taking a hand in the matter, there is no reason why the negotiations, which will be resumed in the third week of this month after his return to Kathmandu from an official tour of Afghanistan and the Soviet Union, should not be brought to a successful conclusion before long. □

RALLY IN US COTTON

WITHIN just three or four weeks a remarkable change has come over the cotton crop picture in the United States and production, it is now estimated, will be of the order of 11.5 million bales instead of 9 million bales as forecast in early May. The drought in the Texas has broken and farmers have made rapid progress with planting. Mississippi, another important cotton growing region, is experiencing ideal weather that has helped farmers to replant all the cotton damaged earlier. The United States thus may not turn into an importer from an exporter as was anticipated only a few weeks ago. Visualising such a possibility Japanese buyers had gone in for some brisk business and this, coupled with disruption of exports of cotton from Turkey, had sent the cotton prices bouncing on the New York Cotton Exchange. The price trend has now been reversed, and the Japanese have reportedly withdrawn from the market. For the Indian cotton mill industry which is relying on the Government's plans for importing 11 lakh bales of the fibre during the current cotton season to tide over the difficulties it is facing, these latest reports of the cotton crop prospects in the United States should bring some cheer. Otherwise it would have been pushed into a situation where inadequate quantities of cotton would have been available at very high prices.

What should be of particular interest is that it has been possible for the world to get the changing picture of cotton prospects in the US at a remarkably fast pace. This is because of the well-knit official machinery that is in operation in the United States to give an accurate picture of the cotton situation at every possible stage during the season. Speculation is thereby curbed and market prices reflect the true supply and demand position. This was exactly what the outgoing Chairman of the Indian Cotton Mills Federation, Mr Radhakrishna R. Ruia, was driving at in demanding the setting up of an agency by the Government to provide a timely and reliable estimate of the cotton crop in the country. As he has pointed out, a dependable crop estimate will reduce the wide fluctuations in prices and possibly help save some foreign exchange by making it possible to plan in time for adequate imports. □

- At post-devaluation rate.
- While estimating foreign exchange reserves, SDRs transactions that might have taken place on April 30, 1971 have not been taken into account.
- The figures indicate percentage change during the current calendar year upto the month indicated as compared to corresponding period in the preceding calendar year.

THE WEEK

THE Governor of Punjab, Dr D C Pavate, dissolved the State Assembly on June 13 on the advice of the Chief Minister, Mr Prakash Singh Badal, and accepted the resignation of Mr Badal's 14-month old Akali Ministry. The Governor, in his report to the Centre, also recommended the imposition of President's rule in the State. The resignation of the Badal Ministry followed a revolt by 18 Akali legislators, including six members of the Council of Ministers, who formed a parallel Akali Dal under the leadership of a former Chief Minister, Mr Gurnam Singh. On June 15, the President signed a proclamation taking over the State's administration under Article 356 of the Constitution.

Domestic air fares have been increased by 15 per cent with effect from July 1 by Indian Airlines. The increase will, however, be only 7 per cent in the eastern sector as no other easy mode of transport is available in that region. According to an announcement by the Indian Airlines, passengers holding round-trip tickets will have to pay the excess fare if the first leg of the journey does not begin before July 1.

The Governing Council of the United Nations Development Programme (UNDP) has approved three more projects in India for a total assistance of \$2,047,500. These projects relate to (1) demonstration plant for irradiation sterilization of medical products; (2) a centre for the development of educational mass media; and (3) pre-investment surveying, mapping and training programmes.

India's trade deficit declined marginally in April 1971 to Rs 17.21 crores from Rs 18.87 crores in the corresponding month of 1970. Exports in April totalled Rs 127.12 crores compared to Rs 127.73 crores for the corresponding month last year. Imports declined from Rs 146.60 crores in April 1970 to Rs 144.33 crores this April.

The Reserve Bank set up on June 15 a regional office of the Department of Banking Operations and Development at Jaipur. It will have under its jurisdiction offices and branches of commercial banks situated in the State of Rajasthan.

According to an announcement by the Union Government, licences were issued to 35 industrial undertakings in the month of April 1971. These were for the manufacture of items such as wire ropes, high duty alloy, grey castings, transmission equipment for long-distance communications, electric motors, vacuum driers, air compressors, tungsten carbide bits, room air conditioners, caustic soda, disperse dyes, art paper, plastic coated industrial packaging paper and tanned skins. During the same period 39 letters of intent were also issued for items including gear blanks, light forgings, ball bearing races, electronics equipment, clutch release bearings, tie rods, drag links, ball bearings, roller bearings, howard tractor mounted rotators rolling cutter rock drill bits, auto air conditioners, basic chromium sulphate and industrial V belts and fan belts.

Three State Government undertakings—the Industrial Development Corporations of Jammu and Kashmir, Tamil Nadu and Haryana—have been issued letters of intent for producing 400 million cigarettes

each per annum. Three private companies were also issued letters of intent for setting up new cigarette factories. These are: Nava Bharat Enterprises, Golden Tobacco Co and East India Tobacco Co.

The Union Government has allowed as an interim measure a price increase of about 4 per cent in the price of milk foods prepared for infants.

The auction sale of 212,472 shares of Jayanti Dharma Teja in the Jayanti Shipping Corporation which was to be held on June 14 has been postponed for the third time. The auction will now be held on August 14, 1971. The postponement of the auction sale was made following a request by private shipping companies on the ground that the Monopolies Commission has not yet given them permission to bid in the auction.

Mr S. Mohan Kumaramangalam, Union Minister for Steel and Mines, announced in the Lok Sabha on June 14 that the Union Government has decided to appoint two representatives of the workers on the board of directors of the Hindustan Steel to strengthen the relations between the management and the labour.

A new programme of airborne mineral survey of over 80,000 sq kilometres of potential ore-bearing areas of Mysore, Madhya Pradesh, Maharashtra, east Gujarat and south Rajasthan began on June 13. An Indo-French joint venture, the airborne survey will be completed within 30 months.

The Jammu and Kashmir Chief Justice, Mr Murtaza Fazal Ali, upheld on June 15 the ban on the All-Jammu and Kashmir Plebiscite Front imposed by the Union Government on January 12 this year.

Mr Ram Jaipal Singh Yadav, leader of the Congress (R) Legislature Party, has been appointed Deputy Chief Minister of Bihar.

The Ruling Congress retained the Ladakh Lok Sabha seat when its nominee Mr Kushak Bakula was declared elected by a margin of over 4,000 votes.

The Ceylon Government tightened on June 16 its press censorship by issuing new regulations under the Public Security Act. Accordingly, all news pertaining to any

Government activity will come under censorship.

In Parliament

The Rajya Sabha which was to have concluded its present session on June 18 will now sit till June 24.

Mrs M. Godfrey has been nominated to the Lok Sabha by the President to represent the Anglo-Indian community. She will be the second representative of the community in the House along with Mr Frank Anthony.

The Rajya Sabha passed on June 16 the Delhi Sikh Gurudwaras (Management) Bill 1971. The bill replaces the Delhi Sikh Gurudwaras (Management) Ordinance promulgated on May 20, 1971.

The Lok Sabha passed on June 14 the Gold (Control) Amendment Bill which seeks to plug the lacuna in the parent act caused by the invalidation of Section 71 by a judgment of the Supreme Court.

Money steady

Conditions were unchanged in the Bombay short-term money market as of Wednesday. Demand for funds was maintained but the supply of credit was short of requirements and there were borrowers over at the close. In the inter-bank call section, both renewals and fresh money were reported at 4½ per cent. In the Calcutta market, the rate ruled at 4½ per cent.

Price index

No official data on the Index Number of Wholesale Prices for the week ended May 29, 1971 were available.

PEOPLE

Dr K. S. Shelvankar has been appointed India's Ambassador to the Soviet Union.

Mr Mario Pellegrino, Managing Director of Atlas Copco (India) Pvt Ltd, has been appointed Managing Director of Atlas Copco Italia SPA with headquarters in Milan. Mr Alain Grenard takes his place in India.

Mr Chandappa Patel has taken over charge as Chairman and Managing Director of the Mysore Paper Mills.

Mr C. G. Shivadasani has taken over as Acting Secretary of the Textiles Committee.

50 years ago

The daily papers wore a dejected and neglected appearance last week, cabled news from the outside world being eight days late—the heaviest delay experienced since the war—and even when Reuter's messages began to come through they were few and far between and were for the most part "weary, stale, flat and unprofitable." The cause, we are told, is large renewal work on the Eastern Telegraph Company's Red Sea cables, which it is hoped, when completed, will result in a vast improvement in the cable service to India. We have heard much during the last year or two of projected improvements in this direction, and we trust that we shall not, in the long run, be disappointed. In the meantime, however, there is a

good deal to be desired, and it must be admitted that the service is scarcely commensurate with the financial position of the companies. Writing of the Eastern Telegraph Company and its associated undertaking, the Eastern Extension, Australia and China Telegraph Company, nearly a quarter of a century ago, Sir Charles Bright remarked that "for the commercial and financial world generally, no less than for the telegraphic, their prosperous career will always have a fascination"; but although we derive a certain amount of gratification from a perusal of the fine record of these concerns, with their imposing array of reserve allocations, we cannot help expressing the thought that they might have made better use of their vast resources.

Cotton made us famous

BUT

today we do much more than trade in cotton. The
house of PATEL-VOLKART has extended its interests
to several other fields of business described
here and earned in each of them a reputation
for its excellence of service.

COTTON: Suppliers of all varieties of Indian
Cotton, Foreign Cotton and Cotton Waste.

SHIPPING: Representatives of renowned
Shipping Companies with regular
Cargo and Passenger Services.

CLEARING & FORWARDING: Clearing
& Forwarding Agents at Cochin and Madras.

ROAD HAULAGE: Transporters of goods
by road in Madras and South India.

TRAVEL: Travel Agency at Bombay.

PATEL-VOLKART LIMITED.

BOMBAY: 19, Graham Road, Ballard Estate, P. O. Box 399, (Regd. Office).

MADRAS: Armenian Street, Catholic Centre, P. O. Box 45.

COCHIN: Calvetty Road, P. O. Box 3.

CALCUTTA: Java Bengal Line Branch, 5 & 7, Netaji Subhas Road, P. O. Box 71.

Also at: BHATINDA, CALICUT, COIMBATORE, DELHI, GUNTAKAL, AHMEDABAD,
ALLEPPEY, AMRAYATI, BROACH, GANGANAGAR, GOA, GUNTUR, HUBLI, JALGAON,
KHANDWA, NANDED, RATLAM AND TUTICORIN.

CELLULOSE PRODUCTS OF INDIA LTD.

GUJARAT'S PROMINENT HOUSE OF CHEMICALS
AND PAPER PRODUCTS Viz.

- Sodium Carboxy Methyl Cellulose (CMC)
- Monochloroacetic Acid (MCA)
- Sodium Monochloroacetate (SMCA)
- Cellulose Powder
- Microcrystalline Cellulose Powder
- Sodium Alginate and Alginic Acid
- Agar Agar—China Grass ('POP' Brand - Powder and Strips)
Both Food as well as Bacteriological Grade
- Straw and Grey Boards
- Filled Corrugated (Pillopak) Boards

221, Dr. Dadabhoy Naoroji Road, Fort, Bombay-1.

BANGLA DESH REFUGEES

UN machinery on the move?

NEW DELHI.

ONE swallow does not make a summer and the sudden drop in the refugee influx into West Bengal from an average of over 60,000 a day to about 25,000 last Saturday does not constitute a declining trend. The fury of the elements might have had much to do with the slowing down of the movement of evacuees from Bangla Desh. The monsoon is in full swing now in the eastern region and until it peters out there will be an abatement of the human inflow. So far a large number of people in Bangla Desh have been forced to leave their homes because of, in the first instance, the atrocities perpetrated by the West Pakistan armed forces and later pestilence. But now another factor which causes mass migration is rearing its ugly head. The spectre of famine is hovering over Bangla Desh and the fear of further privation through hunger may compel many to flee that land. Therefore, it would be premature to think that the refugee influx has begun to wane and will soon become a trickle.

However, in India there is now less evidence of the panic and desperation that the unending flow of refugees and the outbreak of cholera caused among the authorities. There has been some improvement in the utterly chaotic situation that prevailed until last week. The cholera epidemic which took a heavy toll of refugee lives in West Bengal has been practically brought under control. Better arrangements have been made for receiving medi-

cal and relief supplies from abroad and dispatching them to the refugee camps. The large-scale movement of evacuees from West Bengal has begun. It is intended to move in all about 2.5 million refugees from West Bengal and Tripura by train and air to 50 large camps in Madhya Pradesh, Bihar, Orissa, UP and Assam.

The immediate plan is to send out five lakh refugees from West Bengal and one lakh from Tripura in order to relieve the pressure on these States. Within West Bengal, between six and eight lakhs are to be shifted from the border areas to the districts of Birbhum, Bankura and Midnapore. For the airlift of refugees the large transport planes sent by the US and the Soviet Union will be used.

The Prime Minister's visit last weekend to the border areas of Assam and Meghalaya, where the refugees are camping, has also helped to put heart into those tackling the refugee problem and assuage the feelings of the local people. She said at a public meeting that the sympathy of the world was with the evacuees and that the international community was now fully aware of the atrocities committed by the military regime. She added that, while ultimately Pakistan might have to bow down to mounting world pressure for reaching a political settlement with the people of Bangla Desh rather than snap ties with them, "we must now help the refugees to save them from death and destruction".

Fuller details are now available of the number of refugees who had come to var-

ious States until last Sunday. Of the total number of 54.67 lakhs, 43 lakhs were in West Bengal, 7.3 lakhs in Tripura, 2.53 lakhs in Assam and 1.83 lakhs in Meghalaya. About 43.5 lakhs, that is, 60 per cent of the total refugees were in camps and the rest were staying with relatives and friends.

A surprising development in the refugee situation was the unpublicised visit of Prince Sadrudin, UN High Commissioner for Refugees, to New Delhi early this week. He arrived here from Rawalpindi after a week-long visit to West Pakistan and Bangla Desh. Not much is known of the nature of his talks with the Rehabilitation Minister, Mr R. K. Khadilkar. But his visit to the refugee camps in West Bengal would undoubtedly before his eyes a refugee problem unparalleled in dimension and unprecedented in history. The Prince can, no doubt, be relied upon to do his utmost to get the external aid machinery moving in order to relieve India to some extent of the colossal burden cast upon her by the refugee influx. But assistance is only a palliative and cannot be sustained on a larger scale too long. The ultimate solution to the refugee problem lies in creating conditions in Bangla Desh whereby the refugees feel assured of the safety of their lives and property there and are encouraged to go back. The Prince will have served their cause well if he uses his high office to get at the root of the problem instead of remaining content with organising international relief for Bangla Desh refugees.

The Indian position on the refugee situation is that it is not of its making and, therefore, the refugees must return to Bangla Desh. Though the major powers generally accepted this they had, by and large, not explicitly said so. The objective of Mr Swaran Singh's mission to some of the world capitals is not only to secure unreserved support from these powers for India's stand but also persuade them to state their position clearly and frankly. That way alone the pressure of international opinion can be most effective in deflecting Pakistan from the path she is treading, which spells ruination for her and turmoil on the Indian sub-continent.

From all accounts he appears to have succeeded in achieving this objective although the Soviet Union alone, among the other countries he visited, has made a formal declaration of support. The joint statement issued after Mr Swaran Singh's talks with the Soviet leaders in Moscow calls for immediate measures in East Bengal to put an end to the exodus of refugees and to ensure conditions of peace and security to enable those who had already come to India to return to their homes by seeking a political settlement in the interests of the entire people of Pakistan and preserving peace in the region. The statement is a convincing gesture on the part of the USSR to India's call for international action to bring about a reversal of Pakistan's policy of military repression and genocide in East Bengal.

The response from some of the other world capitals which he visited is also en-

GOVERNMENT OF INDIA

4½ PER CENT LOAN 1978 TO BE ISSUED AT Rs. 100.00 PER CENT AND REPAYABLE AT PAR ON 1st OF JULY 1978.

5½ PER CENT LOAN 1986 TO BE ISSUED AT Rs. 100.00 PER CENT AND REPAYABLE AT PAR ON 1st OF JULY 1986.

5½ PER CENT LOAN 2001 TO BE ISSUED AT Rs. 100.00 PER CENT AND REPAYABLE AT PAR ON 1st OF JULY 2001.

Subscriptions to the above loans will be received simultaneously and will be limited to a total of Rs. 375 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 4½ per cent Loan 1971 which will be accepted for conversion at par. Government reserve the right to retain subscriptions up to ten per cent in excess of the notified amount.

If the total subscriptions received for the new loans exceed the notified figure plus the amount of ten per cent retainable as aforesaid, partial allotment will be made in respect of the cash subscriptions received and the balance refunded in cash as soon as possible.

Interest at the rate of 4½ per cent per annum on the securities of 4½ per cent Loan 1971 tendered for conversion will be paid up to and inclusive of 30th June 1971 at the time of issue of the new securities.

The new loans will bear interest from the 1st of July 1971. Interest will be paid half-yearly on the 1st January and 1st July. Interest payable on the securities of all the three loans will be liable to tax under the Income-tax Act, 1961. Interest on Government Securities along with income in the form of interest or dividends on other approved investments will be exempt from Income-tax subject to a limit of Rs. 3,000 per annum and subject to other provisions of Section 80L of the Income-tax Act, 1961.

Subscription lists will open on the 1st of July 1971 and close on 3rd of July 1971 or earlier without notice.

Applications for the new loans will be received at:

- Offices of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Hyderabad, Kanpur, Madras, Nagpur, New Delhi and Patna;
- branches of the subsidiary banks of the State Bank of India conducting Government treasury work except at the branch of the State Bank of Hyderabad, Gunfoundry, Hyderabad; and
- branches of the State Bank of India at other places in India.

For full particulars please apply to any of these offices or branches.

couraging although it is not backed by joint declarations. In Bonn, Paris and Ottawa the leaders whom Mr Swaran Singh met endorsed India's stand that the tide of inflow of refugees from East Bengal had to be reversed by finding an early political situation to the problems that caused the exodus. The Foreign Minister did not do his round of these capitals to seek aid to provide relief to the refugees but to impress on them the gravity of the situation created on the sub-continent by the insensate repression let loose by Pakistan in Bangla Desh. India is naturally anxious that the aid which Pakistan is seeking from the Western powers does not result in the aggravation of an already serious situation. Mr Swaran Singh has, therefore, urged the major powers to deny the wherewithal of strengthening the Pakistani military machine. He has asked them to weigh the situation and judge for themselves if assistance to Pakistan at the present juncture would really help improve the situation. If some of them still felt obliged to give aid to Pakistan he has rightly advised them to ensure that the aid is used for humanitarian purposes and strengthening her economy and not for pursuing her repressive policies. It would be reasonable to hope that Mr Swaran Singh's mission had not been in vain. □

PUNJAB

Return of the Ruling Congress?

CHANDIGARH

THE Akali Government in Punjab is out. On June 13, the Governor accepted Chief Minister, Mr Prakash Singh Badal's resignation and also his recommendation to dissolve the State Assembly. It was a dramatic development. The Assembly was due to meet on June 14. The Ruling Congress was prompting defections to dethrone the Akalis, and two members of the Ruling Congress High Command were on the spot directing the toppling operations.

Suddenly, 17 Akali members of the Assembly, including six Ministers, along with the Akali Parliamentary Board Chairman, Mr Gurnam Singh, quit the party and formed a parallel Akali Dal. Mr Gurnam Singh, a retired judge of the Punjab High Court, had been the Akali Chief Minister twice for a total length of 21 months. All appeared set for the formation of an alternative Government comprising the Ruling Congress and the rebel Akalis with Mr Gurnam Singh as Chief Minister. But Mr Badal completely outwitted his opponents. Before the news of revolt in the Akali party could reach the Governor, he got the Assembly dissolved on the plea that he wanted a fresh mandate from the people.

The present developments in Punjab have far-reaching political significance. The public image of Akalis is at its lowest. The non-Sikhs and non-Jat Sikhs are not prepared to touch them with a pair of tongs because of their acts of highhandedness. It was only on account of their alliance with the Jana Sangh that the Akalis had secured 43 seats in the 1969 mid-term elections. Only an Akali-Sangh alliance can offer stiff resistance to the Ruling Congress. Chances of these two coming together in the foreseeable future are ex-

tremely bleak. In view of this, not more than twenty-five Akalis are likely to be returned to the 104-member State Assembly in the next elections. Such a situation would force them to adopt extremist slogans and accuse the Centre of giving step-motherly treatment to Sikhs. This would lead to the revival of separatist

and communal activities in the State.

On account of the complex communal pattern, the Jana Sangh can never dream of bagging more than twelve seats. Its political future in the State is sealed. The Ruling Congress thus finds conditions favourable to stage a come-back in the State. □

POLITICS TODAY

Congress (O) providing an effective opposition to the Congress (R) would fast diminish.

It is in this context that the decision of the PSP and the SSP to merge is to be considered. There is a politically conscious section in the country which believes that the elements opposing the Congress (R) could be mobilised around a nucleus whose socialist credentials are better than those of the Congress (R). Whether the PSP-SSP merger could be such a centre is a matter of opinion. There are indications that another centre might also develop round Mr Kamaraj and Mr Sanjiva Reddy. It is suggested that in course of time these two centres might combine. Even if this happens the *bona fides* of the new party as a genuine instrument of ushering socialism in this country will have to be established through results and not through mere claims.

Apprehensions were entertained regarding the fate of the ruling fronts in Kerala, West Bengal and Bihar as a result of the PSP national executive's directive to its members to leave the united fronts to which they belong. Much depends upon how the clauses in the merger document are interpreted. In Kerala Assembly, out of a total of 133 members, the CPI-led front today commands 69 votes. If the 3 PSP MLAs were to resign, the front will lose its majority on paper. But it is conceivable that the new party might decide not to join hands with the Opposition in toppling the Government in Kerala and it is still doubtful whether the 3 PSP MLAs in Kerala would accept the national executive's directive to leave the ruling front. The same can be said about the ruling front in West Bengal. There are three PSP members in the 142-strong ruling united front in the Assembly having a total strength of 280. So here again the ruling front would be reduced to minority if these 3 PSP members resign from the front. But as in Kerala they might decide not to be a party to oust the Ajoy Mukherjee Government and perhaps the 3 members will not even accept the directive of the national executive. In Bihar the exit of the 12 PSP members would not immediately affect the strength of the ruling PVD (Progressive Vidayak Dal) and the prospects are that the majority of the 12 PSP members might not accept the national executive directive. We are thus, at the moment, facing a very fluid situation in a number of States.

--Rohit Dave

THE political situation in a number of States has again become fluid and charges are being levelled against the Congress (R) that it is mainly responsible for the unstable situation. The accusation is that the Congress (R) is using its resources in order to encourage defections from other parties and that this is the main reason why the Governments in these States have become unstable. There could be some justification in this accusation. Today all the political parties are trying to muster maximum strength under their banner and the Congress (R) is not an exception. The other parties are more vulnerable than the Congress (R) because of the massive support the Congress (R) had received in the mid-term Lok Sabha elections. This has created a situation in which aspirants to political power are rethinking on their political allegiance and they seem to be weighing whether it is not in their personal interest to flock around the Congress (R) flag.

The main sufferer is the Congress (O) in Gujarat. The tempo of walk-outs from the Congress (O) has picked up. It is doubtful whether one could solely blame the Congress (R) for this phenomenon. The Bombay session of the AICC (O) gave the impression that the leaders of that party were not united and that there was hardly anything like the High Command of the Congress (O). The younger members of this party should be excused under the circumstances if they try to re-assess the situation and to determine where their political interest lay. In fact, there are indications that the Congress (R) is embarrassed at the sudden rise in the number of aspirants wishing to join that party. This has divided the Congress (R) leadership too. There is a section which wants to welcome those who want to join the party whereas the other section is opposed to it. While the debate is going on ideological lines the real conflict is among the leaders at the State level for gaining power.

An interesting development in this controversy is that the Congress (O) chief in Gujarat, Mr Vajubhai Shah, is reported to have told newsmen in Ahmedabad that the members of the Congress (O) were justified in transferring their loyalty to the Congress (R) because the two parties subscribed to the same ideology and programme. It is difficult to accept that this was all along the view of the GPCC (O) or its chief. Mr Vajubhai Shah's statement seems to support the view that the Congress (O) leaders and workers are developing cold feet in the States where elections are imminent. Unless this defeatist mentality is radically changed, the credibility of the

CEYLON

Insurrection hits exports

COLOMBO.

CEYLON'S economy, mainly based on three primary export products—tea, rubber and coconut—is too frail to withstand the burden of her social welfare measures, unknown in any other developing country. The heavily subsidised rice ration, free health service and free education up to the university stage are, by themselves, far too heavy social obligations for her to undertake in her parlous financial position. And the recent armed insurrection, now brought under control, has made the position still worse. Dr N. M. Perera, the Trotskyite Minister of Finance, has remarked that the rebellion has put Ceylon's economic clock back by a decade. The genesis of the revolt being, at least partly, poverty and unemployment, the socio-economic tensions are bound to steeply increase in the near future, with unforeseeable consequences. The left United Front of Mrs Sirimavo Bandaranaike, which has yet to fulfil most of its election pledges to give a fair and square deal to the poor, is thus facing its biggest challenge ever.

The Government is now busy assessing the damage wrought to public property by the insurrection. Damage to telecommunication equipment, the special target of rebel attacks, runs to nearly Rs 7 million, excluding loss of revenue due to disruption of postal and telegraph services. The transport services, which were the next worst hit, have suffered a loss of another Rs 5 million. The serious damage to power equipment, government buildings, bridges, culverts and roads will run into several millions. As Mrs Bandaranaike has pointed out, these would mean the diversion of millions of rupees from development to merely restoring what has been wantonly damaged.

Fortunately, the super-grade teas, grown in the central high hills by the plantation labour of Indian origin which was not involved in the armed uprising, had not been much affected. The loss has been mainly due to the shortfall in production following curfew restrictions and not because of disruption of work or damage to bushes by insurgent activity. Efforts are now being made to make good the loss. But the mid and low grown teas and rubber production have suffered heavily. According to Government estimates, production of 60 million pounds of low and medium teas and 40 million pounds of rubber had been affected, involving a foreign exchange loss of about Rs 200 million. The tourist trade has also suffered a severe setback. Cancellation of off-season booking for the April-October period, because of unsettled conditions in the island, has cost the Government nearly Rs 10 million in foreign exchange.

The ILO employment mission, which left the island towards the end of the last

month after a six-week preliminary field-work, has presented an ominous picture of the situation. Its leader, Professor Dudley Seers, of Britain, has warned that public and private spending should be channelised into productive investments by cutting down luxuries. In his view, Ceylon's balance of payments crisis is the worst ever and the present acute phase is merely the culmination of a chronic disease.

The left-of-centre posture of Mrs Bandaranaike, both in the international sphere and on the domestic front alienated, to a certain extent, the sympathies of the West. The granting of full diplomatic recognition to North Korea, North Vietnam and East Germany, the closure of the Israeli legation, expulsion of the US Peace Corps and the Asia Foundation, and nationalisation of the bunkering trade (the "last foothold" of the Western oil interests), were some of the measures that had irked the US, the UK and West Germany. But in the hour of crisis, Britain and the United States, along with Russia, India, the UAR and Yugoslavia, rushed in aid to quell the rebellion.

The operations against the insurgents alone cost the Government, on a conservative estimate, nearly half a million rupees a day. In spite of help from friendly countries, in the long run the island has to be self-reliant in equipping its armed forces with modern weapons to meet any further threats to its security. But this might mean the diversion of nearly one-third of Ceylon's revenue, which will sharpen the recurring foreign exchange crisis and further debilitate her economy. The imperative need is for the Government to bring in a new sense of urgency in dealing with the formidable socio-economic problems which should rekindle the younger generation's faith in the democratic system before it is shaken beyond repair. □

BURMA

Faith in farmers' co-operatives

RANGOON.

BURMA'S first four-year agricultural plan, covering 1971-72 to 1974-75, is a good example of an exercise in hope. It envisages a 16 per cent increase (by value) in agricultural output over that of the current year 1970-71, or an average annual increase of 4 per cent. But considering that agricultural output, calculated at 1964-65 prices, increased by only 25 per cent during the 8 years 1961-62 to 1969-70, or only by 3.1 per cent annually on the average, despite massive investments in agriculture by the Government through these years, the tar-

geted 4 per cent increase seems a bit on the high side.

But the Government hopes to achieve this target through well-defined means—extension of the cultivated area, crop diversification, multiple cropping, modern techniques, and agricultural co-operation. Of these, the greatest emphasis is placed on the last. The plan provides for expansion of the cultivated acreage by clearing 33,000 acres of virgin land, reclaiming 671,000 acres of fallow land, and irrigating 194,000 more acres of already cultivated land. All these tasks will be undertaken, not by individual farmers or the Government, but by farmers' co-operatives formed in the countryside. The Government will help the co-operatives with loans and with the supply of needed equipment such as tractors, motor trucks and water pumps.

As there is little prospect of Burma's rice exports increasing in the immediate future, the plan keeps the area under rice unchanged at the existing level of 12.4 million acres. But the acreages under eight chosen crops, namely, wheat, maize, groundnut, cotton, jute and three varieties of pulses and beans, will be increased. The aim is to secure crop diversification and thereby lessen the reliance on rice for export earnings, and also achieve self-sufficiency in industrial raw materials needed by indigenous industries. The planned acreage increases for each of these crops are as follows:

	1971-72	1974-75
Wheat	200,000	280,000
Maize	450,000	550,000
Groundnut	1,750,000	1,900,000
Cotton	550,000	650,000
Jute	210,000	510,000
Pulses and beans	430,000	495,000

Specific regions are prescribed for compulsory cultivation of each of these crops, for instance, the Irrawaddy Delta for jute (or rice) and Central Burma for cotton (or groundnut). Farmers are urged to stick to the crop or crops stipulated for their respective regions, in order that different crops are produced in the proportions planned. As an incentive, the official purchase prices of 12 different crops, including cotton, pulses and beans, have recently been raised. The revised prices are designed to ensure a close parity of income between farmers growing different crops.

The plan also calls for improving the per-acre yields of 20 selected crops through application of modern farming techniques and use of improved seeds and fertilisers. Double or multiple cropping is to be practised wherever possible. The Government will hire tractors to farmers so that ploughing of fields can be speeded up for timely cultivation of crops one after the other.

The success of the plan will therefore depend largely on the performance of these co-operatives. If (it is a big if) they are honest, competent and vigorous enough to inspire farmers to greater efforts than hitherto, the Government's hope of a 16 per cent rise in agricultural output can be realised. □

Sheaf of Gold

When the land yields richly, the Tamil farmer calls it 'Land that grows gold'. That is how they talk of fertile land on the banks of the Cauvery. In recent years, the soubriquet has extended to many areas; even districts known in Gazetteers as 'famine areas' have produced more cobs to the sheaf each a sheaf of gold. Whether it is due to better seeds or more fertilisers, whether it is the result of more pumps or improved

methods, the fact is that we have pulled through two drought years to produce record yield of food-grains.

Call it the green revolution or not . . . the grain harvested last year adds up to over 100 million tonnes — double of what we produced in 1950.

As we press forward, applying science to the betterment of man, we know that

IT IS A BETTER TODAY
WHICH WILL LEAD TO
A STILL BETTER TOMORROW

BUSINESS REPORT

From Our Own Correspondents

COTTON TEXTILES

Meeting international competition

BOMBAY

THE outgoing chairman of the Indian Cotton Mills Federation, Mr Radhakrishna R. Ruia, did not turn emotional at last week's meeting of the federation, on the issue of the British levy of 15 per cent on imports of Indian cotton textiles from next year. At the meeting he expressed his full support to the efforts of the Government of India to settle this question. But even when expressing regret over the proposed action of the British Government which would cause great damage to our textile exports and to the economy of those mills which are specially equipped to cater to the UK market, Mr Ruia preferred to discuss exports to the UK in the broader context of the rising costs of production which are making it more and more difficult for the industry to meet the international competition both in regard to price and quality. In other words, he chose to go with the Foreign Trade Minister, Mr I. N. Mishra's contention that what the UK textile levy called for was remedial measures rather than retaliatory action.

As both Mr Mishra and Mr Ruia have emphasised, the basic issue is that the Indian textile industry should be able to maintain its exports, if not increase them, without props like special preference or quota arrangements. Its competitiveness has to be improved. This calls for modernisation of the industry and, more important, measures for increasing cotton production within the country. Mr Ruia expressed his dismay that in both these directions we have made very little progress. The industry should, therefore, draw some comforts from the recent announcements by Mr Mishra in Parliament that the scheme for the import of machinery for modernisation of textile mills had been cleared by the Government and that it has accepted in principle the co-ordinated Rs 21-crore crash programme for raising the per acre yield of cotton. But as Mr Ruia has said, it is important that the cotton development scheme is launched from the next season itself and that efforts are not wholly concentrated on long-staple varieties to the exclusion of medium- and short-staple varieties. Our exports of cotton textiles are mainly of goods produced from medium- and short-staple cottons and this is why considerable encouragement will have to be given for research that helps improve the productivity and quality of these varieties.

Apart from the problem of modernisation and cotton production, it was natural for Mr Ruia to discuss the problems of the industry relating to controlled cloth, production of man-made fibres and credit squeeze. He reiterated the plea of the industry that the prices of controlled cloth should be increased and cited in support the report of the Ramachandran Committee which had said that the price of

controlled cloth does not even cover the cost of cotton consumed in its production. This, in a way, has been recognised by the Government itself since controlled cloth is subsidised though the funds for it might be coming from the industry itself. Mr Ruia's contention is that the industry could well crumble under the weight of the subsidy it has to meet. It is unlikely, however, that the Government will change its attitude until it has had the report of the Bureau of Industrial Costs and Prices on production cost in the industry.

As regards man-made fibres, it was pointed out that the demand for them is on the increase and that there is immense scope for exporting mixed and blended fabrics to Asian and African markets. Obviously, Mr Ruia was not satisfied with the pace of development of the man-made fibres industry and suggested that an evaluation be made of the progress made so far by various projects sanctioned for this purpose, including those for the manufacture of basic raw materials. Such an assessment, in his opinion, would pinpoint the measures to be taken for quickening their growth.

It is Mr Ruia's contention that the credit squeeze has led to a fall in production of both yarn and cloth. In the first four months of this year the drop was of 11.3 per cent and 6.6 per cent respectively as compared with the corresponding period of 1970. While agreeing that the shortage and the consequent prohibitively high costs of cotton, was one of the factors leading to this decline, Mr Ruia asserted that the other major factor was the lack of finance. If this be true, the monetary authorities certainly need to look into the credit needs of the industry and cotton trade (See also *Export Angle*). □

POWER

Load shedding hits industries

CALCUTTA.

RIGHT now West Bengal is passing through a serious power crisis. The industrial region of Calcutta and its neighbourhood has been the worst hit. Load shedding at the power houses takes place almost every day with the result that both domestic and industrial consumers have to put up with frequent failures of electricity. Needless to say that industrial production in the State is being very badly affected.

The jute industry, in particular, is getting worried that not only is it not able to maintain production on account of the power shortage, but regular lay-offs of workers during power-shedding periods are leading to needless labour-management

tensions. The industry has urged the convening of a high-powered meeting of the representatives of the Central and State Governments, those of the power generation and distribution agencies and of the industry to find a way out of the crisis. So far no such meeting has been convened, but the generating agencies explain that most of the trouble is due to the attitude of a section of their employees which has hindered generation and distribution work. Sudden power failures lend credence to this view, but this cannot be the only cause.

There are at least three other reasons for the current power crisis in the State. First, the power station run by the Durgapur Project Ltd has been working much below its rated capacity for the past two years owing to trouble in the pulveriser mills and the ashing system of the boiler unit. This, a large thermal power station, is designed to supply an appreciable part of West Bengal's power needs. Second, there has been a sudden breakdown of another unit of the State Electricity Board's Bandel power station; in other words, this power station has only two of the four units working, and any material improvement in West Bengal's power supply position will come only when at least one of the Bandel units is recommissioned. Third, the construction schedule of the Santaldih power station designed to be the largest single power unit in the State, has been badly delayed, and there is no prospect of any electricity from this source during the Fourth Plan period.

These three factors suggest that power shortage in the State will not be temporary, but may actually worsen if the units concerned do not work to full capacity, and the act of sabotaging power transmission lines continue unchecked. Perhaps because of the overpowering evacuee problem and internal tensions within the Ministry, the Government of West Bengal has not yet realised the gravity of the crisis that has come.

While the infrastructure has thus weakened, the State Ministry has been pressing the Central Government to treat West Bengal as a special case for the purpose of grants-in-aid, and at the same time, initiate the process of another massive dose of investment in a new refinery, in a shipyard and if possible through expansion of Durgapur steel plant, so that investor confidence as a whole could quickly revive. Indications are that New Delhi is not unresponsive, although circumstances like the Bangla Desh affair are making things difficult. □

IMPORT COSTS

Tears shed over Indian onions

COLOMBO.

CEYLON has run into an acute shortage of onions, an ingredient of the daily diet of the Ceylonese, and if the Ministry of Internal and Foreign Trade is to be believed, it is all the fault of India. A re-

cent communique of the Ministry has alleged that India is attempting to do arm-twisting by jacking up prices of Bombay (big) and red (small) onions. The long communique announced a ban on import of Bombay (big) onions with immediate effect and also the Government's decision not to import red onions if they are not available at (Indian) Rs 350 per ton or lower. Discreetly burying the fact that the decision had been taken in view of the acute foreign exchange difficulty, the communique accused the National Agricultural Co-operative Marketing Federation of India (Nafed), which has been given since March last the monopoly of onion exports to Ceylon, of deliberately jacking up the export prices to more than the double quoted by the Indian private trade.

Ceylon used to import annually from India about 70,000 tons of Bombay onions and 12,000 tons of red onions at a cost of Rs 35 million. The prices used to fluctuate widely as is normally the case with all seasonal products. India was holding monopoly of export of onions to Ceylon in view of proximity and low price level. The Ministry of Foreign Trade has alleged that on taking over onion exports to Ceylon, Nafed has quoted Rs 420 per ton for Bombay onions against private trade's offer of about Rs 330, and Rs 470 for red onions which is more than double the price quoted by the private trade. The Ceylon Government has also protested to India against the canalisation of the export of onions through Nafed. The Ceylon Government feels that the move is discriminatory as Nafed handles onion trade with Ceylon only.

The Ceylonese press and radio gave wide publicity to the communique and some of the newspapers even ran editorials accusing India of arm-twisting. In a press interview, Mr T B Ilangaratne, Minister of Internal and Foreign Trade, did not mince words and accused India of following a "discriminatory policy" towards Ceylon. "It appears Indians are ganging up against us. What is most intriguing is the fact that the increased prices applied only to Ceylon. I cannot understand this. Why discriminate against us?" he is reported to have told an evening daily in an "angry" mood.

But inquiries made with the Indian High Commission give a different picture of the whole story. It appears that the Ceylon Government had taken a decision early this year not to import any Bombay onions from India in view of the foreign exchange crisis and that the price factor has nothing to do with the decision to ban onion imports. When a representative of Nafed was here in April to negotiate the price, the Ceylon Government did not show any inclination to discuss the issue in view of the earlier Cabinet decision not to import onions. It is also gathered that higher prices quoted by Nafed were because of the fact that it is a lean season now in India for onion production. It has not been unusual in the past for Ceylon to purchase Indian onions at prices quoted by Nafed or even more during the lean period. It appears that Singapore and Malaysia who also import onions from India, though not in such large quantities like Ceylon, are paying higher prices than

Credit policy and textile mills

MR Radhakrishna R Ruia, outgoing Chairman of the Indian Cotton Mills' Federation, says that the acute scarcity of bank credit and high interest rates and the non-availability of credit either from banks or from traditional trade sources has forced many mills to sell away their production at throw-away prices. The policy of dear money and scarcer credit, according to Mr Ruia, is being overdone. It is hurting production and adding to the cost. The production of both yarn and cloth in the first four months of this year has fallen by 11.3 per cent and 6.6 per cent respectively compared with the corresponding period of 1970 mainly due to paucity of finance and shortage of cotton. Monetary authorities in the country should, therefore, modify the credit control so that production and employment are not affected adversely. (See also Business Report)

West Bengal's problems

MR P Goenka, President, Indian Chamber of Commerce, Calcutta, says that the continuous weakening of West Bengal's economy poses a grave threat to the development of the entire eastern region. As a first step to revive the economy of the region, the law and order problem in West Bengal has to be tackled. It is not possible to run industries in West Bengal in a climate of fear and insecurity. Coupled with this is the gigantic problem of refugees the State is facing at present. If the refugee problem is not tackled immediately it will directly encourage the anti-social elements to take advantage of the situation. Mr Goenka feels it is also necessary to set up a petrochemical complex, a ship-building yard and a free trade zone at Haldia. In order to revive confidence, the public sector should take a lead with large-scale investments in the State. Both the reluctance of the financial institutions to invest funds in the State and the licensing restrictions of the Centre are discouraging investors from setting up industries in the State.

Financing tea industry

Mr Bhagwandas Daga, Chairman, Indian Tea Planters' Association, says that the tea industry is concerned over the fact that the Government is not inclined to accept the recommendation of the Borooah Committee for setting up a Tea Board Guarantee Fund and provide depreciation allowance for the industry. The steady erosion of the profitability of the industry with a concomitant upward rise in the expenditure on various development schemes has resulted in an unprecedented inadequacy of finance. Hence, the industry needs both long-term and short-term loans from commercial banks for the operation of its development schemes. As banks are not will-

BUSINESS OPINION

ing to accommodate such finance without any tangible and safe guarantee, the Tea Board should provide the necessary guarantee for loans.

Freight on ores

The Federation of Indian Mineral Industries New Delhi, says that the proposed increase in railway freight rates on minerals is bound to push up the f.o.b. cost and affect the export of minerals considerably. The Railway budget has only exempted iron ore mined at Bailadilla and Kiriburu areas for export from the proposed increase in freight. But besides Bailadilla and Kiriburu, iron ore is also mined in the Bihar-Orissa and Bellary-Hospet regions by private miners for export through the MMTC. No exemption has been granted to this ore in the proposed increase in railway freights. The manganese ore whose international market is precarious has also not been given any exemption despite a forceful plea for a reduction in freight rates by the working group set up by the Government of India.

Export duty on iron ores

The Goa Mineral Ore Exporters' Association, says that the Finance Ministry should consider the Association's suggestion for a complete abolition of export duties on iron ore. Export duties in the face of rising cost of production and sagging world prices act as a disincentive in expanding production and exports.

Power tariff

The Andhra Chamber of Commerce, Madras, says that the proposed 15 per cent increase in power tariff would nullify all efforts at growth by industry and trade. The higher tariff would affect considerably the cement, sugar, cotton and jute textiles industries and roller flour mills. The power rate hike would not only make inroads into the profits but also drive marginal units into heavy losses in view of the fact that the prices of some of end-products are fixed by the Government.

Clearing agents' rates

Mr Arvind N. Parikh, President, Bombay Custom House Clearing Agents' Association, says that the clearing and forwarding agents in Bombay would need a 60 per cent upward revision of service charges to cover their increased operational costs. This has been due to the introduction of the labour pool which has resulted in a doubling of wage bills. Besides, the transport costs have also gone up by about 30 per cent due to increased price of petrol.

the island. Even otherwise, onion prices in Ceylon are lower than in India.

It is strange that having stripped private traders (who incidentally were Indians) in the island of onion trade and entrusted it to a state trading body in last November, the Ceylon Government should resent the canalisation move by India. While it is understandable that the Government should find an excuse to tide over the public resentment over the acute onion shortage for nearly two months now, not many are happy with its efforts to make India a scapegoat. Even the timely military assistance India had offered Ceylon to combat the youth revolt at a cost of about Rs 50 million to the exchequer is being underrated by the anti-Indian lobby here as an inevitable course of action taken in India's own self-interest. □

BANKS

Deposits outpace credit

BOMBAY.

THE slack season in the second year of bank nationalisation presents a different picture from that of last year. Unlike last year deposit accretion has more than kept pace with credit expansion. During the period of one year ending June 4, while the credit expanded by Rs 532.69 crores, the deposit accretion has been almost twice as much at Rs 937 crores. During the corresponding period of 1969-70 it was the other way round with bank credit expanding by Rs 692 crores against a rise in deposits of only Rs 660 crores. This development is reflected in the credit-deposit ratio which at 77.23 per cent is much below the level of 80.79 per cent last year. In fact, the current level is even lower than that of 78.28 per cent two years ago when the ratio had started moving up with credit outpacing deposit accretion. The banks seem to be hopeful that they would be mobilising additional deposits of Rs 450 crores during the current slack season.

The credit expansion would have been even smaller but for the high food procurement. Advances on this account by the banks are estimated at about Rs 300 crores, which means an increase of Rs 100 crores over the earlier estimated requirement of Rs 200 crores. There has been a heavy unloading of foodgrains in Punjab. Early rains made the farmers nervous with the result that wheat which would have been normally lifted by private parties in the grain market has come to the official agencies. It is also stated that the procurement in UP, Gujarat and Rajasthan has been beyond expectations. All these purchases of wheat have come on top of a large rice procurement earlier.

Actually, according to banking sources, all the funds that are made available to various official agencies involved in food procurement do not get reflected in the data on bank credit. Besides the Food Corporation of India, the States utilise their own agencies for the purchase of foodgrains. Funds are made available to these agencies by the State Governments themselves which, in turn, may be depending on the Reserve Bank of India for the needed resources. Some informed

sources believe that a part of the rise in State overdrafts on the RBI may be traced to this factor.

Reportedly, the Reserve Bank and the Government have asked banks in the regions, where money has been pumped in for food procurement operations, to see that a sizable part of the disbursement made by the food procurement agencies comes back to the banking system. The Punjab farmer is said to be responding quite warmly to the proposal that he should deposit his surplus funds with the banks. This would be a healthy development if in the other parts of the country, too, the mobilisation of resources is on the same scale. That this is not so is apparent from the calculations that in the southern States deposit accretion is lagging behind credit expansion. There is a feeling among banking circles that the surplus funds with the agriculturists in these areas are finding an outlet elsewhere such as the purchase of gold and landed property or deposits with non-banking companies and firms. The latest trend is said to be for such surplus funds to be deposited with firms and not with non-banking companies.

This trend is not restricted to the southern States but is also noticeable in urban areas elsewhere in the country. What is of significance here is that in the case of the non-banking companies the Reserve Bank does exercise a control on the proportion of deposits to be accepted by them but there are no such regulations for firms. Data on such deposits are not available. Even in the case of non-banking companies the latest data published by the Reserve Bank relate to 1968 when deposits with them totalled Rs 478 crores as against Rs 430 crores in the preceding year.

The new element of large advances for food procurement robs, in the eyes of some financial circles, the credit-deposit ratio of the importance it commanded in the past as a norm of assessing discipline in the banking operation. Even though such advances may be of the order of 5 or 6 per cent of the total, the fact that these are advances to the Government gives them a different character from that of those made to the private sector. There is also the element of the shiftable credit which is not slated to grow on account of the new bill market scheme. The re-discounting with the RBI so far under the scheme has been of the order of Rs 17 crores. But the banks could have more bills which are eligible for re-discounting with the RBI. They might have even re-discounted some bills outside the RBI. This would be to the liking of the RBI since it means the furtherance of its objective that all possible resources be tapped by the banks and the RBI be approached only as the lender of the last resort. Now that the bills will not be taken into account in calculating the net liquidity ratio, the lendings of the banks under the scheme are expected to receive a further impetus. The suggestion is, therefore, being canvassed that the banks can utilise the surplus funds for the promotion of the bill market scheme and need not be disturbed if the RBI has not come out with the credit policy for the slack season. □

FUJI BANK

Preparing for growing Indo-Japanese ties

NEW DELHI.

THE shifting of the India office of Fuji Bank, Japan's largest commercial bank, from Calcutta to New Delhi last week follows, according to the bank itself, recognition by Japanese commercial circles of the immense possibilities for increased economic co-operation with this country. In fact, the economic relations between India and Japan have just entered a new phase which should witness a significant increase in their trade through many joint ventures. The ground for this has already been prepared by the recent visit to this country of a high level delegation of Mitsubishi, Japan's foremost industrial giant. Some deals were put through by the delegation, which will be multiplied in future; other leading Japanese industrial combines are also likely to follow suit.

The Japanese are now willing to come in as minority partners in joint ventures and export, if necessary, 100 per cent of the products of Indian units in which they will be collaborating. These conform to the Government of India's policy in regard to foreign collaboration and should, therefore, facilitate the establishment of numerous India-Japan industrial ventures.

This apart, a variety of developments both in this country and Japan during the past few years have contrived to make increased collaboration between them a necessity. It is acknowledged that among the developing countries India has laid the soundest industrial base and diversified her production to a much greater degree than the others as is evident from the wide range of industrial goods she is producing. Japan needs to import quite a number of these items for her own use as well as for supplying them to others as she herself, on account of labour shortage and rising wages, is giving up the manufacture of these. India is well-equipped to step into many of the areas of production that are being vacated by the Japanese. Thus imperceptibly a complementarity has developed between the economies of the two countries.

Foreseeing the ever-expanding volume of business that will take place between India and Japan, Fuji Bank has transferred its office to New Delhi from where it can function more effectively and cover the whole country more easily. Since the Japanese economy is largely dependent on foreign trade, foreign exchange transactions have all along been an important activity of Fuji Bank. Its New Delhi office will maintain liaison with Fuji's correspondent banks, advise local companies and Japanese firms operating in India and conduct research and analysis of economic and industrial developments and trends with a view to assisting its clients. It is a measure of the increasing importance that Fuji Bank attaches to India that its New Delhi office is one of its small number of eight overseas offices, the others being located at New York, Los Angeles, London, Dusseldorf, Hongkong, Seoul and Jakarta. □

Census 1971: State-wise data-3

Andhra Pradesh

By Commerce Research Bureau

ON April 1, 1971, Andhra Pradesh, with a population of 43.4 million, stood fifth among the 19 States of the Indian Union. In terms of geographical area also, Andhra Pradesh occupies the fifth place after Madhya Pradesh, Rajasthan, Maharashtra and Uttar Pradesh.

The density of population in the State, at 157 persons per sq km, continued to be lower than the average density of India (182 persons per sq km). As regards the growth rate of population, Andhra Pradesh is one of the exceptions to the general hypothesis that low-density areas have high growth rates and *vice versa*. Thus, Andhra Pradesh had a density of population below the country's average in 1961; yet the growth rate of its population (20.6 per cent) was also lower than the all-India average (24.6 per cent). In respect of literacy, though the State has improved its rate from 21.2 per cent in 1961 to 24.6 per cent in 1971, it lagged behind the country as a whole, whose rate has been placed at 29.4 per cent.

Among the 21 districts of the State, the East Godavari district in the fertile delta of the Godavari river along coastal Andhra, ranked first in population, while Adilabad in Telengana, with its sandy soils, stood last. The Guntur district, which occupied the first rank in 1961, stood second. This shift in the rank of Guntur was due to the fact that a part of this district was carved out recently to form the new district of Ongole. As for the density of population, all the districts situated in the fertile delta of coastal Andhra are more thickly populated than the State average.

Expectedly, Hyderabad is the most densely populated district of the State followed by West Godavari, Krishna, East Godavari and Srikakulam. Adilabad, at the other end, is the most thinly populated district. During 1961-71, on account of expanding industrial activities, Hyderabad district registered the highest increase in population (35.2 per cent). Other fast-growing districts are Khammam, Nizamabad, Adilabad and Kurnool. These had a low density as compared with the State average in 1961. Srikakulam recorded the lowest growth rate (13.7 per cent). In the State, only in Srikakulam females outnumbered males—1,024 females per 1,000 males. This is perhaps due to the considerable migration of male population in search of employment.

In the State, there are 13 cities with a population of more than one lakh. Together, these cities alone account for 9 per cent of the total population of the State. These cities are Hyderabad, Visakhapatnam, Vijayawada, Guntur, Warangal, Rajahmundry (West Godavari), Kakinada (East Godavari), Kurnool, Nellore, Eluru (West Godavari), Nizamabad, Machilipatnam (Krishna) and Tenali (Guntur). Of these Nizamabad and Tenali are the new entrants: they crossed the one-lakh-population mark in the 1971 census count. The Hyderabad urban agglomeration occupies the fifth place among the nine metropolitan cities of India. The fastest growing city in the State is Visakhapatnam.

Money

earns good, safe interest in a Lombard Bank Deposit Account

A Bank Deposit Account with Lombard provides a good rate of interest, with complete safety for your capital—leading to financial peace of mind.

7%

Deposits at 6 months' notice of withdrawal can earn 7% interest per annum, but you can withdraw up to £100 on demand during each calendar year. Interest is paid half-yearly without deduction of U.K. tax.

TIME DEPOSIT ACCOUNTS: Deposits of £5,000 and over can earn higher rates of interest for fixed periods. Details are available on request.

Lombard is a member of the National Westminster Bank Group whose Capital and Reserves exceed £329,000,000.

Opening an Account is simplicity itself, so write now to the General Manager for further details and a copy of Deposit Account Booklet No. AO. 91.

EXPORT ANGLE

By Stevedore

UK levy

THE British Government's decision to impose a 15 per cent duty on imports of cotton textiles from this country from January 1, 1972 has evoked strong protests from members of Parliament. This is natural, and both Government and industry have been pointing out for some time to the British Government that this decision will harm India. Mr I. N. Mishra, Minister of Foreign Trade, told Parliament recently that he had strongly impressed upon the British Government that its proposal was discriminatory, unequal and has been taken unilaterally and must be reversed. It would have an adverse impact on India's exports of cotton textiles to the UK without providing the expected protection to the British textile industry.

Broader issues apart, the fact remains that even during 1970 we suffered a set-back to exports of piecegoods to the UK even though total exports of mill-made cotton goods in 1970 reached a new record figure of \$148.83 million (Rs 111.62 crores). This exceeded the previous year's performance by \$8.54 million or 6 per cent. The pace of growth, however, was distinctly slower than in the previous year when it was 10.2 per cent. It was also below the Fourth Plan export target of an annual growth of 7 per cent.

A region-wise analysis of piecegoods exports shows that there was a big fall in the share of Europe, which came down to 37.1 per cent from 47.3 per cent in 1969. In terms of quantity, the figure dropped from 197.92 million square metres to 149.91 million square metres. This decline was mainly on account of the very poor offtake by the UK which absorbed only 58.58 million square metres against 113.12 million square metres in the preceding year. Normally, more than half of our piecegoods exports to Europe used to be accounted for by the UK. Even in 1969, which by no means was a good year, that market's share was 57.2 per cent, but in 1970 it dropped to as low as 37.1 per cent. It is against this background that the fears expressed about the likely adverse impact of the 15 per cent import duty have to be appreciated.

Even otherwise, in terms of quantity, exports of both mill-made cloth and yarn were lower in 1970 than in 1969. Cloth shipments are placed at 403.16 million metres against 418.50 million metres in 1969 and of yarn at 30.41 million kg against 33.07 million kg in 1969. The unit values realised were, however, higher. And consequently foreign exchange earnings of mill-made cloth totalled \$84.78 million in 1970 compared to \$84.04 million in 1969; similarly in the case of yarn we earned \$35.64 million in 1970 and only \$31.66 million in 1969. Apparels and hosiery brought in \$8.67 million (\$6.16 million) and other cotton goods \$19.74 million (\$18.33 million). If exports of handloom manufactures are also taken into account, our foreign exchange earnings from all items totalled

\$164.65 million (Rs 123.5 crores) against \$155.34 million (Rs 116.5 crores) in 1969. □

Set-back for tea

IT is not only in the case of cloth that the share of the UK is going down. The same is the case with tea also which has shown a drop of 16 per cent over the last few years. Official sources have listed a number of causes leading to this decline. First, Ceylon and Africa have made inroads into the UK market at our cost, and the share of African tea in the British market has moved up from 4.6 per cent in 1940 to 21.3 per cent in 1970. African tea is cheaper than our tea. Internal consumption of this commodity in East African countries is low and it is suggested that these countries do not mind exporting even at a lower price. Further, the production of tea in East Africa is year round, unlike seasonal in our country, and this gives a certain advantage to the East African countries. Obviously, the greatest advantage the African countries enjoy is the lower cost of production compared to that in our country and unless the Gov-

ernment and industry tackle this vital issue it is unlikely that we can reverse the trend that has set in. □

A good start

ENGINEERING goods are off to a good start. In April, the first month of the current financial year, exports totalled Rs 12.25 crores against Rs 8.6 crores during the corresponding month of 1970. If this pace is kept up during the subsequent months it should not be difficult to reach the goal of Rs 165 crores fixed for 1971-72. In 1970-71 our total exports of engineering goods were of the order of Rs 115.20 crores. The Chairman of the Engineering Export Promotion Council, Mr Raunaq Singh, has, however, drawn attention to a number of problems currently being faced by the industry. These relate to shortage of steel, shipping space, freight, delay in fixation of drawback rates, settlement of drawback claims and delay in the sanction of application for expansion and diversification of production. He has expressed the hope that these problems would be resolved by the Government. □

What India can sell

THE Directorate of Commercial Publicity in the Ministry of Foreign Trade has issued a further list of global tenders. The Purchasing authorities, the items required and the closing dates of these tenders are as follows:

Burma

The Director, Myanma Bawdwin Corporation, 104 Strand Road, Rangoon, Carbid lamps; tyre wheels; June 30, 1971; utility air hoist, air compressor and rod mill and accessories, June 25, 1971.

The Ceramic Industry Management Committee, Strand Road, Rangoon; V belts; June 30, 1971.

The Myanma Oil Corporation, Rangoon; Lubricating oils and greases; marine fuel oil; June 30, 1971; crude oil changing pump; July 31, 1971.

The Chief Engineering, Irrigation Department, 9/21 Strand Road, Rangoon; Dump buckets, tilting carts, trailing low loader etc; July 15, 1971.

The People's Pearl and Fishery Board, Rangoon, Rubber hose, hose clips, steel bolts and nuts, water piping PVC, paint brushes, oil syringe pressure gauge etc; July 6, 1971.

The Director, Myanma Bawdwin Corporation, Rangoon; One complete unit of hydrocone crusher; June 25, 1971.

Asbestos Cement Sheet Plant Rangoon; MS. Angles, June 30, 1971.

Ceylon

Supplies Officer, Ceylon Steel Corporation, Colombo, Wire drawing machines; July 1, 1971.

Iran

Tehran Regional Electric Company, Tehran; 230 kv transmission system; No closing date mentioned.

National Iranian Steel Mill Company, Tehran; Carrier equipment and installation; July 28, 1971.

The Iran Tobacco Company, Tehran; Kraft paper and neo-kraft bobbin paper; August 3, 1971.

Iraq

Ministry of Oil and Mineral Oil Refineries Administration, Baghdad; Sulphur recovery plant; June 29, 1971.

Directorate of Contracts and Purchase, Ministry of Defence, Baghdad, Carpenter's tool kit, tool kit for electricians, tool kit for black smith; June 27, 1971; tool kit for shoe maker, tool kit for armament artificers instruments; 15,000 yards hemp mattress; steel helmets and blue flame kerosene heaters with extra wicks; June 30, 1971.

South Vietnam

Industrial Development Centre, 40-42 Nguyen Hue Blvd, Saigon, Fish netting machines; June 26, 1971.

Sudan

The Sudan Tea Co Ltd, P.O. Box 1219, Khartoum; Black tea, July 6, 1971.

UAR

Messrs Mitr Beida Dyers, Beida Work, Alexandria, Centre swinging hydroextractor machine; July 17, 1971.

Uruguay

The Uruguayan Electricity and Telephone Authority; Monophase transformers; July 9, 1971; monophase control meters; August 10, 1971; main telephone cable; July 21, 1971 and electricity meters; July 20, 1971.

Exporters may obtain the tender documents from the purchasing authorities of the respective countries. Further details about these overseas contracts can be had from the Indian Export Service Bulletin dated June 3, 1971, issued by the Directorate of Commercial Publicity in the Ministry of Foreign Trade, Udyog Bhavan, New Delhi.

**'A GUIDE TO
COMPANIES ACT'**

SIXTH EDITION
By A. Ramalya

The chief merit of this book is its usefulness
from a practical point of view.

The provisions of the sections are explained
in a clear and lucid manner. Helpful notes
explaining the amendments are given. The
author has expressed his views on some
provisions on which there has not been
adequate judicial or departmental interpre-
tation.

In this edition he has made further thought-
provoking comments on matters of frequent
reference and explained doubts hitherto
not noted seriously.

The case law is revised up-to-date.

The relevant rules and forms as well as those
relating to Managing Agents and Secretaries
have been printed in full.

A book that should be on the table of every
Company Executive, Chartered Accountant
and Company Advocate.

Over 1,200 pages.

Place your order immediately.

PRICE: Rs. 50/- postage extra.

Pre-Pub Price: Rs. 45/- open till 15-7-71.

—A SURVEY

The age of polymers

THE plastics industry saw its beginnings in countries with a fully developed chemical industry. In 1924, world production amounted to about 60,000 tonnes. In the thirties and forties, the three bulk materials namely, polyvinyl chloride (PVC), polystyrene and polyethylene, were developed to the stage of marketability, and after the Second War world production of plastics rose rapidly. It was barely 12 million tonnes in 1949 in 1970 the production amounted to 30 million tonnes. The phenomenal growth of plastics production and the anticipated increase in the world and in countries such as the US, Japan, the UK and West Europe are given in table 1.

Table 1: World production of plastics ('000 tons)

Year	World	Japan	USA	UK	Western Europe
1955	3,300	114	1,700	324	NA
1960	6,900	557	2,058	650	NA
1965	14,500	1,601	4,990	942	5,170
1970	30,000	4,195*	9,090	1,473	11,000
1975	53,500	NA	14,159	NA	NA
1980	92,000	NA	21,000	NA	33,000

* Actual production in 1969.

Even though India began evincing interest in plastics immediately following the Second War, it was only during the fifties that the Indian plastics industry got its start. As a matter of fact, the real shot in the arm to the industry was provided only a decade hence, when the two petrochemical complexes were built. Although the plastics industry has still some way to go before it can depend on petrochemicals for most of its base materials, the progress

made by the industry even with the restraint on raw material availability pinpoints its growth potential. Table 2 gives the figures of production and consumption during the period 1961 to 1969.

Table 2: Production and consumption of plastics in India

Year	Production (in tons)	Production index	Consumption (production and imports) in tons	Consumption index
1961	11,000	100	37,000	100
1962	21,500	154	41,000	111
1963	25,000	179	34,200	92
1964	28,400	203	41,700	121
1965	42,300	302	56,900	154
1966	39,000	270	50,800	137
1967	36,300	259	65,200	176
1968	62,700	448	108,500	280
1969 (Estimated)	98,500	704	115,000	311

The plastics panel of the Development Council for the Organic Chemical Industries has estimated the requirement of plastics at 224,000 tonnes by the end of the Fourth Plan and 455,000 tonnes by the end of the Fifth Plan. Table 3 gives the breakdown of the main plastics.

It is obvious that in order to be able to meet these requirements, we will need a doubling of the present capacity by 1973-74 and a further doubling of these increased capacities by the end of the Fourth Plan. Various views have been expressed in regard to the level of investment required to establish the new capacities. The Union Foreign Trade Minister, Mr L. N. Mishra,

Major manufacturers

for example, indicated recently a planned investment of Rs 350 crores by the end of the Fourth Five-Year Plan in plastics and its chemical feedstock. This presumably includes the investment on Gujarat Petrochemicals. Apart from the fact that the actual position of Gujarat Petrochemicals is still uncertain, it would not be appropriate to take full account of the investment on a petrochemicals plant in estimating the investment required for plastics. Thus viewed, the various estimates of investment in the plastics industry up to the end of the Fifth Plan range between Rs 300 crores and Rs 400 crores for both the raw materials and processing sectors. Official quarters seem to be very optimistic about the emergence of a situation of abundance of raw materials by the end of the Fourth Plan. But distinguished experts such as Dr C. J. Dadachanji of the National Organic Chemical Industries would insist that besides the Rs 400-crore investment, considerable capital would be required for the production of hydrocarbon base materials, any slackening in the tempo of which

Table 3: Requirements of plastics under Fourth and Fifth Plans

	1973-74 Estimated requirements (tonne per annum)	1978-79 Estimated requirements (tonne per annum)
Polystyrene	35,000	70,000
Low-Density polyethylene	72,000	150,000
High-Density polyethylene	30,000	45,000
Polyvinyl chloride	80,000	175,000
Polypropylene	7,000	15,000
Total	224,000	455,000

would plague the downstream or consumer plants including plastics manufacturers with severe shortages of base materials.

Nevertheless, there is no gainsaying that the conversion industry must receive concentrated attention. There has been a welcome growth in recent days in certain conversion units such as PVC footwear. There is need to accomplish similar growth in other sectors such as in plastic pipes, carboys and containers, as also in a variety of packaging requirements. In fact two of the biggest growth areas of the present times are construction and packaging. Progress in these fields pre-supposes the development of technological know-how and skills which, by the very nature of the industry, small-sector oriented as it is, means that the technical skills will have to percolate right up to the small-town labour force.

It is in this context that the Central Institute of Plastics Engineering and Tools, set up in the Guindy Industrial Estate in Madras with the assistance of the United Nations Development Programme assumes importance. At this institute, set up at a cost of Rs 125 crores, training is imparted to personnel sponsored by the industry, especially the small-scale ones, on cover mould making, mould design, mould polishing, machine setting, etc. This institute can take 80 students at a time, and a time will come soon when there will be need for more such institutes in various parts of the country. For, on the growth of the conversion industry will depend the magnitude of the role plastics can play in the economy of a country such as India

with its vast manpower resources. It is estimated that, while an investment of Rs 100 crores in plastic resins production can provide employment to some 500 to 600 persons, a similar investment in the conversion sector would generate employment for as many as 60,000 persons. Hence the Government's anxiety to encourage the development of plastics conversion units, and appropriately efforts are being made to set up 600 automatic injection moulding machines with capacities varying from 50 to 300 grammes, 900 extruders, 60 blow moulding machines, 5 calendars and 15 coating machines.

The potential of the plastics industry is obvious if we note that even by 1980, with the estimated investment taking place and coming to fruition, the per

capita annual consumption of plastics in India would be less than 1 kg against the current per capita consumption of 35 kg in the US and 30 kg in Japan. Besides, exports of plastics and plastic products rose from a mere Rs 1.05 crores worth in 1962-63 to an estimated Rs 8.73 crores in 1969-70 showing a compound annual rate of growth of 35.3 per cent as against the 10.2 per cent growth rate in India's total exports. There is vast scope still for further expansion of exports particularly of manufactured goods of the labour-intensive variety, which will obviously have a competitive advantage in the world markets because of the lower labour rates prevailing here. Indeed, larger exports are an imperative for the industry itself whose expansion calls for substantial foreign exchange resources.

PLASTICS IN INDIA

THE beginnings of the plastics industry in India date back to the post-second war period, when it emerged as a processing industry based on imported raw materials. From small injection mouldings for toys and housewares, the industry marched slowly towards polyethylene film blowing and PVC cable extrusion and spread coating, still based on imported polymers and compounds.

The first basic material, phenol-formaldehyde resin, was produced in India in 1946. As demand grew for polystyrene injection mouldings and polyethylene layflat film, investment in polymer manufacture became imperative, and the country's first polystyrene unit, with a capacity of 2,700 tonnes per annum using imported styrene monomer, was commissioned in 1957. Styrene monomer itself was made about three years later, using fermentation alcohol and coal-tar benzene as feedstock.

Two units for low-density polyethylene, with capacities of 3,600 and 2,250 tonnes, also based on ethylene obtained from alcohol, started production in 1958 and 1960 respectively.

Polyvinyl chloride (PVC) was made for the first time in 1961 with the commissioning of a 3,500-tonne capacity plant, employing carbide-based acetylene.

Since then all these plants have expanded their capacities, even as new units have been set up. The installed capacity for the main plastics at present are as follows:

Present installed capacity

Material	Capacity (tonnes per annum)	Number of plants
Polystyrene	17,500	2
High-density polyethylene	24,000	1
Low-density polyethylene	16,000	2
PVC	45,000	4
Total	102,000	9

The base material for most of the plants in the earlier stages were, and to some extent still are, ethylene derived from alcohol, acetylene made

from calcium carbide, and benzene as a by-product of the steel industry's coke ovens. But with the setting up in the mid-sixties of the two giant petrochemical complexes with a combined ethylene output of 80,000 tonnes per annum, the plastics industry is veering towards the use of petrochemical derived ethylene, benzene, naphtha and vinyl chloride.

An idea of the rapid growth of the industry can be had from a comparison of the index of production for plastics and resins with the indices for industry in general and for chemicals and chemical products:

Index of industrial production
(Base: 1960 = 100)

Year	General index	Chemicals and chemical products	Plastics and resins
1960	100.0	100.0	100.0
1961	109.1	115.9	139.2
1962	119.7	121.4	212.3
1963	129.0	135.7	246.8
1964	140.8	146.6	290.4
1965	153.6	159.8	417.7
1966	162.4	167.4	385.1
1967	151.4	172.2	358.4
1968	161.1	206.0	619.1
1969	172.5	217.5	972.7
Compound annual growth rate during 1960-69..	6.3 %	9.0 %	28.7 %

At the beginning of the Fourth Plan, the plastics industry provided gainful employment to about 100,000 people apart from a large number of self-employed persons in the trade. Of the total investment of about Rs 105 crores in the plastics industry, about Rs 80 crores has gone into the raw materials sector and Rs 25 crores into the processing sector. The raw materials sector is capital-intensive and provides only limited employment opportunities. The processing sector, on the other hand, is constituted mainly of small-scale units providing a very high employment potential per unit of investment. Of about 4,500 plastics processing units in the country today, more than 4,000 are in the small-scale sector.

HASTI BRAND

QUALITY PLASTICWARE

made from world-famous

HIGH DENSITY POLYETHYLENE

PIL—who manufacture the superior plastic, HOSTALEN high density polyethylene—now bring you the finest HASTI brand plasticware.

HASTI brand plasticware made from HOSTALEN:

- is uniquely tough and shatter-proof—stands up to rough use
- resists wear, corrosion, chemicals, heat and boiling water
- is light in weight
- comes in handy sizes and attractive colours

HOSTALEN high density polyethylene is manufactured in India by POLYOLEFINS INDUSTRIES LIMITED, in collaboration with FARBERWERKE HOECHST AG., West Germany.

DURABLE, QUALITY PLASTICWARE**

Steady growth maintained

By A. H. Srikanta Aiyar

THE establishment of petrochemical complexes in the country has given a big filip to the development of the plastics industry. The production of plastics materials crossed the mark of one lakh tonnes during 1970. Even so, in comparison with the industrially advanced nations, such as the UK, the US, West Germany and Japan, the per capita consumption of plastics in India is the lowest, being less than 0.1 kg. The performance of the industry would have been better but for the fact that many sections of the industry periodically face shortages of basic chemicals and raw materials. As a result of representations, the Government has liberalised its policy in regard to import of these chemicals and it is hoped that during the current year production of various plastics raw materials will be higher than that of last year.

Plastics have today invaded all aspects of our daily life whether it be in the industrial or domestic sector. Considerable quantities of plastics are also being used in the agricultural and building trades. Plastics products have really helped in raising the living standard of the common man.

The Fourth Five-Year Plan envisages the production of 2,35,000 tonnes of plastics by 1973-74. This target is not difficult to achieve provided a congenial climate is established for the growth of various sections of the plastics industry.

Production of some of the important plastics raw materials during the last three years is shown below.

Production of raw materials
(In tonnes)

	1967	1968	1969
PF moulding powder	3,750	4,750	4,983
UF moulding powder	1,342	1,500	1,540
Polystyrene	5,591	6,500	9,380
LD polyethylene	9,751	17,000	19,556
HD polyethylene	-	8,358	17,605
PVC resin	13,611	14,000	34,380
Cellulose acetate	1,000	900	800

Most of the high tonnage plastics raw materials are produced in the country and hence their imports are greatly restricted. Imports of some important

raw materials not produced in the country so far are as under:

Imports of raw materials
(In tonnes)

Raw material	1967-68	1968-69	1969-70
QAB moulding powder	791	819	683
Nylon moulding powder	113	141	512
Polypropylene	1,425	1,068	903
CN sheets	527	608	482

Plasticisers required for compounding of PVC and cellulose acetate are also produced in the country. The requirement of plasticisers is expected to go up to about 30,000 tonnes by 1974 with the increase in production of PVC and cellulose acetate. Production of plasticisers was about 8,700 tonnes in 1969 as against 6,000 tonnes in 1968.

With the availability of basic chemicals from petrochemical sources, the prices of plastics raw materials are already showing a downward trend. Even so, the prices obtaining in India are on the very high side compared with international prices. This price increase is, to a large extent, due to the heavy incidence of excise duty on the full range of raw materials at the rate of 36 per cent *ad valorem*. In addition, some of the finished products like leather cloth, rigid plastic sheets, PVC flexible sheets and film and polyurethane foam products are again subject to excise

plastics industry in India will be slowed down and that it will not be able to catch up with the progress achieved abroad.

The last three to four years have witnessed rapid progress in the manufacture of processing machinery and equipment. Standard types of injection machines up to 48 ounce capacity are already produced in the country. Similarly, extruders up to 3½ inches capacity can be had from local sources. Standard type blow moulding machines are also produced indigenously. With the availability of HD polyethylene the demand for machines for production of HDPE woven sacks has increased considerably. Such machines are supplied by two companies in the country. Extruder equipment for the production of flexible as well as rigid PVC film are also produced in the country. But, on account of the excise levy on PVC film at the rate of 30 per cent *ad valorem*, this line of manufacture has not made any appreciable progress. Representation has already been made seeking withdrawal of this levy and it is hoped that the Government will respond favourably to the request of the industry.

Imports of the following plastics raw materials are canalised through the State Trading Corporation: (a) cellulose acetate flakes; (b) cellulose acetate sheets/films; (c) cellulose acetate butyrate and cellulose acetate propionate; (d) cellulose nitrate sheets and flakes; (e) polypropylene; and (f) nylon moulding powder.

The last three were included in the list of canalised items even during the last licensing period. Imports of stainless steel strips required for manufacture of fountain pen nibs are canalised through MMTC.

Release order holders are not quite satisfied with the working of the STC. There are complaints of inordinate delay and that the STC is not supplying the right grade and quality of the raw material required. It is hoped that before long the STC will streamline its working and be of real service to the industrial units.

The performance of the plastics industry in the field of exports is indeed commendable. Exports of plastic goods and materials have shot up from Rs 264 lakhs in 1963-64 to Rs 873 lakhs in 1969-70. The local raw material manufacturers have helped in boosting exports by offering the raw materials at international prices. It is estimated that by 1974 exports may total about Rs 15 crores.

The plastics industry has so far primarily confined itself to catering to the needs of the urban population. No serious efforts seem to have been made to take plastics to the villages and thereby serve the agricultural sector. It need hardly be added that there is considerable scope for plastics to make deep inroads into our agricultural economy. In India, the majority of the population lives in villages, the country being predominantly agricultural. Thanks to good monsoons and the adoption of improved methods of agriculture, there has been a boost in agricultural production. As such, there has been a shift in income towards the rural population. The plastics industry can offer a large variety of its products to the rural population and thereby help improve their living conditions.

Mr Aiyar is Secretary of the All-India Plastics Manufacturers' Association.

duty ranging from 24 per cent to 48 per cent *ad valorem*. This is an instance of double taxation. The excise levy collected from the plastics industry which was only about Rs 157 lakhs in 1962-63 increased to nearly Rs 1,500 lakhs during 1969-70. As long as this high rate of duty continues, it is feared that the rate of growth of the

Buyers all over the world

have their eyes on CHEMICALS OF STANDARD MILLS

It is nice to have a reputation for quality. Even better when one's reputation for Caustic Soda, Caustic Potash and Hydrochloric Acid extends round the world. Because then one has to strive harder to maintain the quality... keep it up to international standards. This means you, the buyer, benefit. So do we... in foreign exchange too!

We also supply Potassium Carbonate, Ethyl Chloride and Chlorine.
Do contact us the next time you need any of the above.

A supplement to traditional materials

By N. Srinivasan

THE substitution of imports and promotion of exports is the main plank in the nation's growth policy. There is insufficient awareness of the increasingly effective role that plastics could play in this strategy of development. There is vast potential for exploiting plastics to complement our limited natural resources. Plastics also supplement traditional materials, and upgrade them in combination. The function is particularly important when traditional materials are in short supply and have to be imported. Again, when such traditional materials are export-oriented, plastics increase their availability for exports by providing alternatives for home consumption. Some of the common traditional materials that can be mentioned in this connection are wood, metal, glass, leather, rubber, paper, jute and cotton.

WOOD

Good timber is becoming scarce. The items which have been developed as alternatives to sawn timber for building, furniture and packaging industries are principally (1) particle board or reconstituted wood, (2) plywood or bonded wood; (3) particle board or plywood, surfaced with decorative laminate; (4) fibre board, also called hard board and insulation board.

These alternatives have helped to increase availability of timber for the building industry which has a place in the core of the national plan. But, for a major breakthrough in the future, the main problem would be the high price of resins consequent on high prices of the basic chemicals. The particle board industry is a classic instance of an industry which languished owing to the high cost of resin. Although 60 to 70 licences had been issued only eight units (working to less than 20 per cent capacity) have started production. Indigenous urea resin costs Rs 4,000 per tonne, free of excise duty, as against a price of Rs 1,500 in other countries. The excise duty on resin used in the manufacture of particle board was waived four months ago. The industry is showing signs of revival and growth. If resin was available to the industry at even Rs 2,000 per tonne, a target of 1,00,000 tonnes of particle board could easily be achieved, thus benefiting the consuming industries. The indigenous price of urea resin is solely determined by the price of formaldehyde, which in turn is linked to the price of indigenous methanol. The decorative laminate suffers from a similar handicap, which if removed, will enable it to make an impact on construction so as to utilise much larger quantities of inferior wood and save timber.

Mr Srinivasan is Chairman of the Plastics Institute (Indian Section)

A potential market for plastics in the fishing, and fish processing industry, would be plastics containers for collection and transport of fish. The Scandinavian fish industry employs structurally expanded high density polyethylene (HDPE) boxes for transporting fish even to distant markets. Expanded polystyrene is also in use where extra thermal insulation is required. Conventional wooden boxes serve the purpose in India. As compared to soft wood, HDPE fish boxes, are light in weight, easily cleaned and do not rot. From considerations of hygiene, plastics fish boxes are to be preferred, as pick up of bacteria by the fish and consequent loss of freshness of the fish are avoided. This is the prime consideration for the choice of the plastics container. The initial cost of the HDPE fish box is more than double that of soft wood, but durability of the plastics container is three-fold.

In developed countries, with wood supply shrinking and prices rising, furniture is exploding as a plastics market. A new technology has been developed for making furniture. Filled and reinforced polyesters are coming into use in decorative and structural replacement of wood. Polyethylene compounds and rigid urethane foam are eliminating wood in large-scale furniture manufacture. Ordinary chairs moulded of rigid urethane foam and upholstered with flexible urethane foam are made in 10 to 15 minutes. Table and cupboard drawers are injection moulded from high impact polystyrene in the US. GRP hulls are replacing wood, for small boats. These are some of the highlights of trends in wood substitution in advanced countries.

METAL

The future dynamics for plastics lies in metal substitution. In advanced countries, engineering plastics are fast replacing to advantage, metal components in appliances, machinery, equipment and automobiles. High density polyethylene has been adopted for fuel tanks. Development is fast taking place to make the all-plastics refrigerator. The all-plastics car is stated to be in the planning stage. Plastics is claiming a right to be specified for hardware, pipe and containers for storage, transport and consumer packing. The metal can is on the way out yielding place to structural packaging, based on the multi-ply composite film. Epoxy/polyester reinforced material is occupying a dominant position in engineering plastics along with polypropylene, nylon, polycarbonate, acetal, ABS and PTFE. Some of them are also glass reinforced. The use of RP material epoxy-graphite fibre, for jet engine parts is indicative of the near-realisation of the fanciful concept of the plastics metal.

Cast iron and galvanised iron, steel and steel alloys, tinplate and brass are conventional materials of construction in the pipe, container and hardware fields. Even their partial replacement by plastics would be of significance in the present economic situation. Illustrative of metal replacement already effected in the country by plastics would be: cast iron flushing cisterns, galvanised iron cold water storage tanks, steel drums and jerry cans, stainless steel vessels for the chemical industry and brass hardware, e.g., taps and window stays.

The current production of polyethylene pipe is only a few hundred tonnes and that

of rigid PVC around 1,000 tonnes. The reasons for this slow development are traditional resistance of users, absence of standards, non-availability of fittings, unfavourable prices and disapproval by the public health authorities. There has, therefore, been very restricted use of the pipes. These problems have now been overcome to a large extent. During the next few years, the educational and promotional efforts of private industry and governmental agencies should elevate plastics pipe to the position of an attractive alternative to metal pipe in the big market area of water supply and sanitation, both urban and rural. The requirements of pipes for water supply systems in buildings alone, is put at 60,000 tonnes in terms of plastics during the next five years.

Nearly 1.5 lakh tonnes of tin plate are being consumed in the country for making containers. Tin is not indigenous. Plastics has played the role of an alternative to tin plate in the packaging of confectionery, auto-lubricants, coffee and toilet products. There is potential in the immediate future for plastics packaging of vanaspathi and edible oils which account for one-third of the country's consumption of tin plate as well as other food products, lubricants, greases, toilet products and pharmaceuticals.

GLASS

The major field in which plastics replace glass is packaging. The multi-ply composite film is the near approach to flexible glass. In rigid PVC bottles are gaining acceptance in France, the US, Germany and Japan. These bottles have glass clear transparency, high impact strength and drop resistance, handling safety and dimensional stability. A PVC bottle weighs one-tenth the weight of a glass bottle of equivalent volume and occupies on an average 30 per cent less volume—an obvious advantage to the retailer and the shopping consumer. In comparison to glass, the direct cost of the plastics container is high. But the advantages resulting from light weight and unbreakable property can still make it attractive for use.

There is at present a shortage in the country of glass bottles for automatic filling and prices have been hardening significantly. The existing capacity for glass bottles made in automatic plants is 1,53,000 tonnes and the additional capacity licensed, that may be established before the end of the Fourth Plan would be 1,47,000 tonnes. The shortage in glass bottles will continue till the required additional capacity becomes operative. The foreign exchange requirement for an automatic plant (capital goods) making 12,000 tonnes of glass bottles annually (40 bottles per minute—24 hour working—300 days) would be around Rs 50 lakhs. With a sophisticated PVC blow moulding unit, making 2,000 bottles per hour, the investment on plant need be only Rs 15 lakhs.

In India, suitable PVC compounds for bottles have recently been developed. Machine capacity for blow moulding is also being gradually established. Trials of PVC bottles by several end user industries have been successfully completed. The PVC bottle is therefore ready to enter the packaging market for foods and non-foods.

**When you order chemicals,
remember**

**Bulk thinking pays
in many ways:**

- 1. Saves on handling**
No problem of unloading drums.
Chemicals can be directly siphoned off
into your storage tanks.
- 2. Saves on space**
Valuable storage space required for
storage of drums can be put to
better use.
- 3. Saves on costs**
By ordering bulk quantities in tankers,
you get bulk discounts. You save on
costs of drums, too.
- 4. Saves on time**
Road transport of chemicals is speedy.
Besides, you get the chemicals right at
your doorstep.

Next time you order chemicals, think bulk. So many of our customers
already do. Why don't you? There's quite a bit of saving in it.

Union Carbide can bulk supply you Butanol, Butyl Acetate, Acetic Acid,
Ethyl Acetate, 2-Ethylhexanol, Dioctyl Phthalate and Toluene.

UNION CARBIDE INDIA LIMITED
Chemicals & Plastics Division

It can relieve the present shortage of glass bottles for the user industries and establish itself as an attractive alternate to the conventional glass bottle.

HDPE containers have already replaced glass carboys for transporting corrosive liquid chemicals, e.g. acids, chlorine bleach, hydrogen peroxide, etc. In the small container field, food products, chemicals, medicines, cosmetics and household items packed in glass have yielded to plastics.

The LDPE milk bottle is in vogue in France, in place of the glass bottle. The sachet, a single service container for milk, in substitution for the glass bottle, is popular in Holland and Denmark. It is being tried in Pakistan. The economics of the plastics pouch *vis-a-vis* the glass bottle, under conditions in the country would be very unfavourable. A half litre glass bottle can circulate 70 times and costs only 50 paise. Even if to this bottle cost were added the expenditure on account of cap, bottle washing, etc., the container cost may not exceed one paise per trip. To

match this, the price of 400 gauge printed LDPE film (250 pouches to one kg of film) should be Rs 3 to 4 per kg, while the current price of printed film is around Rs 9 per kg. The printed plastics pouch will thus be very much more expensive than the glass bottle. An alternative single service container would be polyethylene coated cardboard which is already being considered. The advantages of the single service pack are many and the plastics film now under test for pouching can under favourable circumstances play its part in the "operation flood" milk scheme of the National Dairy Development Board, which it is said, will usher in the "white revolution" in the economy. Pressed rigid PVC sheets, wire reinforced, replace glass in anti-vandal glazing. Glass reinforced polyester is in use for the same purpose, and is also an alternative to glass in translucent roofing panel.

LEATHER

The leather industry is export-oriented. Raw hides and skins are imported to the

tune of Rs 1.5 crores annually. Exports of finished leather goods and manufactures and leather footwear are around Rs 8 crores, of which footwear alone is Rs 7 crores. An export target of Rs 20 crores for footwear and Rs 3 crores for leather goods and manufactures has been suggested for 1973-74. The objective should be to increase availability of leather for exports without large imports of raw hides and skins. This would be possible by pressing into service plastics as an alternative to leather in the manufacture of goods. Plastics has already made dents in the traditional leather market, e.g. footwear. The PVC sheet has invaded the shoe market but the main production of plastics footwear is by moulding PVC compounds. The expanded vinyl, for use in upholstery and luggage, looks and feels like leather and lasts longer. Those markets which were previously the prerogative of leather have opened the door to plastics. The production of leather cloth in the country in 1969 was 11,500 kilometres. The expected production in 1970 is 10,000 kilometres. The unsupported sheet production was 4,400 tonnes in 1969 and will increase to 6,000 tonnes in the current year. The current consumption of PVC moulding compounds for footwear may be put at 8,000 tonnes. It will be seen that plastics can come to the aid of the leather industry and help attain the export target, by serving as an alternative, in the growing home market demands, mainly of footwear, luggage and upholstery.

RUBBER

The country is not yet self-sufficient in rubber, and current consumption runs to 1,25,000 tonnes. Automobile tyres, cycle tyres and retreading account for 85,000 tonnes. The footwear market consumes 18,000 tonnes and miscellaneous items such as belting, hose, tubing, proofed fabrics and insulation take up 22,000 tonnes. The exports of rubber goods touch Rs 7 crores. Vinyl plastics has entered the rubber footwear and miscellaneous goods market. Increasing penetration into these markets will save rubber for the tyre industry and for export of rubber goods while simultaneously meeting the rising home demand for the products.

PAPER

Traditionally, paper is a product derived from wood pulp. There has been large-scale entry of plastics film in the wrapping market in other countries. In the US styrene foam sheet substitutes paper pulp and board and is competitive with it. Thin blown HDPE film (40 gauge) has been developed to substitute tissue paper for grease proof packaging. Such film is also suitably processed to give high quality glossy printing paper, rivalling art paper, and resistant to tear and water. In place of cardboard, reinforced corrugated HDPE material has appeared in world markets.

The trend in advanced countries, to make paper and board from non-cellulosic materials should be of particular interest to the Indian pulp industry which is facing a formidable threat of growing raw material scarcity. The long fibred pulp,

PLASTIC SHAPES UP WELL

WITH A BRIMCO MACHINE!

The ever hopeful engineers at BRIMCO proved that if advanced designing and careful engineering went into every machine they built, they can be as good as any imported ones. BRIMCO machines are.

Over the years, BRIMCO has introduced a long line of performance tested machinery that has immensely helped the Indian plastic processing industry to achieve its tremendous growth—without foreign help.

Extruding, blow moulding or pelletizing BRIMCO machines let you get the best out of them—tubes, films, tapes, bags, containers. Any shape that plastics can take.

That's why, wherever plastics are shaped for profit, you'll find a BRIMCO machine!

You can bank on a pioneer any time!

BRIMCO
PLASTIC MACHINERY CORPORATION
 — makers of the reputed BRIMCO range of machinery for the plastics industry

Plot No. 55, Govt. Industrial Estate Roadville, Bombay-47 MB
 Telephone 682818
 Branches at: Ahmedabad • Calcutta • Hyderabad • Kanpur • Madras • New Delhi

required for making tissue paper is not available in the country and 10,000 tonnes are being imported. So is high strength kraft paper to the extent of around 2,000 tonnes. Indigenous kraft paper can be upgraded to make it moisture proof and heat sealing by extrusion coating with polyethylene film. Similarly polyethylene coated cardboard cartons have potential in packaging of frozen seafoods. Thin blown polyethylene film is the alternative to indigenous tissue paper based on imported cellulose pulp. Food packaging is an area which offers considerable scope for replacing such tissue paper by thin HDPE film. Polyethylene film can supplement kraft paper, in unit prepackaging of milled cereals and pulses, fruits and vegetables and dried and salted fish. PVC clear film can function in the wrap market as alternate to transparent paper based on cellulose pulp. Polyethylene and PVC, supplement paper in cable insulation.

JUTE

The recurring shortage in jute can be combated by developing plastics packaging as an alternative. The introduction of the alternative packaging LDPE, PVC or cross laminated HDPE, non-woven film sack, or the HDPE woven sack, up to 10 per cent of jute supplies will only help the economy and increase availability of raw jute for exports of jute goods, which in any case will be sustained by the Government through fiscal measures and attention to production and labour problems. The unutilised capacity of the jute goods industry can also be put to use by turning out, in the mills, the alternative HDPE woven sack. Plastics film, in combination, is already playing a complementary role to increase wider application possibilities of jute in packaging industries, make the package moisture proof and heat sealable and improve the properties in all respects.

COTTON

There are definite advantages in supplementing cotton with synthetic fibre even on the basis of imported chemical intermediates. The savings in foreign exchange would be much greater if the intermediates were also produced in the country. 15,000 tonnes of synthetic fibres, nylon (9,000 tonnes) and polyester (6,000 tonnes) are currently produced from imported caprolactam and DMT. The Fourth Plan envisages production of 20,000 tonnes of caprolactam by the Gujarat State Fertilizers and 24,000 tonnes of DMT by Indian Petrochemicals Corporation. The indicative production estimates of plastics fibres by 1973-74 of 28,000 tonnes of nylon and 24,000 tonnes of polyester would be the equivalent of adding five to six lakh bales to the domestic output of cotton. The plastics fibres, besides, supplementing cotton, add functional values to the textiles such as long wear, crease resistance, light weight, strength, warmth and resistance to insect attack and fungal growth.

GOLDENWARE

START A REVOLUTION IN YOUR HOME!

WITH **MAHARAJA** REVOLVING SEAT FOR YOUR OFFICE, DRAWINGROOM, BEDROOM, BATHROOM, ANY ROOM.

Ideal for Picnics

More and more people are buying MAHARAJA because MAHARAJA offers so much more...

- a revolving seat for greater convenience
- a larger seat for more comfort
- more durability for it's made of unbreakable Hostalen
- greater economy for it costs less, lasts more
- more elegance for your home
- saves space because it is foldable
- MAHARAJA comes in 12 different two-tone colours, choose the one that matches your decor...and your taste!

Glassfibre reinforced plastics

By N. Jagannathan

PLASTICS are materials generally of high molecular weight that lend themselves to being transformed into different shapes by the application of heat, pressure or by catalytic activation. We may divide plastics into two broad categories—thermoplastics and thermosets. In reinforced plastics, thermosets are usually the type of resin employed and among the thermosets, polyesters and epoxides are the most widely used.

Although plastics offer a number of attractions on account of the ease with which they can be moulded, lightness, and remarkable chemical resistance, properties they have very limited strength. This shortcoming renders them unsuitable for use in structural applications. Efforts to overcome this shortcoming led to the development of reinforced plastics.

Mr Jagannathan is Product Manager (Reinforcements) of Fibreglass Pilkington Limited Bombay

For generations, natural materials such as timber, granite and steel, bricks and cement have been used for structural applications. These imposed some limitations on the designer as the basic properties of the materials were dictated by nature. Reinforced plastics have properties tailor-made to the dictates of the designer.

In reinforced plastics, we use in the form of plastics molecules of basic natural origin reassembled to polymers (big molecules) by suitable synthesis. We combine these polymers (plastics) with fibrous reinforcements of known properties into desired forms. In this composite form, the material provides strength and other properties unattainable in materials of natural forms of comparable weight.

Of all the plastics listed above, epoxides and polyesters have attained the greatest prominence in the reinforced plastics field, particularly because of their ability to be "cured" or "permanently solidified" under cold conditions without the use of high pressure.

Of all the fibres, glassfibres are the most preferred ones because of their remarkable strength and inorganic and hence non-rotting nature. A product made by using epoxide resin reinforced with glassfibres may be designed and fabricated to have a strength-to-weight ratio of nearly ten times that of a similarly shaped product made of steel.

While no one can credit Hitler for the advancement of science, science did respond to his challenge. A number of seminal developments occurred during the Second World War—nuclear power, penicillin,

radar systems, etc. The growth of reinforced plastics started during the last war. The first reinforced plastic product to be developed was the dome for radar equipment in aircraft. This needed to be light, structural and transparent to radio waves and reinforced plastics fulfilled all these needs. The post-war years saw the development of a wide range of glassfibre reinforcements and thermosetting resins and after nearly a decade of cautious trials, reinforced plastics came to be accepted as a structural material in its own right. Today millions of tons of reinforced plastics are used the world over.

In India, the reinforced plastics industry came into being about seven years ago when both the raw materials, glassfibre and polyester resins, were indigenously produced and in these seven years the industry has registered a steady growth. It is now making a major contribution to industry and the home by offering a variety of structural materials of great value.

Glassfibre reinforced plastics are made by impregnating glassfibre material normally with a synthetic resin. By varying the type of resin, reinforcement and the method of manufacture, the properties of the end-product can be varied to suit the user's requirements. Glassfibres are used to provide random, bi-directional or uni-directional reinforcement depending on the strength properties required. The resin (or plastic) component is usually a polyester resin, though epoxide resins are also used for certain applications.

There are several basic manufacturing techniques but the most common one is

THE WONDERFUL WORLD OF COLOUR!

Think what a difference colour makes. Colour pleases the eye, creates happiness and it sells. Colour-Chem pigments beautify textiles, paints, printing inks, plastics, rubber, leather, myriad other materials. Make your world even more beautiful with lovely Colour-Chem pigments.

"contact moulding". This makes use of the fact that component resins can be made to cure at room temperature without any applied pressure. A simple open mould is used for the process. The resin and reinforcement are laid up on this mould either by hand lay-up or by a special spray-up technique, involving the use of a machine with linked nozzles spraying the resin and chopped glassfibres simultaneously on to the mould. Though contact moulding is a comparatively slow process, there is almost no limit to the size or complexity of the moulding which can be produced.

Matched-die-moulding is used for the manufacture of smaller articles, especially where quantity production is necessary. The reinforcement can be applied either by hand or as a preform consisting of chopped fibres bonded loosely together in the shape of the moulding to be made. After the addition of the resin the moulds are closed and the laminate cured under heat and a pressure of about 100 lb/sq ft. The moulded product has a good surface finish and it can be made to close dimensional tolerances. Press moulding can also be made using glassfibre preimpregnated with resin. The dough moulding process, where again heated moulds are used under pressure, makes use of a mixture of resin, glassfibre strands and a suitable filler, mixed to the form of a dough. This process is particularly suitable for making small and intricate shapes.

Articles, which can be rotated round an axis, can be made by a process called "filament winding". This involves feeding continuous strands of glassfibre rovings through a resin bath and then winding them around a rotating mandrel or core. Semi or fully mechanised methods of continuous reinforced plastics production are employed for the fabrication of flat and corrugated sheeting, rods and tubes.

Although a number of techniques are

employed in processing reinforced plastics the most common one, as already mentioned, is the contact moulding technique. This process is particularly good in cases where the requirement of an article is comparatively small. This also requires very low capital investment, the capital employed per worker being Rs 750 compared to Rs 7,000 which is the all-industries average estimated by the Union Government for the Fourth Plan. A number of small-scale industrialists in this country have exploited these advantages and have grown commendably in the last six years.

Glassfibre reinforced plastics are well recognised engineering materials of construction. In one way or another, they are replacing conventional materials in most industries and their unique combination of properties, unknown in traditional materials, is creating new applications all the time.

Boats: About 50 per cent of the world's pleasure boats are now made in glassfibre reinforced plastics. A mine-sweeper of about 120 feet length is now being developed by the Royal Navy in the UK. Commercial boats like fishing trawlers are now in regular use in many parts of the world. In India, a number of rowing and sailing boats are already in use. GRP fishing trawlers of 32.6 feet will be available to the Indian fishermen within a few months' time. The advantages of GRP include lower production costs, improved resistance to weather and damage, lower maintenance cost and ease of repair. For India, with its shortage of good quality timber, the advantages offered by GRP are even more attractive.

Aircraft: In the field of aircraft construction, complex mouldings for the interior such as furnished panels, luggage racks, insulation panels and ducting are regularly made in GRP. Radomes and

nosecones of aircraft are also made in GRP; the supersonic jet Concorde has a GRP nosecone, made to very close tolerances.

Commercial vehicles: The production of a commercial vehicle body is very often not done on a large scale thus making the economic advantage of GRP very attractive. Many modern buses and coaches made in India have GRP body panels. Lorry and tractor cabs, crane cabs and engine covers have all taken on a new style and better efficiency where GRP has been used. GRP is more economical for small-scale production—less than 20,000 cars a year—and it would be a suitable material for the body of a small car to be produced in the country shortly.

Rail stock: Glassfibre reinforced plastics are now being used by the railways in the form of coach seats, window frames, bathroom equipment, etc. The Rajdhani Express, to run between Delhi and Bombay, will have carriages fitted with GRP seats and window-frames. Drastic weight reduction and the consequent payload increase is the contribution of GRP in this application.

Electrical: Glassfibre reinforced plastics in sheet and moulded form have been widely used in the electrical and electronics fields. Bus-car insulation, insulating blocks, base boards for high voltage equipment, moulded plugs and sockets and covers for electrical equipment are some of the typical uses.

Consumer durables: Well-designed and colourful home appliances such as trays, bath tubs, shower cabinets, mirror frames and chairs are available in the Indian market.

Chemical plant: In the chemical engineering field, the non-corrosive nature of GRP has made it possible to design and fabricate plants which last much longer than most metals. Tanks, pipes, ductings, pumps and various other structural parts are all made in India, resulting in the saving of precious foreign exchange spent on imported special alloys and metals. Custom fabrication of fewer parts is easy and inexpensive in GRP construction and this is an additional attraction offered by this material in this application.

Building: GRP have been used for long as a roofing material, where it permits daylight and eliminates the need for artificial lighting during day time. The load bearing capacity of GRP is fully utilised and now commercial production of modular houses has started in the UK and the continent.

There is no limit to the articles one can make in GRP. It is a new engineering material, having a composite structure derived from plastic which gives the body and glassfibre which provides the strength. With its inherent all-round properties, it is fast replacing common materials of construction found in everyday use. With glassfibre reinforced plastics having taken firm roots in the home market, their manufacturers have set their sights on exports and have set up an export promotion committee recently. A base has thus been set up to enable GRP to scale new heights.

one of the world's largest fertilizer complexes in public sector offers complete range of services on fertilizers and chemicals

India's biggest undertaking in the field of fertilizer Industry, the Fertilizer Corporation of India Limited is one of the largest producers of plant nutrients in the world.

HOW BIG IS FCI? FCI's five functioning units at Sindri (Bihar), Nangal (Punjab), Trombay (Maharashtra), Gorakhpur (U.P.) and Namrup (Assam) have the installed capacity of half a million tonnes of plant nutrients. This will rise to over two million tonnes when additional six plants under construction go on stream.

CATALYST KNOW-HOW—FCI is one of the few organisations in the world to develop and produce a complete range of fertilizer catalysts, so vital to the industry.

TOTAL FERTILIZER TECHNOLOGY—Backed by its intensive R & D efforts, FCI has now developed its own know-hows, design and engineering capability and can execute six to eight modern fertilizer plants at a time from the blue-print to the final commissioning stage.

MARKETING SET-UP—With a vast network of sales outlets and promotional activities, FCI covers now about 80 per cent of the country.

FERTILIZER CORPORATION OF INDIA LTD.

Exports: Performance and prospects

By K. Ramani

PLASTICS products have been assigned a significant role in India's foreign trade. Exports by the end of the Fourth Five-Year Plan will reach an estimated Rs 50 crores. The Union Government, taking into account the prospects for the export of plastics and linoleum products, has arranged a project study on the export potential of these products in the Fourth Plan. This study is being financed by the USAID, and Industrial Development Services Ltd, New Delhi, has been appointed consultants for this study. The study will review the required inputs and the marketing operations which are to be geared up to achieve the targeted level of exports.

Exports of plastics products, which were around Rs 19.8 lakhs during 1957-58, totalled Rs 8.75 crores during 1970-71. After the rupee devaluation export growth has been spectacular. The growth was as follows: 1966-67 Rs 3.77 crores, 1967-68 Rs 3.29 crores, 1968-69 Rs 6.20 crores, 1969-70

Mr Ramani is Deputy Secretary of the Plastics and Linoleums Export Promotion Council.

Rs 8.73 crores and 1970-71 Rs 8.75 crores. Today about 60 firms account for 85 per cent of the exports though there are 150 firms who have been regular exporters of plastics and linoleums products. The different plastics products have been classified broadly as linoleums, PVC leather cloth, PVC sheeting, laminates, electrical accessories, spectacle frames, fountain pens, bangles, PVC fabricated goods, plastic imitation jewellery, moulded goods, extruded goods, poly-lined jute goods, raw materials, pipes and specials and residuary items.

The Plastics and Linoleums Export Promotion Council, a quasi-government body working under the control of the Union Ministry of Foreign Trade, was established in June 1955 to promote plastics exports. Currently the membership of the Council is 675, the majority being from Bombay and the rest distributed in Delhi, Calcutta and Madras. While the Calcutta office caters to the needs of the members in the eastern region, the Madras office assists the exporters in the southern region. Exporters in the northern and western regions are assisted by the head office in Bombay.

The Council has been sending study teams and sales teams to the different markets abroad. These teams, apart from studying the market potential, have booked orders on the spot. In the last five years the plastics products have entered various new markets, to which India was not exporting before. The Council has been participating in the different trade fairs in the important world trade centres, through the Exhibitions Directorate of the Ministry of Foreign Trade and the Indian Council of Trade Fairs and Exhibitions, Bombay. Apart from this, the Council is also participating in specialised plastics fairs such

as Interplas in London, Kunststoffe in West Germany, Milan Plast in Italy and Macroplastic in Holland. At these fairs and exhibitions the council exhibits the products manufactured by the different plastics manufacturers.

The encouraging response from these exhibitions, has indicated that the industry is on the right path. In 1963 exports to the European countries were less than a Rs 10 lakhs. Today they are in the region of Rs 60 lakhs to Rs 70 lakhs, with the UK as the largest buyer of PVC sheeting, Czechoslovakia of linoleums, the USSR of spectacle frames, the Netherlands of poly-lined jute goods and Italy of textile machinery spares. The US is the largest buyer of imitation jewellery. In West Asia, the Sudan is the biggest buyer of houseware, mainly moulded goods, and the UAR and Iran of fountain pens. Hongkong imports plastics raw materials, while the West African and South-East Asian countries, particularly Malaysia and Thailand, import plastic bangles.

To meet the requirements of these quality-conscious buyers the Export Inspection Agency, set up by the Ministry of Foreign Trade, examines the goods prior to shipment and certifies the quality. Such pre-shipment inspection at present covers the exports of PVC leather cloth, sheeting, PVC footwear and linoleums.

Apart from exporting its products, the industry is also assisting neighbouring countries to set up industries of their own. A start has been made in Ceylon and Uganda for the manufacture of PVC leather cloth and sheeting. Proposals received from Kuwait and the East African countries are also being examined by established manufacturer-exporters for setting up fur-

Chemplast Rigid PVC pipes are ideally suited for efficient protected water supply schemes

Used against conventional piping materials
you get the following benefits:

- **Lower installation cost:** Being lighter in weight, transportation, handling and installation costs lead to a saving of 40%. Do not require rustproof or surface painting.
- **Ease of installation:** Solvent cementing of joints avoids the necessity for threading — gives a permanent joint which is strong in longitudinal pull — does not require skilled labour for installation.
- **Longer life:** Outlasts any conventional pipe as it is completely corrosion-resistant, withstands severe acid and alkali soil conditions.
- **Resistance to Tuberculation:** Mirror smooth internal surface, prevents 'lump' and bacterial growth. No clogging of line or imparting taste or odour to water.
- **Low cost of maintenance:** Rigid PVC pipes require virtually no maintenance.
- **Higher co-efficient of flow:** Rigid PVC pipes have permanent smooth bore, resulting in higher flow always.
- **Hygienic:** Rigid PVC pipes form no scale or sediment and so hygienic.
- **Less frictional loss:** Mirror smooth internal surface, reduces frictional loss to the least.

CHEMPLAST rigid PVC pipes and fittings are manufactured to IS 4983 — 1968 and are available in the size and range of 15 mm to 100 mm for Service, Subsidiary and Main Lines in water supply schemes.

though not the biggest producers...

On the strength of its quality, which meets the highest international standards, Shriram PVC is exported to Japan, Hongkong, Malaysia, Belgium, Holland, Iraq, the United Kingdom, South Vietnam, South Korea, Ceylon, Ethiopia and Kenya.

Shriram Chemicals employ the most modern suspension Polymerisation techniques to produce a variety of Polymers suitable for extruding pipes, making leather cloth, moulding shoes, calendered films and sheets as also electrical insulation and other applications.

SHRIRAM CHEMICAL INDUSTRIES

ther joint ventures for linoleums and PVC tiles

It is noteworthy to point out that India, which was a heavily importing country of plastics machinery, raw materials and finished products prior to 1955, has now transformed itself into a country which now exports not merely finished products, but semi-finished materials, raw materials, machinery and technical services. One-way trade has now become a two-way trade.

In spite of large production of plastics goods, the US, the UK and the USSR, the Federal Republic of West Germany, the Netherlands, Scandinavian countries, Yugoslavia and Czechoslovakia import fairly substantial quantities of our manufactured goods so as to provide a variety and novelty to its consumers of plastics goods. A large number of items carry the stamp of originality, ranging from plastic kippas apparatus to acetate bangles, spectacle frames, ornamental wall pieces, industrial components, etc. However, for achieving the desired targets, additional requirements of the industry could be met only by liberalising the import policy. New processes and technologies are required to be imported to offer a better range of products particularly to the developed countries, keeping in view the

Generalised System of Tariff Preferences available for exports of the developing countries. We should, therefore, produce what we can sell in such developed markets, as we cannot depend on the developing countries, who will gradually ban the import of plastics products, to give protection to their nascent industries. Future investment should relate, to a certain extent, to manufacture such type of products which will have an easy entry in the developed countries. The more sophisticated a market, the more it is keen to know the product and where it comes from. When manufactured products thus come up against international competition, they have to stand on their own. For this the industry will have to keep abreast of the advances in technology notably in the West.

The building materials and packaging lines offer good scope for those who desire to invest.

Today, with the facility of getting almost all the indigenous raw materials at international prices, Indian plastics products have become competitive at the source. With suitable assistance to compensate for the exorbitant freight rates, it may not be difficult to achieve better export targets during the Fourth Plan period.

the compression moulding techniques such as bottle caps, buttons, lamp shades, etc. 2. Plastics articles manufactured from sheets, rods or tubes by the fabrication technique such as bottle caps, buttons, lamp-shades, etc. 3. Polyethylene films (i.e. films with a thickness of less than 1 mm) and products made from the films such as bags, etc. 4. Blow-moulding containers and other similar films products manufactured by the blow moulding technique which is normally called extrusion blow moulding and which consists of extruding a tube into a mould and blowing air to form the finished product. 5. Manufacture of polyester sheets for buttons and the processing of these sheets so produced to manufacture buttons. 6. Spectacle frames made from by the fabrication technique or by injection moulding. 7. PVC shoes.

Besides, there are a few non-reserved items, for which additional capacity is to be licensed for new units in the scheduled sector, with due consideration to the capacity already created in the small-scale sector. Such items include plastics sheets (films above 1 mm thickness), plastics pipes and coated fabrics.

This industry in the small-scale sector exists in almost all the States with a fair degree of concentration in West Bengal and Maharashtra, accounting for nearly 1,000 small-scale units out of the total of nearly 2,200 such units in the country. The small units in these two States also account for about 60 per cent of the total processing capacity in the small-scale sector.

The investment and employment provided by this industry considerably vary according to the process of manufacturing, i.e. compression moulding, injection moulding, blow moulding and fabrication. Since a number of articles are manufactured by these processes, the employment generated at present and the employment potential of this industry can be studied more profitably with reference to these processes, individually.

There are about 217 small-scale units manufacturing plastics goods by compression moulding with an annual capacity of 4,600 tonnes. These units account for an overwhelming majority of the total units engaged in this process of manufacturing mainly because it is technically feasible and economically viable to undertake manufacture of these items on a small scale. A small-scale unit with a capacity amounting to 7,500 pounds of raw material for manufacturing different types of plastics goods through compression moulding provides employment to about 10 persons. On this basis, the small units manufacturing plastic goods through this process are estimated to employ nearly 15,000 persons. This sector of the industry is the source of appreciable employment potential.

Blow moulding is the second important process of manufacturing plastics goods from the viewpoint of employment provided. There are about 125 small-scale units manufacturing plastics goods through this process and are reported to have a capacity of nearly 1,700 tonnes per annum. A small unit manufacturing representative plastics products through this process with

By K. L. Nanjappa

Employment potential in the small-scale sector

THE plastics goods industry has recorded a phenomenal growth all over the world and is reported to have maintained a continuous annual growth rate of 10 per cent to 15 per cent during recent years. Plastics components are used in almost all the important industries like electronics, automobiles, railways, ships, aircraft, building trades, etc. In the packaging industry too, the contribution of plastics is quite significant. According to the report prepared by the Research Department of Predicasts Inc, USA, the world consumption of plastics materials is projected at 48.6 million tonnes per year by 1975; it will be almost four times more than the consumption in 1963-64.

The plastics industry in India has also correspondingly developed enormously since 1956. The production of plastics has risen to 36,000 tonnes in 1966, as against 984 tonnes in 1956. The supply position of plastics raw materials is expected to improve considerably in the near future, as two petrochemical complexes have gone into production. With the increasing availability of these raw materials, the plastics goods industry has also developed correspondingly. The converting capacity of the industry through compression moulding has gone up from 11,200 tonnes in 1955

to 48,000 tonnes in 1966. The corresponding figure for injection moulding has increased from 550 ozs to 8,600 ozs. The number of extruders for the industry has correspondingly risen from 55 to 360.

The industry has made rapid strides in the small-scale sector too. As against about 100 units borne on the list of the DGTD engaged in the manufacture of various plastics items, there are reported to be not less than 2,200 small-scale units with a processing capacity of nearly 30,000 tonnes per annum. The small-scale units manufacture a wide variety of articles both for the home market and export. These include both the utility consumable items and industrial items. The consumable items principally include buckets, bangles, novelties, hair brushes, folders and files, toys and games, flasks, zip fasteners, tubes, etc. The industrial items, mainly comprise electrical accessories, radio cabinets and knobs, textile spares, telephone cords, PVC tubing and sleeveings, bobbins, stores for defence, radio dials, etc. Since the small-scale sector has been considered to be competent to manufacture quality plastics goods, a number of items were reserved, as early as 1962, for exclusive development in this sector.

The items reserved have been revised from time to time and the latest of them are listed below: 1. Items produced by

Mr Nanjappa is Development Commissioner for Small-scale Industries.

ACETATE PRODUCTS

THE PIONEERS IN PLASTICS

The MYCEL range of raw material for various industries include:—

CELLULOSE ACETATE MOULDING GRANULES

- a tough weather-resistant, non-static, dimensionally stable and dye-able plastic material.
- used in the manufacture of plastic domestic products, instrument housings, ceiling panels, coloured sheets, aircraft and automobile components and in the packaging industry and defence production.

ACETIC ANHYDRIDE

- a clear colourless liquid, free from suspended matter, more than 98 per cent pure.
- Widely used as a base for manufacture of aspirin, acetanilide, explosives, weed killers, pest sprays, synthetic fibres and plastics.

ETHYL ACETATE

- used as an industrial solvent in the paint and lacquer industries and in the manufacture of drugs, cosmetics and flavouring essences.

CELLULOSE TRIACETATE

- a non-inflammable safety film base.
- used as a base for photographic and X-ray films (by the Hindustan Photo Films Manufacturing Co. Ltd., Ooty).
- in spinning as yarn and staple, and in the manufacture of "Tow" for cigarette filters.

CELLULOSE SECONDARY ACETATE

- Used in the rayon and plastic industries

COTTON LINTER PULP

- for special applications

NOCIL CHEMICALS MAKE ALL THE DIFFERENCE

NOCIL solvents impart superior gloss, improve flow and brush resistance, reduce costs in surface coatings.

NOCIL also manufacture a wide range of other chemicals and plastics like Ethylene Oxide, Glycols, Alcohols, Ketones, PVC resins and compounds for a variety of uses in industry.

NOCIL's modern technology and large-scale operations mean assured and uninterrupted supplies of dependable quality chemicals.

Whatever you produce, you can be sure NOCIL chemicals will make a lot of difference.

NATIONAL ORGANIC CHEMICAL INDUSTRIES LIMITED

Senior House, Dr. Ambedkar Road, Worli, Bombay 19

the annual consumption of 6,190 pounds of raw material provides employment to seven persons. On this basis, the existing small-scale units engaged in this process of manufacturing are estimated to provide employment to not less than 4,300 persons.

Plastics goods through injection moulding are manufactured by about 500 units with a capacity of 600 tonnes per annum. A small unit manufacturing the representative plastic items manufactured through this process and using 41,760 pounds of raw material, provides employment to 34 persons. Calculated on this basis, the existing small units of this sector of the industry are estimated to engage not less than 2,000 persons.

About 1,000 small-scale units manufacturing plastics articles through fabrication and vacuum forming processes, report an installed capacity of Rs 1,015 lakhs in value. On the basis that a small unit manufacturing representative plastics articles through this process with a capacity of 2,00,000 pounds of raw material employs 16 persons, the existing units can engage nearly 25,000 persons.

The small units manufacturing plastic goods through extrusion process (including polyethylene films and products made therefrom) are 162 in number with a capacity of nearly 10,000 tonnes per annum. A small unit manufacturing the representative items through this process and requiring raw material amounting to 33,000 pounds, per annum employs seven persons on the average. On this basis, the small units engaged in this process are expected to employ nearly 600 persons.

The small units manufacturing Monofilament from polyolefines are 31 with an installed capacity of 1,400 tonnes per annum. A small unit with the raw material requirement of 660 kg per annum is estimated to employ 12 persons. On this basis, the present small units can employ 1,100 persons approximately.

A number of small units are engaged in manufacturing spectacle frames from sheets by fabrication technique or injection moulding. Since this is the single largest group of units, these are kept separate from those manufacturing other articles through either of these processes. Such units are nearly 120 in number with the capacity of 3,200 tonnes per annum. An average small unit, using 4,500 kg of raw materials for manufacturing 15,000 dozens of spectacle frames per annum, employs, on an average, seven persons. On this basis, the existing units are estimated to generate employment for not less than 5,000 persons for full utilisation of their capacity.

It will thus be seen from the above account of employment potential in the existing small-scale units manufacturing plastics goods through different processes that there are nearly 2,200 small-scale units with a capacity requiring the services of not less than 53,000 persons of different skilled categories. It may, however, be added that all the existing units may not be providing employment of such a magnitude because of the under-utilisation of their capacity at present. In case, these units are assured of the required supply of raw materials (indigenous and imported), they can generate employment of this mag-

nitude in the country. The demand for plastics goods is sufficiently large so as to assume full utilisation of capacity by the existing small-scale units in the country.

Future outlook

Plastic goods are commonly used by all classes of people in the country. As such, this industry can be one of those suitable for decentralising manufacturing activities even in the less developed and backward areas. It is quite evident from the fact that the existing small-scale units are spread over in almost all the States with a varying degree of concentration. The employment potential of the existing small-scale units, no doubt, varies from one State to another according to the number of units and the processing capacities installed by them. Out of the total employment potential of nearly 53,000 persons as estimated above, the units in Maharashtra and West Bengal, account for nearly two-thirds of the total but the less developed States like Assam, Bihar, Jammu and Kashmir, Orissa, etc., also have some small-scale units of this industry, producing goods of daily use and providing employment to an appreciable number of persons. Such units in these States are estimated to employ nearly 400, 1,000, 200 and 500 persons, respectively.

This industry is bound to increase employment opportunities during the Fourth Plan period, because the availability of plastics raw materials is targeted to increase considerably and the demand for consumer articles made of plastics is observed to multiply continuously in the country. The Planning Commission is of the opinion that the rate of plastics material industry will grow at 8 per cent to 10 per cent per annum during this period. The total availability of different types of plastic raw materials is envisaged to increase from 86,000 tonnes in 1968-69 to 2,34,200 tonnes in 1973-74. Since the important sectors of this industry are already reserved for further expansion in the small-scale sector, it is fairly a optimistic view to assume that a considerable portion of increased supply of plastic raw materials will be consumed in the small-scale sector of this industry in the coming years. Assuming that the consumption of these materials in the small-scale sector expands at least proportionately to the increase in the total supply of these materials in the country, the employment potential to be generated in small-scale sector of this industry will not be below 1,50,000 persons by the end of 1974-75.

It will, however, be realistic to emphasise that the existing and prospective small-scale units of this industry should not have any bottleneck in utilising their existing capacities and installing fresh ones for meeting the present and prospective demand for plastics goods. Such bottlenecks may be in the form of shortage and high prices of raw materials and the difficult supply position of modern machinery due to restrictive imports. In case the targeted figures of plastic raw materials are fully achieved and a fair distribution of the same is ensured, the other bottlenecks should automatically be removed. Special attention needs to be paid to this industry in view of its capabilities of decentralised manufacturing even in the backward areas of the country. If necessary, it will be conducive to provide special incentives to those who have set up units of this industry in the remote areas in particular.

PLASTICIZERS

FOR THE

Plastics Paint and Perfumery Industries

DOP — Dioctyl Phthalate
 DIOP — Di-iso Octyl Phthalate
 DAP — Dialphanyl Phthalate
 DNP — Dinonyl Phthalate
 DIDP — Di-iso Decyl Phthalate
 610P — Di-Alfol 610 Phthalate
 DBP — Dibutyl Phthalate
 DMP — Dimethyl Phthalate
 DEP — Diethyl Phthalate

Vijay Plastic Corporation, Industrial Estate, Madras

MONSOON, CROP AND COMMODITY SURVEY: MAY 1971

Good pre-monsoon rains

By Commerce Research Bureau

THE pre-monsoon rainfall during May was favourable over large parts of the country. This was not so, however, in Gujarat, Jammu and Kashmir, west Madhya Pradesh, Maharashtra, Punjab, west Rajasthan, the Rayalaseema region of Andhra Pradesh and east Uttar Pradesh. As can be seen from the rainfall map alongside, all other regions received rainfall of between 5 and 15 cm while some regions had heavier rainfall of between 26 and 40 cm. Rainfall of above 5 cm in May is considered as ideal for starting the preliminary agricultural operations and sowing. During the first week of June, the south-west monsoon was active almost throughout the country. In Gujarat and Maharashtra the sowing operations of groundnut, cotton and bajra have commenced. Agricultural operations have also commenced in many other States. Thus, the favourable pre-monsoon showers have pushed forward the agricultural operations in the country by about 10 days. This means that most probably, harvesting and marketing of *kharif* crops will commence earlier than usual this time.

Even at the fag-end of the current agricultural year, i.e., during May, the supplies of most of the agricultural commodities continued to be unusually comfortable. What is more, the country has surpluses in respect of at least three commodities—sugar, coffee and rubber. These surpluses have created their own peculiar problems.

With the expected foodgrains production around 105 million tonnes during 1970-71, the food situation is quite comfortable. At no time in the recent years did the country have such a comfortable supply position.

The supply and demand position of various agricultural commodities, their prices and other related developments during May are reviewed in the following paragraphs. Our State-by-State reviews appear after the commodity reviews.

Rice

The outturn of rice is expected to increase from 40.43 million tonnes in 1969-70 to 42.50 million tonnes in 1970-71. The supply position continued to be satisfactory in May. The daily arrivals at the terminal centres were generally satisfactory. The prices in the selected markets increased further during May on account of seasonal demand. In the Tadepalligudem market, the prices of Akkulu at Rs 96.65-104.05 per quintal showed an increase of 6 per cent in May and were 20 per cent higher than the level a year ago. In the Hapur market also the prices rose by 1.5 per cent but were one per cent lower than the level a year ago.

Wheat

During 1970-71, the production of wheat in the country is expected to be 20.50 million tonnes, against 20.01 million tonnes in 1969-70. But for the damage caused to the wheat crop by the unseasonal rains during April-May in Bihar, Punjab, Haryana and Uttar Pradesh, the production would have been still higher this year. As a result, the Union Government has relaxed specifications for procurement to facilitate purchases of rain-damaged wheat. On May 31, the Reserve Bank of India sanctioned an additional amount of Rs 50 crores to the Food Corporation of India to purchase wheat. This is in addition to Rs 200 crores sanctioned already. The daily arrivals averaged 10,000 and 8,000 maunds in the Hapur and

Sonepat markets, respectively. Nevertheless the prices in these two markets rose by 6 per cent and 2 per cent, respectively on account of good procurement by the Food Corporation of India and the State Governments. The current prices at Rs 80-88 per quintal are 4 per cent lower than the level a year ago.

Barley

The daily arrivals of barley at the terminal centres were satisfactory. Owing to the new crop arrivals, the supply position improved in May. As a result, the prices in the Bhatinda market at Rs 42.60-46.25 per quintal showed a fall of 4 per cent. On the other hand, the prices in the Hapur market firmed up by 6 per cent on account of good demand. The current prices are lower by 16 per cent than the level a year ago.

Jowar

The supply position of jowar continued to be satisfactory. Reflecting this, the prices in the Raichur market, at Rs 75-76 per quintal, recorded a decline of 6 per cent and were 3 per cent lower than the level a year ago. However, in the Hapur market, prices remained steady at Rs 70 per quintal throughout May and were 18 per cent lower than the level a year ago.

Bajra

The overall supply position of bajra continued to be comfortable. However, there was a seasonal fall in supplies. As a result, the prices of superior quality at

Rs 73-75 per quintal during May showed a substantial increase of 18 per cent. At this level, the prices were 23 per cent lower than the level a year ago. In the Hapur market, the prices ruled stable at Rs 40 per quintal and were 33 per cent lower than the level a year ago.

Maize

The arrivals of old maize crop have dwindled. But arrivals of new crop have commenced on a small scale during the last week of May. The prices in the Bhatinda market showed a moderate fall of 2 per cent in line with other cereal prices. On the other hand, the prices in the Hapur market moved up by 5 per cent on good buying support. The current prices in both these markets were 28 per cent below the level a year ago.

Gram

On the whole, the supply position of gram continued to be satisfactory in May. However, the outturn during 1970-71 is expected to be somewhat lower than in 1969-70. As a result of this expectation, the prices in the Bombay and Hapur markets, at Rs 88-89 and Rs 90 per quintal, showed increases of 3 per cent and 7 per cent, respectively. The current prices in the Hapur market were 18 per cent lower than the level a year ago.

Tur

The pace of daily arrivals was not satisfactory. Reflecting this, the prices of tur

(Berar white) in the Bombay market at Rs 128-130 per quintal showed a substantial rise of 16 per cent. In the Hapur market also, the prices firmed up by 4 per cent during May. The current prices were significantly lower than the level a year ago.

Cotton

The estimate of cotton production continued to be placed at 54 lakh bales in 1970-71 (September-August) season, against 58 lakh bales in 1969-70. Owing to the short-fall in the indigenous production, the Union Government had decided to import 10.50 lakh bales. So far, i.e., during September 1, 1970 to May 15, 1971, 2.35 lakh bales have been imported, against 5.54 lakh bales in the corresponding period of the previous year. In April, the US Government issued purchase authorisations for 99,000 bales of Upland cotton to India valued at \$15.84 million. During the period September 1, 1970 to May 15, 1971, Bengal Deshi registered for export was lower at 1.51 lakh bales, against 1.93 lakh bales during the comparable period of preceding year.

During January to March 1971, the consumption of all types of cotton including foreign cotton was lower by 1.70 lakh bales at 14.51 lakh bales compared to the corresponding period of 1970. The aggregate consumption by mills was 35.26 lakh bales during September 1970 to March 1971, against 36.76 lakh bales in the corresponding period of the preceding season.

In the Bombay market, the prices of cotton showed two phases. During the first fortnight of May, the prices of the popular varieties declined but only to rise in the second fortnight. On the whole, prices showed a moderate rise. The price of Digvijay (A) at Rs 886 per quintal recorded a rise of 5.5 per cent in May on account of brisk mill demand. The current price of this variety was 49 per cent higher than the level a year ago.

Jute

Eleven months of the current jute season—July 1970 to June 1971—are now over. At the fag-end of the current season, the daily arrivals in the upcountry markets dropped from 30,000 maunds at April-end to 20,000 maunds at May-end. During 1970-71, the combined production of jute and mesta is estimated at 62 lakh bales against 67.50 lakh bales in 1969-70.

As a result of seasonal fall in the pace of daily arrivals, the prices of Assam Bottoms in the Calcutta market at Rs 163.43 per quintal showed an increase of 3.4 per cent. The sellers were not ready to part with their stocks at lower prices and the buyers were also reluctant to quote higher prices because of the poor quality of the fibre coming at the fag-end of the season. Despite the shortfall in production, the current prices were 3 per cent lower than the level a year ago.

In the meantime, sowing of jute in West Bengal, Assam and Orissa has been almost completed. The weather conditions continued to be favourable so far. As a result, prospect for 1971-72 crop is excellent. It is estimated that the size of 1971-72 crop might be 85 lakh bales, against 62 lakh bales for 1970-71.

Oilseeds

Official estimates of groundnut (nuts-in-shell) placed the 1970-71 crop at an all-

time record level of 60.65 lakh tonnes, against 51.30 lakh tonnes in 1969-70. The previous record level of groundnut production was 60 lakh tonnes achieved in 1964-65. Of the total production in 1970-71, Gujarat accounted for 18.36 lakh tonnes or 30.3 per cent.

The following table presents the production of five major oilseeds.

Oilseed	(Lakh tonnes)		
	1969-70	1970-71	Percentage variation
Groundnut	51.30	60.65	18.2
Rapeseed and mustard	15.07	14.25	-5.4
Sesamum	4.33	4.56	3.9
Linseed	4.15	3.50	-15.7
Castorseed	1.10	1.40	27.3
Total	75.95	84.30	11.0

Meanwhile, the flow of daily arrivals of summer groundnut crop in the Madras market declined from about 120 tonnes in April to about 80 tonnes in May. Even in other major markets, there has been a seasonal fall in arrivals. In the Bombay market, the prices of Khandesh quality at Rs 193 per quintal showed a sharp rise of 9 per cent on good buying support in the face of decline in arrivals. The prices in the Rajkot market ruled more or less steady. In the Adoni and Madras markets, the prices declined marginally on account of somewhat slack demand. The current prices in the Madras markets were 29 per cent lower than the level a year ago. Both in the Bombay and Rajkot markets, the current prices were 23 per cent below the level a year ago. Among other developments, on May 24, the Reserve Bank of India announced a relaxation of its credit control on bank advances against mustardseed, rapeseed and soyabean. The minimum margin banks are required to keep with respect to advances against these three commodities has been reduced from 75 per cent to 60 per cent. Further, such bank advances have been exempted from the ceiling controls. The Union Ministry of Agriculture has sanctioned Rs 1.5 crores for the all-India co-ordinated research project on oilseeds during the Fourth Plan.

Sugarcane

According to official sources, during 1970-71 (October-September), the outturn of sugar (gur) is placed at about the 1969-70 level of 13.44 million tonnes. On the whole, availability of sugarcane was satisfactory from the commencement of the season in October till the end of May. The planting of sugarcane has been completed in almost all the major sugar producing States such as Uttar Pradesh, Maharashtra, Andhra Pradesh, Tamil Nadu, Mysore, Haryana, Bihar and Punjab.

Sugar

A large number of sugar factories have stopped their crushing operations ahead of the normal schedule of the preceding two years. The production of sugar during October 1970 to May 1971 has crossed 37.5 lakh tonnes. During the sugar season (October 1970 to September 1971), the aggregate production is expected to be slightly more than 38 lakh tonnes, against the all-time record level of 42.60 lakh tonnes in 1969-70. The current sugar sea-

son started with a record carry-over stock of 21 lakh tonnes. With this, the total availability is expected to be 59 lakh tonnes during 1970-71. Against this, domestic consumption and export in 1970-71 are expected to total 37 lakh tonnes and four lakh tonnes, respectively. Thus, the current sugar season is expected to close with a carry-over stock of about 18 lakh tonnes. On the whole, the supply position is very comfortable.

All controls on price, distribution and movement of sugar were removed by the Union Government from May 25, 1971. But the releases from factories will continue to be regulated to ensure reasonable and stable prices in the markets. A welcome feature of the new sugar policy is a uniform rate of excise duty of 30 per cent *ad valorem* fixed at Rs 125 tariff value. This excise duty has come into force from May 26. So far there were two rates—25 per cent and 37.5 per cent *ad valorem*—on levy sugar and free sale sugar, respectively. Following decontrol, the Government announced the monthly release of 4.50 lakh tonnes from the factories.

During the first three weeks of May, the prices of sugar in the major markets were rising. But soon after decontrol, the uptrend was arrested and the prices declined in these markets. In the Bombay market, the price of C-30 at Rs 188 per quintal showed a fall of 3 per cent. At this level, the price in this market was higher by Rs 8 per quintal or by 4.4 per cent than the level a year ago. In the Muzaffarnagar market also the prices declined marginally by one per cent, and were higher by Rs 20 or by 12 per cent than the level a year ago.

Khandsari

The production of khandsari has come to a stop. In the Muzaffarnagar market, the stocks of khandsari declined from 95,000 quintals in the first week of May to 75,000 quintals in the closing week of May. Nevertheless, khandsari prices in the Muzaffarnagar market at Rs 155-170 per quintal showed a fall of 11 per cent in sympathy with sugar prices. At this level, the prices were 20 per cent higher than the level a year ago. In the Delhi market also, the prices showed a moderate fall of 3 per cent.

Gur

The seasonal production of gur is also over. In the Hapur market, the daily arrivals dropped significantly. However, demand was fairly brisk from all the centres. The aggregate arrivals in the Hapur market were higher at 3.30 lakh quintals during the current season, against 2.60 lakh quintals in the last season. Reflecting the brisk demand, the prices of gur (superior) in the Hapur market at Rs 92.50-95 per quintal recorded a sharp rise of 20 per cent in May. At this level, the prices were 100 per cent higher than the level a year ago. In Muzaffarnagar market also, the prices of Chaku ruled firm at Rs 90-97.50 per quintal. The trading in the forward contract for gur remained suspended as the Forward Markets Commission did not grant permission to the local chamber to resume trading in the new contract.

Rubber

Rubber, which was scarce in 1969-70, has turned surplus in 1970-71. In 1969-70 (April-March) India imported 17,821 tonnes

of natural rubber to meet its requirements. During 1970-71, the production of natural rubber is expected to be more than 92,000 tonnes, against 81,950 tonnes in 1969-70. This has created a glut in the market. Of the total natural rubber production, more than 90 per cent is accounted for by Kerala.

In the Kottayam market, the prices of rubber on May 26, tumbled down to an all-time low of Rs 437.50 per quintal, against the minimum price of Rs 520 fixed by the Union Government. The slump in prices was due to the lower offtake by big rubber-consuming concerns like Incheck, Good-year, Bata and National Rubber. These units either closed or worked with reduced capacity owing to labour trouble and other reasons. Further, this blocked the pipeline which ensured the smooth flow of raw rubber between the State Trading Corporation (STC) and these companies resulting in the accumulation of stocks with the STC.

On May 29, the Union Deputy Minister for Foreign Trade, Mr A. C. George, said that the Government was exploring the possibility of exporting rubber. This gave a bullish prop to the market with the prices rising to Rs 452.50 per quintal on May 31. Further, the general strike by the plantation workers also aided the uptrend.

ANDHRA PRADESH

The production of foodgrains in the State is expected to increase from 74 lakh tonnes in 1969-70 to 78 lakh tonnes in 1970-71. Crops in more than 20,000 hectares in the State have suffered considerable damage due to the unseasonal rains in April-May. The districts that have suffered most are: Krishna, Guntur, East Godavari, West Godavari, Karimnagar, Mahbubnagar and Hyderabad. Latest reports indicated that paddy, cotton, sesamum crops and mango groves were almost washed away. The Food Corporation of India procured about four lakh tonnes of rice during the kharif season of 1970-71, a record procurement in the recent years.

ASSAM

During 1970-71 the production of foodgrains in the State is expected to be higher at 22.50 lakh tonnes, against 21.19 lakh tonnes in 1969-70. The food situation in the State continues to be satisfactory. The tea crop in Assam is in good shape and the production of tea has commenced in April. However, the tea industry in the State is confronted with the twin problems of tardy growth and dwindling working capital.

BIHAR

The State Government has intimated to the Union Agriculture Ministry that more than 10 per cent of the foodgrains lying in open fields had been damaged. Damage caused by pre-monsoon rains in Bhagalpur district has been estimated at Rs 6 to Rs 7 crores. The Bihar Government has also asked the Centre to send a team to assess the total damage to crops. About 20 to 25 per cent of the harvested wheat has been damaged in Bihar. The Union Government has instructed the FCI to procure rain-damaged wheat as far as possible with a view to helping the farmers.

GUJARAT

The production of foodgrains in Gujarat increased from 32.21 lakh tonnes in

PRICES IN MAY

Stability continues

DURING May 1971, the Index Number of Wholesale Prices (average of three weeks) at 181.9 remained almost unchanged at the average level of April (-0.2 per cent). Compared to the level of the corresponding month of 1970, the average index was higher by only 1.8 per cent.

Reflecting the comfortable supply position, the prices of foodgrains during May were 4.5 per cent lower than the level a year ago. The prices of edible oils also were 15 per cent lower than the level a year ago. On the other hand, the prices of other items comprising the food articles group such as fruits and vegetables, and milk and milk products were 7.6 per cent and 1.6 per cent higher than the levels a year ago. Similarly, the prices of sugar and allied products, and fish, eggs and meat were 27.9 per cent and 9.9 per cent above the levels a year ago. On balance, the index of food articles was about the same as it was a year ago. The price index of manufactures also declined nominally by 0.4 per cent during the month. But it was 7.9 per cent higher than the level a year ago.

During the week ended May 22, 1971, the official Index Number of Wholesale Prices at 182 was only 1.2 per cent higher than the level a year ago.

What is more, the prices have remained almost stable for the eleven months from July 1970 to May 1971. These eleven months included some months of the busy season and some months of the slack season. Going by the normal pattern, the prices should have fallen during the earlier months and risen during the later months. Intriguingly, there was neither a significant fall in the busy season nor has there been a rise in the slack season at least till now.

The indirect impact of the new taxes proposed in the Union Budget for 1971-72 on prices may be very small. However, the deficit financing is likely to be very large. As a result, there will be an upward pressure on the prices in the coming year. At the same time, much will depend upon the supply situation which in turn will depend on the course of the monsoon in the current year.

INDEX NUMBERS OF WHOLESALE PRICES

(Base : 1961 62=100)

Group/Commodity	Weight	May 22, 1971	April 24, 1971	May 23, 1970	Percentage variation on May 22, 1971 over

Manufactures	20	161.9	162.6	150.0	— 0.4	7.9
All commodities	100	182.0	181.3	179.8	0.4	1.2

1969-70 to 34 lakh tonnes in 1970-71. Till May 27, this year, the Food Corporation of India had purchased over 35,000 tonnes of wheat and exceeded the target of 30,000 tonnes fixed for the State. The FCI is expected to procure an additional 20,000 to 25,000 tonnes of wheat during the current marketing season. The Corporation has opened 68 purchase centres in 12 wheat growing districts of Gujarat.

HARYANA

The production of foodgrains in the State is expected to be marginally lower at 46 lakh tonnes in 1970-71, against 46.26 lakh tonnes in 1969-70. Over one lakh tonnes of wheat worth Rs 10 crores, awaiting threshing in the fields, has been either completely destroyed or partially damaged by the pre-monsoon rains in the State. The State Government has started purchasing damaged wheat at prices ranging from Rs 70 to Rs 72 per quintal depending on the extent of damage. The procurement will continue till September 1971. During April-May 1971, about 4.50 lakh tonnes of wheat has been procured, against 2 lakh tonnes in the comparable period of last year. The State Government plans to procure 7 lakh tonnes of wheat in 1971-72, against the target of 5.50 lakh tonnes.

HIMACHAL PRADESH

During 1970-71, the State's foodgrains production aggregated 11.50 lakh tonnes against 9.82 lakh tonnes in 1969-70. Following a severe hailstorm in the apple belt of Himachal Pradesh, apple crop worth over Rs 50 lakhs was destroyed. The worst hit areas were: Korgarh, popularly known as the home of apples, Narkanda, Kotkhai and Jubbal. Further, unseasonal rains and hailstorm have also caused considerable damage to other crops. The State Government has decided to launch a crash programme to construct khuls (mountainous water channels) in the border district of Lahaul and Spiti for proper irrigation facilities.

JAMMU AND KASHMIR

The production of foodgrains in the State is expected to be marginally higher at 11.75 lakh tonnes in 1970-71, against 11.51 lakh tonnes in 1969-70. The food situation continues to be satisfactory. The Forest Department has brought more than 10,000 acres of land under the willow plantation in the Haran area of Ganderbal.

KERALA

During 1970-71, the production of foodgrains in the State is expected to be higher at 13.25 lakh tonnes, against 11.51 lakh tonnes in 1969-70. The production of commercial crops such as rubber, coconut, coffee, arecanut and spices is also expected to be higher than last year. There is a glut of rubber in the markets. In the Kottayam market, the prices of rubber slumped to an all-time low of Rs 437.50 per quintal on May 26. On May 19, the first of the 150-odd closed cashew factories re-opened. On

May 10, the Kerala Government promulgated an ordinance nationalising nearly 1,200 sq miles of private forests in the Malabar area of the State.

MADHYA PRADESH

The production of foodgrains in the State is expected to be higher at 102.50 lakh tonnes in 1970-71, against 97.69 lakh tonnes in 1969-70. The procurement of rice amounted to 5 lakh tonnes in 1970-71. For 1971-72, the procurement target of wheat has been fixed at 50,000 tonnes. Of these 20,000 tonnes have been procured. The State Government has decided to advance Rs 20 crores to the farmers under various agricultural development schemes.

MAHARASHTRA

Because of the drought conditions, the production of foodgrains in the State is expected to be significantly lower at 55 lakh tonnes in 1970-71, against 69.14 lakh tonnes in 1969-70. During the period November 1970 to April 1971, the State Government procured under the monopoly procurement scheme 3.48 lakh tonnes of paddy and 0.64 lakh tonnes of jowar, against 2.82 lakh tonnes of paddy and 1.95 lakh tonnes of jowar in the comparable period of last year.

MYSORE

The State's foodgrains production is expected to be higher at 62 lakh tonnes in 1970-71, against 58.91 lakh tonnes in 1969-70. The State nurses a surplus rice stock. Raw cotton valued over Rs 10 crores are lying unsold in the State. The Mysore State Fisheries Development Corporation has decided to set up a Rs 15-lakh fish canning plant at Kulai in Mangalore.

NAGALAND

Rice is the main crop in the State. No rabi food crops are cultivated in this State. The production of rice is expected to be 52,000 tonnes in 1970-71 as compared with 50,000 tonnes in 1969-70. The food situation in the State continues to be satisfactory.

ORISSA

The State's foodgrains production is expected to be 53.50 lakh tonnes in 1970-71, against 50.33 lakh tonnes in 1969-70. Owing to the good pre-monsoon rainfall in the State, jute sowing is in full swing. It is estimated that an area of 90,000 acres had already been sown under jute. The jute acreage for 1971-72 season may reach the target of 1.50 lakh acres as against 1.08 lakh acres in the preceding year. It has been decided to take up the aerial spraying of urea operation in mid-June over an area of 10,000 acres.

PUNJAB

During 1970-71, the production of foodgrains in the State is expected to be 70 lakh tonnes, against 69.37 lakh tonnes. Owing to the unseasonal rains, about 10 to 15 per cent of the wheat crop in the State has

been damaged. The Union Government has instructed the FCI to purchase rain-soaked wheat in Punjab at prices ranging from Rs 71 to Rs 73 per quintal depending on the extent of damage. The new dwarf rice variety 'Jaya' has shown better performance in Punjab than in any other State in the country. For 1971-72, the Punjab Government has selected an area of 952 acres in the Amritsar district for fish culture.

RAJASTHAN

Rajasthan is expected to harvest an all-time record level of 76 lakh tonnes of foodgrains crop in 1970-71, against 47.50 lakh tonnes in 1969-70. The previous peak level of 66.02 lakh tonnes was achieved in 1967-68. The Food Corporation of India has been procuring wheat in the State at prices ranging from Rs 74 to Rs 76 per quintal. This is the only important rabi foodgrains producing State which has not been affected by the unseasonal rainfall. The FCI has purchased 22,872 tonnes of wheat up to May 15, against the target of 75,000 tonnes.

TAMIL NADU

Official data place the State's foodgrains production at 72 lakh tonnes in 1970-71, against 62.39 lakh tonnes in 1969-70. The farmers of the rice-rich Thanjavur district appealed to the State Government to buy at least one lakh tonnes of rice from the kuruvai crop to prevent distress sales in the wake of the anticipated glut. The State Government has decided that the existing stock of the chemical fertilisers would be sold at the prevailing subsidised rates with a view to increasing the foodgrains production.

UTTAR PRADESH

The State's foodgrains production is expected to rise from 175.47 lakh tonnes in 1969-70 to 180 lakh tonnes in 1970-71. However, the unseasonal rains in May have damaged about 20 to 25 per cent of the wheat crop in the State. According to rough estimates, rabi foodgrains of 15 to 18 lakh tonnes valued at Rs 115 to Rs 125 crores have been damaged. The FCI has been asked by the Union Government to procure the rain-soaked wheat in the State. Following heavy arrivals, the FCI procured 20,000 tonnes of wheat in Muzaffarnagar district and thus fulfilled its target fixed for the district. Despite this, the FCI has continued its procurement operations in this district.

WEST BENGAL

The production of foodgrains in the State is expected to be 78 lakh tonnes in 1970-71, against 73.64 lakh tonnes in 1969-70. Jute sowing has been completed; the acreage this year is more than normal. The State Government has taken special steps to raise the output of jute and mesta. Owing to the continuous influx of refugees from Bangla Desh, the State Government has asked the Centre to allot 8.25 lakh tonnes of rice immediately.

Spot prices of agricultural commodities: May 1971

Mahindra UGINE Steel Company Limited

Statement of the Chairman, Mr Harish Mahindra

FOLLOWING is the statement of the Chairman, Mr Harish Mahindra to the Members on the occasion of the 8th Annual General Meeting of the Company held in Bombay on 11th June 1971:

The Directors' Report and the Accounts for the year ended 31st December 1970 have already been circulated. My statements in the past used to dwell on the economic and political issues providing the background to your Company's operations. But this year I am making a departure by concentrating on topics of direct interest to you. Nevertheless we have been so close to the presentation of the Union Budget for 1971-72 that it would be desirable and appropriate if at the outset it is briefly referred to and its impact on industrial growth assessed.

Budget Proposals

The Government has come out with a Budget having the avowed objective of narrowing down economic disparities. Some of the measures introduced have a distinct veneer of socialism. Reading between the lines, one would find that there is a positive attempt to mould the pattern of consumption as also to further discourage conspicuous consumption. The Budget, therefore, appears to be motivated more by a desire to project a radical stance rather than to trigger off an accelerated pace of industrial investment. As far as the corporate sector is concerned, the measures to increase the rate of capital gains tax and the rate of surtax on company profits where they are in excess of 15 per cent of the capital as also the abolition of Development Rebate after 31st May 1974, coupled with the reduction in the amount allowed to be deducted from 8 per cent to 5 per cent of profits in respect of priority industries whose list has also been slashed will undoubtedly hinder capital formation.

The Development Rebate Reserve, introduced in 1955, is intended to be discontinued from the end of 1973-74 for several reasons. Firstly, with such a threat of abolition of DR it is hoped that the tempo of investment between now and 1974 would be quickened. Secondly, it is presumed that the country has already built up a 'wide enough' industrial base and therefore there is no need to perpetuate DR. And, finally this step is also for the purpose of 'preventing accumulation of surplus resources and growth of larger houses'. These arguments do not carry conviction and sound rather specious. There are several better ways to stimulate investment activity such as expediting issue of industrial licences for both new units and expansion than through the abolition of Development Rebate. The second argument that the country has already built up a wide enough industrial base is open to question as the prime need of the hour is to accelerate the growth of all industries for the sake of which it is essential to offer positive incen-

tives for investment. It is also a moot point whether there is such a wide base as is presumed. If there is one, why should we be planning for expansion of capacities in Steel, machine-building industries, heavy chemicals and such other basic industries? As regards the third argument, we should bear in mind that while there are examples of a few companies who have been able to amortise an amount in excess of the capital invested in a brief period, this does not mean that all companies can do so. Much depends on the nature of the industry. Steel or Alloy Steel Industry as such, is a capital-intensive one and it takes a fairly long time before the break-even point is reached and before an organisation gets into the profitability stride.

The need to build up reserves equal to the replacement value of plant and machinery is such that depreciation by itself however much liberal it be, cannot be adequate, especially in these days of mounting prices steadily eroding the value of the Rupee. Secondly, when the time comes for replacement of Plant and Equipment, it is seldom that Industry buys the same type of equipment, which due to efflux of time would have become obsolete in view of the technological advancements. Consequently, replacement equipment would constitute more sophisticated equipment and also would be in the form of improved designs, with streamlined features incorporating the latest technical innovations. Replacement by such a modern equipment entails a higher capital expenditure than the cost of the original plant or machinery.

It is therefore urged that the commendable and progressive views with which it was introduced should not be lost sight of and the decision in regard to abolition of Development Rebate be reconsidered. Alternatively, the Government may consider a proposal put forward in 1967 by Dr R. K. Hazari that such major tax concessions should be "(a) selective matched with plan priorities and graded accordingly with a larger differential than given at present and (b) related directly to larger output, lower cost and higher profits instead of conferring a bounty on the amount of investment per se."

The agricultural sector has continued to be a tax heaven. If the necessary processes had been set in motion to prompt and enable State Government to tax agricultural incomes in areas of assured water supply, above an exemption limit of Rs 15,000, if not less, it would have helped the achievement of the crucial objective of imparting a measure of equity to our income taxation and would have made our taxation income-elastic, responsive to movements in national income. It may also be stated that taxation of the prosperous pockets in the rural areas would have had to a certain extent, a distinct disinflationary effect on the price spiral by siphoning

a part of the (excess) money in circulation into Government coffers.

Working of Your Company

Let us now turn our attention to the operations of the Company during 1970 and the first five months of 1971. It must be extremely heartening to all of you to learn that the second complete year of integrated operations of your Plant resulted in satisfactory financial results. Indeed 1970 was a year of solid achievement for your Company. We produced more ingot tonnes during the year under review—we rolled and finished larger quantities of bars and our net sales increased by nearly 67 per cent as compared to the preceding year. So far as production was concerned, your Plant was capable of achieving higher levels of output in terms of Ingots as well as Rolled Steel but for constraints like non-availability of certain critical raw materials and consumable stores.

Outlook

As mentioned in the Directors' Report, the Company has finalised the financial plan for the Balancing Equipment and it is in the process of releasing the orders for plant and equipment required to produce 24,000 tonnes of Finished Steel on an integrated and sustained basis. The fact that in 1970 we had produced more than 26,000 tonnes should not make us oblivious to the necessity of forging ahead with the Balancing Scheme inasmuch as last year we rolled about 1,500 tonnes of blooms into finished products in order to augment production.

I am happy to advise you that in furtherance of our plans to expand the capacity of your Plant and to achieve maximum economies of scale your Company has been able to submit a comprehensive plan to the Government for enlargement of the productive capacity upto 60,000 tonnes of finished Tool, Alloy and Special Steels per annum. I am also happy to advise you that our application is being sympathetically considered by the Government in the context of the widening gap between demand and production of Alloy and Special Steels in the country and we expect to receive a favourable decision shortly. In planning the expanded capacity of our Plant we shall strive to achieve maximum diversification of the end-products consistent with a favourable capital-output ratio.

Sales during the first five months of the current year continue to be satisfactory and the gross sales have amounted to Rs 429 lacs as against Rs 283 lacs during the corresponding period in 1970.

Your Company's present position and its outlook for the future, I believe, is fairly promising—promising in people, technological ability, product line and in dedication. However, the strength built up over the past few years will not, by itself enable us to meet the growth goals we have set for ourselves in the coming years. For this, we have to constantly strive to expand our operations and diversify our product-mix so that the goals are met or even exceeded.

Perspective Planning

The observations about our sales and the outlook for our Company prompts me to discuss briefly the developments and

trends in our own industry and share some thoughts on perspective planning. Planning today is a universally accepted exercise for one and all. It involves looking as far ahead as the data on our hands and our vision permit. In the life of a corporation this means a close study of all the factors that shape its progress and influence it decisively. There are several such factors and one such all-important factor, external to the organisation that could provide the guidelines for future growth is the assessment of the potential market. I attach over-riding importance to a sincere, honest and realistic attempt to size up the approximate if not the exact requirements of a given product for a given year in the planning and creation of manufacturing capacity.

Your Company is vitally interested in making projections of its own growth with the help of macro-projections of the demand for Mild, Alloy and Special Steels released by various Government and semi-Government agencies. During the last decade there have been several such macro-projections and I have had occasion in my earlier Statements to refer to these. The latest estimates of demand for Steel have come from NCAER. Most of the studies work out the potential demand with the help of the end-use method which is a simple but down to earth technique to assess the short-term as well as long-term demand in developing countries. The recent estimates of NCAER also utilise the same method. But I have always felt that on account of the lack of a clear perspective, both forward as well as backward, these projections have suffered from certain limitations and shortcomings. One particular fact that strikes me is that the latest macro-projections have not paid adequate attention to the question of backward perspective by which I mean that the wrong assumptions, paradoxes and other factors which have vitiated the earlier demand studies have not been listed nor have any lessons been drawn from the previous exercises.

In the latest study of the demand for Steel, the NCAER has taken full account of (a) all the major steel-consuming sectors, (b) requirements of such consumers, (c) increase in demand due to export of Steel, (d) Steel content of machinery and engineering goods to be exported, (e) possible reduction in demand due to substitution of Steel by items such as plastics, asbestos, cement, aluminium etc. in such products as motor cars, railway rolling stock, ship-building, pipes and tubes, (f) price elasticity of steel demand and (g) Steel content of imported products and so on.

The main assumption underlying the end-use method is firstly that the targets for various industries obtained from research organisations like the Planning Commission or those of NCAER itself, would be achieved. Experience tells us that this has not always been a correct assumption and plan targets for even the major steel-consuming sectors get elasticised. Also in several industries there have been shortfalls in respect of the attainment of targets. As you can see for yourselves, such shortfalls may result in over-estimation of the requirements. Conversely, where targets are exceeded, which is not often the case, the forecast of requirements

for a particular industry turn out to be under-estimates.

Secondly, the success of the end-use method is largely conditioned by the accuracy of the norms that relate the Steel Industry to the Steel consuming industry by indicating the input co-efficient. Such norms are known to change with technological progress and innovations and there have been several occasions in the past when estimates have gone haywire on account of unrealistic norms having been adopted. For instance, the norms employed by the Perspective Planning Division in its 1965 estimate of the requirements of Alloy and Special Steels have been replaced by the NCAER which has employed its own norms for various industries. The end-use method thus assumes that the impact of technological changes would be minimal, if not nil on the norms of consumption of Steel. Naturally to obtain more accurate figures at the end of such an exercise, the final estimates are adjusted upwards to provide for such findings of changes in various consuming sectors. In order to make the macro-projections meaningful for the producers to plan and expand their capacity, it is essential that norms are kept under review and at the end of every year or so the Associations of Consumers and Producers should get together and see that any significant changes in the norms are reflected in the demand figures and necessary adjustments and or corrections are made on the overall demand projections. By such an exercise, the year to year projection of demand would be rendered more realistic and would provide a workable basis to determine the gap between demand and availability.

Estimates of Demand for Alloy and Special Steels

With these considerations regarding the merits and demerits of the end-use technique in mind, let us consider the recent studies in demand estimates with special reference to the products of our own industry viz. Alloy and Special Steels. There have been as many estimates of demand for Alloy and Special Steels as there are for other Steels also. As against about 300,000 tonnes for 1973-74 and 430,000 tonnes for 1978-79, estimated by the Steering Group of the Steel Ministry in 1968 and incorporated in the Fourth Five Year Plan document, the latest study of the Council provides for 434,000 tonnes for 1975 and 817,000 tonnes for 1980.

The estimates of the Steering Committee as revised by the Technical Wing of the Steel Ministry have now become available. Accordingly the demand for Alloy and Special Steels has been revised upwards from 300,000 tonnes to 400,000 tonnes for 1973-74 and from 430,000 tonnes to 500,000 tonnes for 1978-79. What is of interest to your Company as a producer of Alloy Constructional Steel in these varying estimates is that for 1973-74 the estimates of both the Technical Wing and the NCAER arrive at almost the same figure, but for a difference of only about 2,000 tonnes. The marginal divergence however, turns out to be sizable in the estimates for the end of the Seventies. As against the Technical Wing's estimate of 178,700 tonnes for 1978-79, the Council places the demand for

Alloy Constructional Steel at 239,906 tonnes for 1980.

It is now accepted that the assessment of the Technical Wing has been rather conservative and that the Council's studies despite certain limitations, are more realistic. A message that emerges loud and clear from these studies is that even after the schemes for expansion or setting up of new units on green sites which are now under consideration are successfully implemented by the end of the decade, there would still be a gap, probably substantial rather than marginal between requirements and actual production.

All said and done, the numerous estimates referred to above need to be further processed and worked upon for purposes of drawing meaningful conclusions that guide us in deciding about future investments in the creation of new Alloy Steel capacity and in determining the ideal product-mix for your or other plants. The breakdown of such broad aggregates into categories, grade, shapes, surface finish i.e. black or bright etc. is a pre-condition for successful corporate planning. Quite a few snap judgements, I am afraid, have already been made based on broad aggregate demand resulting in duplication of capacity of the same size ranges. And circumstances may force us to amend them, if not reverse such decisions. In this context I would emphasise that before a final sanction is issued for creation of fresh capacity, adequate thought is given to the point whether such fresh capacity should come about through new units on green sites or through expansion of existing units or both. Three considerations weigh very heavily in favour of the second proposition. Expansion would firstly help creation of new capacity faster; it would involve lower capital investment; and finally what is important, it would help the existing units to achieve economies of scale.

Demand Estimates and MUSCO's Growth

The necessity of a precise assessment of the demand for Alloy Steel acquires special significance for MUSCO in view of the fact that, as indicated in the Directors' Report, so far the inflow of orders for our products for the current year has not been upto our expectations. In their anxiety to mitigate the steel shortage in the country, the Government liberalised the import policy and in the process large licences had also been issued for Tool, Alloy and Special Steels. With the liberalisation of imports coupled with the fact that recessionary trends continued to prevail in the offtake of Diesel Engines, Machine Tools, Spring Steels, Railway Wagons etc. the inflow of orders dropped considerably with the result that planning of economic rolling tonnage for different size ranges posed considerable problems to the producers. Pursuant to the representations made to the Government in this respect, I am happy to say that Import Licensing Policy has been reoriented, aiming at imports of only such of those categories and types of steels as are not available in adequate quantities in the country.

The impact of recent restrictions on imports will not be fully felt until the end of this year. At the moment, however, the order inflow appears to be looking up and

it is hoped this trend will grow more distinct.

Taking the long range aspect into account, it may be stated that the growth potentials of the Automobile Industry which accounts for a large part of the offtake of our products have not been fully realised owing to various reasons. Automobile production, inclusive of Jeeps, Cars and Commercial Vehicles put together in about half a dozen plants, does not exceed 90,000. This is a highly anomalous situation insofar as it is an accepted fact that there must be a minimum production of at least 50,000 units per plant if the economies of scale have to be realised. It should therefore, be hoped that the Government will come to certain positive conclusions about the small car project without further delay as this has kept a number of related considerations in suspense. The slow growth of the transport sector in general and the automobile industry in particular does not bode well for our industry and the tolls for quickening the rate of growth. In this context the recent reports about the likely establishment of a private sector small car plant with a capacity of about 50,000 cars per annum and the licensing of additional capacity for manufacture of commercial vehicles are doubly welcome.

Mini Steel Plants

In my Statement last year I had occasion to refer to the fact that the establishment of Electric Arc Furnaces with continuous casting facilities has received the imprimatur of essentially from the Government. Thereafter a lively interest has come to be evinced in this matter. In fact even the Ministry of Foreign Trade also has been credited with suggesting the setting up of Mini Steel Plants either on a captive basis to cater to the needs of particular engineering industries or on a decentralised basis, so that export production is not hampered due to steel shortage. The capacity of each mini steel plant has been placed at about 50,000 tonnes of billets a year using the concast process. They may have either sponge iron or scrap or pre-reduced pellets as the feed stock. Recently the Minister for Steel made it known that six mini steel plants had been licensed, four in the private sector, one in the joint sector and yet another in the public sector. And six more similar projects may get final sanction by 1974. All in all, the dozen or so new mini plants would augment the country's steel capacity by 600,000 tonnes by the beginning of the Fifth Plan.

Although a decision to permit establishment of mini steel plant is a step in the right direction, I think that before new projects are sanctioned the pros and cons of producing the mild steel and special steel in these plants with particular reference to the production cost aspect should be thoroughly looked into, so that they can meet squarely the competition from the integrated steel plants.

In the final analysis, it is high time that a master perspective plan for the speedy expansion of Steel capacity in the country is drawn up and Government and Industry jointly and single-mindedly work for the crystallisation of such plans. This exercise has to be preceded by clearer thinking about the future needs. Fortunately,

there is not much of a dispute in regard to the rapid development of the Steel Industry. The Prime Minister himself has acknowledged the fact that "the capacity for Steel making would have to be doubled every 10 years". In Japan the crude steel output itself is being doubled every 4/5 years from 7.6 million tonnes in 1953 to 10 million tonnes in 1956, to 23 million tonnes in 1960, 41.3 million tonnes in 1965 and 82.2 million tonnes in 1969. This year it may cross the 100 million-tonne mark.

Earlier there has been a reference to the need for forward and backward perspective in Steel planning. Steel planning in our country is now about 15 to 20 years old and the country has had considerable experience. Such experience is most invaluable at a time when the country is likely to be short of Steel during the entire decade of the Seventies. The time is now opportune for the numerous plans and estimates to be placed side by side, compared and our experience in this field consolidated so that the future exercises are spared of any past mistakes.

Feeder Industries

A corporate or industrywise perspective plan considers not only the market potential for a product but also the derivative demand for essential inputs to be supplied by the feeder and ancillary industries. Only such an assessment of the requirements and availability of raw materials would give meaning and content to the perspective plan. For instance one cannot plan the growth of Electric Furnaces without a careful and painstaking study of the supplies of raw materials that would be forthcoming from the feeder industries. The appreciable growth of the Electric Furnace Industry cannot be maintained even in the future unless supplies of the inputs match the growing needs. As of now, it is estimated that there are about 170 Electric Arc Furnaces with a hot metal capacity of about 2.05 million tonnes. Capacity utilisation has been estimated at about 70 per cent. This is likely to improve by another 10 per cent in the current year. The installation of Steel Furnaces could grow at a more vigorous rate but for the constraints in the form of raw material shortages. They are not unique to our industry but happen to be almost world-wide phenomena though there could be differences from country to country in regard to the magnitude of such shortages. Attention must therefore be paid to the feeder industries as also to their growth. These problems and constraints in regard to ferrous scrap, graphite electrodes, refractories, nickel, ferro-alloys etc. are not an easy matter to come to grips with. They make the task of planning the future growth of furnaces rather difficult.

Power Tariff

In these columns, during the earlier years I have been urging the Government of Maharashtra to re-structure the power tariff in the State in a way which will give certain tangible benefits to power intensive industries. Electric power is one of the basic inputs for producing Steel in Electric Furnaces. It is therefore necessary to revise the power tariff applicable to metallurgical industries in particular, with a view to giving a competitive edge to steel

produced within the State. With the same objective, States like Haryana, Kerala, MP, Mysore, Punjab and Rajasthan offer different kinds of concessions or rebates to electro-chemical and electro-metallurgical industries. It should be hoped that the Committee appointed by the Government of Maharashtra headed by the Industries Commissioner to enquire into this question would keep these facts in mind in as much as power costs will largely determine the growth prospects of metallurgical industry in Maharashtra. The State should aspire to have atleast 25% of the liquid metal capacity and this can only be achieved if the disincentive in the form of a high power tariff is removed.

Import Canalisation

A passing reference is also called for in regard to the canalisation of import of essential raw materials of our industry and its possible impact. According to the latest import policy, imports of graphite electrodes have been canalised through the STC, refractories and refractory materials through MMTC/HSL, ferro-molybdenum, ferro-tungsten, ferro-vanadium and ferro-silicon, stainless steel sheets, plates and strips, heavy melting scrap, sponge iron and nickel through the MMTC. It is provided that the import control authority would issue the necessary release orders to bulk importers.

I have had occasion to refer in the past to the increased faith the Government has been putting in State Trading. Ever since they were set up, State Trading agencies have not fared well in their effort to import in bulk several items including sulphur, rock phosphate, chemicals, copra, betelnuts, soyabean oil, etc. It is doubtful, looking at their past record, whether such agencies would literally deliver the goods of the right quality, at the right time and at the right price. There are enormous complexities attending upon such business especially in relation to the hundreds of specifications regarding quality, sizes, delivery periods, sources of supply and in short the dynamics of the world market. It should, therefore, be hoped that the normal production and growth of the Alloy Steel Industry is not jeopardised on account of the inconveniences that may be caused in the supply of indispensable raw materials.

Cordial Relations

Your Company has been able to maintain the most cordial and happy relations with its employees in the Plant as well as Head Office during the year under review and I would like to record my sincere appreciation of the hard and conscientious work put in by the employees. I would also like to express my gratitude to the colleagues on the Board whose wise counsel and advice has largely helped me to discharge my responsibilities. We continue to receive valuable technical assistance and co-operation from our Collaborators and Partners, Uguine Kuhlmann.

Note: This does not purport to be the record of the proceedings of the Eighth Annual General Meeting of the Company.

THE MONOPOLIES AND RESTRICTIVE TRADE PRACTICES ACT, 1969.

(General notice in pursuance of Rule 4A of the Monopolies and Restrictive Trade Practices Rules, 1970)

In terms of the Collaboration Agreement dated 15th January 1970 between The Arvind Mills Limited, Naroda Road, Ahmedabad-2 (hereinafter called 'Company') and M/s. National Distillers & Chemical Corporation, 99 Park Avenue, New York, U.S.A. a new company to be called The Arvind Petrochem Limited is under formation (hereinafter called 'Proposed Company') for the manufacture of Low Density Polyethylene Resins, near Koyali, Baroda (Gujarat State).

In our opinion the Proposed Company when established will not become interconnected undertaking with the Company. However,

as the Letter of Intent is issued to the Company and as the Company is going to subscribe in the equity capital of the Proposed Company to the extent not exceeding 40%, the Government of India, Department of Company Law Affairs, appears to hold *prima facie* the contrary view and hence we have made an application dated 13th May 1971 under Sub-section (2) of Section 22 of the Act to the Central Government, without prejudice to our submission that the provisions of the above Act are not attracted. The proposal relates to the establishment of the new company with the participation of the Arvind Mills Ltd., the applicant company.

The substance of our application is as under:—

1. Constitution of the Board of Directors of the proposed Company, The Arvind Petrochem Ltd. Three Directors will represent The Arvind Mills Ltd., Ahmedabad. The names of the Directors have yet not been finalised except that of Shri Kasturbhai Lalbhai, Pankore Naka, Ahmedabad.
The following three Directors will represent M/s. National Distillers & Chemical Corporation, New York, U.S.A.
1. Mr. K. E. Cosslet.
2. Mr. Tony Chong.
3. Mr. C. E. Trunkley.
Other Directors as may be further selected.
2. Article proposed to be manufactured. Low Density Polyethylene Resins by High Pressure Polyethylene process.
3. Annual Capacity. 40,000 M. Tonnes.
4. Existing units owned by the applicant company. Textile Mill.
5. Estimated outlay. Rs. 18 Crores.
6. Inter-connected undertakings. In our opinion the Arvind Petrochem Ltd. (Proposed Company) will not be interconnected with

any of the undertakings. The following companies are interconnected with the applicant company.

1. The Atul Products Ltd.
2. Cibatul Limited.
3. Ameer Trading Corporation Ltd.

7. Scheme of finance.

Equity participation.
Rs. 2.40 Crores (in foreign exchange) by M/s. N.D.-C.C., U.S.A.

Upto Rs. 2.40 Crores by the Arvind Mills Ltd.

Rs. 1.20 Crores by Indian Public.

Rs. 6.00 Crores total

Borrowings: (Foreign Exchange)

1. Rs. 1.36 Crores I.F.C. Washington.
2. Rs. 0.75 Crores I.C.I.C.I., India.
3. Rs. 0.75 Crores U.S. AID Funds, Washington.

Rs. 2.86 Crores total

The remaining Finance will be borrowed from P. L. 480 (Cooley Funds) and Indian Banks.

Any person interested in the matter may, if he so desires, intimate to the Central Government in the Department of Company Affairs within fourteen days from the date of publication of this notice, his views with regard to the proposal contained in our application and also the nature of his interest therein.

Registered Office :
Naroda Road,
Ahmedabad-2.
3rd June 1971.

PROMOTER.

REVIEWS

Our substitute labour

Employment, Output and Wages of the Substitute Labour: Jitendra L. Dholakia; Asian Thought Centre, Ahmedabad; Pages viii + 47, Price Rs 3

Do you know that the *badli* (substitute) workers in the Ahmedabad cotton textile mills get on an average 167 days of work in a year? Or that the average wages of a *badli* worker, in 1967-68, were Rs 120.15, as compared to the monthly wages of Rs 248.20 of a permanent worker? Or that the average *badli* worker carried a debt of Rs 1,566? Well, these are some of the interesting findings contained in the study under review, based on a survey of 549 workers in 26 cotton mills in Ahmedabad. Apparently there is nothing much wrong with the data presented—although there are several important omissions. It is in the interpretation of the data that the study has blundered egregiously. Here are a few instances:

Page 14 "In comparison to the wages and dearness allowance of the *badli* workers, the average monthly income of the permanent worker... is more than twice that of the substitute labour. The *badli* worker does the same kind of work as the permanent worker in the textile mill and yet there is a great disparity in the wages of these two categories of the workers. This is a glaring illustration of the unequal pay for the equal work"

Comment: The *badli* worker may be doing the same kind of work, but he does not do the same amount of work. By the very nature of his employment, the *badli* worker gets work only on days when a permanent worker is absent. How is the principle of equal pay for equal work violated if a *badli* worker works for half a month and gets half the total monthly wages of a permanent worker? As the author himself says, on page 9, a *badli* worker is not entitled to the fringe benefits of leave, provident fund and sickness insurance as he does not normally complete the qualifying number of 240 days of work in a year, but otherwise the wage rate remains the same for both the *badli* and the permanent workers. The author also says, on page 14, "one of the reasons for the low average income of the *badli* workers may be the lower period of employment." What could be the other reasons?

Page 15: "The *badli* workers could have got Rs 248 per month had they been given the permanent jobs in the textile industry, but they got on an average Rs 120 per month for the same kind of work... It seems, therefore, that wages of the *badli* workers were less than their average productivity... the fact that average product of the substitute labour is greater than wages only proves exploitation in the Marxian sense."

Comment: The same kind of work does not mean the same amount of work. Average productivity is not the same as the average product. As for exploitation in the Marxian sense, all labour is exploited under the capitalist system of production,

irrespective of the level of wages and the nature of employment.

Page 16-17: The average debt of the *badli* worker was Rs 1,566... the debt-income ratio was found to be as high as 13:1. The debt-income ratio is a measure of the economic burden of indebtedness."

Comment: This debt is described later in the same paragraph as a "crushing burden." Is it not reasonable to assume that the amount of debt is directly related to the debtor's credit-worthiness? And that the rate of default in repayment can be the only true index showing whether the debt is a crushing burden?

Page 19: "... the indebted households had to set aside about 6.40 per cent of their monthly income for the payment of interest charges to the various credit agencies"

Comment: If the average monthly income of a *badli* worker was Rs 120.15 as stated by the author, 6.40 per cent of the income should be equal to Rs 7.69, which means, on the average debt of Rs 1,566, a rate of interest of 0.49 per cent per month. Does this show the prevalence of "unconscionable rates of interest"? How can this be reconciled with the author's statement that 72.3 per cent of the total amount of loans was given by money-lenders and *Pathans* on high rates of interest "ranging from 37 per cent to 60 per cent (per annum)"?

Page 21: "The formula used for measuring productivity is as follows: Productivity of Labour = Value added - Number of workers."

Comment: If so, how could the figures, varying from 1,305 to 2,047, be arrived at in the table on the next two pages? If they refer to the year 1967-68, without reference to the man-days worked, the figures for *badli* labour with intermittent employment should have been considerably less than those for permanent labour employed regularly throughout the year. The table, on the contrary, shows that out of the 13 mills covered, *badli* labour was more productive in as many as eight mills. What are the policy implications of such a finding?

Page 25: "The result of this empirical study supports the hypothesis of positive association between high income and high productivity of the substitute labour force."

Comment: This statement refers to a table giving the rank correlation coefficients between the total monthly income and productivity of *badli* workers. The table shows a correlation coefficient of +0.98 for workers in the income group of Rs 200-250, while according to an earlier table given on page 13, no *badli* worker earned more than Rs 200. The correlation coefficient of +0.82 refers to workers in the income group of Rs 151-200, in which there were only 48 workers according to the earlier table. The rank correlation co-

efficient, moreover, is a crude measure, which does not inspire sufficient confidence to assert anything categorically regarding the relationship between income and productivity, especially on the basis of the limited data collected for the study.

The above are but a few of the errors and misinterpretations which abound in this small study. Besides, in the short span of 32 pages of the text, there are innumerable repetitions and pointless statements like: "It was interesting to find that one *badli* worker prayed for a propitious period of economic prosperity during the spell of unemployment." (pages 8-9)

The study refers neither to the number of years for which the workers interviewed had been working as *badli* labour, nor to the rates of absenteeism in the mills. There is also no mention of the decasualisation schemes for *badli* workers in the textile mills in other industrial centres or of the schemes covering dock workers in all the major ports.

—Federalist

IN BRIEF

Laghu Udyog Annual 1970: Edited by M. V. Panvalkar; Published by Maharashtra Small Scale Industries Development Corporation, Bombay; pages 382; price Rs 20.

The second number of this annual publication is devoted to a comparative study of the small-scale industries in advanced countries as well as under-developed countries. It contains many informative and perceptive contributions from eminent experts. Most of the contributors have written about the small-scale industries in their respective countries. These articles throw light on the size and characteristics of the small-scale industry in the different countries at various stages of development. The Maharashtra Small Scale Industries Development Corporation has rendered a valuable service by bringing out this Annual Number.

THE STORY OF OUR ABRASIVES

From the rural setting of Bhatia to the calm waters of the Arabian sea... from green Edapally on the Muttarpuzha River to industrial Tiruvottiyur on the Coromandel coast—a succession of contrasting scenes sums up the story of abrasives—a transition that sees the conversion of raw bauxite into a variety of bonded and coated abrasives.

The Carborundum Universal operation is virtually synonymous with the story of abrasives in India. Under the Red Indian and Ajax names, we provide basic tools which are helping to shape the very future of industry in India and in many countries abroad.

CARBORUNDUM UNIVERSAL LTD.

Manufacturers of Quality Bonded and Coated Abrasives, Abrasive Grains, Calcined Bauxite and Super Refractories. Madras • Calcutta • Bombay • New Delhi.

BALANCE SHEETS

HIGHER TURNOVER AND EXPORTS

Hindustan Lever fares well

HINDUSTAN Lever Ltd (Chairman: Mr V. G. Rajadhyaksha, Bombay) has reported a creditable performance for the year ended December 31, 1970. Sales rose to Rs 1192 crores from Rs 1088 crores in the previous year. The considerable increase in raw material costs could not be fully offset by the company under the existing controls on selling prices. As a result, profits dropped in spite of a rise in turnover. Thus, the gross profit of the company for the year was only Rs 65 crores (Rs 7.3 crores). The net profit, after depreciation and taxation, amounted to Rs 25 crores (Rs 2.7 crores). The dividend was maintained at 14 per cent payable on the enhanced capital. In the year under report, the ordinary paid-up capital of the company was raised to Rs 1445 crores from Rs 1156 crores by issue of bonus shares of Rs 289 crores in the ratio of 1:4.

The company's gross profit margin works out to 55 per cent against 67 per cent. The ratio of net profit to net worth comes to 127 per cent (142 per cent).

In the year under review, the factories maintained satisfactory quality standards and production levels, in spite of difficulties in the supply and quality of raw materials. Many new products were developed for full scale production, notably, the synthetic detergent bar "Run". New techniques for upgrading non-traditional oils were introduced.

In 1969-70, the oilseeds crop was an average one and prices soared to a higher peak than in the previous year in spite of imports of oils and fats by the Government. To reduce the pressure on the supply of traditional edible oils, greater use was made in soaps of local non-traditional oils such as neem, karanjia, kusum, rice bran and sal increased, while technological problems on the usage of these oils are being solved, difficulties of collecting the seeds continue to restrict availability.

The sharp increase in raw material and other costs was not reflected in the selling prices allowed to the soaps and detergents industry. This depressed margins on soaps, especially in the first half of the year. An inquiry into the cost of production of the soap industry has been undertaken by the Bureau of Industrial Costs and Prices. Increased sales of synthetic detergent powder and bar have helped to reduce the demand on oils for making soap. The company expects to obtain sufficient imports of the raw materials required for manufacturing synthetic detergents.

Sales of the company's toilet preparations in 1970 were encouraging and in particular "Signal" toothpaste and "Sunsilk" shampoo gained wider popularity. The margins on vanaspati shrunk further as a result of increased costs which could not be recovered under the price formula. The consumer offtake of "Anik" ghee and "Lever's Baby Food" showed considerable

increase over the previous year. The malted milk food market has become highly competitive and the company's brand "Astra" made less progress than expected. A promising start was made with the export of Hima range of food products to the UK and many other countries.

Steady progress was made in the growth of animal feed business and the range of products has been extended. To reduce imports and meet the rising demand from vanaspati manufacturers, the production of nickel catalyst was again increased.

Exports for the year rose substantially to Rs 4.78 crores from Rs 2.01 crores in the previous year. Special mention may be

made of the export of synthetic detergents valued at Rs 21 lakhs to the USSR through the State Trading Corporation.

The company is at present negotiating with the Punjab State Industrial Development Corporation and the Union Government regarding a fertiliser project in Punjab. It is also discussing with the Government a number of other projects. One such proposal submitted to Government is to build a factory in a backward area. During 1969-70, pilot plant facilities at the company's research centre were enlarged. The total capital expenditure incurred on research so far amounts to Rs 154 lakhs. □

Travancore Electro-Chemical Ind.

Sales of the Travancore Electro-Chemical Industries Ltd, Chingavanam, Kerala, for the year ended December 31, 1970 have slightly increased to Rs 1.12 crores from Rs 1.03 crores in the previous year. The net profit, after providing Rs 4.39 lakhs (Rs 20.42 lakhs including Rs 16.11 lakhs as arrears up to 1968) for depreciation amounted to Rs 24.18 lakhs

(loss of Rs 9.01 lakhs). A maiden dividend of 10 per cent has been declared on ordinary shares. An amount of Rs 12.75 lakhs has been transferred to the development rebate reserve and Rs 4.16 lakhs to the general reserve. The company has been granted recently a letter of intent

In the market

Polysteels (India) Ltd

POLYSTEELS (India) Ltd (Chairman: Viren J. Shah, Managing Director: Jasvantra P. Mehta; Registered Office: Bhavnagar, Gujarat) is entering the capital market on July 5 with an issue of Rs 32.50 lakhs in equity shares of Rs 10 each. The subscription list will close on July 15 or earlier but not before July 7. A sum of Rs 2.50 is payable on application and Rs 2.50 on allotment.

The company will be manufacturing mild steels, special steels, alloy steels, etc. Initially it will produce mild steel ingots/billets using electrical arc furnaces and continuous casting based on steel scrap as the principal raw material which is available locally. At present the company proposes to set up two arc furnaces with an installed capacity of about 50,000 tonnes of ingots/billets per annum. Inbuilt provision has been made for future expansion.

The total cost of the project is Rs 120 crores. This will be met by the present issue, capital already taken up by the directors and friends (Rs 27.50 lakhs) and loans (Rs 60 lakhs). Mukand Iron and Steel Works Ltd will be technical collaborators. The turnover of the company in the year ending June 30, 1972 is expected to be Rs 1.60 crores. On full production it is estimated at Rs 3 crores. The company expects to pay a maiden equity dividend for the year ending June 1972.

Roneo Vickers

RONEO Vickers India Ltd (Registered Office: 184 Jor Bagh, New Delhi-3) is offering for public subscription two lakh ordinary shares of Rs 10 each at par for cash to the total value of Rs 20 lakhs. The entire issue has been underwritten.

The subscription list will open on June 21 and will close on July 1 or earlier at the discretion of the directors but not before June 23. Applications for shares must be for a minimum of 50 ordinary shares or multiples thereof. An amount of Rs 2.50 per share is payable on application and the balance of Rs 7.50 per share will be payable in two or more equal calls. The company was incorporated in 1967. It manufactures and markets duplicating machines, franking machines and addressing machines. The company has declared a dividend of 10 per cent for the year ended November 30, 1970.

for the expansion of its capacity of calcium carbide from 10,000 to 15,000 tonnes per annum which will involve an expenditure of nearly Rs 25 lakhs. The company has also been granted a letter of intent for the manufacture of 1,000 tonnes of acetylene black. It has made collaboration agreement with a well-known Japanese firm. The project will cost nearly Rs 70 lakhs for capital equipments and buildings.

Company trends

Deepak Nitrite

A project to manufacture sodium nitrite and sodium nitrate will be launched shortly by Deepak Nitrite Ltd in technical collaboration with the Fertilizer Corporation of India. The Government has issued an industrial licence to this company for a capacity of 2,700 tons of sodium nitrite and 9,000 tons of sodium nitrate. The Fertilizer Corporation of India holds a letter of intent for a capacity of 1,000 tons of sodium nitrite and 3,000 tons of sodium nitrate. An estimate by the Ministry of Industrial Development has placed the requirements of the country by 1975 at 27,000 tons of sodium nitrate and 4,000 to 5,000 tons of sodium nitrite. Deepak's products are therefore expected to have a ready market and would also prove foreign exchange savers.

The company was originally promoted by Mr C. K. Mehta and Mr S. S. Agarwal as a private limited company. In view of the availability of raw materials in Gujarat, the plant will be located on a land measuring about 57,000 sq yards at Nandesari Industrial Estate, near Baroda. The project cost and outlay is estimated at Rs 130 lakhs. Deepak Nitrite is expected to enter the capital market next month with an issue of 250,000 equity shares of Rs 10 each and 15,000, 9.5 per cent redeemable cumulative preference shares of Rs 100 each. The entire issue is fully underwritten by various financial institutions and other concerns.

New issues

THE Government has given consent to nine companies to raise capital amounting to over Rs 3.23 crores. Five of them are to issue bonus shares totalling over Rs 2.61 crores and the amount of bonus shares ranged between Rs 1,31,545 and Rs 25 lakhs. The consents are valid for 12 months.

The Ashoka Mills Ltd, Ahmedabad, has been accorded consent to capitalise Rs 25 lakhs out of its general reserve and issue fully paid equity shares of Rs 100 each as bonus shares in the ratio of one for every two equity shares held.

Audco India Ltd, Bombay, has been accorded consent to capitalise Rs 11 lakhs out of its general reserves and issue fully paid equity shares of Rs 100 each as bonus shares in the ratio of one bonus share for every two equity shares held.

Jayati Paper Mills Ltd, Bombay, has been accorded consent to capitalise Rs 4,96,500 out of its general reserves and issue fully paid equity shares of Rs 100

each as bonus shares in the ratio of one bonus share for every five equity shares held.

The Motor and General Finance Ltd, New Delhi, has been accorded consent to capitalise Rs 20 lakhs out of its general reserves and issue fully paid equity shares of Rs 10 each as bonus shares in the ratio of one bonus share for every four equity shares held.

The Cochin Electric Co (Pvt.) Ltd, Cochin, has been accorded consent to capitalise Rs 1,31,545 out of its free reserves and issue fully paid equity shares of Rs 10 plus Rs 5 each as bonus shares.

Jessop and Co, Ltd, Calcutta, has communicated to Government its proposal to issue capital of Rs 1.06 crores under clause 5 of the Capital Issue (Exemption) Order, 1969, in equity shares of Rs 100 each for cash at par. The proceeds are to be utilised for augmenting the company's working capital.

Sakti Sugar Ltd, Coimbatore, has communicated to Government its proposal to issue capital of Rs 25 lakhs under clause 5 of the Capital Issues (Exemption) Order,

1969, in equity shares of Rs 10 each for cash at par. The proceeds are to be utilised for financing the industrial alcohol plant.

Braithwaite and Co (India) Ltd, Calcutta, has been accorded consent to issue convertible debenture stocks in units of Rs 10 each in 8.5 per cent stocks. These stocks will be issued to the Industrial Development Bank of India Ltd, (Rs 24 lakhs), Industrial Credit and Investment Corporation of India Ltd, (Rs 20 lakhs) and Unit Trust of India (Rs 20 lakhs). The proceeds are for augmenting the company's working capital.

Oriental Coal Co Ltd, Calcutta, has been granted consent to issue capital of Rs 51,62,680 consisting of Rs 41,62,680 in equity shares of Rs 10 each and Rs 10 lakhs in 7.15 per cent redeemable cumulative preference shares of Rs 100 each free of company's tax subject to deduction of tax at source at the prescribed rate. These shares will be allotted to the shareholders of Bhowra Kankanee Collieries Ltd, as a result of the latter company's amalgamation with Original Coal Co Ltd, and sanctioned by the High Court of Calcutta.

The inheritors

...or the betrayed?

A shadow darkens the future of over 60% of India's children—yet not many people even know its name: protein malnutrition.

generation could be handicapped by malnutrition, how can we talk of equal opportunity for all?

What it means

Protein is the element in food that builds both body and mind. If children between 6 months and 5 years do not get enough protein they become physically stunted. Worse, their mental development may be affected. And protein later on cannot repair this damage. It lasts a lifetime.

What it forebodes

- *Economic ills—Adults below par, prone to illness, mean low productivity, wasted manhours.
- *Population problems—Malnutrition is the major single cause of infant deaths. High infant mortality encourages larger families.
- *Social injustice—When over two-thirds of the younger

Help.

Malnutrition is a hidden famine ...and so more dangerous. We must fight it on all fronts.

DEVELOPMENT PLANNERS must recognise that nutrition is an important pre-requisite to socio-economic development.

PRIVATE INDUSTRY must fulfil its social responsibility—low-cost nutritious foods are urgently needed.

- GOVERNMENT, BOTH CENTRAL AND LOCAL, must**
- *initiate developmental research
 - *rationalise distribution of scarce protein foods
 - *encourage the food industry with rational laws and licensing policies
 - *organise mass-scale relief programmes
 - *extend fortification of basic foods
 - *use mass communication for nutrition education

Inserted in the public interest by the Protein Foods Association of India

Brady & Morris Engineering Company Limited

BOMBAY

Speech of the Chairman, Mr. G. D. Morarka

FOLLOWING is the speech delivered by the Chairman Mr G. D. Morarka at the Annual General Meeting held on the 14th day of June, 1971:

LADIES AND GENTLEMEN,

I have great pleasure in welcoming you all to this 'Silver Jubilee' Annual General Meeting of your Company.

The Directors' Report and the Audited Accounts of your Company for the year

ended 31st December 1970 have been circulated and as is the practice, I shall with your permission take them as read.

It is a matter of satisfaction that the working result of the Company for the year 1970 was satisfactory both from the point of view of turnover and profitability. It is also significant that a greater profitability was achieved despite rising cost of material and labour by employing new production techniques and economising on cost of pro-

duction. Further thought is being given to introduce certain design changes in consultation with our Collaborators so as to enhance the ratio of profit.

I referred to in my last speech to the diversification and with this in mind negotiations are well in progress with a German Firm for the manufacture of medium and small size Bakery Machinery and with the assistance and co-operation of the Indian Investment Centre, we hope to be able to finalise the terms of collaboration. The Company has also received an Industrial Licence for the manufacture of Biscuit Plants and its ancillary machineries. Your Board is actively considering ways and means of obtaining orders for such plants.

After strenuous efforts we have been able to persuade the Government to accept a reduction in the quantum of Know-how paid to our Collaborators Herbert Morris Limited, in view of the abridged collaboration activities and the same has now been adjusted at Rs 1 lakh. In other words the Company's Foreign Collaborators Herbert Morris Limited, have been asked to subscribe in Sterling for 1,000 Shares already allotted to them against the earlier appropriate sanction of the Government. The consequential effect of this would be that the figure shown under the head 'Technical Know-how' will be reduced to Rs 1 lakh.

It is also a matter of gratification for me to mention that we have made a few units of 'Morris' Electric Hoist Block which we hope to be able to market during latter part of this year.

During the year 1970 we have surrendered the land at Badlapur leased to the Company by MIDC as the abridged activities can now be carried out at the existing premises. By the same token proceedings have been lodged against the Vendors in respect of the land at Borivli agreed to be conveyed to the Company on the grounds of their failure to provide marketable title.

This being a Silver Jubilee year your Directors keeping in mind the interest of the Shareholders have thought it advisable to pay a Dividend of Rs 8 per Share subject to the deduction of tax.

You will be naturally interested to know the prospects of the Company's working for the current year. As things stand at the moment we are hopeful of maintaining the same results as last year provided of course nothing untoward happens during the year. It is needless for me to mention that your Directors will do their utmost to obtain the optimum possible results.

I must also take this opportunity on this Silver Jubilee year of placing on record the valuable services rendered by the Company's Chief Executive Mr M. J. Engineer who has been associated with the Company right from its inception but for whose zeal and enthusiasm the Company would not have been able to show satisfactory progress. Let me also express my thanks to my colleagues on the Board as well as those associated with this Company as executives, officers and technicians and last but not the least the staff and workers for their co-operation and assistance.

I would now move the Resolution for adopting the Accounts and would be happy to answer any query that may be raised.

(This does not purport to be a record of the proceedings of the annual general meeting.)

EQUITIES

Tata Steel moves up

BOMBAY, June 16.

DESPITE an attempt at recovery at the start, equities over the week fell back on lack of fresh support and closed on a quietly steady note. The volume of business was also restricted to four sessions. The market had no encouraging news to go by but the announcement by Tata Steel that it was maintaining its dividend at Rs 8.60 per share did help to steady the market. Dalal Street also drew some comfort from the withdrawal by the Union Finance Minister of the levy on maida and of additional excise on coarse cloth and reports that the World Bank had recommended to the Aid India Consortium substantial aid to this country to help maintain the tempo of economic development.

For the market it was encouraging that, despite the escalation in costs, the gross profit of TISCO had showed an improvement of Rs 5.76 crores at Rs 30.27 crores with sales moving up from Rs 144.37 crores to Rs 150.75 crores. The net profit after providing for higher depreciation of Rs 16.10 crores (Rs 13.19 crores) and taxes Rs 6.70 crores (Rs 5.20 crores) was also higher at Rs 7.47 crores (Rs 6.12 crores). Even then the company had to draw upon reserves to the extent of Rs 90 lakhs (Rs 1.38 crores) in order to pay the ordinary dividend of Rs 8.60 per share, Rs 9 on first preference share, Rs 7.50 on second preference share and Rs 7.50 on 'A' second preference shares, which together adds up to Rs 5.27 crores. The results were greeted with a modest improvement of 50 paise in the share to Rs 105 and in late deals on Wednesday, the share was quoted still higher at Rs 106.

All leading textile scrips were subdued. Rayon shares were easy on reports that an accord was likely to be reached between the Government and rayon spinners on fixing lower prices for tyre cord. The easy tone in textiles affected dyestuffs, whose fortunes are linked with cotton textiles, and as a result dyestuffs were marked down.

Changdeo Sugar proposed bonus shares issue on a one-for-four basis. Indian Metals and Ferro Alloys reported excellent results for 1970, with 100 per cent increase in gross profit and higher sales.

The Chairman of Polyolefins Industries—Mr Arvind Mafatlal—said that the company will start paying dividend from 1972, and expected the 1971 working to be better. Baroda Rayon also reported good results, and maintained the equity dividend.

In cash scrips, there were some bright spots. Chowgule Steamship shot up to Rs 145 on interested buying. MICO improved on hopes of Government's approval both for its substantial expansion and the issue of bonus shares. Bajaj Auto was firm and spurred on talks that the company has received licence for expansion of scooter capacity. Garware Nylons was a feature and shot up by over four points.

COMMODITIES

Mixed trend in spot cotton

BOMBAY, June 16

A mixed trend prevailed in the spot cotton market during the last week with limited deals passing. Such of the varieties which tended to rule firm did so on occasional desperate bids by stray spinners to obtain the specific lots. The sellers, in the circumstances, had their own terms. On the whole, the volume of business tended to remain inconsequential.

Reports from upcountry centres indicated that the farmers were rather anxious at the absence of rains in most of the cotton growing tracts during the greater part of the week. The break in the monsoon necessitated a stoppage of sowing operations or a halt in the preliminary preparations for sowing.

In the import section interest was confined to stray lots of American and Sudanese cotton in the main. There was a modest improvement in the volume of business. Importers are generally awaiting the

developments following negotiations held in Moscow regarding the supply by Russia of Sudanese cotton against equivalent Indian cloth for the Russian consumers. On the export front, very little business of note was reported in Bengal Deshi.

The following has been the trend of prices of some of the leading varieties

YARNS LOOK UP

BOMBAY, June 16

Yarns scored further gains in the week under review. Art silk yarns improved during the week due to short supply in the wake of more demand, especially from upcountry centres. There were inquiries from Amritsar. Staple fibre yarns also looked up. Cotton yarns were steady.

In the art silk yarns section, 150D National improved by 46 paise to Rs 18.52. 120D put on 12 paise to Rs 19.72. 150D Bright Century spurted by 51 paise to Rs 18.45. 120D was 1 shade higher at Rs 19.62. 100D Bright South India gathered 13 paise to Rs 23.15. Staple fibre yarns (2 x 34 nF) spot Kiran put on 18 paise to Rs 11.75.

JUTE GOODS IMPROVE

CALCUTTA, June 15

Good demand both on overseas and internal accounts, raised the prices of jute goods during the past week but raw jute prices were unchanged, though tully firm. At long last, load-shedding ended, but in the past week mills could not operate to the extent possible in view of large absenteeism among workers. Prices gained and it was not yet possible for mills to indicate that they would be able to operate to meet demand in full. In this connection the inadequate allotment of wagons for raw jute movement and the irregular services provided by the Eastern Railway have become matters of considerable anxiety to the mills industry.

In the past week, considerable business was done in sacking for internal consumption. Overseas buyers also lifted substantial quantities but only against spot and near-delivery positions. However, it has now become very clear that Bingle Desh would be out of the export market for a long time to come. The US buyers covered their immediate needs. Both Turkey and Burma figured in good inquiries. The demonetisation by Pakistan of Rs 500 and Rs 100 currency notes had its share in raising the prices of goods but reports of an imminent devaluation of the Pakistani rupee would appear to have been dismissed by the trade as of no consequence in view of Pakistani inability to export jute goods. The raw jute crop in East Bengal, reports from the border indicate, would be one of the lowest in recent years. Such of the cultivators as have out-lived cholera and eviction are reportedly preferring to grow paddy instead of raw jute. This also strengthened Calcutta goods, although it was realised that in the interests of increased exports the rise in price would be detrimental. Hessian 40" 10 oz gained from Rs 98.50 to Rs 103.50, and B twills from Rs 267 to Rs 270.50.

With good weather reports, raw jute prices should have normally declined, but the slow movement of the remnants of the old crop because of wagon shortage led to firmness, with Assam bottoms quoting at Rs 59 per maund, daissee bottoms at Rs 60.50, and northern bottoms at Rs 57. The bullishness in goods encouraged stockists to be reserved.

OILSEEDS IRREGULAR

BOMBAY, June 16

Irregular price movements characterised trading in oils and oilseeds. With the onset of the monsoon, there was a tendency to liquidate holdings. But buyers from Delhi and Calcutta came to lend fresh support to the market. Price movements were restricted and depicted no definite trend. In groundnuts, dry weather in the producing areas induced a firm sentiment and prices improved. Arrivals were also limited.

Castor seeds improved owing to the changed sentiment for oilseeds. Futures were firm in line with the firmness in spot section. Arrivals in Gujarat were considerably lower. Gujarat, UP and Bihar, the main producing centres, were bullish.

Linseeds were also firm in line with the general tendency. The September contract opened, but there was no notable business. Cottonseeds improved on oilcakes export busi-

ness of about 20,000 tonnes from Saurashtra and prices ruled steady.

Comparative prices in rupees were

Item	9 6 1971	16 6 1971

FAIR DEMAND FOR TEA

CALCUTTA, June 15

The price trend in the past week's export auction was mixed, due to the expectation of a larger crop. With no fiscal relief, the tea industry is now left with no alternative but to make good the increased costs by higher output. Ceylon is likely to have a lower crop as a result of the insurrection there and West Pakistan which used to depend on Bangla Desh for its supplies may have to look elsewhere. These factors have led to the hope that India would be able to make use of the full export quota.

Leaf on offer at Sale No 10 held on June 8 totalled 36,372 packages including a small quantity from the old season. Demand was fair. Orthodox broken and the few brighter lines were readily absorbed at firm rates, but fannings eased. Plain CTC broken were about firm, but others eased. The few brighter teas were steady. All CTC fannings eased, but the improved types were sold well. The quotations in rupees per kg inclusive of excise duty were good Assam BOP 8 to 9, medium Assam BOP 7 to 7.40, clean plain pekoe 7 to 7.50, low Assam BOP 6.50 to 7, medium CTC BP 6.20 to 6.40, Dooars BOP 6.20 to 6.50, plain CTC BP 6 to 6.20, medium CTC fannings 5.30 to 5.50, plain CTC fannings 5.20 to 5.40, medium Assam OF 5.60 to 5.80 and low Assam OF 5.40 to 5.80. Others were unquoted.

Dusts offerings totalling 12,869 chests met with lower demand and eased. No quotations were issued in view of the limited quantity. Legg-cut and all CTCs with the exception of a few brighter lines eased.

FOODGRAINS DIVERGENT

BOMBAY, June 15

The prices of foodgrains in the local market showed a divergent trend during the past week. Whereas the prices of foodgrains declined those of pulses increased. In cereals, the prices of wheat (pissi) declined by Rs 2.50 to Rs 83-87 per quintal on account of increased arrivals. The off-take was also good at around 9,000 bags per day. In coarse grains, bajra (superior variety) at Rs 68-75 per quintal showed a modest fall of Rs 2 owing to the increased arrivals from the producing centres. Following the small arrivals of new crop maize continued to rule steady at Rs 73 per quintal.

In pulses, gram (Punjab) moved up by Rs 3 to Rs 90-92 per quintal on account of good demand by millers. Urad (Khandesh) also firmed up by Rs 5 to Rs 155-165 per quintal owing to short supply. Tur (Berar white) at Rs 125-130 per quintal showed a rise of Rs 3 on account of good buying support. The stock of moong (Chinai) has now been exhausted. However, the prices were quoted at the previous week-end level of Rs 250-300 per quintal.

SUGAR RISES

BOMBAY, June 15

For the second week in succession, the prices of sugar (C-30) in the local market at Rs 193-194 per quintal recorded a rise of Rs 2. This was attributed to higher ex-mill rates and better off-take. Today the arrivals were 3,000 bags against the off-take of 4,000 bags.

METALS GAIN

CALCUTTA, June 15

Prices of non-ferrous scrap scored marked gains in the past week due to the new import duty. Although authoritative information is lacking, it was stated that the levy is in addition to the countervailing customs duty of Rs 1,500 a tonne on copper, and Rs 500 each on

zinc and lead. These two levies, coupled with the third levy on non-ferrous semis such as copper and copper alloys strips and pipes and tubes and zinc sheets would mean that the Government would claim almost half the price of these metals.

The scarcity of the primary aluminium metal raised the price of scraps with the utensil scrap moving from Rs 500 to Rs 520 and sheet cutting scrap from Rs 520 to Rs 530 per quintal. In registered a smart gain of Rs 200 at Rs 5,000. Electrolytic zinc at Rs 500 added Rs 30 and virgin lead forged ahead from Rs 465 to Rs 500. Both lead and zinc scraps also recorded sizable gains and the galvanising industry is being compelled to revise quotations submitted prior to the Budget day. Brass scraps added Rs 10 with honey quality quoting at Rs 1,010 and utensil scrap at Rs 980. At Rs 1,410 and Rs 1,500, utensil copper scrap and clean wire scrap advanced by Rs 60 each.

SILVER FIRM, GOLD EASY

BOMBAY, June 16

A divergent trend prevailed in the local bullion market during the past week. Silver gained further ground during the week due to paucity of floating stocks. The improved demand from up-country centres such as Delhi also pushed up prices. Gold however eased due to

more arrivals in the wake of slack demand. Sovereign was fully maintained.

Silver (996 fineness) commenced trading Rs 2 higher at Rs 494.50. It improved further in the subsequent sessions and wound up the week at Rs 597 today. The net gain over the week being Rs 4.50. Silver weekly delivery was mentioned at between Rs 533.50 and Rs 595. The weekly average arrivals and off-take of silver aggregated 47 bars and 37 bars respectively.

Primary gold in unofficial trading began at last week's closing level of Rs 190 but receded in the following session. It closed at Rs 187 today, with a net loss of Rs 3 over the week. Standard gold in official trading commenced Rs 1.75 lower at Rs 197.75 and about steady at that level. It wound up at Rs 197 today, the net loss over the week being a rupee. Sovereign was fully maintained at Rs 174.

MONEY UNCHANGED

BOMBAY, June 16

Conditions remained unchanged in Bombay's short-term money market in the past week. The call rate ruled at 4½ per cent. In Calcutta, renewals were done at 4½ per cent. In Madras the inter-bank call rate was quoted at 4 per cent.

During the week ended June 4, foreign exchange reserves of the Reserve Bank of India declined by Rs 8.39 crores to Rs 368.58 crores.

TATA ELECTRIC COMPANIES—

Pioneers of power generation in Maharashtra for over 50 years. They meet the needs of Bombay and the surrounding areas for a reliable power supply with some of the latest in generating, transmitting and monitoring equipment.

They are today's contribution for

a planned and prosperous tomorrow.

TATA CONSULTING ENGINEERS—

Engineering consultants who meet the evergrowing demand in India and abroad for sophisticated and expert engineering services in industrial and associated fields.

- THE TATA HYDRO ELECTRIC POWER SUPPLY CO. LTD.
- THE ANDHRA VALLEY POWER SUPPLY CO. LTD.
- THE TATA POWER CO. LTD.
- TATA CONSULTING ENGINEERS

Bombay House, Pooze Street, Fort, Bombay 1

While foreign securities came down by Rs 25 crores to Rs 278.42 crores, balances held abroad increased by Rs 16.61 crores to Rs 90.16 crores. Notes in circulation expanded by Rs 55.11 crores to Rs 4,424.77 crores.

Week ended June 4 recorded a rise of Rs 11.76 crores at Rs 4,719.28 crores in the total credit made available by scheduled commercial banks. Aggregate deposits rose to Rs 6,111 crores from Rs 6,079.61 crores.

Notices

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty third Annual General Meeting of the shareholders of the Britannia Biscuit Company Limited will be held at the Committee Room No 2 of the Bengal

Chamber of Commerce and Industry, 6, Netaji Subhas Road, Calcutta-1, on Friday the 9th July, 1971, at 10.00 a.m. to transact the following business:

- 1 To receive and consider the report of the Directors together with the Profit and Loss Account for the year ended 31st March, 1971, and the Balance Sheet as at that date and the report of the Auditors thereon
- 2 To declare dividends.
- 3 To appoint a Director in place of the Director retiring
- 4 To appoint Auditors and fix their remuneration

SPECIAL BUSINESS

- 5 To consider and, if thought fit to pass with or without modifications, the following resolution -

(i) As an ordinary resolution

RESOLVED that pursuant to

Section 294 of the Companies Act, 1956 the Company hereby approves of the appointment of The Exchange Stores of 13, Alipur Road Delhi-6 as the Sole Selling Agents and Distributors in the Delhi area in respect of bread and cakes made by the Delhi factory for a period of three years with effect from 1st April, 1971, on the terms and conditions set out in the draft letter of appointment laid before this Meeting and initialled by the Chairman thereof for the purpose of identification

The registers of the members of the Company will be closed from 24th June to 9th July, 1971, both days inclusive and warrants for such dividends as may be declared will be issued directly to the registered shareholders or their mandatories whose names appear in the Company's books on 9th July, 1971, on or after 21st July, 1971

By Order of the Board
N C CHAUDHURI
Director & Secretary

THE HOLDERS OF 7½% CONVERTIBLE Bonds of the Company desiring to avail of the option of converting their bondholdings into Equity Shares as per the terms of the issue of the said Bonds should, between 1st July, 1971 to 15th December, 1971 surrender their Bonds and notify the Company their decision in the Form posted to individual Bondholder under cover of the Circular Letter dated 13th May, 1971.

By Order of the Board,
P. S. KANUNGO
Secretary.

BOMBAY

13th May, 1971.

*A dream
today,
a reality
tomorrow*

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

TATA CHEMICALS LIMITED

Alembic Glass Industries Limited

BARODA

Chairman, Shri R. B. Amin's Speech

THE following is the speech of Shri R. B. Amin, Chairman, Board of Directors, at the 26th Annual General Meeting of the Company held on 15th June 1971:

LADIES AND GENTLEMEN,

I have pleasure in welcoming you all to the 26th Annual General Meeting of the Company. The Accounts for the year ended 31st December, 1970 and the Directors' Report have been circulated to you and with your permission I shall take them as read.

Your Company has completed another year of steady progress. The production has been maintained at a high level both at Baroda and at Whitefield and our marketing strategy ensured that higher sales were maintained throughout the year.

The results achieved by your Company have to be judged against the perspective of the multifarious problems facing the glass industry in the area of shortages and increasing costs. Rise in the costs of all inputs has continued unabated. All important raw materials as well as refractories are in short supply and are difficult to procure in a steady flow as required by our production schedule. Soda ash supplies have become increasingly difficult during the past year and production schedules are not easy to maintain in this kind of situation. We have had to relieve the difficulty by using some cullet which has to be collected from all over the country; but this cannot be a satisfactory method whether in the short-term or the long run. Additional capacities for the manufacture of soda ash have, therefore, to be promptly sanctioned and government should help in ensuring that the usual procedural and other matters do not delay such units coming into production. The production has to reach a level whereby this important raw material is available to all users at the price fixed by the manufacturers. It has also to be seen that shortages do not lead to a position where soda ash is sold at a premium of 30 per cent to 40 per cent in the market. In the meantime, imports should be made and allotted to the glass units in all regions of the country so that they can continue production at the full capacity. The closeness of the market price and the manufacturers' price acts as a barometer as to the adequacy of supplies and this index should be used for regulating the level of imports and production capacities.

All these adverse factors, however, have not been allowed to affect the overall performance of the Company. This has been done through increased productivity at all levels and higher turnover achieved through a well organised and sustained sales and marketing effort.

The rise in sales has been achieved against the increasing degree of competition which has to be faced in the market for Yerawares. Here, too, the organisa-

tional steps undertaken by us in the past few years have helped your Company. The network of dealers for Yerawares has spread wider over the country. The operations of market representatives have become increasingly effective. And a well-conceived advertising campaign, prominently projecting the brand name, has stimulated the specific demand for our tableware and jars. We are confident of retaining our premier position in this field and all necessary steps to increase this lead are being taken.

You are, no doubt, aware that in our Baroda plant we have switched to the use of gas as fuel since 1967. The price of the gas was decided after considerable deliberations. It was also assumed that this price would be maintained and not be changed abruptly or sharply. The recent proposals for a drastic upward revision made by the O.N.G.C. has, therefore, rightly provoked protest. We are watching this matter carefully so that the interests of your Company do not suffer adversely.

Another factor you would like me to refer to is the recent additional excise imposed on glassware. This will reflect itself in higher prices to our clients and consumers. The resultant rise in the price of glassware along with the other levies proposed in the Finance Bill are bound to contribute to the inflationary situation encompassing our economy. In the case of containerware, however, the effect will be felt manifold and in many industries which need to be allowed to develop. It must be realised that higher costs in a container

industry like glass industry in turn affects the cost structure of a large number of other important user industries, including pharmaceuticals as well as preservation and packaging of food. Without going into the merits or the advisability of the increased excise on glassware, it is obvious that the only way by which the resultant high cost of containers to user industries could be reduced substantially and continuously is through increased production and lower cost.

Your Company has always taken opportunity of realising economies of large scale production and has in the past expanded manufacturing capacity to the extent possible. A new difficulty in any such programme of expansion is the ban on imports of glass manufacturing machines. Even in regard to this we will, through facilities and expertise available in the country, be able to procure these machines indigenously. The machines so built will soon be available for increasing our capacities. We are confident that these machines which are now being produced at our initiative and to our requirements would satisfy the high standards required in automatic manufacture and would be suitable to particular conditions obtaining in our country. This ban on imports of machines has thus been taken by us as a welcome challenge to the ingenuity and skills of our management and technicians.

Before I finish, you would like me to place on record our appreciation of the co-operation and hard work put in by the workers as well as members of the staff of the Company, both at Baroda and Bangalore. I also wish to thank my colleagues on the Board for their support and guidance.

I now commend the annual Accounts and Directors' Report for your consideration.

FINANCIAL CONTROLLER

Applications are invited for the post of a Financial Controller for an Industrial Concern which has separate Units in various parts of the country for the manufacture of different components and accessories.

The function of the Controller will be to Organise Management Accounts in the various Units and to organise and maintain control accounts in the Head Office at Calcutta. He will report directly to the Managing Director and keep him posted about the financial position of each Unit, and in particular, of problems anticipated regarding Finances, Inventories, Stocks and Sales.

Candidates should be Chartered Accountants and/or Cost Accountants. Particular consideration will be given to the nature and extent of experience in similar jobs. They should be around 40 years of age.

This is a challenging job requiring initiative, drive and imagination. Emoluments will be fixed according to qualifications and experience, but will not be less than Rs. 40,000 per year.

Please apply before 30th June, 1971 to Box No. 2450, C/o "Commerce," Manek Mahal, 6th Floor, 90 Vir Nariman Road, Bombay-20.

V.I.P.'s stop here so very often !

Because we care for their moods, and hunches, and whims.
And we know they like red carpet which is exactly
what they get.

And, of course, they go for that elusive something called
atmosphere - which is everywhere in Rajdoot.

And, before they are gone, we like them to taste the
wonderful Indian and Western cuisines, the variety
programmes in the ELDOARDO and STARLIT Restaurants
or an open air cinema at RAMPAGE Cinema House.

We have a telephone in each room, and hot and cold
thermostat control.

What's more, we don't treat them as mere-and-only
guests; but like the real hotel guests!

A sari of Mafrene makes a woman a queen. Drapes like a dream. For it's as soft as a cloud. As cool as a breeze. As light as a feather. As strong as a steel. As beautiful as a flower. As durable as a diamond. As versatile as a chameleon. As fashionable as a fashionista. As comfortable as a cloud. As easy to wear as a sari. As perfect as a queen.

Mafrene 100% polyester saris and polyester blended cotton saris. polyester blended dress materials. wavy lawns, summery cambrics and heartily poplins.

Also: Terocer, polyester blended cotton shirtings in the latest, greatest prints and prints. Exterior polyester blended cotton shirtings in debonair stripes and checks.

MAFATLAL GROUP

stating our policy

In one word—Responsive

To us, responsiveness is extending our resources to meet the needs of industry. For instance we have introduced the application of free cutting and special steels where conventional mild steel was used. Made high tensile fasteners and self tapping screws to improve the performance of machinery subjected to vibration stress and strain. Developed aluminium die-cast rotors to assist the manufacture of small and medium size A.C. squirrel cage motors, strip wound cores for electrical and electronic industries. These are just a few examples of what we have achieved. Of what we are constantly doing. By transforming the shape and size of steel, we multiply its functions. Convert it from mere metal to sophisticated components. To anticipate the changing requirements of industry the way we do, we have to be responsive.

National security and political democracy

THE emergency situation developing in West Bengal is a matter for concern for the entire country. The alarm was initially raised by the Chief Minister of West Bengal, Mr Ajoy Mukherjee, who announced a series of measures to deal with the situation. His Government decided to overhaul thoroughly the police administration in the State. Sneak attacks on policemen on duty by political extremists had demoralised the ranks of the State police and even of the officers. A few of them are suspected to be the sympathisers of CPM and other political parties and there has been a deterioration in discipline among the police force in many parts of the State. In order to deal with this situation, the State has been pressing on the Centre to declare an emergency so that it may have sufficient powers to deal with the lawless elements among the police as also the people.

There will be a general sympathy with the difficulties which Mr Ajoy Mukherjee has to face in dealing with the extraordinary situation in the State with a very slender majority in the State Assembly. It is not certain how long he will be able to command even this marginal majority. While appreciating all this, however, it is difficult to support the proposal of the West Bengal Government to create resistance groups to counter violence in Calcutta and in the districts of the State. It has been explained that though the decision was political the actual formation of these groups and their relationship with the police in Calcutta and statutory bodies in the districts would be defined through administrative orders. But this by itself does not solve the problem because, according to a further clarification, the composition of the bodies would be guided

by the directions yet to be issued by the ruling parties. In the peculiar situation prevailing in West Bengal today, it would not be easy to determine the composition of these resistance groups in a manner whereby they could be clearly distinguished from the armed volunteers of a few political parties. The idea that people of a locality should organise themselves to fight violence is a tempting one in view of unprovoked and indiscriminate attack by political extremists on those whom they consider to be undesirable persons. But there are indications that the main targets of these extremists are their political rivals. In such circumstances, a fight between political extremists and the resistance forces could soon degenerate into violent engagements among the political rivals. This fear is not imaginary, and if it materialises it will lead to a far dangerous law and order situation in the State than it is today. Once passions are roused on both the sides it will be very difficult for the police to keep the situation under control. Instead of helping the police in maintaining law and order, the resistance forces might complicate the handling of law and order situation still further.

That is why there are some fundamental objections to creating bodies of citizens to resist violence of law and order in the country. But there is a strong case for strengthening the hands of the executive to cope up with the developing situation. It is, therefore, surprising that some of the parties in Parliament opposed the Maintenance of Internal Security Bill so violently. As one of the members belonging to the CPI remarked, the Bill had turned out to be adversity that had made strange bed-fellows. He was sup-

porting, at the time, the motion disapproving the Maintenance of Internal Security Ordinance sponsored by the Jana Sangh and the CPM. It is true that the Bill confers extraordinary powers on the executive to detain a person without trial. But we had such a measure on our statute book before and the executive, by and large, used the powers conferred on it by that measure to achieve its objectives. Of course, that measure was also bitterly attacked by the opposition parties even then. But this time it was expected that in view of the extraordinary situation which the country has to face, the political parties would realise the need for arming the executive with adequate powers. It would not be proper to assume that the opposition parties are unaware of the situation. The conclusion is, therefore, inevitable that some of our political parties do not accept the assurance by the Government that the measure will be used strictly to deal with abnormal situations. It is this credibility gap at this critical hour that is disturbing.

It must be conceded that there are provisions in the Bill to prevent the arbitrary use of the emergency powers. Advisory boards are to be constituted comprising persons who might be depended upon for taking a judicial view. While these boards will be advisory, the detainees would be permitted to represent their cases before them. It is further provided that no person can be detained for more than a year at a time. If he is found to be still a menace to the security, a fresh detention order could be issued against him. There is provision for scrutiny by the Government of the reasons for detention within seven or 12 days and these reasons are to be explained to the person detained. Of course, it would be idle to argue that these safeguards are sufficient to ensure that no error would take place or those powers would not be misused. Once, however, the necessity of extraordinary powers for the executive to deal with the law and order situation is recognised, the only effective safeguard against the misuse of power will be popular vigilance and Parliamentary exposures.

Much of the potential threat involved in the Internal Security Bill could be avoided if the political parties even at this stage agreed to abide by what Mr K. C. Pant called rules of game within the framework of the nation's liberal and democratic Constitution. This applies to the ruling party as well as to the Opposition. The concept of violence itself has to be properly understood. It is not shooting of a political opponent down in the street that alone constitutes violence. If the parties in power utilise the Internal Security Bill for the purpose of achieving a political end, that would as much be a violence on the liberal and democratic spirit of our Constitution. The tendency to identify the Government and the ruling party is one of the chief reasons why the credibility gap among the political parties is so wide today. We have to take note of the fact that the Jana Sangh is bitterly opposed to the Bill. The reason for this is obvious. As Mr K. C. Pant himself has declared in the Lok Sabha, the law on the anvil would come into play if under the guise of political activity certain people acted in a manner which is prejudicial to preserving communal harmony. This is quite legitimate if the formulation is strictly adhered to. But if there is prejudice against a political party, say the Jana Sangh, that it is deliberately fomenting communal disharmony, even legitimate expression of views might be interpreted as disturbing communal harmony. The point is that it will be necessary to judge each act on its merit without prejudice. At least a few of those who fought the measure tooth and nail seem to be genuinely apprehensive of its illegitimate use. The actual working of the Act in the months ahead would prove whether these fears were genuine or exaggerated.

Nixon's duplicity

PRESIDENT Yahya Khan may yet have the last laugh on us and, in fact, on the entire civilised world. When he met recently the South Asia Director of the World Bank, Mr Peter Cargill, the Pakistani dictator is reported to have told him in his blunt way, according to a press report, that "you will have to give

us 100 million (dollars) immediately". Mr Cargill's reply was, "you need 300 and it wouldn't be immediate." Mr Cargill went to his word, and last week members of the 11-member Aid-Pakistan Consortium postponed indefinitely their meeting with Pakistani representatives till they knew of the political settlement President Yahya Khan had to offer to the people of Bangla Desh. It looked as though the international community had at last veered round to the view that it could no longer afford to sit idly by while President Yahya Khan and his army completed their exercise of genocide and that it must take a hand in the matter. The main purpose of Mr Swaran Singh's visit to the major world capitals was thus claimed to have been achieved and there was a note of satisfaction in New Delhi that the External Affairs Minister had succeeded in establishing before the international community that the solution of the gigantic refugee problem, the transfer of power to the elected representatives in Bangla Desh and the maintenance of peace and stability in the sub-continent are closely connected.

But was Mr Swaran Singh's mission that successful? The world has now been awakened rudely to the fact that one of the leaders of the Aid-Pakistan Consortium, namely the United States, even while ready to suspend economic aid to Pakistan, has felt no hesitation in supplying arms to that country even after the massacre of over half a million innocent Eas' Bengalis. We owe a debt of gratitude to the *New York Times* for bringing to light with full facts that two Pakistani freighters were on the high seas with aircraft, parachutes, armoured vehicles and tonnes of spare parts and accessories for aircraft and military vehicles sold to Pakistan by the United States. This makes nonsense of the repeated declarations of the US State Department that no arms had been supplied to Pakistan and none were in the pipeline after the outbreak of the civil war in Bangla Desh on March 25. Pentagon spokesmen have sought to justify the sale of these arms on the ground that the export licence for the supplies was granted before the March 25 embargo. Is Washington so naive as to believe that these arms will not strengthen Yahya Khan's war machinery which he is using to bring devastation in Bangla Desh and send millions of refugees fleeing to India for safety? The *New York Times* has declared that the arms shipments "represent a breach of faith with the American public, with the Congress and with a friendly foreign power. They serve further to undermine the credibility of the US Government and put the US in the position of abetting an act of repression which is not only morally repugnant but also constitutes a serious threat to this country's own long-term interest in peace and democratic development in the Indian sub-continent". This is no mere breach of faith with the American public or with a single friendly foreign power. The American Administration in seeking to pursue a policy of establishing its own sphere of influence in Asia apparently believes that it can get away by speaking in two voices even when it comes to acts of horror that should awaken the human conscience. Or is it that it believes that the American conscience has all dried up after the horrifying stories that have come from Vietnam?

India will naturally protest against the dangerous course that the United States has taken. The refugee problem for her is a crushing one. Looking after six million of them even for a short period of a few months will make a huge draft on her economic resources. But it is not enough that India protests. At least the 10 other members of the Aid-Pakistan Consortium, who told Pakistan "no economic aid" at this stage, must raise their voice and compel the United States to see that the arms are not unloaded in Pakistan. Otherwise, they too, along with the United States, will lose their credibility, and the world will conclude that their action last week was only a facade put up for the benefit of the World Bank and the public in their own countries. Is it that President Yahya Khan knew this when he was talking to Mr Peter Cargill? He was fully aware that arms were on their way and was not perturbed that economic aid might be delayed somewhat. The leaders of the Western world and particularly of the US have yet to prove that there is still an element of basic human decency left in international relations even in this age of mass destruction weapons and that it is not all double-talk and duplicity.

DURING my recent visit to New Delhi, one topic of discussion that I came across so often was the style of living of our Ministers which had no relevance to their socialist protestations. A friend who is an official of the Government of India graphically described the attitude of this new feudal class: "These Ministers do not find even the sprawling bungalows fit enough for their imperial residence. Quite a few have rejected these bungalows as 'stables'. They describe the furniture as junk and their wives are busy spending quickly the Rs 30,000 that Ministers are allowed for furnishing their houses, even if their predecessors had left them in good condition. Their wives are also, of course, constantly complaining about the useless peons and *malis* who do not keep their gardens in trim. You know, it was only recently that Mr Bahuguna told the Rajya Sabha that quite a few of our Ministers spend between Rs 2,000 and Rs 3,000 a month on local calls only. The story of electricity and water bills has now become a household story of ministerial extravagance with the tax-payers' money."

While listening to my friend, I was not concerned with the attitude of our Ministers and legislators alone, but with that of the upper class including the bureaucrats, industrial magnates and the rich peasants. Ostensible consumption whether by private citizens or public men is to be eschewed. This is the precondition for the creation of the climate of austerity which Mrs Gandhi so appropriately recommended to the people.

★

It was not surprising, therefore, that at the recent meeting of the Congress (R) Parliamentary Party Executive many members criticised the "vulgar display of wealth" by Ministers, legislators and some other leading Congress leaders. An MP demanded that a ceiling should be imposed on expenditure by Ministers. Mrs Gandhi who sympathised with the demand said that she had written to the Chief Minister of Maharashtra, Mr V. P. Naik, about the extravagant marriage reception held by Mr Shankarrao Mohite Patil at Akhuj recently. Mr Naik informed her that a large number of people turned up at Mr Mohite's house whether or not they were invited. Mr Naik also told her that many people had come to see him on the death of his father. Then Mrs Gandhi cited the example of her own marriage. She and her husband had wanted a quiet celebration. But Gandhiji wished that all the formalities be gone through. Her father wrote to all the people "we knew" about her wedding. The number of people who turned up at Mrs Gandhi's wedding was so large that there was a rush at the railway platforms. People also sat on the lawns of Jawaharlal Nehru's house.

Mrs Gandhi has been rightly identified with change in our tradition-bound society. But her performance at the Congress Parliamentary Party Executive meeting was, to say the least, distressing. By citing rather irrelevantly the instance of her marriage as well as Mr Naik's letter she spoke more as a leader of the Establishment than of change. True, she did concede that the time had arrived for Ministers to give up their sprawling bungalows. But that can happen only when the old plan for reshaping New Delhi is finally drawn up and implemented. This would, even theoretically, take decades; by

EDITOR'S NOTEBOOK

that time the Congress party may again become a symbol of *status quo* and decadence.

A little while ago I said that Mrs Gandhi's reference to her marriage ceremony was irrelevant to the debate on ministerial pomp. When Gandhiji asked her to go through the formalities of a Hindu marriage he certainly did not want it to be as lavish as the marriages of some of our Ministers' and legislators' sons and daughters. The formalities of a marriage can be gone through even with an expenditure of Rs 10. If Jawaharlal Nehru invited all the people "we knew", that was his business. It had nothing to do with Gandhiji's advice. The people came in great numbers not because she followed his advice but because her father invited them. All this has nothing in common with the marriages and other display of wealth which her party MPs have attacked. One should go a step further. Even if Gandhiji had advised Mrs Gandhi to go through the formalities of a marriage, if that led to a feudal display of wealth we should condemn it equally and unequivocally. As for austerity, if Gandhiji's advice the advice of the greatest apostle of austerity—comes in our way we should discard it, and I am sure the spirit of Gandhiji would applaud this unreservedly.

★

Mrs Gandhi who chose to trust a Chief Minister more than the press also made an attempt to defend the marriage ceremony at Mr Mohite Patil's house where nearly one lakh people were fed. Some time ago, speaking at a press conference in Srinagar, she advised pressmen more to get in touch with the people rather than sit in their offices. This is exactly what that responsible daily, *Maharashtra Times*, had done. The Editor of the paper got in touch with the participants in this marriage ceremony and persuaded one of them to write an account of it. Mrs Gandhi's acceptance of Mr Naik's explanation that many people came uninvited is unfortunate. It was revealed that as many as 27 committees had been constituted with prominent citizens of Sholapur district, and they were on their feet for months together planning this marriage ceremony. Did Mrs Gandhi know that it was these committees which had organised the entire show? And to condemn the people for the organised extravagance of her partymen is just not fair. I had thought that a Prime Minister who is concerned about the future of democracy in India would publicly express her gratitude to the two enterprising Marathi dailies, *Kesari* of Poona and *Maharashtra Times* of Bombay, rather than condemning them indirectly for bringing to public notice an aspect of the life which worries her partymen also.

★

Sensing the mood of the country, the Minister for Planning, Mr C. Subramaniam,

in his recent meeting with economists, asked all of a sudden what they thought of our Ministers' emoluments and perks. I was told that quite a few economists felt that the theoretical knowledge of the economists was not required to answer this question. It was a simple question of personal integrity and political will. All the same, one economist replied to the Planning Minister to this effect: "I am not worried about your visible emoluments. In fact we should pay you Ministers even Rs 10,000 per month. What I am particularly worried over is your political emoluments." This economist was quite justified in setting the problem in the proper perspective. The man in the street is more worried about the spoils system which is imperceptibly built up around a Minister's life. To begin with, while condemning black money day in and day out, the Ministers are the top collectors of cash money in India. An industrialist once told me that one of our Ministers had shouted at him during the mid-term poll: "Do you tell me that you can't give me Rs 2 lakhs in cash?" So long as our elections remain intolerably expensive and so long as the companies are not again permitted openly to subscribe to election funds through cheques, black money will continue to be encouraged by our rulers for their own political survival. The way relations of our Ministers and political leaders become affluent overnight is another aspect of the political emoluments of our Ministers. As one of our former Ministers put it to me: "I don't care whether a particular Minister declares his assets or not. What I do want to know is whether his son, his brother or his son-in-law has become more affluent than at the time when the Minister was not in office."

★

In these days of ministerial pomp it is refreshing to meet a Minister who has not changed his way of life after becoming a member of the Council of Ministers. When I called on my old friend, Mr Ghanshyambhai Oza, Minister of State for Industrial Development, he asked his daughter to bring me a cup of tea as he used to do when he was not a Minister. The furniture in his house in Delhi is very similar to that in his flat in Ahmedabad where he used to stay before his election to the Lok Sabha. This is not surprising because Mr Oza is a rare politician who is exercised about the problem of poverty. He is also among the few present-day politicians who actively work for the welfare of Harijans, the working class and of the minorities. Meeting him is always a rejuvenating experience. He is primarily a social servant with an abiding concern for values. So, I do not despair of rectitude in our public life as long as there are persons like Ghanshyambhai Oza working amongst us.

MARKET GOSSIP

Lure of high interest

FACED by the failure of some non-banking companies to repay the amounts deposited with them by individual investors, the Reserve Bank issued in 1966 certain directives to regulate the deposits with such companies. These regulations laid down that every non-banking financial company other than a hire-purchase finance company or a housing finance company will not hold deposits in excess of 25 per cent of its paid-up capital and free reserves. A study in the April issue of the RBI Bulletin has stated that these directives have had some healthy effect on the unsecured borrowings of non-banking companies. While some of the larger public limited companies with considerable owned funds have been able to increase their deposits substantially within the permissible ceiling limit of 25 per cent, some of the private limited companies having substantial deposits, disproportionately large to their own funds, had to repay a fairly large sum or convert them into loans of exempted category so as to bring their deposits within the ceiling limit. But have enough safeguards been provided for the investor?

This poser arises in the context of a recent meeting of depositors of the Shamsher Sterling Cable Corporation Ltd. They met to consider how, if possible, to recover an amount of about Rs 75 lakhs kept as deposits with the corporation by about 3,800 investors. The affected people are said to be mostly belonging to the middle-class, and at the moment at least the possibility of the corporation repaying their deposits looks remote.

The Reserve Bank may have to have another look at the problem of such deposits because of the trend said to be evident in urban areas of investors placing their savings at the disposal of firms which are not covered by the directives applicable to non-banking companies. It is the high interest offered that attracts deposits to non-banking companies and firms. Very few of the investors are in a position to make a thorough study of the financial working of a company. This becomes all the more difficult when financial accounts of a company are not available for some period. In the case of the cable corporation referred to earlier, for instance, accounts have not been published for the past two years. The Reserve Bank study, mentioned earlier, also brings out that not all the companies submit their returns. It says that while the number of deposit accounts in the non-banking corporate sector dropped from 550 lakhs in March 1967 to 530 lakhs in March 1968, this is mainly accounted for by the reduction in the number of companies submitting returns from 2,591 to 2,398. This should not be the case since the Reserve Bank cannot overlook that deposits with non-banking companies are quite substantial. In 1968 they were of the order of Rs 479 crores. We have yet no idea of funds placed at the disposal of firms. But the fact that banking circles feel that it is this trend which

is one of the causes of deposit accretion lagging behind credit expansion in the southern parts of the country is significant enough for the RBI to take note of it. □

In-fighting in Synthetics

KILACHANDS have now given a new edge to their fight with Firestone Tire and Rubber Company over the control of Synthetics and Chemicals Ltd. What Firestone is aiming at by lending support to particular candidates in the elections to the Board of Directors, according to Kilachands, is a take-over of the company. By implication they have suggested that here is an American giant that seeks to be at the helm of the management of an Indian company by just holding 25 per cent of the share capital. The unsaid part is that such a development would go contrary to the Government's policy. Kilachands also argue that with the "yes men" on the Board of Directors, Firestone would be able to renew the technical assistance agreement it has with Synthetics and thus assure for itself substantial know-how fees. These allegations have been promptly denied by Firestone.

But in all this advertisement war, the much abused term is "independent" directors. Both Kilachands and Firestone have announced that they would support the candidature of the LIC nominee, Mr J T Ranadive. In addition, Firestone has said it will support the "independent" candidates, Dr D Banerjee, Mr J. N. Heredia and Mr K. M. Khushvala. These men have been described by Kilachands as "yes men" of Firestone and they, in turn, have announced their own choices—Mr J. H. Doshi, Mr Pravinchandra V. Gandhi and Mr Pratap Bhogilal. The two leading figures in the fight, Mr Tulsi Das Kilachand and Mr F. G. Reighley of Firestone are, of course, there in the field. The shareholders must be wondering who is independent and who is not. □

Speculation in chemicals?

DIVERGENT trends have been noted in the dyes and chemicals market in Bombay in the past few days. Generally dyes have ruled easy despite brisk inquiries from textile units because of comfortable supply position. In the chemicals section, however, prices have spurted reportedly on hectic buying of a speculative nature. For instance, borax granular moved up to Rs 100 per 50 kg from the preceding week's level of Rs 73 before reacting to Rs 82. Boric acid jumped by Rs 113 to Rs 275 per 50 kg over a period of seven days. This, despite the fact that indigenous manufacturers are said to be in a position to cater to the needs of the market. Caustic soda flakes ruled firm at Rs 205 and the solid variety at Rs 150 per 50 kg. Sodium nitrite has been quoted at around Rs 185

per drum packing. This item is currently imported by the STC as there is no indigenous production.

The Finance Bill has imposed a duty of 10 per cent *ad valorem* on bichromates of potassium and sodium. The manufacturers of these items have, however, absorbed this duty and not passed on the burden to the consumer. The market hopes that producers of hydrogen peroxide and potassium permanganate will follow this example. The consumers also expect that the authorities will move in to check the prices if they continue to rise because of further speculative activity. □

Low cloth exports

TEXTILE exports during May touched a new low for the year at Rs 636.9 lakhs, the decline being shared by all the items except cotton yarn. There was an improvement in the export of cotton yarn to the extent of Rs 12 lakhs over the April figures, due mainly to business done on Burma account. In the case of cotton piecegoods, there was a marked fall from Rs 484 lakhs in April to Rs 377.9 lakhs while the value of the exports of cotton apparel declined from Rs 91.1 lakhs to Rs 52.4 lakhs. In the case of "other cotton manufactures" the set-back was rather pronounced, the value of shipments declining from Rs 114.1 lakhs to Rs 92.4 lakhs.

The aggregate exports for the first five months of the year at Rs 39.36 crores compare very unfavourably with Rs 48.83 crores during January to May 1970 and Rs 42.08 crores in 1969. The total offtake of cotton piecegoods by the Asian markets declined sharply from Rs 446.2 lakhs to Rs 180.6 lakhs. While most of the markets in this zone accounted for a lower offtake, Thailand recorded a marked rise in her offtake at Rs 15.3 lakhs against Rs 3.4 lakhs.

The declining trend in the export of cotton piecegoods to Europe noticed in earlier months has continued. The value of exports during the period under review was placed at Rs 829.5 lakhs against Rs 939.7 lakhs. While sharp declines in offtake were noticed in the case of France, West Germany, the USSR and Yugoslavia, and Eastern Europe, there was a sharp rise in the offtake of Indian cotton piecegoods by the UK buyers—are they trying to make good in advance what they would be losing early next year?—from Rs 270 lakhs to Rs 570.7 lakhs.

The exports to America also declined from Rs 415 lakhs to Rs 305 lakhs, the sharpest fall in the offtake being registered by the US. In contrast, the exports to the African markets increased over three-fold at Rs 892.2 lakhs against Rs 286.9 lakhs, of which the Sudan alone accounted for Rs 842.6 lakhs, representing a four-fold rise from the level achieved during the first five months of last year. □

INDIANOIL BANQUETS THE EMPEROR!

To feed the fuel-hungry Emperor—India's first Jumbo (capacity 1,80,000 litres of jet fuel!) posed a challenge to Indianoil.

Indianoil's Aviation Engineers successfully met it by designing **giant refuellers of 45,000 litre capacity**—the biggest ever fabricated in India with indigenous components—capable of delivering fuel at the rate of 4,500 litres per minute.

Indianoil, the nation's largest oil refining & marketing organisation keeps pace with the latest technology—in aviation as well as other industries.

SURVEY

SOME GAIN IN AID

NEW Delhi has no particular reasons to complain about the outcome of the Aid-India Consortium meeting in Paris last week. The \$1,150 million (Rs 862.5 crores) assistance agreed to by the consortium for the current year more or less corresponds to what this country had asked for. The non-project aid will be of the order of Rs 487.5 crores, which means that the declining trend in this type of assistance will not have been reversed. Further, when we consider that the debt relief of Rs 67.5 crores to Rs 75 crores will come out of this non-project aid, the limited success we have achieved in convincing the consortium of the greater need of non-project aid for our economy at this stage is obvious. In fact, the total non-project aid promised just about matches the debt servicing burden this year which will be of the order of Rs 458 crores. If, therefore, New Delhi is reportedly satisfied with the aid promised, it is presumably because it did not expect assistance on a more liberal scale. Secondly, it is also committed to a policy of relying less and less on foreign aid.

But obtaining promises of aid is only the beginning of the process of flow of foreign aid. In recent years aid disbursements have fallen short of their commitments. Even for this year the \$1,150 million assistance that has been committed is subject to ratification by parliaments of the aid-giving countries. There is thus no finality about the quantum of aid, but it can be reasonably expected that the authorisation this year will more or less match the commitments. For one thing, the consortium is satisfied with the performance of the Indian economy; the significant improvement in the agricultural situation and the rapid increase in exports have particularly impressed it. The consortium members also recognise that non-project aid could help in liberal imports of crucial raw materials, spare parts and components so necessary to impart the much-needed momentum to industrial activity.

For another, the enormous economic burden imposed on this country by the influx of six million refugees from Bangla Desh seems to have shaken the consortium members out of their aid weariness and made them readily agree to the World Bank's proposal for a total aid of \$1,150 million, which is \$50 million more than that committed last year. That they should have thought it fit to devote exclusively one of the sessions to the consideration of this matter and record in the consortium communicate their "deep concern about the situation" and unequivocally state "that it could have serious consequences for the economic development of India unless conditions are created soon to enable the refugees to return to their homes" testifies to this. The consortium has agreed that refugee relief is an international responsibility and has declared that assistance for this purpose will be in addition to the development aid promised. To that extent,

it is a gain for this country though the response from the world community to the needs of the situation has been far from satisfactory till now. □

THE OILY DEALS

THE deals by the Oil and Natural Gas Commission with certain tea estate owners in Assam might not have resulted, as claimed by the Minister for Petroleum, Mr P. C. Sethi, in a loss of Rs 50 lakhs to the exchequer. They might not have been put through for the benefit of a particular political leader as alleged by a Marxist member of the Lok Sabha. It is also possible that Mr Sethi was really not informed of the fact that his predecessor had ordered a CBI inquiry into the purchases of tea estates. But the whole episode has severely damaged the image of the ONGC and, what is more, has given the impression that the Government is keen on shielding the high-ups in the bureaucracy even when they are accused of gross misdeeds. No one expects the Government to mete out punishment the moment an allegation is made. That would be doing injustice and would demoralise the entire administrative machinery. But the public must have faith in the Government's readiness to act where necessary. That type of confidence has been diminishing in recent years with scandal after scandal in various Government departments coming to light. Mr Sethi's attempts at soft-pedalling on the alleged lapses by certain officers of the ONGC even when informing Parliament that another CBI inquiry into the affairs of the organisation was in progress is, to say the least, no way to build public faith in the integrity of the administrative set-up.

That is not all. The ONGC itself might have been let down by Mr Sethi in the process of establishing that he did not want to be unfair to certain persons unless the CBI inquiry pointed to their guilt. ONGC's efficiency is not accepted by all. Its critics would now talk also of corruption in the organisation that prevents the country from getting the optimum return from the crores of rupees placed at its disposal for oil exploration. These activities, however, have to be stepped up and not slowed down if the country is to be in a position to reduce imports of crude oil over which the foreign exchange outgo is already over Rs 100 crores. That will mean more funds for the organisation. The allocation of such resources might not be easily agreed to by Parliament whose members will justifiably demand an assurance that every rupee will be well spent. But additional funds are only one aspect of the whole issue. It is equally important that the ONGC builds cadres of technically competent and dedicated personnel needed for expansion of its activities. The chances are that so long as the organisation remains a "suspect" in the eyes of members of Parliament and the public, demoralisation will spread among the staff. That could only result in a setback to the desired efforts at locating more oil within the country. □

THE SOCIALIST ALTERNATIVE

THE merger of the Praja Socialist Party and the Samyukta Socialist Party is hopefully expected to be the beginning of a strong socialist party in the country. The draft agreement signed by the leaders of the two parties claims that the merger of their organisations would provide the country with a radical socialist alternative. It promises to lead the masses in the struggle for economic equality, social mobility and meaningful participation. The caste system and class division would be removed and preferential opportunities would be secured for backward classes in such a way that they could get the substance of power. The new party would strive to achieve these goals single-handedly eschewing the politics of united fronts. The party offers to work for the realisation of democracy, secularism and socialism. Its price policy will seek to establish a parity between price of the agricultural produce and of the industrial goods. Remunerative prices would be assured to the agriculturist and wholesale trade in essential commodities would be socialised. The price of essential commodities would not be permitted to exceed 1½ times the cost of production including the transport charges.

It is not quite clear how such a comprehensive policy is sought to be implemented. Prices do reflect the cost of production and the parity would be possible only when there is a parity between the cost of production of agricultural and industrial goods. Such a parity could be achieved only after a far-reaching technological revolution in rural areas. The conflict between growth and social justice is bound to arise in such a transformation and unless this conflict is resolved price parity would remain a pious objective. All this does not mean that these objectives are unattainable. It only means that details of blue-print will have to be prepared to ensure the realisation of these goals without creating unacceptable distortions in the economy. If the party visualises active participation in the coming elections to the State legislatures, it will have to work fast in creating the necessary blue-prints so that the people could be in a position to judge the economic programme of the party while exercising their vote. □

STATE BUDGET

Tamil Nadu

THE budget of the Tamil Nadu Government, presented by the Chief Minister, Mr M. Karunanidhi, who also holds the finance portfolio, shows an overall cumulative deficit of Rs 59 crores at existing rates of taxation. In his speech presenting the budget Mr Karunanidhi has implied that the only way to find a solu-

tion to the continuing deficit is to endow the States with greater autonomy. In the meantime, he has proposed additional taxation totalling about Rs 22 crores so as to bring down the closing cash balance deficit to Rs 37 crores. The most important of this is the suspension of prohibition laws from August 30, this year. He has also proposed a graduated increase in the levy of urban land tax with exemptions to holdings in Madras below one ground. He has also proposed the extension of the application of the Urban Land Tax Act, which is till now applicable only to Madras City, to Madurai, Tiruchirapalli, Salem and Coimbatore. Another proposal is for the revision of the rate of multi-point tax, levied under the Tamil Nadu General Sales Tax Act, from 3 per cent to 3½ per cent and the levy of 10 per cent surcharge on sales tax collected in Madras City. Defending the surcharge Mr Karunanidhi has pointed out that it is in lieu of octroi duty which other cities such as New Delhi, Bombay and Calcutta levy. The most interesting decision is to bring about certain changes in the Agricultural Income-tax Act so as to increase taxes on agriculturists with large incomes, particularly from the cultivation of commercial crops. He has also announced his decision to nationalise all passenger transport divisions of transport undertakings having 50 or more bus permits as on June 1971.

On the expenditure side he has promised new schemes costing Rs 1 crore to be taken up this year for extending the network of roads. High priority will be given to education, medical facilities, employment opportunities to medical graduates and Harijan welfare. The DMK Government has also decided to form a 2,000-member youth corps which will dedicate itself to social service in the villages. It will consist of graduates in medicine, engineering, agriculture, science and arts. These volunteers will undertake tasks such as adult literacy, improvement of health services, family planning, removal of untouchability, casteism and other bad practices. They will also help agriculturists in adopting new methods of cultivation. After having served one year they will be eligible for preferential treatment in recruitment to Government jobs. They will receive an honorarium of Rs 175 per month. The budget does reflect the hopes of the State Government to increase the tempo of industrial and agricultural programmes. Over 60,000 pumpsets are to be energised during the year. Dispersal of industries is to be encouraged by holding the incentive of lower power tariffs and other measures, and the Tamil Nadu Industrial Investment Corporation is to finance small-scale industries to the extent of 75 per cent of their capital needs with a view to encouraging this sector. And Mr Karunanidhi has also not forgotten to add that his State could have had many more larger industrial units if licensing had not been centralised in New Delhi.

INDIAN ECONOMY: BASIC INDICATORS

- While estimating foreign exchange reserves, SDRs transactions that might have taken place on April 30, 1971 have not been taken into account.
- The figures indicate percentage change during the current calendar year upto the month indicated as compared to corresponding period in the preceding calendar year.

THE WEEK

THE Aid-India Consortium, meeting in Paris on June 17 and 18, assured India of external assistance for 1971-72 of \$150 million (Rs 862.5 crores). This comprises \$650 million in non-project aid and \$500 million in project aid. The Consortium also agreed to provide for debt relief \$90-100 million out of the non-project aid. The assistance is apart from whatever contributions the member-countries have made for Bangla Desh refugee relief, which the Consortium acknowledged as an international responsibility.

Britain's contribution in this assistance will be £34.5 million (Rs 621 crores) in non-project aid, £20 million (Rs 36 crores) for specified project aid and £7.5 million (Rs 562 crores) towards debt relief.

Japan has pledged \$16 million (Rs 34.50 crores) on non-project account, of which \$20.6 million (Rs 15.45 crores) is for rescheduling of debts for 1971-72. In addition, she also made a three-year projected credit pledge of \$45 million (Rs 33.75 crores), specifically for the Tuticorin and Kottah fertiliser plants and for the Cochin shipyard.

France and India signed in Paris on June 22 a financial protocol specifying the terms of French credit to India for 1971-72. The agreement provides for a French contribution of 177.7 million francs (Rs. 25 crores) of which 27.7 million francs will be for debt relief. (See also Survey)

S.S. Padma, a freighter flying the flag of Pakistan, was preparing on June 22 to sail from New York to Karachi with a cargo of US military equipment to Pakistan, according to a *New York Times* report. The report added that at least one more ship, S.S. *Sunderbans*, left New York on May 8 and is due in Karachi in mid-August, also carrying what the paper described as "foreign military sales," apparently in violation of the Administration's officially proclaimed ban on such shipments. (See also Editorial)

Sir Alec Douglas Home, British Foreign Secretary, told the House of Commons on June 23 that Britain will not resume aid to Pakistan until there was a firm evidence of progress towards a political solution in East Bengal.

Britain and the Six Common Market countries reached a final agreement on June 23 on the terms of British entry into the Community. The agreement was the result of a mutually acceptable compromise on the two major outstanding issues, namely, the quantum of Britain's contribution to the Community's budget and the future of New Zealand's dairy exports. Britain has agreed to raise its contribution to the budget from 3 per cent to 8.6 per cent in the first year, which is only slightly less than the French demand for 10 per cent. The EEC will allow New Zealand to maintain 80 per cent of her butter exports to Britain and 20 per cent of her cheese exports during a five-year transitional period.

Britain and the United States have committed aid totalling Rs 28 crores for a giant fertiliser complex to be built in Gujarat by the Indian Farmers' Fertiliser Co-operative Ltd (IFFCO). Separate agreements were signed in New Delhi on June

18 covering the British credit of £7 million (Rs 126 crores) and the American loan of \$21 million (Rs 15.75 crores). The project has been undertaken with the co-operation of the Co-operative Fertilizers International (CFI), a non-profit organisation owned by 13 US co-operative ventures.

The Central Statistical Organisation has set up a working group to suggest a revision of the industrial production index by shifting the base-year and by giving a higher weightage to some of those industries that have become more important over the past decade. This is felt necessary in order to give a more precise picture of industrial growth.

Tamil Nadu, the first Indian State to experiment with Prohibition (1937), will go wet on August 30, 1971. Presenting the revised budget estimates for 1971-72 to the State Assembly on June 19, the Chief Minister, Mr M. Karunanidhi, announced the suspension of the enforcement of prohibition laws "until such time as the Central Government enforces it as a national policy". (See also Survey)

The Andhra Pradesh Cabinet announced on June 23 an *ad hoc* increase of Rs 6 in the dearness allowance of the non-gazetted employees. The city compensatory allowance has also been raised by 15 per cent. Three-fourths of the dearness allowance will be taken into account for the purposes of calculating house rent allowance. The Cabinet also announced a rise of Rs 3 in the pay of village officers.

The Uttar Pradesh Cabinet decided on June 22 to impose a ceiling of Rs 5 lakhs (per family) on urban property.

A sophisticated electronic equipment for measuring the ionospheric radio waves worth Rs 15 lakhs was gifted to India by the German Democratic Republic under an agreement signed in New Delhi on June 23. The equipment which is expected to reach India in a few months is to be installed in the Gujarat University at Ahmedabad.

In Parliament

The Lok Sabha on June 18 approved the Maintenance of Internal Security Bill 1971 amid a noisy walkout by the entire Opposition and a five-minute *dharna* by a Swatantra member. Sixty-five amendments had been moved to the Bill, only two of which, of a technical nature, were adopted and the others declared lost.

Mr L. N. Mishra, Foreign Trade Minister, told the Lok Sabha on June 23 that the Government had decided to set up an export promotion council for oilseeds, oils and oilcakes.

Money unchanged

There was no clearing on the Bombay short-term money market on Wednesday owing to heavy rains and dislocation of transport. On Tuesday the rate was 4½ per cent. In Calcutta money market, transactions were done at 4½ per cent. In the Madras market, the rate ruled at 4 per cent.

Price index up

During the week ended May 29, 1971, the Index Number of Wholesale Prices recorded a rise of 0.8 per cent to 183.4. At this level, the index was only 1.5 per cent above its level a year ago.

Mr Sri Prakasa, a former Governor of Maharashtra and Chancellor of Kashi Vidyapeeth, died on June 23. He was 81.

PEOPLE

LALA Bansi Dhar and Mr M. L. Apte have been elected President and Vice-President respectively of the Indian Sugar Mills Association for 1971.

Mr S. N. Guha Ray has been elected President of the All-India Federation of Master Printers. Mr R. M. Cama and Mr Jagdish Parikh have been elected Vice-Presidents.

Mr Sarat Chandra Sinha has been appointed Chairman of Oil India Ltd.

50 years ago

The world cotton conference has been in session in Liverpool and Manchester from the 13th to the 22nd instant. Representative of nineteen nations the conference was presided over by Lord Emmott. Mr Shute, President of the Liverpool Cotton Association, welcoming the delegates, said that a good understanding between employers and employees was essential to the world's prosperity. Lord Emmott was optimistic in a speech on the subject of industrial troubles he firmly believed that as regards the cotton trade, before long we should need millions of bales of cotton every year. The last conference, the first after the war, and the first of the new series in which the word "world" was introduced into the title in place of "international" was held at New Orleans in the autumn of 1919. The present conference which, while discussing matters affecting the

world's cotton trade, paid visits to mills, works and places of interest was representative of all countries interested in the production, handling and manufacture of cotton in all its phases. It brought together representatives of all branches of the cotton industry in the world except those from late enemy countries. The representation from India was particularly strong comprising the Bombay Millowners' Association, the Madras and Southern Millowners' Association, the Upper India Chamber of Commerce and the Director of Agriculture of Baroda. Egypt had an important delegation, while the United States sent across as many as 200 delegates. Great Britain had 300 and the other countries represented were France, Italy, Czechoslovakia, Norway, Holland, Portugal, Switzerland, Belgium, Spain and Sweden.

INTEREST twice a year; SAFETY all the year

**when you open a
Lombard Bank Deposit Account.**

A Bank Deposit Account with Lombard provides a good rate of interest, with complete safety for your capital—leading to financial peace of mind.

7%

Deposits at 6 months' notice of withdrawal can earn 7% interest per annum, but you can withdraw up to £100 on demand during each calendar year. Interest is paid half-yearly without deduction of U.K. tax.

TIME DEPOSIT ACCOUNTS: Deposits of £5,000 and over can earn higher rates of interest for fixed periods. Details are available on request.

Lombard is a member of the National Westminster Bank Group whose Capital and Reserves exceed £329,000,000.

Opening an Account is simplicity itself, so write now to the General Manager for further details and a copy of Deposit Account Booklet No. AO. 91.

REPORT

THE NATION

From Our Own Correspondents

DIFFERENTIAL INTEREST RATES

Pragmatic bankers and a theoretician

NEW DELHI.

THE committee set up under the leadership of Dr R. K. Hazari, Deputy Governor of the Reserve Bank of India, to examine the pros and cons of introducing differential interest rates has reportedly submitted its study to the Government. Whether it will strengthen the hands of the Finance Minister, Mr Y. B. Chavan, in evolving a policy of lower interest rates for the small and weaker borrowers and higher rates for the more affluent borrowers is not yet clear. An answer to this question would be possible only when the report is made public. Informed sources, however, believe that if the majority (which included all the five banker-members) view prevails there need not be a radical change in the picture. But if Mr Chavan chooses to go with his Chief Economic Adviser, Dr Ashok Mitra, who was on the seven-member committee, the interest pattern would show wide differentials. The issue before the Finance Minister is: Should he respect the views of bankers or of an economist who, from the report, gives the impression of being fully in tune with his (Mr Chavan's) feelings?

There is agreement on the one basic issue between Dr Mitra and the others led by Dr Hazari. It is that in any scheme the banks must not suffer, which means that in the existing conditions they must be assured of a return of 10 per cent on their lendings. This, according to the majority view, can be achieved by having interest rates varying from 8.5 per cent to 10 per cent to preferred classes of borrowers and 12 to 13 per cent for others. Reportedly, it is the view of Dr Mitra that this is arguing for the *status quo*. He himself would like to go in for a spectrum of lending rates where smaller farmers, for instance, are charged a nominal interest rate of 0.5 per cent to 1 per cent though the well-to-do ones would be charged 9 to 12 per cent. At the other end of the spectrum, a section of the trade, for instance, could be charged an interest of 20 per cent. If Rs 50 crores are advanced to the trade at this rate of interest, then an equal amount could be lent to deserving farmers, small artisans and self-employed individuals at a nominal rate.

Dr Mitra's basic point would appear to be that we cannot overlook that nearly two-fifths of the total agricultural community is made up of landless and small farmers holding less than two acres of land. They have to be provided with money at nominal interest. At the same time, it would be necessary to have credit rationing in order to stop the possible misuse of the scheme by the rich farmers. No doubt a scheme of differential lending rates will put additional burden on the banks, but it will have to be faced and a continuous check be kept on the tempo of recoveries.

To the banker-members of the committee all this looked like a theoretical approach. Their point of view was obviously that any scheme drawn must be beneficial, acceptable and practicable, and hence they came to the conclusion that too wide a range of differential would be inadvisable. An unrealistically low minimum would cause a stampede for bank funds, generating pressures which the bankers may not be able to withstand. There was also the possibility of a sharp lowering of the rate causing diversion of resources from the organised to the unorganised sector through re-lending.

Then they were faced also with the issue of how high rates of interests charged by banks in the context of the existing legislation aimed at regulating money-lending. In most States the maximum interest permitted by law for unsecured loans is around 12 per cent. Could the banks then be free to charge interest rates of 18 and 20 per cent, making nonsense of the legislation to control the money-lenders? True, this legislation is often bypassed and money-lenders recover rates of 18 and even 20 per cent. But with banks themselves charging up to 20 per cent the money-lenders would feel themselves free to charge even 30 per cent.

FARM FINANCE

AFC's co-ordinated services for farmers

BOMBAY.

WITH farmers taking to the new agricultural strategy involving the use of high-yielding varieties of seeds and modernisation of farming practices, they are in search of more medium- and long-term finance as also more crop finance. The Agricultural Finance Corporation, a body sponsored by commercial banks, is seeking to meet this challenge. The Corporation formed three years ago has done a significant job in trying to reduce the costs of various services and inputs to the farmers. The Corporation has provided large loans to the State electricity boards. It has helped energisation of 1.06 lakh irrigation wells at an average cost of Rs 2,330 per well. It has persuaded the electricity boards to bring about some improvements in their financial and other operations. This has resulted in the reduction of the cost of transmission per well from Rs 3,000 to Rs 1,600 in some cases and from Rs 4,000 to Rs 3,000 in a few other cases.

During the third year of its working the Corporation approved and sanctioned six proposals involving total finance of Rs 26.92 crores as against Rs 90.06 crores in the previous year. The sanctions include Rs 11.07 crores loan to Maharashtra

This apart, the majority view apparently is there would be repercussions if the interest rate was higher than 12 to 13 per cent. Logically this would have to fall on the bigger borrowers, which means medium and large industry and trade. The argument that substantially higher rates of interest could be easily borne by these borrowers would be valid only to the extent to which they enjoy a surplus because of scarcity conditions or monopoly or oligopoly situation. Higher interest rates in such cases would be socially justifiable. But not every industry falls into this category. In several instances, the scope for transmission of higher cost to the consumer is very great. This is especially there in the case of industry where administered price system permits adequate revision on the basis of increases on the cost, fixed on a formal or informal basis.

From these arguments flowed the majority conclusion that the lowest interest rate to be charged to any borrower should be approximately equal to the ratio that raising and using funds bears to total resources, which on an average works to about 8½ per cent. While, therefore, preferred classes of borrowers could be charged rates varying between 8½ per cent and 10 per cent, banks could charge higher rates for other borrowers. But in doing so they should take into account what is permissible by law or what is indicated by the Reserve Bank and also the broad principle on what the traffic can bear. Banks cannot also overlook the overall consideration of maximising profitability. □

State Electricity Board for energisation of irrigation pumpsets, and Rs 11.84 crores for financing individual farmers for land development and land reclamation purposes in Kota and Bundi districts of Rajasthan. The Corporation has also agreed to finance development of areca nut gardens in Coimbatore district at a cost of Rs 12.25 lakhs. There are also certain innovations. It has started a project for the integrated agricultural development at Jalna in Aurangabad district of Maharashtra. This involves co-ordinated service and supplies to farmers utilising the loans from the banks.

A significant feature of the Corporation's operations is the setting up of risk stabilisation funds in the projects involving sinking of 5,000 wells in Raipur district in Madhya Pradesh and 3,000 wells in Jalna in Maharashtra. In the case of Raipur project it has been assumed that a total of 20 per cent failures may have to be dealt with. On an initial investment of Rs 5,000 per well this involves a potential loss of Rs 5 lakhs. The stabilisation fund would be of the order of Rs 8.72 lakhs. This includes Rs 1.40 lakhs from banks, Rs 60,000 from the farmers in the form of premium, four per cent con-

tribution by pumpset manufacturers on their sales (Rs 480 lakhs), fertiliser credit extended to the farmers (Rs 112 lakhs) and Government contribution (Rs 80,000). This should help the financing institutions to enter into the field of financing well-digging operations in the absence of geo-hydrological survey reports. The balance in the fund after meeting 50 per cent of loss on wells will be available to the input manufacturers for meeting expenses incurred in the servicing of pumpsets, and for fertiliser agencies to meet the cost of extension services.

Prof M L Dantwala, Chairman of the AFC, has said that the Corporation has still to resolve some issues with the banks in regard to area development schemes. Though the Corporation has evolved uniform documentation and procedures in respect of the area development projects they have not been accepted by all the banks.

PUNJAB

Mandis creak under bumper wheat output

CHANDIGARH

THE wheat-producing States of Punjab and Haryana have always been ready to take up the cudgels on behalf of the farmer when it comes to the fixing of procurement prices. Their anxiety that the cultivator, who made it possible the ushering in of the green revolution in wheat, should receive a fair return is understandable. Between 1967-68 and 1970-71 Punjab's wheat output has increased from 33.52 lakh tonnes to an estimated 50 lakh tonnes and that of Haryana from 14.66 lakh tonnes to 22 lakh tonnes. The two States are also the main sources for building the wheat reserves. Out of every four bags of wheat procured, three come from these two States, and it is therefore important also from the point of view of the consumer that the farmer receives what is rightfully due to him.

A recent study by the Punjab Agricultural University however brings out that he is being let down not so much because the procurement prices are low but because the State authorities have yet to awaken to the fact that marketing is as important as production. If there are bottlenecks in the marketing system it is the farmer who suffers as also the consumer. The university points out that the arrivals of the surplus wheat in the grain markets of Punjab have more than trebled since 1967-68. But the mandis are incapable of handling the goods received. In Ludhiana market, for instance, 23 per cent of the wheat arrivals continued to be sold outside the market yards for 35 days. In Jagraon, another marketing centre, sales were conducted in mill premises, in front of houses and even at the railway station yards.

New procurement centres were opened in villages and small towns on road sides but these centres lacked watch and ward arrangements and storage facilities. Additionally, there were no banking facilities, and electricity could not be provided. This naturally led to pilferage and wastage besides causing inconvenience to the farmers.

Shortage of labour led to the demand for extra payment from farmers for packing, stitching and stocking the wheat bags. Bags were stitched at 7 to 10 centres only instead of the normal 14 to 16 places caus-

ing spilling of grains in transit. In 1969-70 there was a shortage of gunny bags and poor quality bags were used. Four to five per cent of these bags were damaged in transit. The report also highlights some of the malpractices which came to notice in 1968-69. The rejected produce was purchased at abnormally low prices and was later offered by traders to the purchasing

agencies in other markets in the name of fictitious farmers. Quality produce remained at disadvantage. For instance, in 1970-71 a lot containing 36 per cent total refraction was priced at Rs 76.10 per quintal, but another lot containing 14.25 per cent refraction was priced at Rs 75.75 per quintal. This did not give any incentive for cleaning or preparing the produce in the market.

THE Congress (R) leadership is faced with a number of problems, caused by the group rivalries in the various State units of the party. In Bihar, rivalry between Mr Daroga Rai and Mr R S Yadav has reached a point which might give anxious moments to Mr Bhola Paswan and his ministers. If the PSP Chairman, Mr N G Gorry succeeds, in persuading his followers in the Bihar Assembly to get out of the ruling united front there, the continuance in power of the Bihar Ministry would be in doubt. If on top of this, the faction fight in the Congress (R) is escalated, the threat to the Ministry will be all the greater.

In Kashmir Mrs Gandhi is reported to have failed in resolving the differences dividing the two factions in her party—one headed by the Chief Minister Mr G M Sadiq, and the other by Mir Qasim the PCC President. This is all the more unfortunate because that State is today faced with big challenges as a result of deterioration in the relations between India and Pakistan. In Gujarat too though outwardly the conflict among the group leaders who have now joined the party of the Prime Minister has been patched up there are reports of persistence of intense rivalry among them. As both Kashmir and Gujarat have to face the election to the State Assemblies in the near future these rivalries are ominous.

In all these instances, the real problem is concerning ripeness relation to the rival groups in the State cabinets. In Bihar and Gujarat the groups are divided more or less on caste lines. Regional rivalries also play a part and this makes the central leadership's position all the more difficult. There seems to be no easy way out of these faction fights unless the Prime Minister feels himself strong enough to put her foot down and impose discipline in pain of severe disciplinary action in case the unseemly fighting continues. Till now she has used the carrot-and-the-stick technique as the circumstances demanded it. This has not helped in resolving the conflicts. But if the Congress (R) hopes to make an impressive show during the State elections something will have to be done immediately before there is any sign of revolt from the petty groups.

The decision of the Praja Socialist Party and the Samyukta Socialist Party to merge into a single party to be called the Socialist Party has been generally welcomed. The merger decision is yet to be approved by the conventions of the two parties to be held shortly. But it is expected that there would be no difficulty at that level and that the merger decision would go through. The general welcome extended to this decision is with the hope that the nucleus

POLITICS TODAY

thus formed would attract other socialists in the country divided among small parties, to flock round the banner of the Socialist Party and that in course of time it would be possible to bring all those who subscribed to the socialist principles into this party. Mr Goray hopes that the merger will have an impact on the thinking of democratic socialist elements in the Sanjivayya Congress. There do not appear to be any immediate chances of the break-up of the Congress (R) on these lines. But in case serious ideological split appears in that party the radical elements have now a place to go to.

The draft agreement signed by the representatives of the two parties states that the united party will eschew politics of the united fronts with the parties opposed to nationalism, democracy, secularism and socialism. It views the post-election Congress (R) as the old monolith comprising elements of diverse political perspectives and as such bound to belie the hopes and expectations raised in the minds of the common people during the mid-term poll. The agreement agrees to build an effective organisational instrument which will lead the people's struggle for economic equality, social mobility and meaningful participation of the people in building a socialist society.

These formulations of the task of the new party clearly reflect the disillusionment of both the parties with the policies of electoral adjustments which they had tacitly or openly adopted during the Lok Sabha mid-term poll. It remains to be seen however, whether the two parties along with a few other minor socialist parties will be able to build up an organisation that would inspire confidence among the people as an alternative to the Congress (R). The main task will be to build up a platform which clearly distinguishes the policies of the new party both from those of the Congress (R) and of the two communist parties. There is no likelihood of any confusion in the public mind regarding the stand of the party vis-à-vis the Swatantra Party and the Jana Sangh. It will be quite easy for the new party to make the distinction clear. Will the party however succeed in building up a clear, distinctive image from those of the Congress (R) and the two communist parties? The credibility of the Socialist Party would depend upon its success on this point.

—Rohit Dave

No doubt one or two problems have been tackled. Even till 1968-69 almost all the wheat was carried in bullock carts from the market to the railway stations. This led to accumulation of stocks, to overcome which lifting of the stocks is now done by trucks. The Food Corporation of India and other procuring agencies have also begun gearing their purchasing operations to the new periods of peak arrivals. Till four years ago the maximum daily arrivals were between June 4 and June 19 but the peak arrivals now begin from the third week of May itself. This should be the explanation why this year the total procurement of wheat has already crossed the four-million tonne mark and that, too, quite early in the season.

But the Punjab University study suggests that there is still no co-ordination among the three purchasing agencies—the FCI, the State Government and the State Co-operative Supply and Marketing Federation. These three are required to operate turn by turn and each of them maintains its offices, transportation arrangements and other establishments in each market and also at district headquarters. This adds to overhead costs which could be avoided if the three agencies are allotted different areas or one agency procured all the wheat. According to the university this will facilitate mechanisation because a single agency would be in a better position to install elevators, graders and other equipment. In fact, the study suggests that

mechanisation of lifting, sewing and weighing operations is now as important as the harvesting of the heavy crops through combined harvesters.

The university study would like the procurement be done in the villages through the village co-operative societies. This will mean additional expenditure on construction of proper godowns in the villages but it would allow linking of credit with marketing. The lesson the report holds for the authorities in Punjab and Haryana is that, instead of concentrating all their efforts on securing higher procurement prices for the farmers, the interests of cultivators would be better served by a drive for the creation of a modern marketing system. □

THE WORLD

From Our Own Correspondents

US-CHINA TRADE

Embargo off to Hongkong's benefit

HONGKONG.

PRESIDENT Nixon's announcement last week lifting the two-decade-old China trade embargo has sparked a new debate in this gateway to China—how soon will Americans and Chinese start trading? The answer to the question is as unpredictable as enigmatic China.

The reaction of American businessmen in Hongkong and in the US has so far been lukewarm to Mr Nixon's most magnanimous move—part of a series he started in July 1969 with a surprise announcement allowing American tourists to take home US\$100 worth of Chinese goods. The most common reaction among Hongkong's nearly 400 American businessmen was: "It depends upon what response the new Nixon move will draw from Peking." In the US, Mr Benjamin Weiner, President of Probe International, a China trade consulting firm, has commented that direct trade "is going to be a very slow process".

American businessmen and the 350-strong American Chamber of Commerce in Hongkong has lately been very active in probing the China market. During the Canton trade fair in last March over 100 American businessmen had applied to the China Travel Services, a Peking-controlled agency in Hongkong, for entry visa to China. The American Chamber early this year established a China trade sub-committee to examine trade possibilities between its members and the Chinese. This month the committee completed a survey among the Chamber's 223 voting members to find out their feeling on China trade. The committee has found strong support for direct trade links with China though a powerful and influential section opposes it for fear of losing investments and market potential in Taiwan.

China trade supporters admit that it will take some time before they could establish direct and regular trade links with Peking. The growth rate of the

China market also will be slow. It could within the next three years reach a total of \$50 million—the level reached in 1950 before the US enforced a total trade ban on China when the Chinese People's Liberation Army marched into the Korean war front in support of the North Koreans. In the next 10 years the trade may rise to \$250 million in each direction.

This, however, would be a paltry sum compared with the Japanese share of the market which by the end of this year is likely to hit \$1,000-million-mark. In the next ten years this figure could easily double. This Japanese drive in the China market as well as stiff Japanese competition elsewhere are becoming a major concern for both American policy-makers and American corporations that already feel the pressure in Western Europe from the growing strength of the European Economic Community and its protectionist policies. Asia's largest trading post, Hongkong, meanwhile is virtually dominated by Japan while China takes the second rank among Hongkong's suppliers. The problem posed for the Americans by the growing Japanese economic power was highlighted recently by Mr Orville Freeman who was the US Secretary of Agriculture in both the Kennedy and Johnson Administrations for eight years.

Addressing an American Chamber of Commerce gathering in Hongkong a few weeks ago, Mr Freeman said the technological progress in Japan today was as good as in the US. This is what worries the Americans and forces them to settle with China—the world's largest consumer market. The American approach towards the market potential in China was explained thus by one American executive: if his firm could sell one aspirin pill a day to every Chinese, that will make a market for 700 million aspirins a day.

But this American desire to capture the China market will not succeed with-

out an equally positive response from Peking. Although the visit of the American table tennis team to China in April has, in Mr Chow En-lai's words, opened "a new page in the history of relations of the American and Chinese peoples" Peking has not responded to the latest Nixon overture. No one in fact expects Peking to respond directly. The reasons are many. First, China has learned to live without trade with America during the last 20 crucial years of her history. At the same time, there has been no difficulty at all in obtaining through third countries whatever selected American products she needed.

Although some optimistic Americans hope to get invitations to the next Canton fair in October, some astute observers believe that China will continue to follow the policy of indirect trade for quite some time to come using Hongkong as the main outlet. In such an event Hongkong will not only become a clearing house for Chinese exports but it will take a much more important role of a processing centre for China.

Certain latest developments have added strength to this belief. Only a few days before Mr Nixon lifted the trade embargo, the Hongkong-based pro-Peking Chinese General Chamber of Commerce in a statement condemned the US move to control textile imports from Asian countries, including Hongkong. The Chinese Chamber, unlike other trade organisations, has not been so active in issuing statements in support of the Hongkong industry. But what dictated the Chamber to denounce the US textile quota plans, it is believed, was the anticipated announcement from Mr Nixon. Before the embargo was lifted, Hongkong's exports to the US had to be cleared through a Comprehensive Certificate of Origin (CCO)—a certification system imposed in 1953 on the request of the US as a deterrent against Hongkong manufacturers supplying goods to the US market using Chinese raw materials. But the CCO has now been cancelled. This move was welcomed by Hongkong manufacturers.

with jubilation. One of them said that both textile and wig manufacturers would find it a great relief from rising cost of production, for Chinese grey is some five to ten cents cheaper than other greys while Chinese human hair is far superior to that coming from other sources—particularly

India and Indonesia. It is also believed that pro-Peking Chinese businessmen in Hongkong may now be encouraged to set up production lines to cater to the US market. These would certainly build up China's exports to Hongkong which last year hit a record high of HK\$ 2,830.4 million. □

China woos Malaysia

KUALA LUMPUR.

THE trail blazers are back home from Peking and the mood in the Malaysian capital is not dissimilar to the exultancy that marked the early "Hindi-Chini bhai bhai" days. Except, of course, that the Malaysians appear much more pragmatic, have a system of priorities and are not prone to count the chickens before they are hatched.

The 19-man trade mission, the first organised team to visit China for 15 years, has brought back enough good tidings to make even the incorrigible pessimist to take heart and sing. "The best piece of news this year commercially," as the Minister of Commerce and Industry, Mr Khir Johari, put it, is that China might buy 150,000 to 200,000 tons of Malaysia's natural rubber annually at average world prices. Apart from helping to stabilise the price of natural rubber, such substantial oftakes by China would help neutralise the threat posed by large-sale releases of American stockpile.

If China lifts even the lower figure, it would be a tremendous improvement over the present performance. China's imports of Malaysian rubber dropped to 49,600 tons last year, compared to 90,000 tons in 1969 and an average of 150,000 tons in the 1966-68 period. Malaysia's gain may be at the expense of Ceylon, who sells her rubber to China under a barter arrangement. A Chinese rubber mission is due here soon to examine in detail the problems involved in the purchase of rubber and its direct shipment to China bypassing Hongkong and Singapore. China has also offered to buy up the entire stockpile the Malaysian Government holds, estimated at between 4,000 and 10,000 tons, and a Chinese mission is already in Kuala Lumpur discussing terms.

It is likely China may provide the substantial markets Malaysia has been seeking for her growing production of timber, copra and palm oil and thus redress the unfavourable balance of trade. Last year Malaysia's exports to China were worth only M\$66 million (about Rs 15.5 crores) while Malaysia imported from China goods worth more than M\$200 million (over Rs 47 crores), mostly foodstuffs.

Malaysia intends to continue and even increase imports from China. These imports will be handled by the Government-sponsored National Trading Corporation because China, which handles her foreign trade through the Overseas Trade Promotion Council, would prefer to deal with a single body. Government circles here also feel that importing through the NTC would help keep a check so that her industrialisation programme will not be affected.

But what is, perhaps, more important is that the trade mission, which had only

an unofficial status, was received by the Chinese Prime Minister, Mr Chou En-lai, who spent almost an hour with them. And he seems to have won the hearts of the Malaysians by his charm, civility and courtesy. Mr Chou En-lai's gesture in asking the mission leader, Tengku Razaleigh, to convey his good wishes to the Paramount Ruler and Prime Minister, Tun Abdul Razak, further endeared him to the visitors. Tengku Razaleigh was naturally in good spirits when he addressed newsmen here on his return from China. He gave only a general outline of his talks with Mr Chou En-lai but later reported in detail to the Government leaders. And the reaction was optimistic.

Tun Razak said he was heartened by the Chinese Prime Minister's assurance that Peking respected the sovereignty and independence of other countries and that China would not interfere in their internal affairs. On a more personal level the Tun was happy to hear that Mr Chou En-lai had responded favourably to his proposal to neutralise South-East Asia under a guarantee by the big powers, including China.

Equally hopeful was Wisma Putra (Foreign Ministry). A seemingly common usage, but a very meaningful one for Wisma Putra, was that throughout the mission's tour of China, it was referred to as a "Malaysian" mission and Mr Chou En-lai also spoke of "Malaysia". Why this is significant is that till now Peking had been consistently referring to Malaysia as "Malaya", ignoring the formation of the Federation (of Malaya, Singapore, Sarawak and Sabah) eight years ago, and the subsequent separation of Singapore into an independent State. The banned Malaysian Communist Party (MCP), whose remnants are still waging an armed struggle for the "liberation" of "Malaya," and the pro-Peking Socialist Front of Singapore refer to this country as "Malaya." Even a report after the return of the mission that Peking Radio was still referring to this country as "Malaya" has failed to dampen enthusiasm and the feeling here is that this is a matter of time.

Unlike countries such as Canada or Italy, Malaysia has more problems when it comes to establishing diplomatic relations with Peking. Which explains why Tun Razak said he was in no hurry to set up diplomatic ties but would wait to see trade relations develop into more friendly exchanges. He probably had in mind the 25-year-old communist insurgency, whose hard core, including its leader Chin Peng, began stepping up activities in the border region three years ago. The May 1969 racial riots was a shot in the arm for the sagging morale of the MCP. There were fears that disgruntled Chinese youths might find their way into the ranks of the

"liberation army", but these apprehensions have been proved to be rather exaggerated.

More important is the question of Malaysia's Chinese community. Accounting for almost 40 per cent of the population, and economically more affluent than the indigenous Malays, this vigorous group remains unassimilated. The Malays and Chinese operate on entirely different wavelengths and till the riots two years ago, there was no adequate appreciation of the wide gap that separated the very thinking of the two major communities. Some efforts are now under way to reduce the gap all round and orientate the Chinese towards a Malaysian society.

Policy makers in Kuala Lumpur believe that some kind of understanding with Peking would help sort out both these issues. It is realised that Peking might be in no position to wind up the border insurgency just like that because the patronage the communists enjoy appears to be limited to ideological support, with no material assistance forthcoming. Yet, if Malaysia cultivates good relations with Peking, the MCP will find it hard to convince all but the dwindling hard core that the country needs to be liberated.

But the impact of better relations with China will be more marked on the Chinese population. In this regard Mr Chou En-lai's reported remark to a Chinese member of the mission that Malaysian Chinese must have complete loyalty to Malaysia and should not look to China as their homeland might lead to some heart-searching here. Mr Chou En-lai's call to the overseas Chinese in general to show their loyalty to their adopted country is a serious departure from the official Chinese position that all overseas Chinese are *ipso facto* Chinese citizens. A dogmatic example of this was the strife in Burma between the Burmese and the Chinese in Rangoon and other cities not long ago.

How important this emotional appeal could be was demonstrated when a pro-Peking dramatic troupe from Hongkong visited Malaysia recently. Tickets were booked out days ahead and people queued up for the whole night at the theatres to buy the few remaining tickets. Thousands poured into the streets just to have a look at the troupe members. The near-riot situation almost alarmed the Government which had allowed the visit in an apparent effort to boost the fortunes of the Malaysian Chinese Association, a partner in the Government, after its disastrous rout in the 1969 elections.

That Malaysia should seek to normalise her relations with her powerful neighbour is only legitimate. It was not attempted before partly because of the strong pro-Western stance of Tunku Abdul Rahman, the former Prime Minister, and partly due to China's own belligerence. And Malaysia has noted that almost every country is joining the queue. Even the solidly pro-American Thailand has revealed that she has been putting out feelers to China since the last three years, whereas a Philippine trade mission beat the Malaysians to China by a week or so.

There is no sign yet of any irrational haste here to get on to the China bandwagon and claim to be "one-up" in this favourite South-east Asian game. But it likely that the trail hit by traders might soon be trod, gently though, by officials and diplomats. □

BUSINESS REPORT

From Our Own Correspondents

INDIAN AIRLINES

Break-even only at 82 per cent load

NEW DELHI.

IN November 1969, the Government allowed the Indian Airlines to raise its fares by 8 per cent on the routes served by Caravelles, by 5 per cent on the non-jet eastern routes and by 7 per cent on all other routes. And now, within eighteen months, it has permitted a further increase of 15 per cent in the fares on all domestic routes except those in the eastern region where the rise is 7 per cent. Thus, in a matter of one and a half years, air travel in this country has become costlier by nearly 25 per cent generally. It would have cost much more had not the Government mercifully scaled down the demand of the Indian Airlines for a 28 per cent hike this time to 15 per cent.

The increase in air fares since the end of 1969 by any reckoning is unconscionably high and what is worse is that this abnormal rise should have occurred during a period when the users were most harassed by lock-outs and lightning strikes in the IA and the lack of decency and discipline among its employees even when they were at work or rather at work-to-rule which is a euphemism for go-slow. It could get away with all this and make the travelling public pay the price for its inefficiency and sloth just because it is a monopoly.

The fact that the Government was prepared to grant the IA only a 15 per cent increase in fares against practically twice this sought by it is a measure of its lack of satisfaction with the IA's performance. This is not to say that there was no case for raising air fares to some extent and, indeed, some of the grounds adduced by the IA are reasonable. Four of the major components of its cost structure, namely, fuel, wages, spares and insurance, which together account for 70 per cent of its total operating expenses, have gone up steeply during the last two years. Fuel expenditure is estimated to have gone up by 14 per cent from the 1969-70 level of 28 per cent of the operating cost. Because of the higher excise levy, the difference between the IA's fuel expenditure and that of airlines in other countries has been widening rapidly. Its fuel cost now stands at 5.7 paise per seat kilometre against an average of two paise in the case of other airlines. The recent increase in crude oil prices is likely to increase the burden further. There is, therefore, a good case for affording some measure of relief to the IA by reducing the excise levy on fuel. But would the Government, so hard pressed for resources, be prepared to forgo such a lucrative source of revenue?

The prices of spare parts which are mostly imported are reported to have gone up by 15 to 20 per cent during the last two years. The increase in customs duty on imported items proposed in the Budget

this year will further push up their prices. Insurance rates which are generally rising will increase by another 25 per cent because of the IA's decision to insure its jet fleet against hijacking risks. This, it is estimated, will involve an additional burden of Rs 1 crore. Further, there have been increases under other heads of expenditure such as catering, rental and uniforms for staff, which have gone up in tune with the inflationary trends in the economy.

On top of all these are the wage increases that the IA will have to pay. The recent agreement with the Air Corporation Employees Union which accounts for 6,000 out of the 14,000 workers of the Indian Airlines—the remaining employees belong to three other unions—will entail an expenditure of over Rs 1 crore during the last two years as the agreement has retrospective effect from April 1, 1969, and Rs 1.54 crores in the current year. But this is not all. As a result of the proposed revision of wages for the remaining employees, the total wage bill of the IA is estimated to increase by Rs 4 crores in 1970-71, while the arrears of wages that will be payable on this account will be Rs 6.5 crores. All this is due for payment in the current year.

The Indian Airlines' case for an upward revision of fares rests on two other grounds: (a) to enable it to attain an economic level of operation, and (b) to generate resources from within for financing its expansion and modernisation programmes. It is true that its high operating costs have pushed up its break-even load factor (BELF), that is, the minimum load that an airline has to carry in order to avoid losses and, if possible, make some profit. At the end of 1969-70, the BELF in the case of the IA was 75.5 per cent and it is estimated that at the close of 1970-71 it had increased to 82 per cent. On the other hand, airlines in other countries, especially the advanced ones, have been able to cover all costs with a load factor of 55 to 60 per cent. In other words, the IA would have suffered greater losses if it had load factors which were sufficient to make the other airlines break even, if not make profits.

As regards future expansion, there will be agreement with the IA's assessment that, as a result of the economic resurgence of the country, the increasing volume of tourist travel and other factors, the growth rate of air traffic will increase much faster than hitherto. Even now, in spite of a load factor of over 80 per cent, not less than 13 per cent of the traffic is turned away on a number of sectors because of heavy congestion. All this underscores the need for considerable augmentation of carrying capacity. Along with this, new stations will have to be opened to provide the faci-

lity of air transport to new areas and a wider section of the public.

Modernisation should go hand in hand with expansion. Improvement of the telecommunications system, introduction of sophisticated reservations systems, mechanisation of baggage handling and a host of other things will be necessary to cope with the growing volume of traffic. The implementation of these plans will require large sums of money. These must come largely from the IA's internal resources. Some loans will also have to be raised from foreign banks to meet its foreign exchange requirements. Its creditworthiness abroad will depend on its ability to make profits or at least break even, which, in turn, will depend on the resources it can raise from within.

But why should the travelling public be made to contribute so much to the resources of the IA through abnormal fare increases? It would have accepted a reasonable increase in fares if this had been warranted by the rise in the prices of items required by the IA, wage increases, improvement of passenger amenities and the like, as, indeed, they have. But proof is not wanting to show that the IA's high operating cost is the result of inefficiency and bad industrial relations also. As for inefficiency, the air traveller in this country knows this to his cost. He has also been made to pay the price for inept and unimaginative handling of labour problems. The lock-outs and work-to-rule tactics of the unions during 1970-71 resulted in a revenue loss of about Rs 4.20 crores and the anticipated profit of Rs 3.44 crores during that year was converted into a loss of Rs 4.65 crores.

The Indian Airlines has justified the fare increase on the ground that the revised fares are still below that of other domestic airlines. This may be so, but what is relevant is to compare the increases in the fares of the IA with those effected by the latter over a period of time. Surely, none of them could have raised their fares by as much as 24 per cent in 18 months as the IA did. Of the passengers carried by the IA, generally 85 per cent are Indians and the rest are foreign tourists. The IA has argued that since 90 per cent of the Indian passengers travel on Government or business account, the fare hike will not affect a large majority of its users. But this will certainly impose a burden on the Government and the companies.

There has been constant clamour by the public for economy in Governmental spending and it is admitted on all hands that one of the areas where there is considerable scope for economy is air travel by officials. Now, thanks to the IA, the contrary will happen. Similarly, the companies will have to make larger provision for air travel by their heads and executives which will certainly tell on their costs. The solution to the IA's problems lies not in raising fares and freight rates indiscriminately, but in setting its own house in order. □

EXPORTS

TDA's first anniversary

NEW DELHI.

THE Trade Development Authority held its first annual general meeting in New Delhi last week, but its effective operational period has been only six months, for it was towards the end of last year that it began work in earnest. But within this short span it has done much to justify the expectation that it will effectively play the role intended for it in the export effort. Until last year a major deficiency in the institutional framework for export promotion was the absence of an agency to provide personalised services to individual exporters at one place. TDA was set up by the Foreign Trade Ministry to pay specific attention to the product rather than the product line, the exporter rather than the exporting community and the particular buyer rather than the export market.

Accordingly, TDA has selected about 100 items which can be developed for export to Western Europe, the UK, the US, Canada and Japan. It has also made a selection of units which have the capacity or the potentialities to produce some of these items as per the high standards required by these countries. An idea of the enormous scope for stepping up the export of these items can be had from the fact that they account for Rs 2,250 crores of the world trade annually. India's exports of these products amount to only Rs 6 crores per year. But if the potential she has can be translated into actual exports through sustained efforts to develop these products and enterprise in marketing them, an annual earning of Rs 50 crores from their export to the advanced countries is a distinct possibility within the next three years or so.

Recognising this, TDA has worked out a package servicing plan to provide all the inputs required for export production and marketing to selected units which form part of its clients. The highlight of the plan is the import of technical samples and critical raw materials for the preparation of counter samples by the selected units. A special allocation of free foreign exchange has been made for this purpose. TDA is also developing its foreign market intelligence service by linking up with reputed sources of intelligence like JETRO, the World Trade Centres Association and the Development Enquiry Service of OECD.

As a result of the contacts which TDA has helped to establish between Indian producers and foreign buyers, firm contracts for the export of alloy iron and steel castings, electronic components, hand tools, stainless steel cutlery and bicycle parts worth about Rs 2 crores have been signed. That these are the precursor to bigger orders is evident from two developments: (1) TDA is at present processing inquiries from buyers in West Europe, the UK and the US for the import from this country of Rs 10 crores worth of automobile ancillaries annually; and (2) It is liaising with two of the leading department stores in the United States for the

Power shortages

MR J. S. Zaveri, President of the Indian Electrical Manufacturers' Association, has urged the setting up of at least one million kw of additional power generating capacity during the next year through installation of a large number of medium and small capacity generating plants such as gas turbine diesel generating sets. He has suggested that the Union Government should make additional funds available for the purchase and installation of these plants at suitable locations. If necessary, the Government should also consider importing generating plants as a temporary measure. Even as this emergency step would partly mitigate the adverse effect of the shortfall in power generation, Mr Zaveri has suggested that the Government should plan and give firm sanctions for projects that would be undertaken in next 20 years, so that lags in implementation leading to slowing down of industrial production are minimised. Referring to the electrical industry as the biggest sufferer due to power shortages, Mr Zaveri has complained that the levies imposed in the Finance Bill 1971 such as import duty on copper, increase in the import duty on CRGO steel sheets and other constructional steels, and on lead and insulating materials are likely to increase the cost of electrical equipment by 10 to 15 per cent.

Export freight rise

MR G. V. Swaika, President of the Eastern India Shippers' Association, has said that the India-UK Conference has gone back on agreements in principle arrived at earlier by raising freight rates by 15 per cent from June 1, 1971. The few concessions the Conference has so far announced are meagre and would benefit a fraction of Indian exports to the UK and the Continent. A majority of the important export items, he says, will come under the purview of the 15 per cent general freight increase and severely affect the exports from eastern India. Mr Swaika feels that the Government should take appropriate steps to safeguard national self-interest in regard to shipping.

Mineral exploitation

Mr Umashankar Agrawal, President of the Federation of Mineral Industries, says that in cases where the Government's financial ability does not permit it to set aside adequate funds for mineral exploitation private parties should be allowed freely to exploit and develop even those minerals reserved for the State under the Industrial Policy Resolution. He also wants adequate security against expropriation so that long-term development may be undertaken and plans framed accordingly. With a view to preventing private monopolies and concentration into a few hands, he says, the State can introduce a sort of healthy competition between the private parties and, while granting leases, adopt the criterion of productivity, efficiency and performance

BUSINESS OPINION

of a party. This, according to him, is necessary not only to ensure exploitation of the large chunks of areas bearing minerals which now lay waste but also to maximise production and create exportable surpluses in minerals.

Copper control order

Mr Nandlal C. Shah, President of the Bombay Metal Exchange Ltd, wants the Government to withdraw the Copper Control Order restricting the use of copper and the newly imposed and existing duties both of which, he says, are likely to hit the industry, large as well as small. He has pleaded that regular arrangements should be made for the import of adequate quantities of non-ferrous metals which are vital for the growth of the non-ferrous metal products-making industries and for their exports. In this context, he has supported the idea of having a buffer stock of non-ferrous metals so that the actual user-industries can get their requirements off the shelf without running the risk of violent price fluctuation.

Wagon building capacity

Mr R. Subramanian, outgoing chairman of the railway wagons and components division of the Indian Engineering Association, feels that there is vast scope for product diversification in the wagon building industry. He has cited freight containers, pallets and LASH barges as items that can be manufactured by the wagon builders. In his opinion, the long-term solution to the industry's problems lies in its freeing itself from the present position of being a "one-product one-customer" industry always looking to orders for wagons from the Railway Board. While exports could be a means of utilising the industry's capacity, he feels that a sound home base is essential. In this connection, he says, his Association's earlier suggestion to the Government for setting up a shipbuilding yard at Haldia would provide the wagon building and structural fabricating industries with a useful workload.

National road board

Mr K. Hariharan, President of the Federation of Indian Automobile Associations, wants the setting up of a national road board to look after the interests of proper development and maintenance of roads and motor transport. Although during the Fourth Plan period, the revenue from road transport is expected to be around Rs 3,795 crores, he has complained that the Government has provided only Rs 829 crores for construction and maintenance of roads. He wants this amount to be raised at least to Rs 1,500 crores in order to enable the country to have a reasonably good system of road communications.

sale of items like readymade garments, transistor radios, sports, light roadster bicycles and infant sleepers, and the prospects are that Rs 12 crores worth of these will be sold annually through them.

TDA is also pioneering a bonded processing and warehousing project to facilitate the export of electronic equipment and components. Land is being acquired near Santa Cruz airport in Bombay for locating the project which when commissioned is expected to bring a foreign exchange earning of Rs 375 crores per year. This apart, TDA has undertaken pre-investment feasibility studies and the preparation of project reports in respect of six products for which export opportunities have opened up but cannot be availed of because of capacity constraints. After the project reports are prepared, entrepreneurs will be selected to establish the necessary capacity for producing these items which include plastic moulds and dies, sports goods, printed circuits and other components for electronics, mini motors for toys and components for sports and racing models of bicycles. Thus the TDA's many-sided activities distinguish it from other export promotion agencies. It has made a good beginning and holds out promise of bigger achievements in the export field in future. (See also *Export Angle*) □

CEMENT

Not by wagon shortage alone

BOMBAY.

THE developing shortage in cement in the northern States such as Punjab, Jammu and Kashmir and Himachal Pradesh as also in the city of Bombay has prompted the Cement Manufacturers' Association to come out with its own view of the matter. The President of the Association, Mr R. D. Shah, has placed a substantial part of the blame for this shortage on a severe shortfall in the availability of railway wagons. Wagon shortage is not particular in the case of cement; it has hit many other industries as well. And we have it on the authority of the Cement Controller that even last year movement of cement had been handicapped by varying degrees of wagon shortage. This year, too, the Controller has been keenly aware of the shortage and has been holding consultations both with the Railways and with the industry in order to mitigate hardships caused to the public because of paucity of cement in the market.

On the other hand, one also finds that

in spite of the blocking of a large number of wagons in the eastern region consequent to the refugee influx from Bangla Desh, not to speak of the wagon requirements for the movement of rabi crop from Punjab, Haryana and Uttar Pradesh, the Railways during the past four months of this year have been able to transport some two lakh tonnes more of cement to the northern region than in the corresponding period of last year. The figures given by Mr R. D. Shah would appear to tally with this claim of the Railways. As against the availability of around 1.3 lakh wagons during the first four months of last year, the cement industry was able to avail itself of 1.9 lakh wagons up to April this year.

Yet, if the industry feels more inhibited than before, the reason for this, according to Mr Shah, is that the cement capacity by now has increased by 11 lakh tonnes to 64 lakh tonnes, and comparable wagon availability has not been forthcoming. Curiously enough, however, even in the last quarter of 1970, by which time most of the additional cement capacity had been commissioned, the wagon availability rose only to 1.6 lakhs. This only goes to weaken the argument of the CMA that the cement shortages are mostly because of the shortfall in the availability of wagons. That the quota of wagons fixed by the Railways for cement movement for Janu-

Idle insurance funds

By Our Insurance Correspondent

IT appears unlikely that the Government will delay the nationalisation of general insurance till after the amendment of the Constitution to regulate the compensation for take-over of property rights. An amendment of the Constitution is a long-drawn process and subject to challenges in a court of law, which may delay it indefinitely. Under the present political situation, it is considered advisable to continue a tempo of apparent activity.

Actually, once the management of companies is taken over, no further benefit can accrue by hastening the process of nationalisation. It is true that every day the private sector has to be paid compensation for the take-over of management till the day of ultimate take-over of the assets and liabilities of all companies. But this temporary compensation could be much less than the possible loss which might accrue ultimately to the Government after the shareholders have been paid off in the case of some of the companies. That a company like the New India Assurance Company will have to be paid about Rs 10 crores is certain; what is not so certain is whether the new organisation will continue to make commensurate profits to justify the investment. It could even make more profits than before because the cost of competitive procurement should go down. But much depends on the morale of the staff at all levels and the dedicated work which professional managers can put in. Brain drain to other professions and countries is not likely unless conditions are made very frustrating.

There is a great virtue in the present maintenance of *status quo* in the industry insofar as it has not produced any insecurity. But apprehensions about the future have made the employees rather restive and it would be very appropriate for the Government to make an announcement that the present terms and conditions of employment of all employees will be fully protected or improved except in the case of non-existent inspectors and organisers or officials with overall benefits exceeding say, Rs 5,000 per month.

The ways of the public sector are undecisive and absence of any decision-making powers at the custodian's level has resulted in a standstill of various sorts. All the insurance companies' funds accrued since nationalisation are lying idle because no decision is yet taken about the investment policy. Even fixed deposits in banks could not be made till recently. The Finance Ministry has named four chief custodians for overall control of all the companies at the four major centres of Bombay, Calcutta, Madras and Delhi. A sub-committee for the overall guidance of the numerous custodians at each centre has also been formed. But no new guidelines or policy decisions have come out of their deliberations among themselves or confabulations with Finance Ministry officials.

An inspired report from New Delhi has appeared in the press about dummy appointments of field officers. Screening them is going to be a difficult and long-drawn process and it would be best not to meet trouble more than halfway at

this stage. There are many better ways of showing desirable movements. There is likely to be a spate of anonymous letters addressed by malicious persons for the character-assassination of senior officials. It would be much more practical to look to future progress on correct lines without any post-mortem.

The negative attitude of the Government has resulted in the non-distribution of dividends to shareholders for 1970. Similarly, the bonus for the staff for last year has fallen between the two stools of the old and new managements. It would be psychologically important to add some grace to the whole show and pay the dividends, grade increments and bonuses on time. There is no reason, for example, why the travelling allowances should not be adjusted to take care of the abnormal increase in the cost of petrol.

Absence of decisions should not mean wrong decisions and all concerned should be taken into confidence by letting the public know what the shape of things is likely to be, even though only a vague picture can be had at present. Even if the public can appear before the Select Committee of Parliament after a proper bill is introduced, there should be ample opportunity for all to think, say how they feel and analyse dispassionately the likely long-term effects of any administrative decisions which are under consideration in the Finance Ministry. Let not the famous competitive spirit of general insurance be marred by anything like the doldrums and demoralisation of nationalised banking with low profitability, more irregularities and fast deteriorating standards of service as its inevitable consequences.

ary-April 1971 was 2.8 lakhs does not really make much sense even last year the availability of wagons was far below the quotas fixed.

Mr R. D. Shah has indeed gone a step further and pinpointed a figure of 6.3 lakh tonnes as the loss in the production of cement due to shortage of wagons both for outward movement of cement and for inward movement of coal, out of a total production loss of about 12.7 lakh tonnes. The capacity of the industry during January-April 1971, as Mr Shah admits, is 58 lakh tonnes. The actual production, however, was of the order of 45.3 lakh tonnes or 78 per cent of the capacity. Obviously it is Mr Shah's contention that this sharp fall in the industry's utilisation of its capacity even from the last year's average figure of 87 per cent is to be ascribed to wagon shortage. And 87 per cent utilisation has not been the best by the industry. However, it has also never worked to 100 per cent capacity to claim a loss of 12.7 lakh tonnes.

It must be said, of course, that whatever be the quantum of shortage in production, the accumulation of stocks with the industry to the tune of 15 lakh tonnes of clinker/cement is cause enough for concern. And one should hope that the meeting called by the Cement Controller early next month, which will be attended by representatives of the industry as well as of the Railway Board will evolve methods by which bottlenecks in the movement of cement are mitigated to the maximum extent possible. In fact, reportedly, the Railways have made certain suggestions for the regrouping of the marketing zones in order that a more rational distribution of wagons would enable speedier despatch of cement particularly to the scarcity areas.

Having said this, however, there is no gainsaying that the industry must give serious thought to the deteriorating situation in regard to utilisation of cement capacity. The industry has always been priding over the fact that it was utilising the capacity to the extent of 95 per cent. In this context, the present under-utilisation of over 22 per cent is clearly not conducive to the growth of the industry, not only in view of the rising demand in the country but all the more because the industry happily has been taking considerable interest in cultivating foreign markets for our cement even at a cost to itself. Wagon shortage is no doubt an impediment. But there have also been reports of considerable loss in production because of break-downs and other factors. □

HP unit a boon to neighbouring States

SIMLA.

THE news that the Union Government has approved the proposal for the setting up of a cement factory in Himachal Pradesh is bound to be received well not only in the State itself but also in the neighbouring States of Punjab and Uttar Pradesh. The cement factory in Surajpur, in Haryana, which is feeding these neighbouring States is facing closure in the next two years due to the exhaustion of the limestone deposits in the nearby areas.

Punjab and Uttar Pradesh can now turn to the new factory for supplies.

The proposed cement factory, based on the locally available high-grade limestone, is being set up at Rajban, near Paonta in the Sirmur district, by the Cement Corporation of India. The estimated cost of the project is Rs 8 crores. The limestone deposits near the planned site of the factory would be sufficient for nearly hundred years. With a production capacity of 600 tonnes of cement a day, the factory will be the biggest project so far sanctioned in the public sector in the State. The daily capacity of the factory is expected to be increased later to 1,200 tonnes.

The new cement unit is likely to go into production towards the end of the current Plan period and is expected to provide employment to over 800 skilled and unskilled persons. Besides, the State exchequer would be benefited to the tune of Rs 4 crores in the form of royalty, excise duty, etc. While the Cement Corporation of India has undertaken a detailed survey

of the limestone deposits and other prerequisites in the area, the State Government has taken up the work of widening the road leading to the site of the proposed cement factory. Meanwhile, the Haryana and Uttar Pradesh governments are constructing two bridges over the Yamuna river to connect the Paonta valley with the two States.

The State Government has also prepared a feasibility report for setting up another cement factory in the Kangra district. Like the prosperous Paonta valley the Kangra district is also said to be very rich in high-grade limestone deposits likely to last for nearly two hundreds years.

The State Government has also signed an agreement with a leading business house for the setting up of a 200-tonne per day capacity newsprint factory in the State at an estimated cost of Rs 30 crores. Because of the rich industrial potential of the State, the Industrial Development Bank of India proposes to undertake an industrial survey later this year. □

A dream today, a reality tomorrow

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

TATA CHEMICALS LIMITED

ANNOUNCEMENT REGARDING THE ISSUE OF EQUITY SHARES

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Persons interested in full details may obtain copies of the Prospectus and Application Forms from the brokers and bankers mentioned below.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON MONDAY, JULY 5, 1971 AND CLOSE AT THE CLOSE OF BANKING HOURS ON SATURDAY, JULY 17, 1971 OR EARLIER AT THE DISCRETION OF THE DIRECTORS, BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON WEDNESDAY, JULY 7, 1971.

CHEMICALS AND FIBRES OF INDIA LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

Registered Office: "CRESCENT HOUSE" 19 WALCHAND HIRACHAND MARG, BALLARD ESTATE, BOMBAY-1.

EXISTING AND PROPOSED ACTIVITIES :

The Company was incorporated on March 29, 1961. Imperial Chemical Industries Limited, U.K. presently holds 60 per cent of the Equity Share Capital of the Company.

The Company manufactures polyester staple fibre which it markets under the trade mark 'Terene'. The fibre is mixed by customers with other natural and man-made fibres in an optimum blend, spun into yarn and ultimately woven, dyed and finished into fabric. The fabrics made from 'Terene' polyester fibre such as suitings, shirtings, saris, dress/kameez materials and furnishings are extremely popular for their excellent performance characteristics such as crease-resistance, pleat retention and high durability owing to their high resistance to abrasion. Such suitings, shirtings, saris and dress materials are also colloquially known as "Wash-N-Wear" garments owing to the dimensional stability of 'Terene' polyester fibre.

The Company manufactures its 'Terene' polyester fibre under a Technical Collaboration Agreement with Imperial Chemical Industries Limited which had developed its own polyester fibre sold throughout the world under its well-known trade mark 'Terylene'. The Government of India has approved the terms of this collaboration. The Agreement is for a period of ten years from the commencement of production on a commercial scale which commenced on April 1, 1965. Under the Agreement ICI provided all technical information and know-how covering design and procurement of equipment, construction, start-up and operation of the Company's plant. Under the Agreement ICI also provides training of personnel in the operation of the plant and makes available continuing development and research information as well as licences under all relevant patents in the manufacturing and user fields. Assistance is also being given in the development of end-uses of the product. For the continuing know-how made available, the Company pays ICI a royalty.

The Company's initial licenced capacity was for 2,041 tonnes of polyester fibre per annum. By licence No. L/23/5/8/07, Ch.I dated May 27, 1967 the Government of India approved the increase in the Company's capacity to 4,500 tonnes per annum and the increased capacity became fully operational in 1968. Pursuant to the application in this behalf, the Government of India issued a Letter of Intent dated November 29, 1968 for further substantial expansion of the existing plant from 4,500 tonnes per annum to 6,100 tonnes per annum of polyester fibre. One of the conditions of the Letter of Intent was that the Company would undertake an increase in the association of Indian capital by reduction in the foreign equity. The present issue is being made to meet this condition. The Government of India has since converted the Letter of Intent

into a Licence bearing No. L/23/5/18/71/Ch.I/SE dated February 3, 1971.

LOCATION OF THE COMPANY'S PLANT :

The Company's plant is situated in the Trans-Thana Creek Industrial Area of Maharashtra.

EXPORT ANGLE

By Stevedore

Generalised preference

THE developing countries look forward to the Generalised Scheme of Preference, which is coming into force in the EEC countries from July 1, to give a boost to their exports. The scheme would allow duty-free entry or substantial reduction in duty for a number of semi-manufactured and manufactured commodities generating from developing countries. To what extent will this scheme help India? Detailed studies are still to be made. But the Trade Development Authority has just come out with an assessment relating to the goods whose exports it is seeking to promote.

The studies have been made both at macro and micro levels. At the micro level 120 items were considered. Accordingly an operational plan has been drawn and targets have been fixed for additional exports to the EEC of the commodities which were likely to benefit the most. For the year ending March 31, 1972 the target is Rs 525 crores, but considering that the effects of tariff reductions are unlikely to be of a significant magnitude before September 1971 the target recommended is Rs 225 crores. For the year ending March 31, 1973 the target fixed is Rs 675 crores and for the subsequent year Rs 1675 crores.

The TDA, however, recognises that to exploit the opportunity certain immediate measures will have to be taken. On the broad plane the TDA concludes (i) manufacturer-exporters would have to be informed about the quantum of tariff reductions and the consequent increase in the potential EEC market size, (ii) programmes for product development in the various product groups must be identified immediately, (iii) the Government should ensure that all inputs to the manufacturing industry are provided at international prices, (iv) the Government should also ensure ocean freight reduction for bulk items and (v) steps must be taken to identify competent units for expansion or development programmes to set up new units if need be.

The TDA has not stopped there. It has also studied specific problems relating to particular items. The conclusions are as follows:

(i) In the case of canned fruits Government must take measures to reduce the cost of cans. Possibly, the Government could negotiate with Metal Box and Poysha for a system of concessions to the exporting units in the price of cans. While continuing with the export development efforts of mango, the exports of litchis should also be taken up for export development measures.

(ii) In the case of iron castings, shipping poses a major constraint. This being an unpreferred cargo, it is difficult to get adequate shipping space for it. The Government should start negotiations with shipping conference lines to work out an arrangement whereby shipping space for iron castings is adequately made available in time.

(iii) For ensuring an increase in exports of steel castings the supply of heavy melting scrap to electric furnaces should be maintained at reasonable prices. Also there should be a continued ban on the export of scrap.

(iv) For forgings the Government should arrange for availability of steel at international prices.

(v) For fasteners the Government should arrange for priority supply of steel wire rods and merchant sections of steel.

(vi) In the case of radio broadcast receivers the Government should allow the import of all the circuitries involved as well as the import of designs and models for the purposes of product adaptation. Also, efforts to increase component supply must be made.

(vii) To reach the export target for cutlery the Government should consider a long-term expansion programme of capacity as well as sanctioning of export-oriented industries where at least 60 per cent of the production is exported.

(viii) In the case of sewing machines the Government should aim at a long-term capacity expansion.

(ix) For ensuring an increase in exports of the automotive ancillary products, the expansion of capacity for automotive castings, engine valves, piston rings and fuel injection must be seriously considered. Also, proper steps should be taken to enable the Indian manufacturers of automotive ancillary products to study the electrical system of EEC's auto manufacturers.

(x) Freight incidence is a major constraint to the exports of bicycles and parts of bicycles. Efforts at negotiating the freight with the shipping conference lines must be made. Also, small import problems like use of multi-speed hubs and coaster brakes should be solved either by allowing for imports of these inputs or setting up a production base internally within a reasonable time period.

(xi) The exports of toys can be substantially increased provided steps are taken to create capacity for the production of mini motors.

(xii) The sports goods sector will require a long-term creation of capacity to keep up with its rate of increase of exports.

What India can sell

THE Directorate of Commercial Publicity in the Ministry of Foreign Trade has issued a further list of global tenders. The purchasing authorities, the items required and the closing dates of these tenders are as follows:

Bahrain

Government of Bahrain Bihrain, Turn-key projects, September 4, 1971

Burma

The Chief Engineer, State Timber Board, Rangoon, Marine diesel engines, July 10, 1971

Myanma Bawdwin Corporation, Rangoon: Sub-cubic circuit breakers, microwater strainer, July 15, 1971.

Myanma Oil Corporation, Rangoon, Pipe wrenches, July 7, 1971.

Ceylon

Ceylon Plywood Corporation, Colombo, Moisture meters, July 31, 1971.

Indonesia

Government of the Republic of Indonesia, Jakarta, Pre-fabricated bridges reinforcing bars, culverts, explosives etc, July 1, 1971

Libya

Central Committee of Tender, Tripoli, Telegraph and automatic landing apparatus, July 5, 1971.

Nigeria

Corporations Standing Tenders Board, Lagos, Underground cables, July 8, 1971.

Singapore

The Public Utilities Board, Singapore, Construction of Jalan Eunes Water Tower; July 5, 1971

Syria

The General Electricity Establishment of Syrian Arab Republic, Damascus; Induction

bobbins, August 28, 1971, security apparatus etc, August 12, 1971

The General Petroleum Co, Damascus, Seismological survey equipment, August 7, 1971, gate valves, August 14, 1971, chemicals, August 2, 1971, sodium carbonate, August 21, 1971.

Ministry of Defence, Damascus; Electric generating sets, July 5, 1971, generating sets on trailer, July 7, 1971; bolts and nuts, July 6, 1971, equipment for acetylene and generating sets, July 17, 1971, wax glue, graphite and grinding stone, July 20, 1971.

Bradma Metallic Industries Corporation, Damascus, Plastic sealing gum for refrigerators, July 20, 1971, push buttons for refrigerators, July 10, 1971, diamond dies, July 8 1971.

General Organisation for Syrian Railways, Aleppo, Clinches, bolts and nuts; August 31, 1971; spare parts for locomotives; August 1, 1971.

Damascus Municipality, Damascus; Steel poles and lighting equipment; July 21, 1971.

Turkey

Istanbul Belediye Baskanlige, Istanbul, Concrete pipe plant; July 19, 1971.

UAR

Misr Beida Dyers, Alexandria; Circular Screen Printing; August 4, 1971.

Misr/Shebin El Kom Spg. & Wvg., Shebin El kom; Single row ball bearing; July 1, 1971; selenium rectifier; July 10, 1971.

Exporters may obtain the tender documents from the purchasing authorities of the respective countries. Further details about these overseas contracts can be had from the *Indian Export Service Bulletin* dated June 19, 1971, issued by the Directorate of Commercial Publicity in the Ministry of Foreign Trade, Udyog Bhavan, New Delhi.

Indian jute industry

—A SURVEY

Problems and prospects

By Commerce Research Bureau

RECENT years have witnessed a steady but by no means slow decline in the exports of jute goods from India. In terms of quantity, the exports of jute goods declined from 922 thousand tonnes in the 1964-65 jute season (July to June) to 467 thousand tonnes in the 1969-70 jute season. This is also reflected in the export earnings from jute goods which steeply decreased from Rs 263.5 crores to Rs 206 crores in 1969-70. During the first eight months of 1970-71 the exports of jute goods fetched no more than Rs 120 crores. This indicates that in all probability the export earnings from jute goods during 1970-71 will be even lower than those in 1969-70. The declining trend in exports was accompanied by declining trend in overall production.

Jute goods production in India recorded a gradual rise during the fifties and this rising trend continued till 1964-65. The production of jute goods which stood at 9.60 lakh tonnes in 1951-52 (July 1951-June 1952) reached the all-time high at 13.20 lakh tonnes in 1964-65. During the same period the production of hessian increased from 3.15 lakh tonnes to 5.27 lakh tonnes whereas the sacking output recorded a decline from 6.16 lakh tonnes to 5.74 lakh tonnes. The production of other jute goods which is primarily carpet backing registered a remarkable increase from 29,000 tonnes in 1951-52 to 2.19 lakh tonnes in 1964-65.

However, this rising trend was completely reversed after 1964-65 and the jute goods production continued to decline till 1968-69. Thus, between 1964-65 and 1968-69 the production of hessian contracted by about 40 per cent and that of sacking by about 10 per cent. However, the produc-

tion of other jute goods including that of carpet backing recorded a rise of about 29 per cent over the same period.

Because of the easy availability of raw jute, the production of jute goods in 1969-70 showed an improvement over 1968-69. But for the labour strike in December 1970 and frequent power cuts in jute mills, the production of jute goods in 1970-71 would have recorded further improvement over 1969-70.

In India, the availability of raw jute determines the quantity of jute goods production. Therefore it would be interesting to study the trends in the production of raw jute over the last few years.

As can be seen from Table 1, during the first decade, 1950-51 to 1960-61, the aggregate production of jute and mesta in the country increased at the average rate of 5.9 per cent per annum while the

Table 1: Supply and demand position of jute and mesta
(In '000 bales of 180 kg each)

Year (July-June)	Production	Consumption (a)
1950-51	3,800	3,681
1955-56	5,314	5,810
1960-61	5,553	5,851
1965-66	5,785	7,551
1966-67	6,072	7,400
1967-68	7,563	7,326
1968-69	8,327	6,850
1969-70	8,358	6,850
1970-71 (b)	6,500	5,500
1971-72 (b)	7,200	7,200

NOTE: (a) Includes other consumption
(b) Trade estimates

aggregate consumption increased by 1.3 per cent per annum. During the second decade, 1960-61 to 1970-71, the rate of growth of output of jute slowed down to 1.8 per cent and the aggregate consumption increased only by 0.7 per cent per annum. It thus appears that slow-down in the growth of jute output in the country has affected the production trends in jute industry unfavourably.

Apart from the question of the supply position of the raw jute during the recent years both the production and export have

been affected by the steadily deteriorating labour situation. As is obvious from the figures in Table 2 the number of strikes in the jute industry during recent years has been disconcertingly high.

Till 1964-65, jute industry in India enjoyed a unique pre-eminent position in the world supplies of jute goods. Thereafter, the Indian jute textiles industry rapidly lost its relative importance on many fronts. Of late, India's share in world production declined to 30 per cent from 55 per cent in 1955. Similarly, the

proportion of Indian jute goods exports slipped down to 46 per cent from 88 per cent in 1955.

From Table 3 it can be seen that India lost jute goods exports market mainly to Pakistan.

India's share of sackings had sharply gone down to 23 per cent in 1968-70 from 63 per cent in 1964-65. Similarly, share in respect of hessians declined from about 88 per cent in 1964-65 to 57 per cent in 1968-70. However, in respect of carpet backing, India was able to maintain its posi-

THE STORY OF JUTE

THE first ever jute factory to be established anywhere in the world was the one at Dundee in Scotland in 1838. Prior to this, jute manufacture, a virtual monopoly of India, was a cottage industry. Dundee used Indian raw jute, but it was around 1854, during the Crimean War, that the demand for Indian jute spurted suddenly when Russian supplies of raw flax and hemp ceased. Coupled with the high price offered, this prompted extension and improvement of jute cultivation, and then in 1855 India's first jute factory was set up at Serampore in Bengal. Several others followed, and before the turn of the century Indian jute goods began to compete with Dundee.

On the eve of the first world war, with 73 factories, Indian output surpassed that of Dundee. Indeed it was the ever-increasing demand for jute goods due to the expanding volume of world trade in the last quarter of the 19th century that had prompted the setting up of a number of large-sized factories. It is thus that the average size of jute mills in India is larger than that of mills in the UK where no jute factory has more than 1,000 looms. The loomage capacity of a vast number of Indian mills ranges from 1,400 to 5,000, though mills outside Bengal have less than 500 looms each.

After the massive increase in demand for Indian jute goods such as sand bags, gunny bags and canvas during the war years, which these large-sized units, with the benefit of local availability of raw material, could very well cope up with, followed the post-war dampening in demand, which reached its low after the Great Depression of 1929. The industry was badly hit as much because of this tapering off of demand as on account of over-production.

Over-production, in fact, was a malady which had raised its head even in the last few years of the 19th century, and one of the main objects for which the Indian Jute Mills Association (IJMA) came into being was the regulation of production by limiting the hours of work in the factories. Thus from 1932 through the inter-war period restrictions on the hours of work had to be imposed twice, first by the IJMA itself and then in 1938, after a year of relaxation which led to stock accumulation and unhealthy competition from mills outside the IJMA, by the Government which prohibited through an ordinance work beyond 45 hours a week. All the mills had to join the IJMA and 20 per

cent of the looms had to be sealed even as jute cultivation was restricted.

Came the second world war, and the demand boost along with higher prices. The Government encouraged the mills to work 60 hours a week. But the boom was short-lived; following Pearl Harbour and especially when India's jute belt almost became a danger zone, an American technical mission recommended closure of certain types of mills, but the industry opted for restricted production as before.

The fluctuations in the fortunes of the Indian jute industry continued following Independence and the Partition, when nearly 75 per cent of India's jute-growing area went to East Bengal, in Pakistan, even as most of the mills remained on the Indian territory. This, of course, gave a stimulus to efforts towards increased jute production through both extensive and intensive cultivation. Acute paucity meant spiralling prices and an incentive to larger productive effort. But, as is the tendency in most agriculture-based industries, jute since 1952-53, when the supply position started becoming comfortable, has been the victim of the vicious circle, periodically aggravated by the vagaries of the monsoon, of prices chasing the goods

Pakistan which has built considerable jute manufacturing capacity over the years and has had the advantage, being a late-comer, of installing more productive modern machines as against India's old factories crying for modernisation. Indian jute goods also have to contend with synthetics such as polypropylene which have already shown promise of being an effective substitute to jute.

Continuous improvement in the quality of the fibre and product diversification are the two major means by which the jute industry can hope to sustain its competitiveness both against other jute-producing countries and against the avalanche of polymers. The Fourth Plan development programme for jute which seeks to increase jute production through intensive cultivation over large areas, extension of double-cropping in irrigated areas, introduction of high-yielding strains, and evolution of early maturing varieties and better seeds, also proposes better retting facilities to achieve better quality fibre. With a financial outlay of around Rs 7 crores the Fourth Plan hopes to achieve a production target of 74.2 lakh bales of jute and 17 lakh bales of mesta. The Government has recently set up a Jute

Total loom-strength as on January 1, 1968

	Hessian	Sacking	Broad looms	Other looms	Total looms
Association Mills:					
In West Bengal ..	27,028	11,859	3,089	2,107	44,259
Outside West Bengal ..	364	850	Nil	10	1,224
Total (IJMA) ..	27,392	12,709	3,089	2,117	45,483
Mills outside IJMA:					
In West Bengal ..	937	492	Nil	462	1,391
Outside West Bengal ..	1,312	1,253	24	Nil	1,589
Total (outside IJMA) ..	1,249	1,745	24	642	3,480
Grand Total ..	28,641	14,454	3,113	2,579	48,963

followed by goods chasing the prices. With production falling short of demand, the country has had to import some quantities of raw jute to feed the factories.

This situation is hardly conducive to the health of an industry which accounts for Rs 87 crores by way of capital employed, provides employment in its 90 mills to some 2.5 lakh people and exports more than 75 per cent of its production. It has constantly to guard its competitiveness in the world markets. The most powerful competitor is

Development Corporation charged with the task of improving the quality and productivity of jute as also of the marketing system.

If on the success of this programme would depend to a large extent the jute industry's capacity to sustain its competitiveness in the immediate future, the industry's own efforts to augment its export performance through diversification of production will largely determine its ability to raise at least a part of the resources needed to modernise its plants and face the future with confidence.

tion. Thus, between 1964-65 and 1969-70 India's share of jute goods significantly came down from 80 per cent to 53 per cent.

If the export data for the period April to September 1970 is any guide, the share of our jute goods is still declining and continues to cause concern. The share of sackings has gone down to 19 per cent, that of Hessians and carpet backing to 49 per cent and 71 per cent respectively. In short, India lost its sacking market a few years back. The Hessian market has already been reduced to 50 per cent. The same fate is likely to await the carpet backing.

On the other hand Pakistan expanded her broadloom capacity very rapidly.

Table 2: Number of strikes and man-hours lost in the jute industry

Year	Number of strikes/lockouts	Man-hours lost (thousands)
1959	124	3,273
1960	58	6,400
1961	87	6,428
1962	11	4,640
1963	15	2,104
1964	86	5,870
1965	30	5,800
1966	145	11,595
1967	139	7,650
1968	101	7,307
1969	122	11,017

Further, the profit margin on carpet backing in respect of Pakistan Jute Industry is very high compared to that enjoyed by the Indian Industry. On the top of

Table 3: Exports from India and Pakistan: 1964-65 and 1969-70

	Sackings		Hessians		Carpet backing	
	1964-65	1969-70	1964-65	1969-70	1964-65	1969-70
(a) India	258.7	55.8	479.7	262.7	109.2	204.8
(b) Pakistan	153.2	242.3	66.4	202.6	6.6	32.7
(c) Total (a + b)	411.9	298.1	546.1	465.3	115.8	237.5
(d) India's share in (c) (%) ..	62.8	23.0	87.8	56.5	94.3	86.2

this, the manufacturer from Pakistan, at present, making a profit of 35 per cent by virtue of the export bonus voucher system and the low cost of raw jute. This system has given a tremendous advantage to the manufacturer from Pakistan over his counterpart from India. Presently, the profit margin in Indian jute textiles is barely 5-7 per cent depending upon the prices of raw jute. According to industry circles, even if the jute industry forgoes its profit margin of 5-7 per cent and the Government on their part forgoes the export revenue of Rs 300 per tonne of jute goods, the Indian jute goods would be cheaper by only about 10-15 per cent. However, even under these circumstances, Pakistan jute goods would still remain cheaper by about 20 per cent as long as the export bonus voucher system continues in Pakistan.

Of late, because of the present chaos in jute, exports from Pakistan have fallen and continue to fall. Indian jute industry should regard this situation as a blessing in disguise and gear up itself to fill up the void in the world market.

Fortunately for India, the overall availability of raw jute and mesta during 1971-72 would be around 86 lakh bales. Therefore, it should be possible to raise the average monthly production of jute goods to 1 lakh tonne from the present level of 90,000 tonnes. However, increased production would not be sufficient to boost up the Indian jute exports unless our jute goods are competitive enough to attract buyers who have been purchasing from Pakistan. This problem will assume added significance in case Pakistan devalues her rupee in the near future. In that event, the Pakistani jute goods would be cheaper than what they are at present. Therefore, maximum utilisation of the present installed capacity by the jute industry, good labour management relations, availability of raw jute at lower prices are some of the major problems which need immediate attention.

During recent years the synthetic materials mainly based on polypropylene have emerged as major competitors of jute

QUALITY JUTE GOODS

Carpet backing, decorative fabrics, linoleum hessian, polythene and paper-lined jute bags, are some of the quality jute products exported in recent years. The Mills, with over a century in the jute manufacturing industry backed by up-to-date machinery, efficient quality control methods and modern laboratories, manufacture and convert a wide range of quality goods for both domestic and international markets.

goods in the affluent western countries. While in the fifties the main threat to jute goods was from the increased use of bulk handling techniques in the advanced countries, during the sixties the rapid development of petrochemical industry has resulted in making available synthetic materials at a price cheap enough to make them compete effectively with the jute goods. Polypropylene sacks have come in general use and even in respect of carpet backing the synthetic materials are now favoured. As a result of these factors, the world demand for jute goods, during the recent years, had been more or less stagnant if not declining. This is evident from the fact that the combined exports of jute textiles from India and Pakistan were about 9 per cent lower in 1969-70 than in 1964-65.

Any export promotion scheme must take this basic fact into account. Apart from the question of maintaining or enlarging the share of India in the world market, the basic problem to be faced by the jute industry, whether in India or elsewhere, is to check the inroads of synthetics. The remedy obviously lies in enhancing the competitiveness of the jute goods in terms of price and quality. Quality jute goods must be offered to foreign buyers at attractive prices. Apart from the question of the extent of support from public exchequer by way of reduction of export duties or grant of export subsidies, the industry should turn its attention to keeping the cost rise in check through modernisation.

While the modernisation programme in the spinning sector has been completed, much remains to be done in respect of modernisation of the weaving sector. Whether this is due to paucity of funds as contended by the spokesmen of the industry, or due to lack of interest as contended by the Government circles is a moot point. However, the very survival of the jute industry in export market depends upon to its ability and will to control the rise in cost.

However, it should not be construed to mean that the industry by its own efforts can overcome all the quite heavy odds which are ranged against it. The stabilisation of wage bill and prices of raw jute can come only through the co-operation of the Government. It should be noted that the raw materials and wages taken together constitute 85 per cent of the total cost of production.

Cost-stabilisation and cost-reduction need to be supplemented by a policy of diversification aiming at a higher output of sophisticated items. Granting that it may not be possible for the Indian jute industry to compete in the international market in respect of such unsophisticated items like sackings either because the synthetic substitutes are cheaper in terms of price and quality, the superior technological base of the Indian jute industry can be advantageously utilised to produce sophisticated products such as decorative goods for which unfulfilled demand may exist. The recent experience with the carpet backing shows clearly that the jute industry must keep way ahead of the main competitor, namely, Pakistan by developing new products which employ complex production methods, not easy to copy. Only by maintaining this type of technological leadership can we regain our leading position in the world markets.

Statement of the Chairman, Mr. J. V. Patel

FOLLOWING is the statement of the Chairman, Mr J. V. Patel to the Members on the occasion of the 7th Annual General Meeting of the Company held in Bombay on June 17, 1971:

It gives me pleasure to welcome you all to this 7th Annual General Meeting of our Company. The Directors' Report and the audited Statement of Accounts for the year 1970 have been in your hands for sometime and with your permission I shall take them as read. We are meeting this time soon after the budget proposals have been presented to the Parliament and it would be proper if we could briefly acquaint you with the likely effect of the budget proposals on our company. Those aspects of the budget proposals which affect us directly concern the proposal to increase the rate of surtax on company profits from 25 per cent to 30 per cent in case of chargeable profits in excess of 15 per cent of the capital. We would also be affected by the reduction proposed in the special tax exemption enjoyed by priority industries from 8 per cent to 5 per cent of the profits, though our industry continues to be on the list of priority industries. This would mean that we would have to pay considerably higher taxes from the next year, assuming of course that the company continues to perform at the current level. These proposals, plus the withdrawal of development rebate after 31st March 1974 would undoubtedly have a somewhat discouraging effect on the industry in general. If the aim of the budget is to accelerate industrial growth it is to be seen if these proposals would contribute to that cause.

The working of the company during the year 1970 was reasonably satisfactory, the company continuing its growth at a fairly rapid rate. Its sales increased by about 50 per cent. The company continued to widen its product base, and in addition to the standard range of shot blasting equipment it also made several special purpose machines. These included a shot blasting machine to clean steel bars for the Mysore Iron and Steel Co Ltd equipped with 4 Wheelabrator wheels. The company also made shot peening machines for use in the manufacture of springs. The quality of our equipment was maintained at a high level and we are glad to report general customers satisfaction with our equipment.

The financial position of the company continued to be satisfactory. A sum of Rs 6,49,480 was added to the reserves, the total reserves now amount to Rs 19,03,240 as against our equity capital of Rs 14,58,470. This further strengthening of the company's financial position would no doubt be found gratifying by you all. The Directors have after due consideration decided to recommend a dividend of 15 per cent. A part of this dividend, namely 17.66 per cent, is tax free. Shareholders will recall that last year the company paid a 12 per cent dividend in addition to a 2:1 bonus issue.

During the year the company took over full sales responsibility for marketing

its products all over the country. Part of the territory was earlier looked after by selling agents. The company was able to do this by participating in the Central Sales Association established by New Standard Engineering Co Ltd, and Companies of our Group. As a result of this arrangement, our Company now has at its disposal the full infrastructure of the all-India marketing facilities that are being established, including branches and representatives all over the country. This should enable us to reach our customers promptly and render effective after sales service. Very recently we have begun to stock spare parts in our branches as a further measure to give better service to our

customers. As you know, spare parts are a very vital item for the shot blasting equipment.

With a reasonably good order book, the outlook for the current year appears to be satisfactory.

Before I conclude I would like to place on record our sincere thanks for the understanding and assistance we have received from our partners, Wheelabrator Corporation, USA and Tilghman Wheelabrator Ltd, UK. On behalf of the other Directors and on my behalf, I would like to thank the staff and workers of the company for their hardwork and devotion to duty. I now propose that the audited statement of accounts and Directors' Report be adopted and passed.

Note: This does not purport to be the record of the proceedings of the Seventh Annual General Meeting of the Company.

Alembic Chemical Works Company Limited

BARODA

THE following is the speech of Shri R. B. Amin, Chairman, Board of Directors, at the 64th Annual General Meeting, 17th June 1971:

LADIES AND GENTLEMEN,

I have great pleasure in welcoming you to the 64th Annual General Meeting of the Company.

The Accounts for the year ended 31st December, 1970 and Directors' Report have been circulated to you and with your permission, I shall take them as read. You will observe from these that your Company continued to maintain the rate of growth in turnover.

While maintaining its pace of growth, your Company has always kept in view the need for making available new and better drugs and to make them available where needed through a wide and efficient network for distribution. In this direction, the commencement, during the year, of the manufacture of two antibiotics viz. Streptomycin and Erythromycin are worth mentioning. The next one would be Kanamycin. In the distribution of goods we have reached out to the rural centres to a larger extent than was hitherto possible. In spite of the frequent and persistent uncertainties in obtaining raw materials, the Company, I am glad to say, has been able to satisfy, by and large, the demand for quality goods. In this task, while there arose a necessity to maintain larger stocks of material, the facilities for credit and finance became more and more difficult to arrange for. The nationalisation of the major commercial banks and the subsequent directives regarding the grant of facilities to larger industrial units like yours are affecting the pattern of corporate financing. The transition in this, as in all others, has been trying. The paucity of finance is accompanied and aggravated by higher cost of borrowings.

The overall economic situation in our country has over the past few years improved and stabilised. Agricultural production has made good progress. In the industrial sphere, a number of linkage products and services have been developed, so that the major industries can expand and diversify production without suffering setbacks and delays as they used to, earlier. The general perspective, therefore, is such that the economy is poised for rapid, smooth and sustained growth. It, however, has not been able to 'take off' because some prerequisites in terms of government policy and approach are not satisfied; and the momentum built up so far is likely to be spent and dissipated. If this happens, we would have an induced recession, thanks to the lack of imaginative and positive policies on the part of government rather than to the constraints and limitations of our economy itself.

The proposals of the budget presented by the Finance Minister are not designed to lift us out of stagnation.

Excise as a form of taxation has been a very popular instrument for raising revenue with governments. Because of the easiness with which it can be raised there is a tendency to bring more commodities under it or to enhance the rates on existing articles or to take resort to both. This is done with a view to pull in the revenue without any serious consideration as to its other wider implications. The high level of these rates makes the use of these articles prohibitive. Also in cases like the excise on capital goods, the means of production themselves are subjected to a crippling levy. Whatever may be the objectives of an excise levy, it surely was never meant to be a punitive measure to prohibit consumption of certain categories of articles, nor should it, by its very nature, be an impediment to higher production because excise thrives on higher production. Instances of such ill-considered excise levies are many. The heavy excise of over 50 per cent on refrigeration units used in industry is one instance. The high rate of 66 per cent on air-conditioners in a country of climatic extremes is prohibitive and is a levy on efficiency. The rate of 53 per cent for industrial refrigeration units cuts at the roots of industrial production and employment. Further, what was once regarded as a luxury soon becomes a common man's necessity. Surely betterment of life is what we all strive for. However, when industries try to make this possible and bring some of the good things of life within the reach of the people, the tax gatherer promptly steps in and pulls the things back out of their reach. Such exercises in frustration have become hardy annuals in our budgets.

Any excise levy which increases costs and curtails production leads to an aggravation of the inflationary situation already threatening our economy. I submit, therefore, that there must be a ceiling on the rate of excise duty say, at 20 per cent. Industrial equipment should be completely freed from excise and be relieved from this additional load, particularly when high costs are pricing out so many of our potential exports in international markets.

Much has been said recently about the inconvenience caused to industry by the canalisation of imports. What I would like to point out, however, is the danger of indiscreet imports being made. And indiscriminate imports would be against the interest of the domestic production and indigenous development of materials, and

would dampen the tempo of self-reliance and import substitution which we have sought to build up over the years. We already have a paradoxical spectacle of the imports of penicillin being made while indigenous manufacturers like us are asked to export it. An added curious aspect is that your Company is not even allowed to expand its capacities.

Price control in a specific sector of the national industrial nexus is *prima facie* unfair and is also difficult to manage. It is unmanageable because the official machinery, whose acquaintance with the specific and general situation of an industry is already inadequate is burdened with a mandate which may be characterised by political prejudice, as it was in the case of the Drug Prices Control Order. It is unfair because the scheme of control is arbitrarily worked out and operated in such way that the prices of end products are fixed while the costs of every other input are allowed to rise unchecked. Ironically enough, this was imposed on perhaps the only industry in India wherein the industry kept its own prices in check while the prices of every other industrial product were going up. The present price control order, however, is a fact of life and the industry is somehow adjusting itself to its peculiarities and hardships. One would hope and strongly urge that in the light of this experience, Government does not indulge in any further exercises and experiments in this direction. Experience shows that price control can be only a temporary measure and a palliative to be utilised only in special conditions. In the long run, selling prices will depend on costs. Costs can be reduced only if production is allowed to grow. There must, therefore, be lesser constraints on production and there should be no procedural delays in sanctioning new or increased capacities. The long delays in sanctioning the expansion programme for increased capacities in our antibiotics and the antitussive are glaring examples in our case. We understand that similar is the experience of most other manufacturers. If there are no hurdles and handicaps to increased production, we have greater competition and a basic drive to greater efficiency and cost-consciousness. And better results will be achieved thus than through any system of rigid and detailed price control. One can only hope that an appreciation of this plain truth will be more widespread and will influence all governmental action hereafter.

Before I conclude, you would like me to express our appreciation of the hard work willingly put in by all the workers and members of the staff both at Baroda and at the various centres for distribution situated all over the country. I thank my colleagues on the Board for their guidance throughout the year.

I now commend the Annual Accounts and Directors' Report for your consideration.

This does not purport to be minutes of the meeting.

Tribeni Tissues Limited

STATEMENT of the Chairman, Mr A. K. Sen at the Twenty-fifth Annual General Meeting of the Shareholders of Tribeni Tissues Limited held at its Registered Office at Calcutta on the 18th June, 1971:

LADIES AND GENTLEMEN,

I extend a hearty welcome to you all who have found time to attend this Twenty-fifth Annual General Meeting of your Company. It will be of interest to you to know that this meeting takes place in the Silver Jubilee year of your Company which was formed in the year 1946. An event like this constitutes a milestone in the history of an organisation. As we look back we see the long distance we have covered and as we look forward, the future beckons us with promise of further progress.

To review developments over the last year, a Leftist United Front Government which assumed power in West Bengal after the mid-term elections in February 1969, vacated office with the resignation of the Chief Minister in March 1970; this was followed by declaration of President's Rule over the State and dissolution of the Assembly. However, unsettled conditions still continued and economic growth and progress of industry in the State were adversely affected by the deteriorating law and order situation and labour unrest. Let us hope that with restoration of the Parliamentary form of government in the State, as a result of mid-term elections held in March 1971, all political parties will endeavour to bring about a climate of stability and orderliness so that West Bengal may also participate in and derive benefit from the economic and industrial revival in the country, of which there are now unmistakable signs.

The decisive victory which the party led by the Prime Minister won in mid-term election to the Lok Sabha held in March 1971 should facilitate implementation of the Government's programme for urgent economic development and social reform. This should also lead to increasingly favourable conditions for greater investments so that there may be accelerated growth in industrial activities and employment. However, I should mention that our expectations in this regard have suffered some set-back from the recently announced budget proposals for 1971-72; later in this statement I shall deal with certain main features which are likely to affect your Company.

Just when industry and commerce in the country as a whole, and West Bengal in particular, were beginning to look forward to a period of stability after the recent elections, the events in Bangladesh across the border have cast their shadows over the entire country. Millions of evacuees are pouring into the country. West Bengal and some of the neighbouring States are confronted, as a result, with an enormous task of providing food and shelter to these terror-stricken people. This has added a new dimension to our problems and our economy and society are under great strain.

It is against this background that the performance of your Company during the year 1970 and its future outlook should be considered.

Sales

In 1970 the benefit of the third paper making machine installed at Tribeni Mill towards the end of 1969 began to be felt and sales for the year, at Rs 5.44 crores, were 26.15 per cent higher than in 1969. Demand for the Company's products continued at a very high level but unfortunately the full potential of the additional machinery could not be achieved during the year. In my statement last year I mentioned that unfavourable labour conditions had resulted in a complete shut-down of the newly installed machine until March 1970 and that production on the two older machines had also been affected. While, initially, production improved quite steadily after the settlement with the Union in March, further progress was impeded by State-wide hartals and the go-slow tactics adopted by certain sections of workers. At the end of the year output was also restricted by an unfortunate breakdown of the main drive motor of the third machine, but in this case the resultant loss was met by a claim for about Rs 6 lakhs under a loss of profits insurance policy.

I am pleased to say that 1970 was another good year for exports, and, in spite of shipping difficulties during the year arising from labour problems and strikes at Calcutta docks, export sales, at Rs 95.48 lakhs, showed a substantial improvement over the 1969 figures, rising by Rs 12.40 lakhs.

Profit, Taxation and Dividend

The profit before taxation for the year amounted to Rs 1,15,16,193 against Rs 1,07,73,940 for the previous year. Although, as already mentioned, sales were higher in 1970, the increase was not sufficient to make any significant contribution to the profits of the Company because of a number of interruptions in production.

Provision for taxation for the year 1970 amounted to Rs 50,15,000 compared to Rs 14,20,000 for the year 1969. The lower tax liability in 1969 was, as you will recall, due to a substantial claim for development rebate because of the installation of the third machine.

Transfer to Development Rebate Reserve during the year under review was Rs 3,01,257 (previous year Rs 47,28,842) and transfer from Development Rebate Reserve amounted to Rs 1,58,222 (previous year Rs 5,30,224). After adding a small surplus brought forward from the previous year, the profit available for appropriations amounted to Rs 63,58,695 against Rs 79,97,291 in the previous year. During the year 1970 the Company paid an interim dividend of 7 per cent which absorbs a sum of Rs 26,68,148. Of the balance a sum of Rs 947 has been transferred to Capital Reserve and Rs 36,89,600 to General Reserve.

On 27th October 1970 the first and final call of Rs 7 per share was made on

11,39,120 equity shares issued to the public at the end of 1969. Your Directors, after a careful consideration of the Company's present and future resources, decided to recommend the payment, out of General Reserve, of a final dividend of 8 per cent subject to tax, on the paid-up value of 43,81,200 equity shares, making a total of 15 per cent for the year. If this recommendation is accepted, the final dividend will absorb a maximum sum of Rs 35,05,000.

You may have noted that this year we have changed over to the vertical form of Balance Sheet which I hope you will find more useful and meaningful.

I would also take this opportunity to mention that following the change in the accounting year of our parent Company in the UK we have decided that in future our own accounting period will run from October to September and our next accounts will be made up for a nine-month period, from January to September 1971.

Research and Development

Since the inception of the Tribeni Mill we have laid considerable stress on research and development, and this has contributed greatly to the operational efficiency of the mill by enabling us to adapt our manufacturing methods to local conditions. I shall give you a recent example of our development efforts in the vital field of raw materials.

For a number of years your Board has watched with concern the diminishing supply of Sann hemp and old hemp materials which have in the past been our main raw materials for cigarette paper and our other speciality tissues. When the Tribeni Mill first started production in 1950 Sann hemp and old hemp rope cuttings were in plentiful supply in Uttar Pradesh, but over the years there has been a drastic fall in hemp cultivation. This has been due to the fact that despite the increased requirements of the paper industry, various other economic factors have influenced the cultivator to reduce the acreage under hemp. Until recently Sann hemp was being used extensively for well ropes and other domestic purposes. Green hemp was used as a manure and large quantities were also exported for paper-making and ropemaking. Now with the rising standard of living and the spread of power irrigation, there is less demand for rope and since the introduction of fertilizers less hemp is used as green manure. Similarly, because of rising prices overseas papermakers have switched to the cheaper flax tow from Russia, China and a number of European countries. Exports have therefore fallen also. Further, the increased profitability of other cash crops has led to the diversion of the acreage under hemp to these crops. As a result of these various factors, the Sann hemp crop has fallen from about 150,000 bales in 1956-57 to about 25,000 bales in 1969-70. Apart from our own increased requirements, other papermaking concerns have also entered the field and the scramble for supplies has led to a steep rise in prices.

In view of the difficult supply position and the growing demand for cigarette tissue, your Company has been investigating other possible fibrous raw materials for use in cigarette tissue, particularly jute, which is more abundantly and more readily

ly available than Sann hemp. After much laboratory work in our Development Section and machine trials to ensure that the new quality met the specifications in all respects, sample bobbins were sent to our cigarette customers for testing. The new furnish passed the exhaustive tests which such papers have to undergo and with customer's approval, jute became a regular component of cigarette tissue from 1st July 1970. This development work, representing a break-through in the technology of cigarette tissue manufacture, has thus broken the Company's dependence on the uncertain Sann hemp crop, and since jute and mesta are available in much larger quantities in various parts of the country, our customer's future supplies are ensured. In addition, the Company is giving active support to the UP Government in its schemes to promote better methods of Sann hemp cultivation and higher yields. It is also encouraging the growth of Sann hemp in other parts of the country.

In carrying out its research and development work, your Company pays special attention to the question of import substitution and a deliberate policy in this regard is followed. For example, as a result of our own efforts a plant was set up in Tribeni in 1960 to manufacture Precipitated Calcium Carbonate a vital raw material for cigarette tissue. Since the plant came into operation it has saved the country over Rs 2 crores of valuable foreign exchange.

Having regard to the important contribution which research and development makes to the progress and prosperity of the Company, your Board has decided to enlarge its activities in this field. As a member of the Wiggins Teape Group, the Company also benefits from regular technical assistance received from the Group's Central Research and Development Organisation in the UK. This assistance continues to be of great value and will be particularly so when we start on our next phase of diversification and expansion to which I shall be referring later. However, there are already indications that as our research establishment grows, it will not only undertake development work of a local nature, but also make a more positive contribution to the total development effort of the Wiggins Teape Group.

In order to put the arrangements for technical collaboration with Wiggins Teape Limited on a proper basis, we propose to enter into a Technical Aid Agreement with them and active steps in this direction have already been taken.

Expansion

In my statement last year I mentioned that the Company had under consideration plans to diversify its production further and to manufacture an additional range of industrial speciality papers which were at present being imported. These plans have now become firm and an application has been made to the Government for an industrial licence for a new paper mill in the South of India to manufacture a number of speciality papers for the electrical industry, as well as our existing lines. The exact site has still to be chosen, but the area being considered has a number of advantages. It is central to existing customers and to other potential customers for the new grades, ample

water is available and the site is well served by road and rail. Raw materials are available from the neighbouring States. Electricity is cheap and plentiful and ample unskilled labour is available in the area.

There is a growing demand for our products, both at home and overseas, and in order to meet this it is essential that we bring new capacity into production in the next few years. We hope therefore that the Government will consider our proposal favourably and issue the necessary licences as early as possible.

Personnel

Your Company has always followed a progressive personnel policy and we believe it provides service conditions which are comparable with the best in the country. It is a matter of regret that despite this enlightened policy, agitations and go-slows affected our industrial relations during the year. In 1971 also production has been lost due to a strike which commenced on the 20th January and ended on 2nd March 1971, when an agreement was reached with the Union after protracted negotiations. It is my sincere hope that the employees will now avoid the agitational approach and make every effort to achieve higher productivity, as their well-being is ultimately linked with the continuing prosperity of the Company.

I reported last year that your Company was conscious of the need for management development, and steps have been taken during the year to build up a sound team for the next phase of expansion.

Since the last Annual General Meeting, Mr C. M. Broadbent and Mr B. F. Coupland, Directors, relinquished their respective offices to take senior appointments with the Wiggins Teape Group outside India. Mr J. C. Basu, Finance Director, also retires from the Company with effect from 1st June 1971. All of them played a significant role in the development of the Company, and I would like to place on record the Board's appreciation of the valuable services they have rendered. I would also like to welcome, on your behalf, Mr S. B. Sengupta, who has been appointed to join the Board as Finance Director with effect from 1st June 1971, subject to your approval at this meeting.

I should also like to thank all those employees who by their efforts have helped towards the progress of the Company in 1970, and in particular Mr R. A. Traill, Managing Director, and my other colleagues on the Board.

Future Outlook

I have already explained that the Company has not derived the full benefit of the expansion in 1970 due mainly to loss of production in the first quarter. It is unfortunate that the results for 1971 will again be affected in a similar fashion because of the strike at the beginning of the year.

I have already referred to the recently announced budget proposals for 1971-72. While the full implications of these proposals still remain to be examined and

assessed, certain main features which are likely to affect your Company may be noted. Although the paper industry continues to remain on the list of priority industries which has been curtailed, the special tax concession is reduced from 8 per cent of the profits to 5 per cent. The benefit of development rebate will be withdrawn in respect of investment after May 1974. In calculating the limit of 6 per cent of the capital for purpose of tax exemption for new industrial undertakings, debentures and long-term borrowings will no longer form constituents of the capital. A ceiling of Rs 5,000 per month is imposed on the remuneration of Company employees which would be deductible in the computation of Company profits.

Nevertheless, given a reasonably satisfactory political and economic situation in the country, especially West Bengal, prospects beyond 1971 are on the whole promising. I am also fairly optimistic about the longer term outlook. As I have already mentioned, an application has been submitted to the Government for an industrial licence for a new paper mill in the South of India to manufacture a number of speciality papers for the electrical industry, as well as our existing lines. Assuming the Government issues the necessary licences at an early date, we can look forward to an era of further progress for the Company.

(Note: This does not purport to be a record of the proceedings of the Annual General Meeting)

THE INDUSTRIAL COURT REPORTER

Started in January 1948, the *Industrial Court Reporter*, issued monthly, contains important orders and awards of the Industrial Court and Tribunals in Maharashtra State, as well as the selected decisions of the High Courts and the Supreme Court of India. The *Reporter* serves employers, employees, trade unions and lawyers in finding at one place the case law on industrial and labour matters.

The Chartered Bank Organisation

Chairman, Mr W. G. Pullen's Statement

THE following are extracts from the Statement and Overseas Survey by the Chairman, Mr William George Pullen, to be presented at the Annual General Meeting of the Chartered Bank on 30th June 1971, at 38 Bishopsgate, London, E.C. 2:

Our merger with our friends The Standard Bank Limited was effective from 1st January 1970 and in the ensuing year most satisfying progress has been made towards our final goal of the closest possible collaboration compatible with the interests of the respective banks and thereby those of the shareholders in our joint fortunes. In particular, plans are well advanced for a joint international division which in size and diversity will have greater scope for handling the large and widespread demands of international companies and yet will still give that personal service which our customers, no matter how small or in what part of the world, have come to expect.

Although, as usual, the year did not pass without one or two political setbacks, the most important of which was the nationalisation of our business in Libya, 1970 was a successful year in which we were able to take full advantage of steady conditions in most of our territories and of increasing world trade. Once again too the relative stability of all the major currencies enabled us to give exchange cover to our large trading customers without undue risk to ourselves, and in this connection it is reassuring that H.M. Government has agreed to renew the guarantees against the effects of devaluation for those countries of the sterling area maintaining the greater portion of their overseas balances in London. Furthermore, in spite of some underlying weakness in the United States dollar, and a reluctance of some of the more powerful countries to regard Special Drawing Rights as desirable alternatives to gold and currency holdings, there has been an obvious concerted effort by central bankers to play down, and eradicate if possible, any disparities arising from pressures in the foreign exchange market. Whilst changes in the parities of any of the world's leading currencies might therefore appear unlikely in the near term future we cannot overlook the extraordinary power generated in free Euro currency markets which could exert sufficient pressures from the flow of hot money to over-ride the monetary policies and interests of individual countries. The United States dollar will, however, continue to suffer all the stresses, which we know so well, of being a reserve currency. There is too, in spite of more inclination to write and talk of a world central bank, very little likelihood of a fundamental change in the present system for a long time to come.

Mention has been made of the nationalisation of the Commercial Bank S.A.L. in Libya, the first joint Libyan bank founded and in which we held forty-nine per cent of the capital. It is not easy to understand either the political or economic

reasons for this action but Libya, a rich country, has promised to pay full compensation. Last year I referred to our expectation that India would reimburse us in full for the nationalisation of the Allahabad Bank Limited, and I am pleased to say that we have received the first of the three compensation instalments. Only Burma still shows no intention of honouring its promises and obligations and so assumedly can still have no plans for enlisting overseas aid to underpin its ailing economy.

This Year's Accounts

The consolidated balance sheet figures have again increased and this year total £1,010 millions, an increase of £75 millions over the figure for 1969. Current, Deposit and Other Accounts have increased by £60 millions and Advances to Customers and Other Accounts by £50 millions. In The Chartered Bank's own accounts £4,400,000 has been transferred from inner reserves to the Reserve Fund which now stands at £22 millions. In the Group accounts, capital and consolidated published reserves together with the balance on profit and loss account now total £34,210,908, an increase of £5,046,998 over the corresponding figure for 1969.

Dividends are now payable in their entirety to our parent, Standard and Chartered Banking Group Limited, whose first accounts to 31st March 1971 cover a period of 15 months. In consequence the dividends, paid and proposed, totalling £2,950,000, which appear in the profit and loss account exceed by £590,000 the amount which would be required on a twelve months' basis. To accommodate the excess payment The Chartered Bank's own transfer to Reserve Funds from published profits has been reduced from a figure of £1,000,000 in 1969 to £600,000 and there is a reduction in the carried forward balance on profit and loss account from £1,045,622 to £948,790.

Introduction to Overseas Survey

In order to adjust more nearly to the yearly report of our friends The Standard Bank Limited this survey covers a period of fifteen months to the end of March 1971, which is perhaps useful for the last three months of the period saw some unusual and unexpected political twists and changes affecting some of the countries in which we operate.

Generally speaking the Vietnam war has been going on so long that as such it no longer commands over-riding interest and it is significant that newspapers both in the United States and in this country think that the only events worth stressing are so-called reserves for the United States and South Vietnam forces. Full credit is seldom given for the steady progress achieved, particularly in restoring large areas of South Vietnam to near normal conditions and to the building up of that country's armed forces to a strength that will prevent the country falling into communist hands as United States forces

are withdrawn. There is still some concern in neighbouring countries that political pressure in the United States is dangerously accelerating the running down of both personnel and effort but President Nixon and his Chiefs of Staff are hardly likely to countenance any precipitate moves in negation of the principles involved in the intervention: nor could they for one moment allow it to be thought that all the effort and loss of life had been in vain.

Reference is often made to the problem of the developing countries with particular emphasis on the extent to which their agricultural produce, and hence often their economies, are at the mercy of world prices but for many years now in even the more developed as well as the underdeveloped countries of Asia another problem has been increasing and now coming on top of the population explosion bids to outweigh all others. This is the ever growing trek of the country people to the large cities in the area and many governments are at their wits end to find solutions for the traffic congestion, pollution and squalid living conditions that arise from the overcrowding in the vast conurbations of the countries' capitals. Plans to assist agriculture and stop the denuding of the country-side are seldom effective and even with increased budget allocations for welfare few countries have sufficient resources to arrest let alone eradicate these social evils. Perhaps this should now be the main area for international assistance, be it soft loans or technical aid.

India

At the opening of the year the situation in India was, to say the least, confused as there was complete indecision at the Centre and a total lack of leadership while in many States, especially in West Bengal, the outlook was indeed cheerless. The Congress Party had been torn asunder and Mrs Gandhi found herself the head of a minority government whose sole objective was to remain in power with a view to strengthening its position until fresh elections could be held which her party could hope to win. To accomplish this Mrs Gandhi sought the support of minority parties and as was inevitable, insecurity led to indecision so that the major problems which faced this great sub-continent remained unresolved and the country, to an extent was allowed to drift without guidance or leadership.

Although the general elections were not due to be held until 1972 it is a measure of the political acumen of the Prime Minister that she accurately assessed the mood of the country by calling an early election in 1971 almost a year before it was due and her judgement was vindicated by her Party obtaining an overwhelming majority in the lower house. By discarding many of the stalwarts in the old Congress Party she portrayed a new image, which was reflected in her own approach to the public and helped the swing in her favour. The second largest party, which hardly constitutes opposition, is the divided communist party and it is interesting to note that of the twenty-five members of the C.P.M. no fewer than twenty were elected from West Bengal. This suggests that the communist party, despite all the vicissitudes through which the country has

passed, has not gained in stature since the last election.

With the necessary two-thirds majority the Prime Minister will now have full powers to promote her policies and will have a continuing degree of stability in the administration. However, there will not now be the excuse of a divided government for failing to honour election pledges and the voters will now expect Mrs Gandhi not only to implement her policies but also to show that they are beneficial to the country in order to prove she is worthy of support. The destiny of a vast population estimated to be 570 million persons, depends on democracy in India under her leadership moving forward peacefully and above all with stability. The greatest test is likely to come in the effectiveness of the steps which must be taken to restore law and order. Whatever the basic causes of unrest, political, economic or straightforward discontent at living conditions, no country can hope to make progress until a modicum of discipline is installed into its labour force. For too long the authorities have been sitting on the fence and allowing employers to bear the brunt of violent and other labour disruptions, which threaten the whole structure of the economy. Over the past year or so there has been a divergence of opinion in the thinking of the Government in power and that of the country's industrialists on future development as there has been an apparent preference for government to give scope and assistance to a new group of entrepreneurs to the detriment of expansion by the already existing internationally-known business houses. Whether this policy will, in the course of time, bear fruit is a matter for conjecture but at this crucial period in the country's fortunes it may have been wiser for established entrepreneurs to be given more scope to utilise advantageously their expertise and resources. In many ways 1970 was a year of disappointments and while there have been gains in certain sectors there were serious setbacks in others. The most rewarding achievement was in agriculture, where for the fourth year in succession there was an excellent harvest, and it was possibly because of this good fortune and the sufficiency in good grains that Mrs Gandhi's party decided to hold the elections at a time when conditions otherwise were far from propitious. At last the government's rather belated official recognition of the importance of agriculture is reaping its reward. Unfortunately any increase in the output of foodgrains is to some extent nullified by the continued substantial rise in the population figures, and this seems an insoluble problem.

The satisfaction which may have been engendered by the welcome increase in foodgrains must be, to an extent, tempered by a lack of progress by industry, which is still hampered by an inadequate utilisation of capacity. Consumer goods industries probably suffered least from the recession but the position of the manufacturers of intermediate and capital goods, particularly the latter, remains most unsatisfactory and until the resources of these two sectors are better utilised there is little chance of improving the country's overall rate of growth or of attracting substantial overseas investment.

The nationalisation of the fourteen largest commercial banks caused no undue

local concern for, as far as can be ascertained, this move has enabled the government to fulfil its aspirations and policies of diverting funds to the farmers and to small scale industries. What is more in doubt is whether the tenets of prudent banking are being applied in the provision of such finance and there could well be a build up of large, uncovered debts, with considerable embarrassment in the future. It is to be hoped that any cumulative effect will not be too serious for the reputation of any particular bank even though government will assuredly have to bale out any institutions in trouble.

The expansion of credit over the year was larger than expected and it became necessary for the Reserve Bank of India to caution banks on the need for greater credit restraint. Lending restrictions were placed on the banking system through an increase in statutory liquidity requirements and by an increase in the bank rate from five to six per cent, the first increase since 1968.

From the foregoing it would seem that India's problems are entirely internal ones, but externally too India encounters all the difficulties of avowed neutralists without becoming seriously involved, except recently with Pakistan. Feelings ran high after the hi-jacking of an Indian plane but in aligning herself with the plight, if not with the aspirations, of the East Pakistanis in their troubles with the Pakistan government, the Indian government seems to have taken a line, rightly or not, that must delay the return of the peaceful relations so necessary for the prosperity and progress of both countries.

Conclusion to Overseas Survey

Once again in studying the relative progress of countries of South East Asia and the Indian sub-continent over a year, or in this case fifteen months, there is confirmation that irrespective of the type of constitution those countries with the liberal policies are the most successful. Even adverse movements in world commodity prices seem to have less undermining effect than the narrow often nationalistic orientated restrictions which eliminate competition and stultify growth and perhaps the most regrettable sign of this at the moment is the increasing popularity of state trading organisations. This type of trading concern formed by the state taking away profitable business from private hands is the socialists' dream and the civil servants' delight and once started, as in India where it was designed to handle the barter trade with communist countries, it spreads with the ambitions of the socialists and bureaucrats in all directions where profit is envied and control is desired for controls' sake. The final outcome is nearly always the same, efficiency decreases, performance becomes erratic and prices rise. In this context it is noteworthy that in those countries with liberal minded statesmen, politically mature and at home on the international scene, there is a realisation that trading is best left to the life-long experts and that the state reaps its rewards in the more efficient running of its country and from the taxes levied on the profits earned from economic and competitive trading.

Banks are no exception to this general rule and again those experienced Finance Ministers and Governors of central banks

who realise the very full part that large and secure banks can play in competition in promoting savings and encouraging industrial expansion and agricultural efficiency are not disappointed, we are sure, at the whole hearted manner in which The Chartered Bank and others, traditionally associated with the area, ally themselves with the aspirations of the countries in which they are operating.

GENERAL NOTICE TO THE MEMBERS OF PUBLIC

In terms of provisions contained in Rule 4A of the Monopolies and Restrictive Trade Practices Rules 1970 it is hereby notified for the attention of the members of public that our Company viz Messrs. GOETZE (INDIA) LIMITED having its Registered Office at Escorts House, Roshanara Road, Delhi-7 and its Head Office at Block H, Connaught Circus, New Delhi-1 intends to give notice to the Central Government under sub-section (1) of Section 21 of the Monopolies and Restrictive Trade Practices Act, 1969 in regard to its proposal to carry out substantial expansion of its manufacturing capacity of piston rings from 6,000,000 numbers per annum to 26,000,000 numbers per annum, for which an application for a licence under Section 13 of the Industries (Development and Regulation) Act, 1951 is already pending with the Government of India.

The Company is currently manufacturing piston rings and cylinder liners for internal combustion engines in collaboration with Messrs. Goetzewerke Fr. Goetze AG., West Germany. The piston rings manufactured by the Company enjoy reputation of a very high order because they conform to the highest standards of quality comparable to the products of the best manufacturers in the world. It is because of this reason that the majority of the engine builders in the country procure their requirements of piston rings from the Company. Almost 22% of the Company's production of piston rings was exported in 1970 to the highly sophisticated markets of Western Europe. The Company has been finding it extremely difficult to meet the demands of industry as well as trade in the country due to limited production capacity. This has also affected exports of the Company to a considerable extent. It is in view of these reasons that the Company has applied for a licence for substantial expansion.

Any persons interested in the matter may intimate to the Central Government in the Department of Companies Affairs within 14 days from the date of publication hereof his views with regard to the proposal contained in this notice, and also the nature of his interest therein and forward a copy of the same to the undersigned.

M. K. SWAMI
Jt. Governing Director,
Goetze (India) Limited

UNIDO SPECIAL CONFERENCE

Sights raised but not funds

From Our Special Correspondent

VIENNA.

IN India palaces, it seems, are being transformed into hotels; in Austria one of the most famous palaces has been turned into a conference centre. As a result the Vienna-based UN Industrial Development Organisation was able to hold its Special Conference recently in the gilt and glitter of the Hofburg, the winter residence of the Hapsburgs.

One would like to be able to write that the conference, which brought together delegates from 103 countries, was as historic as its setting. After all UNIDO has been given the central role in the UN's efforts to hasten the industrial development of the Third World, and the Special Conference, the first in the organisation's four-year existence, had been convened at the "highest level" in order both to map out the organisation's long-term strategy and to endow it with a suitable institutional framework and adequate financial resources.

The basic problem facing the organisation was neatly summed up by Mr Moinul Huq Choudhury. UNIDO, the Indian Minister of Industrial Development pointed out, has done substantial and useful work and developing countries generally

have benefited greatly from its operations. But this has been in spite of the limitations under which it has been working. The task before the conference, therefore, was to see what should be done "to enable UNIDO to assume a more dynamic and positive role during the second UN Development Decade."

It was a task the assembled delegates carried out imperfectly at best. The blunt truth is that the spirit of confrontation, which has proved so frustrating for the Unctad, was much in evidence during the 8-day session. As in the Unctad the Group of 77 found itself in open disagreement with the developed OECD countries on virtually every issue before the conference, with the result that it took the delegates four days of secret negotiations to reach a semblance of agreement on their recommendations to the UN General Assembly (of which UNIDO, like Unctad, is an organ).

The greater part of these recommendations deals with UNIDO's long-range strategy and its role in the second Development Decade. The organisation has always prided itself on being operations-oriented; much of its activity is in the field, involving direct technical assistance. In India, for example, it is collaborating in a design centre for electrical measuring instruments and helping set up a central creep testing facility at the National Metallurgical Laboratory in Jamshedpur.

This preoccupation with specific projects has kept UNIDO from developing a long-term strategy—and even from drawing up a list of priorities. But as Mr Choudhury pointed out, the question of UNIDO's long-term objectives is of great importance if the organisation is to play an effective role in the 1970's. As it is, its contribution to the international strategy for the second Development Decade has been very limited.

The Indian Minister outlined some of the broader problems the organisation will have to consider in the years ahead: how to help industry in the developing countries take advantage of the progressive shift away from labour-intensive industries in the developed countries, how to organise the transfer of technology so that its cost to developing countries is not prohibitive—in short, how to stimulate effective co-operation between industrialised and industrialising countries.

Most of the recommendations on long-range strategy were drafted by the Group of 77; and if the text finally approved by the conference is often diffuse and repetitive, it is certainly comprehensive. The conference made clear its desire to see UNIDO involved, alone or in collaboration with other UN bodies, in virtually every aspect of industrialisation, from the training of technical personnel to the promotion of multinational industrial projects. Not satisfied with this, the delegates went on to recommend to the General Assembly that it ask U Thant to appoint a small group of high-level experts "to carry out

the important task of formulating... the long-range strategy for the activities of UNIDO."

But if the Group of 77 succeeded in persuading the developed countries to support most of its recommendations as regards the scope of the organisation's activities, it failed miserably in its efforts to secure the organisation the money needed to finance so ambitious a programme. Of course there has been a gulf from the beginning between the role assigned to UNIDO and the financial resources made available to it. In 1970, for example, total resources amounted to \$32 million (although expenditure that year on field operations came to only \$13 million). The organisation hopes to obtain some \$49 million for 1972 and while this is a substantial increase over the 1967 figure, it is not large in terms of needs. As an Indian note pointed out, UNIDO's contribution towards pre-investment activities in the manufacturing sector was not even 1 per cent of the requirements of developing countries.

Although no figures were put forward, the developed countries (including the Soviet Union) made abundantly clear their reluctance to contribute additional funds to UNIDO. They agreed, however, that the UN Development Programme, which is the main source of financing for UNIDO's operational activities, should increase its allocations, although not to the level favoured by developing countries. But even a proposal to set up an *ad hoc* committee to examine how additional resources could be made available to UNIDO was turned down by the developed countries, who threatened at the last minute to withdraw their support from the recommendations to the General Assembly if the offending paragraph were retained in the draft.

The developing countries also tried to secure a higher volume of financial resources for UNIDO by pressing for its transformation into a specialised agency (such as the FAO). Such a step would automatically make available to the organisation substantially higher financial resources and give it both financial and administrative autonomy. If all the developed countries were opposed to such a move, so were a number of the developing, although in order to maintain the unity of the Group of 77 they refrained from saying so. (If UNIDO were made into a specialised agency, countries with a relatively high GNP, such as India, would have to make a substantial contribution to its budget.)

But the developing countries were equally unsuccessful as regards their efforts to endow UNIDO with a periodic conference as in the case of Unctad. Their proposal for an international conference every two years to review the organisation's activities and evaluate its strategy was resisted by the industrialised countries, so that the next conference is not expected to take place until 1974 or 1975. Moreover, their proposal to set up two subsidiary organs was substantially modified

LABOUR GAZETTE

Started in 1921, the *Labour Gazette*, issued monthly, is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. It contains statistical and other information on consumer price index numbers for working class, industrial disputes, absenteeism, trade unions, industrial relations, cases under labour laws, glimpses of industrial awards, labour legislation, etc. Special articles on matters connected with labour and industrial relations are published from time to time.

• *Annual Subscription* (September-August): Rs. 12.

• *Back Copies*: If available, supplied at Rs. 15 per set.

• *Advertisement Rates* can be had on request.

All correspondence and remittances should be addressed to:

THE COMMISSIONER OF
LABOUR AND DIRECTOR OF
EMPLOYMENT,

Commerce Centre,

Tardeo, Bombay-34 WB (India)

during the course of the confrontation: only one organ—a permanent Committee of the Board—is to be set up.

Not surprisingly, the results of the Special Conference were regarded with considerable disappointment by the developing countries. Even those of their proposals which were finally retained were so watered down that some observers believe the debate is likely to be reopened this autumn when the General Assembly takes up the Conference's recommendations. The Group of 77 did not even have the moral satisfaction of seeing their draft resolution receive a majority of the votes; early in the proceedings they agreed that no votes would be taken.

From the purely Indian point of view the results were perhaps reasonably encouraging. As Mr Choudhury pointed out, the inadequacy of funds available to UNIDO is an important limitation on its activities, and to this extent India must share the disappointment of other developing countries at the failure of their combined efforts to increase the organisation's financial resources. But this disappointment will be tempered by the realisation that a country as industrially advanced as India cannot expect large-scale help from UNIDO, which is more likely to focus its efforts on the industrially more backward countries and regions

In any case, the role of UNIDO will remain that of a catalyst. It is important, therefore, that the organisation innovate rather than follow and thus point the way to the structural changes which will be needed in the economies of developed countries if the developing ones are to industrialise rapidly. UNIDO's efforts in the field of export development and product adaptation are to be welcomed, therefore, and the Indian Minister did well to congratulate the organisation for its initiative in this direction.

UNIDO also has a role to play in the transfer of technology to developing countries, although the field seems to have been pre-empted by Unctad. To the extent that India's need is for the advanced technology possessed mainly by private firms there is probably little that UNIDO can do to help. However, the Conference has recommended that the organisation help developing countries in the application, adaptation and development of technology.

But if India needs experts in certain fields she is in a position to supply them in others. Mr Choudhury's suggestion that UNIDO make greater use of the expertise available in developing countries was endorsed by the conference, although the beneficiary countries themselves may prove to be an important obstacle to the greater use of experts from developing countries for UNIDO-sponsored technical aid programmes; many of them continue to show a preference for experts from developed countries. It is all the more encouraging, therefore, to note that India is the largest supplier of field experts to UNIDO after the United States. On the other hand, the number of Indians working at the organisation's Secretariat in Vienna will remain small until such time as UNIDO acquires greater administrative autonomy. □

BALANCE SHEETS

SHEEP BREEDING FARM PROJECT

Raymond Woollen's march

THE Raymond Woollen Mills Ltd (Chairman and Managing Director: Mr Gopal Krishna Singhan, Bombay) has achieved a better performance for the year ended December 31, 1970. The company's sales rose to Rs 10.5 crores from Rs 9.1 crores in the previous year. The gross profit rose to Rs 103 lakhs from Rs 90 lakhs. The net profit, after depreciation and taxation amounted to Rs 43 lakhs (Rs 36 lakhs). The ordinary dividend was 12 per cent (12 per cent) payable on the enhanced capital. In the year under review, the ordinary subscribed capital of the company was raised from Rs 1.05 crores to Rs 1.26 crores by issue of bonus shares in the ratio of 1:5.

The company's gross profit margin works out to 9.8 per cent as in the previous year. The ratio of net profit to net worth comes to 14.5 per cent (13.2 per cent).

The operations in the woollen mills division were maintained at the highest levels. The second modernisation scheme undertaken for this division and the wool combing division will continue through 1971 and 1972. During the year, 40 new Sulzer weaving machines were installed making a total of 74 Sulzers in full current operation. Besides the term loan of Rs 1 crore sanctioned by the company's bankers to finance part of the cost of the second modernisation scheme, the ICICI has also sanctioned a loan of Rs 90 lakhs

was also higher than in the previous year. Exports in quantity rose by about 58 per cent and represented above 50 per cent of the output.

The company has undertaken a scheme of research and development for sheep breeding and wool production in India with a view to producing locally Merino type wool required for the manufacture of suitings. This is a long-term scheme and will require many years to come to fruition. The Government of Maharashtra has granted to the company lease of forest land measuring about 10,132 acres in the west Dhulia forest division for use exclusively for the establishment of a sheep breeding farm. The company will pay over Rs 9 lakhs to the Government towards the capital expenditure incurred by it on this lease land. An amount of Rs 5.06 lakhs paid to the Government on this account together with other capital expenditure totalling in all Rs 5.36 lakhs has been written off in the profit and loss account for the year as capital expenditure on scientific research relating to this project. The company's overall exports for the year were Rs 1.53 crores (Rs 1.25 crores).

Gold Mohur Mills

SALES of the Gold Mohur Mills Ltd (Chairman: Mr Ratansi Mulji, Bombay) for the year ended December 31, 1970 amounted to Rs 5.6 crores against Rs 5.4 crores in the previous year. The gross profit was Rs 47 lakhs (Rs 57 lakhs). The net profit, after depreciation and taxation, came to Rs 13 lakhs (Rs 25 lakhs). The ordinary dividend was stepped up by 1 per cent to 12 per cent payable on the enhanced capital. In the year under report, the ordinary subscribed capital of the company was raised from Rs 70 lakhs to Rs 80 lakhs by issue of bonus shares.

The company's gross profit margin works out to 8.3 per cent against 10.5 per cent. The ratio of net profit to net worth comes to 8.4 per cent (15.9 per cent).

In the year under review, four high-speed draw frames, six roll to roll machines and some humidification equipment were installed. Two sets of high-speed combing machinery and four high-speed draw frames were also installed. Orders are proposed to be placed for two high draft-speed frames, four high-speed draw frames, two cone winders and three superspinner ring frames. It is also proposed, subject to the necessary foreign currency loan being obtained, to order one set of high-speed combing machinery.

Garment Enterprises Ltd, in which the company had a 50 per cent share, during the year incurred a loss of Rs 15,084 (loss of Rs 23,815). Sales during the year were maintained at about the same level

as those of the previous year. The Company Law Board have approved the proposed investment of Rs 6.12 lakhs by Gold Mohur in the purchase of 7,000 ordinary shares of Garment Enterprises Ltd to be completed before June 30, 1971. Accordingly the company will purchase the shares

per cent payable on the enhanced capital. In the year under report, the subscribed capital of the company was raised from Rs 60 lakhs to Rs 80 lakhs by issue of bonus shares in the ratio of 1:3.

The company's gross profit margin works out to 12 per cent against 12.5 per

cent. The ratio of net profit to net worth comes to 10.7 per cent (13.5 per cent).

The improvement in the working of the company's mills noticed in the previous year was maintained in the year under report and the mill's working, including that of the cord department, was up to the mark.

In the year under review, four high speed draw frames were installed and two sets high speed combing machinery and a further four high speed draw frames have also since been installed. Orders are proposed to be placed for three superspinner ring frames, two high draft speed frames, four high speed draw frames and one high pressure high temperature dyeing plant. It is also proposed, subject to the necessary foreign currency loan being obtained, to order one set of high speed combing machinery. □

Podar Mills

DESPITE higher sales for the year ended December 31, 1970 at Rs 6.8 crores against Rs 6.2 crores in the previous year, the gross profit of the Podar Mills Ltd (Chairman: Mr Ramnath A. Podar, Bombay) was lower at Rs 66 lakhs (Rs 76 lakhs). This decline in profit is accounted by an all-round increase in the cost of production and higher wage bill. The net profit, after depreciation, was Rs 40 lakhs (Rs 51 lakhs). The ordinary dividend has been maintained at 10 per cent.

The company's gross profit margin works out to 9.6 per cent against 12.1 per

The financial year of the company has been changed from April-March to January-December with the approval of the Income Tax authorities. The company's exports during the period of nine months under review amounted to c.f. Rs 15.70 lakhs. The export orders on hand as on April 1, 1971 are c.f. Rs 35.64 lakhs. □

Shri Ambica

SHRI Ambica Mills Ltd (Chairman: Mr Jaykrishna Harivallabhdas, Ahmedabad) has achieved better working results for the year ended December 31, 1970. Its sales rose to Rs 15.8 crores from Rs 14.7 crores in the previous year. The gross profit was Rs 2.7 crores (Rs 2.2 crores). The net profit, after providing for depreciation and taxation, stood higher at Rs 93 lakhs (Rs 74 lakhs). The ordinary dividend was maintained at 33 per cent.

The company's gross profit margin works out to 17.3 per cent against 15 per cent. The ratio of net profit to net worth comes to 12.7 per cent (12 per cent). The company proposes to issue bonus shares of Rs 1.36 crores in the ratio of 1:1 by capitalising the general reserve. The issue is subject to the approval of the Government.

During the year under review efforts to modernise the plants continued. Extensive renovation and modernisation of the spinning department at unit No. 3, Baroda is nearing completion. Modern high-speed ring frames are being installed in place of old ones. Expansion of the weaving section by 86 automatic looms was completed in the course of the year. The process house at unit No. 1 is being reorganised and expanded in view of the increased production and technological advances in the technique of processing. A rotary screen printing machine and 3 sets of combers are to be imported against

the foreign exchange loan granted by the ICICI.

There was considerable increase in the production of blended fabrics. In the year under review, the tube division continued to face chronic shortage of raw materials. The situation was aggravated by labour unrest at Rourkela and Durgapur plants of the Hindustan Steel Ltd. There was a steady progress in sales as well as in the manufacturing activities in

the machinery manufacturing division Jute jiggers, star agers, J-boxes, cheese dyeing machines, etc have been added to the existing line of manufacture. The factory building and installation of all the machineries including a deep drawing 400 tons hydraulic press were completed during the year. The company also succeeded in taking the trial production of liquid petroleum gas cylinders

J. K. Chemicals

SALES of J.K. Chemicals Ltd (Chairman: Mr Gopalkrishna Singhania, Bombay) for the 18-month period ended December 31, 1970 amounted to Rs 7.9 crores against Rs 4.2 crores for the year ended June 30, 1969. The gross profit was Rs 242 lakhs (Rs 74 lakhs). The net profit, after depreciation and taxation, amounted to Rs 65 lakhs (Rs 30 lakhs). The ordinary dividend for the period under review was 15 per cent (12 per cent) on the increased ordinary share capital. During the period under review, the ordinary subscribed capital of the company was raised from Rs 36.13 lakhs to Rs 60.22 lakhs by the issue of bonus shares.

The company's gross profit margin works out to 30.8 per cent against 17.6 per cent. The ratio of net profit to net worth comes to 33.5 per cent (21.7 per cent).

The manufacturing facilities of the company were under vigorous maintenance throughout, to keep the plant in a state of high efficiency. However, the highly corrosive nature of the process and the non-availability of some critical equipment including stores and spare parts of the requisite specification and quality locally, resulted in occasional breakdowns and interruptions in production. The zinc dust pilot plant worked satisfactorily, the daily rate of production being three times of that recorded in the previous year.

On July 22, 1970 the Hindustan Shipping Co, a division of JK Chemicals, chartered a small cargo ship (2,810 dwt capacity) under a 54-month bareboat agreement. This vessel is being employed on the Indian coast and adjacent trades. Despite the considerable stringency prevailing in the international money markets the company succeeded in negotiating a line of credit for \$12 million with a leading American bank. But the approval of the loan terms took considerable time as they did not fit into the Government's existing guidelines allowing for a 6 per cent tax free remittable rate of interest, on foreign exchange loans, and which was totally out of alignment with conditions then prevailing.

The company has recently received approval from the Government of India for going into shipping business, subject to the condition that the new undertaking shall be taken up as an independent company in which JK Chemicals together with its interconnected undertakings and associates will directly or indirectly contribute not more than 40 per cent of its ordinary share

capital. In view of the inherent soundness of the project, the company has agreed in principle to this condition and is now taking necessary steps for floating a new public limited company for this purpose

As a part of its export drive, JK International (another division of JK Chemicals) has entered the field of marine product exports. A rented facility is used to process and store the products for export.

Coromandel Fertilisers

SALES of Coromandel Fertilisers Ltd (Chairman: Mr Bharat Ram, Secunderabad) for the year ended December 31, 1970 amounted to Rs 25.1 crores against Rs 26.3 crores for the 15-month period ended December 31, 1969. The gross profit was Rs 5 crores (Rs 4.9 crores). The net profit, after depreciation, amounted to Rs 55 lakhs, against a loss of Rs 62 lakhs. The profit, though modest, marks the turning point in the company's fortunes. As the profit is not high and the working capi-

tal demand of the company persists to rise, no dividend is recommended for the year. The company's gross profit margin works out to 20 per cent against 18.8 per cent.

In the year under report, Rs 88.75 lakhs in short-term interest expense was incurred. This short-term borrowing was mainly to supply working capital for the peaks of product inventory and for the credit provisions to customers in this highly seasonal business.

Though the Visak plant generally operated well, the profits would have been higher but for two unforeseen breakdowns at the plant. In all, these shutdowns resulted in a loss of nearly 35,000 tonnes of complex production in terms of Gromor 28-20 plus about 16,000 tonnes of urea production. During the year, the plant produced nearly 2.2 lakh tonnes of fertilisers which is 76 per cent of the rated capacity in terms of plant nutrient.

Nearly 1.41 lakh tonnes of product were sold within Andhra Pradesh and 92,000 tonnes outside that State. Sales of product in Upper India, particularly in

In the market

Gujarat Polyamides

GUJARAT Polyamides Ltd, in which the Baroda Rayon Corporation Ltd has substantial interest, is entering the capital market on June 28, offering for public subscription 1,286,300 B equity shares of Rs 10 each and 1,10,000 9.5 per cent redeemable cumulative preference shares of Rs 100 each. The subscription will close on July 8 or earlier but not before July 1. An amount of Rs 5 and Rs 50 respectively per share will be payable with the application for equity and the preference shares. The balance amount on both classes of shares will be payable as and when the calls will be made by the company. The company is establishing a nylon-6 yarn project at Udhna, Surat district, with a five-tonne per day capacity. This is the first nylon plant in Gujarat and is expected to go on stream during the latter half of 1973. The total cost of the project is estimated at Rs 11 crores.

It is proposed to finance the project by raising equity share capital of Rs 3.30 crores, preference shares of Rs 1 crore, foreign exchange loan of Rs 3.12 crores from the ICICI and the IFCI, an Italian credit of Rs 70 lakhs and through rupee loans and debentures worth Rs 2.77 crores from the IDBI, IFCI, Unit Trust and the LIC. The company has reserved 23,904 equity shares of Rs 100 each for allotment to the shareholders of the Baroda Rayon Corporation Ltd in the ratio of one for every 20 shares of Baroda Rayon. The company has obtained collaboration from Italtiscosa Eastern Trading S.p.A. who are the associates of Snia Viscosa S.p.A., one of the biggest manufacturers of man-made fibres and plants in Europe. The collaborators are to supply the machinery manufactured by Snia Viscosa S.p.A. and will assume full responsibility for the quality and the rated capacity of the plant.

Punjab and Haryana region were encouraging. The company has appointed Rallis India Ltd, effective January 1, 1971, as another major agent of Gromor products.

The Government of India has granted the company a licence in January 1971 for the expansion phase I programme. This licence permits an increase in the plant

* This loss has been shown as adjusted against general reserve in the balance sheet.

crores in the previous year. After providing for depreciation it suffered a net loss of Rs 222 lakhs (loss of Rs 50 lakhs). The ordinary dividend has been skipped for the third year in succession. Expendi-

ture on capital account including block-in-progress during the year amounted to Rs 19.25 lakhs (Rs 42.45 lakhs).

In view of the critical financial position of the company due to shortage of working capital, the Government of India urgently sanctioned and paid to the company in February 1971 Rs 1.5 crores to enable it to meet its current obligations on the understanding that the company should raise the balance of its requirements by increasing the subscribed and paid-up capital. The detailed terms and conditions of the Government assistance have not yet been finalised with the company. Appropriate arrangements are being made to issue further shares, both performance and ordinary, for cash at par, to increase the paid-up capital to the full limit of the authorised capital of the company, that is Rs 186 lakhs nearly.

Dharamsi Morarji

THE Dharamsi Morarji Chemical Co Ltd (Chairman and Managing Director: Mr Pratapsinh R. Morarji, Bombay) had higher sales for the year ended December 31, 1970 at Rs 8.5 crores against Rs 7.9 crores in the preceding year. The gross profit was Rs 137 lakhs (Rs 138 lakhs). The net profit, after depreciation and taxation, amounted to Rs 46 lakhs (Rs 48 lakhs). The dividend was maintained at 20 per cent. However, the dividend absorption is higher at Rs 25.49 lakhs (Rs 20.39 lakhs), since the dividend is payable on the capital enlarged by the bonus issue made in 1969 in the ratio of 1:4.

The company's gross profit margin works out to 16.1 per cent against 17.3 per

cent. The ratio of net profit to net worth comes to 14.2 per cent (15.7 per cent).

The company's production and sale of single superphosphate was once again the largest. Demand for triple superphosphate was also better than in the previous year, although still far behind the installed capacity. There was further improvement in sales of acids and chemicals. The total exports for the year were Rs 28.32 lakhs (Rs 24.65 lakhs).

Capital expenditure during the year amounted to Rs 43.89 lakhs. The construction of sulfamic acid plant and the expan-

sion of chlorosulphonic acid plant capacity to 40 tonnes per day, both at Ambarnath works, were completed by the end of the year.

Vijaya Bank

THE total income of the Vijaya Bank Ltd (Chairman: Mr M. Sunder Ram Shetty, Mangalore) for the year ended December 31, 1970 has increased to Rs 2 crores from Rs 1.4 crores in the previous year. The profit was Rs 8.5 lakhs (Rs 4.6 lakhs). The dividend was stepped up by 2 per cent to 10 per cent.

The paid-up capital of the bank increased to Rs 43.84 lakhs from Rs 20.18 lakhs. Deposits expanded to Rs 27.5 crores from Rs 18.7 crores. Advances rose to Rs 17.5 crores from Rs 13 crores. Invest-

Straw Products

STRAW Products Ltd (Registered Office: Jaykaypur, Dist Korapur, Orissa) is offering for public subscription at par 20,000—9.3 per cent cumulative redeemable preference shares of Rs 100 each of the total value of Rs 20 lakhs. The entire issue has been underwritten. The subscription list which opened on June 25 will close on July 6 or earlier at the discretion of the directors but not before June 28. The full amount of Rs 100 per share is payable on application.

The company was incorporated in 1938 with the main object of manufacturing and dealing in boards and papers of all kinds. The capacity of the paper mills established at Jaykaypur (Orissa) in 1962 is being expanded for the manufacture of 9,500 tonnes annually of top grade light weight papers like tissues, manifold, air mail, etc. The capital expenditure of Rs 8.52 crores for the expansion would be met from the issue of equity and preference shares, loans from financial institutions and the company's own resources. Three lakh equity shares of Rs 10 each issued at a premium of Rs 2.50 per share as right shares have already been subscribed. The proposed issue of preference shares for Rs 20 lakhs will also meet a part of the finance required for expansion.

Williamson Magor

WILLIAMSON Magor & Co Ltd (Registered Office: 4, Mangoe Lane, Calcutta 1) is offering for sale at par 40,000 fully paid ordinary shares of Rs 10 each of the total value of Rs 4 lakhs in order to comply with the listing requirements of the Calcutta Stock Exchange. The company's 102,520 ordinary shares of the company will then be officially quoted in the stock exchange. The application list for the shares now offered for sale, which opened on June 26 will close on July 5 or earlier but not before June 29. The company was incorporated on March 8, 1954. Its business activities extend over a wide field including tea production and exports.

ments were higher at Rs 7.8 crores (Rs 4.2 crores).

The ratio of advances to deposits was lower at 63.7 per cent (69.5 per cent) and that of investments to deposits was higher at 28.5 per cent (22.3 per cent). The ratio of cash to deposits was lower at 11.6 per cent (12.3 per cent).

The advances to priority sectors such as agriculture and small-scale industries were well maintained. At the close of the year, the bank's advance to agriculture

was 12 per cent and to small-scale industries 19 per cent of the total advances. The bank opened 12 branches during the year raising the total to 126 as on December 31, 1970. □

Brady and Morris Eng

Proceeds of engineering works of Brady and Morris Engineering Co Ltd, Bombay, for the year ended December 31, 1970 increased to Rs 53.52 lakhs from Rs 45.41 lakhs in the previous year. The net profit, after providing Rs 1.40 lakhs (Rs 1.44 lakhs) for depreciation and Rs 3.80 lakhs (Rs 1.15 lakhs) for taxation, amounted to Rs 2.97 lakhs (Rs 1.51 lakhs). The dividend was 8 per cent (6 per cent), which includes the silver jubilee bonus of 2 per cent. The company was able to undertake the manufacture of a preliminary batch of Morris new design electric hoist blocks which are expected to be marketed during the second half of the current year after completion of the endurance trial and performance efficiency. This product will be completely indigenous. Subsequent to the closure of the financial year, the company has been granted an industrial licence for the manufacture of biscuit plant and ancillary machinery. The company is negotiating with a German collaborator for the production of small and medium size bread plant for which there is growing demand.

Devidayal Cable Industries

Sales of products of Devidayal Cable Industries Ltd, Bombay, for the year ended December 31, 1970 increased by 33.6 per cent to Rs 5.09 crores from Rs 3.81 crores in the previous year. The net profit, after

providing Rs 8.95 lakhs (Rs 8.58 lakhs) for depreciation and Rs 8.76 lakhs (Rs 1,852) for taxation, amounted to Rs 20.82 lakhs (Rs 14.65 lakhs). The ordinary dividend has been doubled to 10 per cent from 5 per cent. The general reserve absorbed Rs 19.02 lakhs (Rs 8.42 lakhs). The company has received sufficient import licences for the import of copper and other raw materials to meet its requirements for the whole of the current year. The demand for winding wires and strips has picked up and the company hopes to increase its turnover considerably. Though the company has established a fair market for its cables in West Asia, owing to keen competition from other countries, it could only export goods worth Rs 15.2 lakhs against Rs 21 lakhs in the previous year. The total capital expenditure incurred during the year was Rs 11.25 lakhs.

New Great Eastern Spg

The New Great Eastern Spinning and Weaving Co Ltd, Bombay, has increased its sales for the year ended December 31, 1970 to Rs 4.38 crores from Rs 3.89 crores in the previous year. The net profit, after providing Rs 14.65 lakhs (Rs 13.38 lakhs) for depreciation amounted to Rs 4.32 lakhs (Rs 12.34 lakhs). In the year under review the company worked under difficult conditions due to abnormal increase in the prices of raw materials and wage bill. An amount of Rs 27.55 lakhs has been spent towards additions to fixed assets for modernisation of machinery. The company has entered into an agreement with the State Industrial and Investment Corporation of Maharashtra Ltd for Rs 20 lakhs for the modernisation scheme. Exports for the year were Rs 125.17 lakhs (Rs 58.77 lakhs).

Polson

Sales of Polson Ltd, Bombay, for the year December 31, 1970 amounted to Rs 2.47 crores against Rs 2.37 crores in the previous year. The net profit, after providing Rs 2.53 lakhs (Rs 2.99 lakhs) for depreciation and Rs 7.70 lakhs (Rs 6.87 lakhs) for taxation, amounted to Rs 5.86 lakhs (Rs 5.43 lakhs). The ordinary dividend has been pruned to 10 per cent from 12½ per cent. The general reserve absorbed Rs 5.85 lakhs (nil). In the year under review, the value of production has gone up to Rs 2.65 crores from Rs 2.20 crores in the previous year. The company has restarted its Digha Ghat dairy at Patna from February 16, 1971 and has recommenced production of butter. A letter of intent for the manufacture of high-protein beverage has already been issued to the company.

Tide Water Oil

Sales of Tide Water Oil Co (India) Ltd, Calcutta, for the year ended October 31, 1970 have increased to Rs 2.30 crores from Rs 1.90 crores in the previous year. The net profit, after providing Rs 2.65 lakhs (Rs 3.50 lakhs) for taxation, amounted to Rs 1.78 lakhs (Rs 2.29 lakhs). The dividend was 20 per cent (15 per cent) which included an interim dividend of 10 per cent. The general reserve got Rs 1.82 lakhs (Rs 1.50 lakhs). To reduce operational costs and also to diversify its products, the company installed bulk storage facilities at Calcutta during the year at a cost of Rs 1.5 lakhs and also a plant for the manufacture of greases. Steps have also been

taken for the installation of a blending plant and improved storage facilities at Madras by the purchase of the necessary land.

Preliminaries

Straw Products

Straw Products Ltd, Rayagada, Orissa, improved its sales for the year ended December 31, 1970 to Rs 7.49 crores from Rs 7.21 crores in the previous year. Profit before depreciation was Rs 1.78 crores (Rs 1.66 crores). Depreciation absorbed Rs 49.11 lakhs (Rs 46.32 lakhs) and taxation claimed Rs 56.60 lakhs (Rs 51.50 lakhs). The ordinary dividend was maintained at 12 per cent. An amount of Rs 8.50 lakhs (Rs 16.10 lakhs) was transferred to the development rebate reserve and the general reserve got Rs 33.04 lakhs (Rs 21.65 lakhs). Production rose to 34,629 tons from 33,221 tons. The expansion programme involving Rs 8.5 crores has progressed well. The company proposes to increase production of paper and boards, by installing balancing equipment on a crash programme basis. It has approached financial institutions for assistance for this programme which is likely to cost Rs 1.4 crores.

Indabrador

Sales of Indabrador Ltd, Bombay, for the year ended December 31, 1970 increased by 50 per cent to Rs 70.42 lakhs from Rs 47.04 lakhs in the previous year. The profit, after providing for depreciation and development rebate, amounted to Rs 14.13 lakhs (Rs 9 lakhs). Taxation claimed Rs 8.04 lakhs (Rs 4.07 lakhs). The balance of Rs 6.09 lakhs (Rs 4.93 lakhs) was transferred to the general reserve. Dividend recommended for the year was 15 per cent (12 per cent).

Hyderabad Asbestos Cement

Hyderabad Asbestos Cement Products Ltd, Hyderabad, has earned a higher gross profit of Rs 61.29 lakhs (Rs 21.71 lakhs in 1969) for the year ended December 31, 1970. Sales are reported to be 48 per cent higher than that in 1969 (figures not disclosed). Depreciation absorbed Rs 34.44 lakhs. The general reserve got Rs 29.99 lakhs. The ordinary dividend for the year was 10 per cent.

Company trends

Surrindra Stein Malt

Surrindra Stein Malt Ltd has started the construction of its factory in Ghaziabad, UP, to manufacture malt and malt extract and other malt based products. The capital outlay of the project is estimated at Rs 46 lakhs. The annual capacity will be approximately 4,500 tonnes. Mr Movinder Singh, managing director of the company, has stated that the factory is expected to go into production early next year. The plant will produce high quality malt based on the latest West German process. The company will be shortly entering the market with a public issue.

EQUITIES

Restricted trading

BOMBAY, June 23

AFTER ruling steady and recording a modest improvement during the first half of the week, equities staged a retreat in the latter part of the week on stale bull liquidation coupled with short-selling. Fresh interest was markedly absent, and the turnover visibly shrank. The market closed on a subdued note, with trading restricted to four sessions over the week.

The start was promising, and the recovery move following the release of Tata Steel results was extended initially. However, there was no follow-through, as several dampers chilled the enthusiasm of operators. Official pronouncements about the possibility of a national emergency owing to the developments in Bangla Desh, and the report that the Union Law ministry had drafted a bill to restore to Parliament the right to amend the Constitution and abridge the right to property, all affected the sentiment.

A notable feature of trading was the sharp decline in the quotations of some of the favourite scrips in both the cleared and cash lists. This was stated to be due to funds being withdrawn in preparation for payment of taxes, and for applying to some of the new issues shortly coming into the market. Fears of further radical fiscal and taxation measures by the Government also restrained fresh activity. Naturally buyers were reserved.

Corporate news was satisfactory on the whole. Shree Ram Mills reported higher sales in the current year. The sales of Borosil Glass were also higher in the current year, and the company was operating profitably. GEC of India came out with excellent results for the year ended March, with the pre-tax profit more than doubled. The Chairman of EID-Parry has said that the company is faring better in the current year. The current outlook of Warner-Hindustan is said to be cautiously encouraging, as sales were on the increase, but the Budget levies are likely to affect the company adversely. Gokak Mills' Chairman said at the annual meeting that the turnover in the first five months was 15 per cent better. However, the Chairman of Century Spinning struck a subdued note at the annual general meeting, as the company may not reach this year the level of profits attained last year. This induced an easy tone in the market.

Textiles were generally lower, as the current year is expected to be difficult for the textile industry. Rayons were friendless, as the Government is keen to bring down the price of nylon and rayon in the country. Kohinoor was quiet. Shippings were quietly steady. In cements, ACC suffered a sharp setback on lower production and lower despatches to touch a new low. Chemicals were subdued. Papers met with selective buying. Engineerings and steels were easy.

COMMODITIES

Spurt in spot cotton

BOMBAY, June 23

A marked improvement in prices was noticed in quality cotton in the spot market during the past week. Mill demand was distinctly better, especially for choice lots, the prices of which, in consequence, spurted. There was also a perceptible improvement in the volume of business done although quite a few mills saw to the cotton being carried by their regular merchant-clients.

The break in the monsoon noticed during the first half of the week has introduced an element of uncertainty about the sowing operations. Reports from quite a few cotton growing centres like Khamgaon indicate that the farmers

have decided to await further showers before commencing their sowing operations. However, in Saurashtra the sowing has commenced, according to reports reaching here. Should there be an undue delay in the commencement of sowing in a majority of the leading cotton growing centres, it could have an adverse bearing on the crop outlook for the new season commencing from September. Nothing, however, positive could be said about the crop at this stage.

In the foreign section inquiries were mainly confined to stray lots of African and American cotton. There had been some improvement in the offtake of cotton that had piled up at the docks. Unless there is a liberalisation of credit

facilities, a speedy disposal of the unlifted cotton is not feasible, according to importers.

The following has been the trend of prices of some of the leading varieties:

	(Rs per candy)	
	For the week ended June 23	For the week ended June 16
Khandesh ..	2,300-2,350	2,300
Berar AK average	1,800-2,000	1,700-1,900
Berar AK Good ..	2,200-2,300	2,200-2,250
Digvijay Dabhoi ..	3,250	3,225
Berar L 147 ..	2,800-2,900	2,400-2,500
Manavadar CO 2 ..	2,900	2,750

Reports from Punjab and Rajasthan indicate that the sowings of Bengal Deshi and 320F have been completed in most of the regions. There are indications to show that Pakistan had latterly sold sizable quantities of Deshi and staple cotton to China against arms supplies.

ART SILK YARNS FLARE UP

BOMBAY, June 23

A steep rise in the prices of art silk yarns characterised trading in the yarns market during the past week. The prices flared up due to the sustained support from stockists who expect a shortage in pulp supplies because the STC had so far not finalised any deal for the import of the rayon pulp. The upcountry demand was not there. Staple fibre yarns also improved in sympathy with the art silk yarns. Cotton yarns were firm.

In the art silk yarns section, 150D National Rayon put on 32 paise to Rs 19.84. 120D firmed up by Re 1.09 to Rs 20.81. 150D Bright Century spurted by Rs 1.52 to Rs 19.97. 120D improved by Re 1.13 to Rs 20.75. 100D Bright South India gathered 55 paise to Rs 23.70. Staple fibre yarns (2 x 34 nF) spot Kiran picked up 24 paise to Rs 11.99.

JUTE GOODS DECLINE

CALCUTTA, June 22

Although overseas inquiries for jute goods continued, the actual business put through was extremely limited. This was due to the expectations that in the wake of a good crop, prices of goods as well as of raw jute would not be maintained at present levels. However, raw jute prices in the past week moved up, since sellers were reserved having regard to the present difficult position in the allotment of wagons for the movement of the crop.

The fall in goods in stock with mills at the end of May by 12,000 tonnes should have normally strengthened bulls, but there was the feeling that by and large prices had already risen to very high levels, and that overseas buyers would resist any further rise. The total May-end stock of goods was 81,800 tonnes compared to 94,000 tonnes at the end of April. The largest decline of 6,100 tonnes was recorded in sacking of which mills had 33,600 tonnes. Hessian at 29,700 tonnes was lower by 5,700 tonnes.

Internal buyers placed good orders with mills, although the industry with a lean inventory was cautious in booking orders for distant positions. Overseas buyers accounted for only scattered business. It would appear that they were waiting for prices to decline before entering into bulk commitments. Prices shed a part of the gains of recent weeks, with hessian 40/10 oz and B. twillings opening at Rs 106 and Rs 271.25 and closing at Rs 103.50 and Rs 266.50.

The new crop is expected to move in sizable quantities within a week or two, and the industry has placed wagon requirements for this purpose at 103,170. This is in addition to movement by road and river, which accounts for a good portion of the crop. To enable jute mills to offer more attractive prices to foreign buyers, prices of raw jute must decline, and this would depend upon adequate transport facilities for the movement of raw jute. Of course, the mill industry does not desire that the raw jute price should be depressed. It is only for this reason

Attention Contractors!!

Are you intimating details of your building contracts to the Income-tax Deptt.?

Under Section 285-A of the Income-tax Act, 1961, you must furnish details of a contract entered into by you for construction of a building or for supply of goods or services for construction of a building if the value of such a contract exceeds Rs. 50,000. These details must be furnished to your Income-tax Officer in the prescribed form (Form No. 52) within one month from the date of the contract. This requirement must be fulfilled even if the contract is entered into with Central or a State Government, local bodies or semi-Government organizations.

BEWARE! Failure to comply with this requirement, can lead to a penalty of upto Rs. 50 for every day of default subject to a maximum of 25% of the value of contract.

If you need guidance, please contact the Income-tax Officer

CENTRAL BOARD OF DIRECT TAXES

(Department of Revenue & Insurance)
Ministry of Finance, Government of India.

that the Indian Jute Mills Association has called for the stepping up of the bank credit to the mills or the setting in motion of an alternative agency to undertake price support operations. Otherwise, the JMA apprehends offtake could fall short of arrivals on occasions and thus lead to price depression. In the past week, Assam bottoms new moved up from Rs 59 to Rs 59.50 and the old crop from Rs 60 to Rs 60.50. Daissee bottoms old accounted for an increase of Re 1 at Rs 62.50.

OILSEEDS EASY

BOMBAY, June 23

Oilseeds presented a mixed show during the short week. Trading on Wednesday was very restricted owing to the poor attendance due to heavy rains in the city. The tendency was easy.

Prices ruled firm in the early part of the week due to dry weather in the producing areas. But later the tendency turned subdued owing to weakness in groundnut and its oil, and sizable stocks at the upcountry centres.

In futures, the near contracts met with support owing to the delay in rainfall. Improved prospects of castor oil sale to the USSR and shortage of linseed were additional factors inducing bulls to extend holdings. But the distant contracts lacked support. Linseeds advanced on a bull grip by north Indian and local operators. But profit-taking at the higher levels brought down prices.

Towards the latter part of the week the tendency turned easy. Showers in some parts of the country induced selling in castorseed as well as linseed. While the arrivals of groundnut oil from the South were quite sizable, the demand from industrial units showed no signs of revival. Unnerved by fresh fall in groundnut oil in the spot market, operators liquidated holdings, particularly in castorseed. Advances from upcountry centres were discouraging, following dry good rainfall in South Indian producing areas.

Linseed futures were also affected by the weakness in groundnut oil. At lower levels some support emerged, and the backwardation charges ended at Rs 2.

Cottonseed futures were neglected, and no business was reported.

Comparative prices in rupees were:

Item	16-6-1971	23-6-1971
Castor June ..	130.75	No trading
Castor September ..	132.25	131.12
Linseeds July ..	165.50	165.00
Linseeds September ..	164.00	163.00
G. Nuts Khandesh ..	104.00	107.00
G. Nut oil ..	40.90	39.60
Castor Madras Small ..	134.00	134.00
Castor Comm. oil ..	28.25	29.00
Castor B.S.S. oil ..	31.00	31.50
Linseeds Bold ..	162.00	163.00
Linseed oil ..	36.25	36.75

DEMAND FOR TEA WIDENS

CALCUTTA, June 22

Improved demand was the feature of last week's export as well as internal auctions. With considerable improvement in the labour situation at the Calcutta port, the trade hoped that efforts to raise exports would be successful, though much would depend on the improvement in the allotment of wagons for the movement of the crop. It looked as though there could be no need to divert Calcutta shipments to west coast ports. Considering the low quantity of leaf being offered at Gauhati auctions, chances of Gauhati being developed as an international auction centre similar to Calcutta or Kochin are very limited.

Leaf on offer at sale No 11 held here on June 16 totalled 32,500 packages. In a good general demand, whole leaf grades were absorbed at quoted rates. Orthodox broken were well absorbed, with the few improved lines realising good prices. The poor liquoring fannings were not firm, the brighter kinds selling well. Among CTCs, the better kinds were competed for but the plain broken and fannings were not. The quotations in rupees per kg.

inclusive of excise duty were: good Assam CTC fannings 7.80 to 9, good Assam CTC BP 7.50 to 8.50, medium Assam BOP 7.20 to 8.50, clean plain pekoe 7 to 7.50, low Assam BOP 6.50 to 7, Dooars BOP 6.20 to 6.50, plain CTC BP 6 to 6.20, medium Assam OF 5.60 to 6, low Assam OF 5.40 to 5.80, medium CTC fannings 5.30 to 5.50, medium CTC BP 6.20 to 6.50, and plain CTC fannings 5.20 to 5.40.

Leaf on offer at the last sale held in Gauhati was a meagre quantity of 712 chests, most of which had to be withdrawn due to lack of demand. Excepting for the orthodox teas, which were readily absorbed, others including CTCs and fannings eased liberally. Dusts on offer totalled 4,954 chests, for which there was, however, a good demand, although here again there were withdrawals. The Gauhati trend is not altogether unexpected as the tea trade generally goes in for bulk commitments with a view to deriving benefit of economies of scale. If Calcutta port could maintain the improved labour conditions in evidence since early in this year, the Gauhati auction centre would be unable to attract exporters from Calcutta.

FOODGRAINS STEADY

BOMBAY, June 22

The prices of foodgrains in the local market ruled more or less steady. Among coarsegrains, wheat (pissi) at Rs 83-87 per quintal ruled steady on account of good supply. Bajra (superior), at Rs 68-75 per quintal also ruled steady. Maize at Rs 71-73 per quintal showed no change during the week. In pulses, gram (Punjab) moved up by Rs 3-4 to Rs 93-96 per quintal owing to the higher upcountry advances as well as short supplies. On the other hand, urad (khandesh new) ruled steady at Rs 155-165 per quintal. However, tur (Berar white) showed a modest rise of Rs 2 and ruled at Rs 128-130 per quintal. This marginal rise was attributed to the good demand. Moong (Chinai) at Rs 250-300 per quintal displayed no change during the week.

SUGAR EASY

BOMBAY, June 22

The prices of sugar (C-30) in the local sugar market showed an easy trend during the week under review. The prices of sugar (C-30) declined by Rs 4-5 to Rs 189 per quintal. This fall in prices was attributed to the expected larger quota of 7.60 lakh bags against 6.16 lakh bags for release by Maharashtra sugar mills. Daily arrivals and offtake were fairly good at around 4,000 bags. Today, about 4,000 bags of 'D' grade sugar were sold at Rs 181.50 with ex-mill duty by a co-operative sugar mill. Further, on June 19, the Union Government has issued orders for the release of 4.5 lakh tonnes of sugar from factories for sale to licensed wholesale merchants.

KIPS STEADY

MADRAS, June 19

Arrivals from the tanning centres were moderate and the offtake from the market was steady. Overseas demand was similar to last week's trend with emphasis on lower grade cow hides, cow calf fourths and buff calf inferior thirds. There was patchy demand for goat skins; US importers showed some interest in light goat skins, while French buyers seemed indifferent. In the sheep skins section, primes ruled firm while other classes remained dull.

METALS IMPROVE

CALCUTTA, June 22

The full impact of copper, zinc and lead being brought under the import duty list is yet not evident. The prices of non-ferrous scrap continued to move up in the past week under the impact of the Budget proposal. The supply position continued to be tight, and stockholders were reserved on expectation of higher prices. The confidence of consumers and non-ferrous

India and Pakistan WOOL, HOSIERY AND FABRICS—1971 ANNUAL OF THE WOOL, WORSTED, CARPET, JUTE, COIR AND HOSIERY TRADES AND INDUSTRIES

- Comprehensive details of woollen spinners, carpet, hosiery and knit goods manufacturers, wool and hair markets, wool merchants, woollen presses, bulk buyers of raw materials and finished textiles and principal stores and bazaars handling textile lines, including imported piece goods and hand knitting wools.
- This publication is the only one of its kind catering specifically to the wool, worsted and associated trades in India and Pakistan and has a large circulation amongst Woollen, Worsted and Hosiery Mills and leading firms engaged in Manufacturing, Exporting, and Importing Wool, Hosiery, Carpets, Woollen Machinery, Spares and Accessories.

Phone: 253505

semi-manufacturers seemed, however, activated by the heavy imports of non-ferrous metals taken on hand by the Minerals and Metals Trading Corporation. Arrivals against orders placed by the MMTC months ago following the announcement of the new import policy are anticipated shortly. Already, 2,000 tonnes of copper have been received so far at the Calcutta port against these orders, and these were from Zambia and the US. Shipments of zinc from the USSR and Japan totalling about 7,000 tonnes are expected to be received in Calcutta port this month and July. Canadian etc. grade aluminium of about 300 tonnes and 1,000 tonnes of Australian lead are also on the way, in addition to tin from Malaysia. These arrivals would substantially improve the stock position of the MMTC and industrial releases would be much more liberal. The output by both the indigenous zinc smelters is also expected to be much higher this year.

The good demand for zinc and zinc scrap from galvanisers was a striking feature and electrolytic zinc was fully firm at Rs 500 per quintal and dross at Rs 405. Small-scale users could not meet their demand for copper scrap in full, and clean copper wire scrap was up at Rs 1,520 though utensil scrap was unchanged at Rs 1,410. Wirebars were quoted at Rs 1,675, and wires at Rs 1,700. Tin was unchanged but fully steady at Rs 5,000.

BULLION DIVERGENT

BOMBAY, June 23

A divergent trend prevailed in the bullion market here during the past week. Silver prices, which were firm in the last fortnight, lost ground during the week following improved arrivals in the wake of slack off-take. However, in the initial sessions the prices ruled firm and touched a high of Rs 600 at one time but closed the week easy. The easier overseas advices also imparted weakness. Gold was divergent. Primary gold closed firm due to good seasonal demand from the South. Standard gold was easy following improved arrivals. Sovereign was fully maintained.

Silver (996 fineness) opened the week Rs 2 higher at Rs 599 but lost ground in the following session only to recover in the latter sessions. It, however, reacted in subsequent sessions and wound up the week at Rs 590 today, with a net loss of Rs 7 over the week. Silver weekly was mentioned at between Rs 597 and Rs 590. The weekly average arrivals and off-take of silver aggregated 60 bars and 38 bars, respectively.

Primary gold in unofficial trading commenced at last week's closing level of Rs 187 and moved up in the following sessions. It wound up the week at Rs 189 today, the net gain over the week being Rs 2. Standard gold in official

trading began a rupee lower at Rs 196 and receded in subsequent sessions to close at Rs 195 today. The net loss over the week was Rs 2. Sovereign was fully maintained at Rs 174.

CALL RATE STEADY

BOMBAY, June 23

Conditions remained unchanged in Bombay's short-term money market during the past week. The inter bank call rate was steady at 4½ per cent. In Calcutta, renewals were effected at 4½ per cent. In Madras the call rate was 4½ per cent.

Ninety-one days' Government of India treasury bills sold from June 14 to 19 amounted to Rs 531 crores against Rs 677 crores in the preceding week.

During the week ended June 11 foreign exchange reserves of the Reserve Bank of India increased by Rs 587 crores to Rs 374.45 crores. While foreign securities rose by Rs 15 crores to Rs 293.42 crores, balances held abroad declined by Rs 9.13 crores to Rs 81.03 crores. Notes in circulation expanded by Rs 78.14 crores to Rs 4,502.91 crores. Deposits of scheduled commercial banks with the Reserve Bank of India rose to Rs 213.72 crores from Rs 194.73 crores.

Week ended June 11 recorded a rise of Rs 20.36 crores at Rs 4,739.64 crores in the total credit made available by scheduled commercial banks. Aggregate deposits increased to Rs 6,134.76 crores from Rs 6,111 crores. Borrowings from Reserve Bank were higher at Rs 154.63 crores (Rs 139.28 crores).

Notice

NEW INDIA INVESTMENT CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT the Thirty-fourth Annual General Meeting of the Company will be held at the Registered Office of the Company at 9, Brabourne Road, Calcutta, on Monday the 12th July 1971 at 3:00 p.m. to transact the following business:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1970.
- (2) To declare a Dividend.
- (3) To elect Directors.
- (4) To appoint Auditors for the Current year and to fix their remuneration.

The Register of Members and Share Transfer Register Books of the Company will be closed from 9th to 12th July 1971 both days inclusive.

By Order of the Board,

B. P. GOENKA,

Director.

CALCUTTA,

June 10, 1971.

Note: A member entitled to attend and vote at the meeting may appoint a Proxy to attend and vote instead of himself. A Proxy need not be a member.

The dividends, if declared, will be paid on or after 30-7-71 to those Shareholders whose names appear on Company's Book on 12-7-1971.

The Century Spinning & Mfg. Co. Ltd.

Chairman, Shri R. D. Birla's Statement

STATEMENT of the Chairman of the Century Spinning and Mfg Co Ltd, Shri R. D. Birla at the 74th Annual General Meeting of the Company held on Tuesday, 22nd June 1971:

LADIES AND GENTLEMEN,

I am pleased to welcome you all to the 74th Annual General Meeting of the Company. The Report and Accounts of the Company are already in your hands and I hope you are fully satisfied with the results.

Future Prospects

The Directors have given details about the working of the Company in their Report, but I would like to make a few observations on the future prospects of the Company. The Textile Division of the Company experienced difficulty during the first half of the current year as a result of shortage and very high prices of cotton and an all-round increase in costs of which all are aware. This is bound to affect profits. As regards Tyre Cord Division, the Government has asked the industry to cut prices and the demand for tyre cord in the home market is also not satisfactory. In view of this, it is feared profit in this Division too will suffer a setback. As for Rayon Division, the recommendations of the Tariff Commission are being examined by the Government and if and when these are implemented, they too will naturally affect the profits. Although the working of all the divisions of the Company continues to be quite satisfactory, if the price cuts referred to above take place, then the profits of the current year may possibly not attain the figure reached during the year under review.

Diversification, Expansion

The Textile Division of the Company, as I had mentioned last year, has embarked upon a programme of progressive improvement and diversification of its products. It has further during the year, developed some more sophisticated qualities which have been received well in the market. The progress in this direction is continuing. The quality of the Company's rayon and tyre cord yarn continues to be excellent and as you must have noticed in the Directors' Report, it is being exported in increasing quantities to the most advanced countries of the world.

As regards the Company's expansion programme, you will be happy to know that the Government has already given us a "carry-on-business" licence in respect of our Cement Project on which work was already in progress. It is expected that the Cement Factory will go into production by the end of 1972. We have two more applications for major industrial projects with the Government—one for Pulp and the other for Seamless Pipes. As the Government is anxious to increase indigenous production and reduce dependence on imports, let us hope it will favourably consider these two applications also.

Happenings in Bangla Desh

The unfortunate happenings in Bangla Desh have affected our economy, millions

and millions of refugees from that region have been trekking to India and it has become a great burden for the country to feed and look after them. The merciless sins committed by Pakistani rulers in Bangla Desh are unparalleled in the history of mankind. In recent history only Hitler committed crimes of this magnitude and the history tells what his fate had been.

Our Prime Minister, who enjoys the backing of all our countrymen, has made a firm determination to send back the evacuees. Although this is a very difficult task, but as we have seen, she has succeeded in all the missions she has undertaken. Now even the world opinion is veering round in India's favour. The powerful countries of the world should now apply pressure on Pakistan to take back the refugees and only after this happens, will peace dawn on both the countries. It is not too late ever now for Pakistan to understand that it is in its interests to take back the refugees.

Stable and Strong Government

For accelerating the process of development and growth, we need to harness all the talent and skill in the country. Fortunately, we have now a very stable and strong Government with a thumping majority in Parliament. Our Prime Minister too is very popular, brave and forward-looking. Let us hope that the Government

will now adopt a bold and courageous policy to stimulate savings and investments for setting up new enterprises and take all necessary steps to increase production. To generate more savings prices must be held in check by augmenting the supply of consumer goods. Population in the country is rising fast and unless production rises at a faster rate, there will be no improvement in our living standard.

Large-scale Industries need to be Encouraged

The encouragement given by Government to small-scale industries is quite understandable. But small-scale industries alone cannot achieve the objectives of providing employment to millions of our unemployed and of producing consumer and other goods on the scale needed to fill the vacuum in the home market and also to create surpluses for export. Besides, exports can be stepped up only with mass production and with competitive prices and this can be possible only if the productive units are fairly large and of economic size of which the Government is fully aware. The Government, therefore, must also encourage the setting up of large-scale industries.

Before I conclude, I would like to express my warm and hearty thanks to the workers, staff and officers of the Company for their hard and devoted work which enabled the Company to show such excellent results. I hope they will continue to work with the same devotion and loyalty in future.

Thank you

N.B.:—This does not purport to be a report of the proceedings of the Annual General Meeting.

ARE YOU CONCERNED ABOUT UNEMPLOYMENT?

Then your views and suggestions are valuable.

The Expert Committee on Unemployment invites views and comments that will help the Committee in the task assigned to it.

The Committee is interested in the following aspects :—

- 1) Directions in which programmes in the Fourth Five Year Plan could be more employment-oriented.
- 2) Strategy for generating employment, both short term and long term including technical, financial and fiscal measures.
- 3) Specific programmes to promote productive employment among the educated unemployed in general and the technical personnel in particular and to suggest measures to rectify the imbalance between the out-turn of educated and technical persons on the one hand and the available employment opportunities on the other.

Views and comments are welcome from individuals as well as associations.

Please send your communications before July 15, 1971.

N. S. Pandey
Member-Secretary
Expert Committee on
Unemployment

V.I.P.'S stop here so very often !

Because we care for their needs, and lunches, and drinks.
And we know they like red carpets - which is exactly
what they get.

And, of course, they go for that elusive something called
atmosphere - which is everywhere in Rajoot.

And, before they are gone, we like them to take the
memorable Indian and Western cuisines, the variety
programmes in the ELORADO and STARLIT Restaurants
or at open air venues at RAMBLE Courtage Place.

We have a telephone in each room, and the own
dinner and cocktail service.

What's more, we don't want them to come-and-go
just - but like real home guests !
